FARM CONSUMPTION OF FEED CROPS.

The following percentages of farm consumption in the United States of feed crops by the several kinds of live stock are based upon estimates made in 1918 by several thousand voluntary crop reporters to the Agr. Dept., of the actual amount fed to each class of stock:

	Horses.	Cattle.	Swine.	Sheep.	Poultry.
corn	24.5	19.2	50.3	0.9	5.1
oats	67.8	13.2	10.8	2.3	5.9
barley ...	17.7	11.9	50.9	...	10.5
rye	26.5	5.5	53.4	...	14.6
wheat ...	5.4	6.4	29.1	...	59.1
hay	44.6	51.4	0.2	3.8	...
silage ...	1.7	96.9	2.2	1.1	0.1
millfeed .	5.6	44.2	41.5	3.7	5.0

PRICES OF COTTON.

The following table gives the United States estimated average price, cents per pound, to producers of cotton, monthly for six years:

	1919.	1920.	1921.	1922.	1923.	1924.	Avg. ¹
Jan.	28.7	35.9	11.5	16.3	24.5	32.5	17.2

PROVISION AND LIVESTOCK SECTION

HOGS AND PROVISIONS.

The number of hogs slaughtered in the West in 1924-25, the averages of weights, yields of lard, production of meats, etc., are shown in the following tables:

	1924-25.	1923-24.
Summer season hogs....	24,458,600	25,529,000
Average weight, lbs.....	242.82	241.04
Yield of lard, lbs.....	38.61	37.58
Percentage yield of lard	15.90	15.60
Cost of hogs, 100 lbs....	\$7.80	\$7.42
	1924-25	1923-24
Winter season hogs....	17,968,003	17,731,528
Average weight, lbs.....	217.23	236.30
Yield of lard, lbs.....	32.32	39.93
Percentage yield of lard	14.87	16.01
Cost of hogs, 100 lbs....	\$10.21	\$6.91
Twelve months, hogs....	42,426,603	43,260,528
Average cost, 100 lbs....	\$9.00	\$7.17

The following tabulation illustrates the progress in Western slaughtering of hogs during the past 26 years, showing the numbers for years ending March 1, according to compilations of The Price Current-Grain Reporter:

	1900.....	1913.....	1910.....
1900.....	22,201,000	1913.....	25,583,834
1901.....	23,601,000	1914.....	27,621,561
1902.....	25,411,000	1915.....	27,386,462
1903.....	20,605,000	1916.....	32,602,333
1904.....	22,375,000	1917.....	33,707,814
1905.....	23,918,000	1918.....	28,487,550
1906.....	25,575,000	1919.....	36,263,733
1907.....	35,430,000	1920.....	33,172,444
1908.....	27,980,000	1921.....	30,483,884
1909.....	28,996,000	1922.....	30,076,904
1910.....	24,162,000	1923.....	36,535,963
1911.....	21,755,000	1924.....	43,260,528
1912.....	29,918,000	1925.....	42,426,603

The following exhibit shows the annual averages of numbers of hogs slaughtered for commercial purposes in the West in periods of five years, 1891 to 1910, inclusive, with the average annual prices paid for hogs, and the highest yearly average price within the periods indicated, to which is added the figures for the years named, ending March 1:

Periods.	Annual number.	Average price.	Highest average.
1891-95.....	14,435,000	4.80	5.85
1896-1900.....	19,600,000	3.75	4.05
1901-05.....	23,180,000	5.65	6.80
1906-10.....	26,427,000	6.15	7.75
1910-11.....	21,755,000	8.50
1911-12.....	29,918,000	6.35
1912-13.....	25,583,834	7.50
1913-14.....	27,621,561	8.26
1914-15.....	27,386,462	7.61
1915-16.....	32,602,333	7.21
1916-17.....	33,707,814	10.21
1917-18.....	28,487,550	16.04
1918-19.....	36,263,733	17.18
1919-20.....	33,172,444	17.18
1920-21.....	30,483,884	12.69
1921-22.....	30,076,904	8.32
1922-23.....	36,535,963	8.96
1923-24.....	43,260,528	7.17
1924-25.....	42,426,603	9.00

An illustration of the magnitude of the hog slaughtering industry is had by comparisons of cost of hogs purchased by Western packers, with also the approximate cost of Eastern slaughtering, shown in the following, for years ended March 1:

	Western.	Eastern.	Total.
1924-25.	\$861,760,547	\$145,540,914	\$1,007,301,461
1923-24.	755,503,000	100,538,000	865,041,000
1922-23.	763,310,000	156,025,000	919,335,000
1921-22.	583,954,000	134,322,000	718,276,000
1920-21.	887,790,000	184,542,000	1,072,332,000
1919-20.	1,291,042,000	184,281,000	1,475,323,000

1910-11.....	21,755,000	4,766,000	26,511,000
1909-10.....	24,162,000	5,761,000	29,923,000
1908-09.....	28,996,000	6,201,000	35,197,000
1906-07.....	25,430,000	6,548,000	31,978,000

	Western.	Eastern.	Total.
1905-06.....	25,575,000	5,698,000	31,273,000
1904-05.....	23,918,000	5,773,000	29,691,000
1903-04.....	22,375,000	5,242,000	27,617,000
1902-03.....	20,605,000	4,641,000	25,246,000

Western Stocks, March 1, 1925.

A comparative statement of stocks of hog products in the West on March 1, 1925:

	1925.	1924.
Sides, lbs.....	162,434,040	132,076,000
Shoulders, lbs.....	53,911,060	50,543,000
Hams, lbs.....	231,592,166	246,295,000
Other cuts, lbs.....	52,373,376	76,893,000
Total meats, lbs.....	500,310,642	505,807,000
Pork, barreled, lbs.....	7,024,870	11,899,000
Meats and pork, lbs.....	507,335,512	517,706,000
Lard, lbs.....	121,749,510	47,560,000

Total products, lbs..... 629,085,022 565,266,000
 *Includes D. S. bellies. *Includes picnics.

The Bureau of Markets reports all stocks of hog products in store on March 1, 1925, exclusive of frozen meats, trimmings and offals, as follows, in pounds:

	1925.	1924.
D. S. in process of cure.....	79,699,000	90,769,000
D. S. cured.....	70,980,000	87,489,000
Pickled, in process.....	283,605,000	309,450,000
Pickled, cured.....	200,744,000	191,334,000
Lard.....	152,485,000	68,610,000
Total above.....	787,513,000	737,652,000

Western Stocks, Nov. 1, 1924.

A comparative statement of stocks of hog products in the West on November 1, 1924, is shown in the following:

	1924	1923
Sides, lbs.....	*76,302,759	*81,416,000
Shoulders, lbs.....	15,795,802	13,594,000
Hams, lbs.....	132,351,126	162,724,000
Other meats, lbs.....	28,264,476	53,139,000
Total meats.....	252,776,163	310,873,000
Pork in bbls., lbs.....	3,438,050	6,040,000
Meats and pork.....	256,214,213	316,913,000
Lard, lbs.....	23,012,795	29,955,000
Meat and lard.....	279,227,008	346,868,000

*Includes D. S. bellies.

The Bureau of Agricultural Economics reported all stocks of hog products in store on Nov. 1, 1924, exclusive of frozen meats, trimming and offals, as follows, in pounds:

	1924	1923
D. S., cured.....	35,802,000	43,972,000
In process of cure.....	46,094,000	64,794,000
Pickled, cured.....	108,414,000	115,126,000
In process of cure.....	177,102,000	209,532,000
Total meats.....	367,412,000	433,424,000
Lard.....	31,566,000	37,489,000
Total products....	398,978,000	470,913,000

Comparative Western Stocks March 1.

The following shows comparative total stocks of meats and pork in the West on March 1:

	Meats, lbs.	Pork, lbs.	Pork, lbs.	Lard, lbs.
1902	592,000,000	26,000,000	618,000,000	42,000,000
1909	672,000,000	28,000,000	600,000,000	47,000,000
1910	333,000,000	17,000,000	350,000,000	25,000,000
1911	355,000,000	14,000,000	369,000,000	28,000,000
1912	596,000,000	26,000,000	622,000,000	83,000,000
1913	433,584,000	20,143,000	453,727,000	33,529,000
1914	390,715,000	22,437,000	413,152,000	65,500,000
1915	590,856,000	38,786,000	629,642,000	64,947,000
1916	529,918,000	22,491,000	552,409,000	129,886,000
1917	508,856,000	19,078,000	527,935,000	115,339,000
1918	578,550,000	20,615,000	599,165,000	52,962,000
1919	658,753,000	13,520,000	672,273,000	114,640,000
1920	567,104,000	17,929,000	585,033,000	89,392,000
1921	706,867,000	19,583,000	726,450,000	105,744,000
1922	346,871,000	5,044,000	351,915,000	49,385,000
1923	336,871,000	8,150,000	345,021,000	27,876,000
1924	505,807,000	11,899,000	517,706,000	47,560,000
1925	500,310,642	7,024,870	507,335,112	121,749,510

Barreled Pork.

The returns of barreled pork made during the winter season show the following totals, in comparison with previous years, representing number of barrels, for the West:

	Total mess.	All other.	All kinds.
1924-25.....	4,608	78,082	82,690
1923-24.....	5,249	97,268	102,517
1922-23.....	9,727	118,775	128,502
1921-22.....	1,260	23,960	25,220
1920-21.....	10,300	137,940	148,240
1919-20.....	13,450	132,260	145,700
1918-19.....	37,100	363,300	400,400
1917-18.....	10,109	302,800	312,900
1916-17.....	40,200	317,500	357,700
1915-16.....	12,900	157,000	169,900
1914-15.....	38,900	161,500	200,400
1913-14.....	16,300	180,700	197,000
1912-13.....	11,500	154,000	165,000
1911-12.....	48,000	151,000	199,000
1910-11.....	11,000	141,000	152,000
1909-10.....	18,300	156,000	174,000
1908-09.....	24,000	195,000	219,000
1907-08.....	56,000	139,000	195,000

Barreled pork made during eight months of the summer season, March 1 to November 1:

	Total mess.	All other.	All kinds.
1924-25.....	7,327	500,214	507,541
1923-24.....	16,720	300,600	317,320
1922-23.....	6,916	143,590	150,506
1921.....	8,050	266,630	274,680
1920.....	17,800	201,400	219,200
1919.....	129,400	256,500	385,900
1918.....	7,700	468,500	476,200
1917.....	6,400	215,000	221,400
1916.....	8,400	185,800	194,200
1915.....	4,700	208,000	212,700
1914.....	22,500	214,400	236,900
1913.....	21,700	207,500	229,200
1912.....	15,000	160,000	175,000
1911.....	19,000	220,000	239,000
1910.....	23,000	250,000	273,000

Total manufacture of barreled pork in the West for twelve months ending March 1:

	Mess.	Other.	Total.
1924-25.....	11,935	578,296	590,231
1923-24.....	21,969	397,868	419,837

Total Packing in the East.

The aggregate number of hogs packed during the year ending March 1 at Eastern points from which returns and estimates have been obtained by The Price Current-Grain Reporter is shown in the following, for summer and winter seasons, and for the year, these totals not including New York City, Philadelphia and Baltimore:

	Summer.	Winter.	12 mos.
1924-25	3,039,923	2,106,998	5,146,921
1923-24	2,666,000	2,272,000	4,938,000
1922-23	2,315,000	1,744,000	4,059,000
1921-22	2,106,000	1,415,000	3,522,000
1920-21	2,232,000	1,322,000	3,554,000
1919-20	2,011,000	1,255,000	3,266,000
1918-19	2,019,000	1,815,000	3,834,000
1917-18	1,849,000	1,314,000	3,163,000
1916-17	2,211,000	1,816,000	4,028,000
1915-16	1,931,000	1,620,000	3,551,000
1914-15	2,047,000	1,459,000	3,506,000
1913-14	1,819,000	1,391,000	3,210,000
1912-13	1,870,000	1,368,000	3,238,000
1911-12	2,027,000	1,306,000	3,393,000
1910-11	1,591,000	1,068,000	2,659,000
1909-10	1,780,000	1,029,000	2,809,000
1908-09	2,057,000	1,284,000	3,341,000
1907-08	1,982,000	1,218,000	3,200,000
1906-07	1,694,000	1,095,000	2,789,000
1905-06	1,647,000	1,108,000	2,755,000
1904-05	1,746,000	1,212,000	2,958,000

Pork Packing at Boston.

Returns to The Price Current-Grain Reporter show the total number of hogs packed at Boston during the eight summer months, the four winter months, and for twelve months ending March 1, as follows:

	Summer.	Winter.	12 mos.
1924-25	519,752	513,754	1,033,506
1923-24	657,970	471,364	1,129,334
1922-23	593,962	419,264	1,013,222
1921-22	471,864	368,918	840,782
1920-21	521,742	309,638	831,380
1919-20	652,536	317,134	969,670
1918-19	783,000	709,000	1,492,000
1917-18	615,000	470,000	1,085,000
1916-17	654,000	594,000	1,248,000
1915-16	629,000	484,000	1,113,000
1914-15	630,000	441,000	1,071,000
1913-14	710,000	465,000	1,175,000
1912-13	784,000	454,000	1,238,000
1911-12	732,000	566,000	1,278,000
1910-11	589,000	423,000	1,012,000
1909-10	721,000	408,000	1,129,000

Pork Packing at Buffalo.

Returns to The Price Current-Grain Reporter show the total number of hogs packed at Buffalo during the eight summer months, the four winter months, and for twelve months ending March 1, as follows:

	Summer.	Winter.	12 mos.
1924-25	639,756	372,885	1,012,641
1923-24	612,820	422,411	1,035,231
1922-23	546,562	399,778	946,340
1921-22	507,974	351,413	859,387
1920-21	526,834	349,027	875,861
1919-20	610,659	300,219	910,873
1918-19	422,000	344,000	766,000
1917-18	408,969	238,515	647,484
1916-17	544,000	368,000	912,000
1915-16	519,000	392,000	911,000
1914-15	585,000	423,000	1,008,000
1913-14	480,000	349,000	829,000
1912-13	475,000	290,000	765,000
1911-12	610,000	347,000	957,000
1910-11	460,000	290,000	750,000
1909-10	467,000	277,000	744,000
1908-09	538,000	333,000	871,000

Hog Receipts at New York City.

The receipts of live hogs at New York and Jersey City in recent years, for the eight summer and four winter months, and year ending March 1:

	Summer.	Winter.	12 mos.
1924-25	1,055,951	659,097	1,715,048
1923-24	1,034,696	675,655	1,710,351
1922-23	923,399	667,521	1,590,920
1921-22	856,806	562,607	1,409,413
1920-21	849,834	629,308	1,479,142
1919-20	704,815	424,151	1,129,966
1917-18	665,000	523,000	1,188,000
1916-17	1,087,000	704,000	1,792,000
1915-16	879,000	680,000	1,559,000
1914-15	1,165,000	694,000	1,859,000
1913-14	1,074,000	558,000	1,632,000
1912-13	900,952	651,983	1,552,935
1911-12	996,000	742,000	1,738,000
1910-11	840,744	538,391	1,379,135
1909-10	1,197,154	659,061	1,856,215

The meat product of hogs received at New York is mostly used for local consumption.

Hog Receipts at Philadelphia.

The total supply of hogs at Philadelphia for the summer and winter seasons, and 12 months ending March 1, is shown in the following:

	Summer.	Winter.	12 mos.
1924-25	783,896	133,019	916,915
1923-24	763,081	469,401	1,232,482
1922-23	603,702	383,097	986,799
1921-22	584,086	341,686	925,772
1920-21	556,207	352,890	909,097
1919-20	380,480	168,090	548,570
1918-19	340,000	235,000	536,000
1917-18	316,000	197,000	513,000
1916-17	575,000	387,000	962,000
1915-16	508,000	256,000	763,000

	Summer.	Winter.	Total.
1913-14.....	506,000	102,000	608,000
1912-13.....	465,000	218,000	683,000
1911-12.....	260,000	125,000	385,000
1910-11.....	96,000	63,000	159,000
1909-10.....	204,000	110,000	314,000
1908-09.....	170,000	115,000	285,000
1907-08.....	180,000	91,869	271,869
1906-07.....	156,203	92,464	248,667

*The figures here given are of hogs slaughtered in inspected houses. There have been no accurate records of the total actual receipts of live stock in Philadelphia since the death of Col. Siewers, our former correspondent. *As reported; evidently too low.

Net Hog Receipts at Baltimore.

The reported net receipts of hogs at Baltimore are shown below for years ending Mar. 1. But little is done in curing product from hogs received.

	Summer.	Winter.	12 mos.
1924-25.....	713,756	403,528	1,117,284
1923-24.....	745,425	866,128	1,611,550
1922-23.....	625,948	397,490	1,023,438
1921-22.....	666,307	365,863	1,032,175
1920-21.....	694,036	459,204	1,153,290
1919-20.....	559,096	430,375	989,971
1918-19.....	301,000	248,000	549,000
1917-18.....	323,000	198,000	521,000
1916-17.....	431,000	292,000	723,000
1915-16.....	649,000	564,000	1,203,000

1908.....	30,785,000	1891.....	15,180,000

¹As reported by Bureau of Agricultural Economics.

NAME EQUIVALENTS FOR ORIENTAL BEANS.

The Bureau of Markets gives the following English trade terms equivalent of Japanese terms for well established varieties of Oriental beans:

Adzuki—Small dark red bean (Baby Reds).
 Aneko—Long red and white speckled bean.
 Chunagazura—Medium long cranberry—Aka—Red.
 Chunagazura—Medium purple cranberry = Cha—Brown.
 Maruzura—Round cranberry = Chiro—White.
 Nagabura—Long cranberry = Chu—Middle or medium.
 Kotenashi—Oriental small white pea bean = Dai—Large.
 Otenashi—Same, large = Ko—Small.
 Kiji-Kiji bean (Red bean spotted with dirty white) = Maru—Round.
 Same = Naga—Long.
 Kintoki—Manchurian Red Marrow = O—Large.

YEARLY COMPARISONS OF PORK PACKING.

Total number of hogs packed in the West during the summer and winter seasons, and for twelve months ending March 1, with yearly production of green meats and lard, in pounds, and aggregate cost of hogs:

Years.	Summer season.	Winter season.	Yr. ending March 1.	Green meats produced.	Total lard produced.	Total cost of hogs.

CATTLE AND SHEEP SLAUGHTERINGS.

The Price Current-Grain Reporter submits the following compilation, showing yearly number of cattle slaughtered at the four Western centers:

	Chicago.	K. City.	St. Louis.	Omaha.	Total.
1899....	1,702,000	993,000	542,000	549,000	3,786,000
1900....	1,794,000	1,116,000	590,000	553,000	4,053,000
1901....	2,000,000	1,195,000	717,000	579,000	4,491,000
1902....	2,031,000	1,103,000	839,000	646,000	4,619,000
1903....	2,163,000	1,029,000	871,000	770,000	4,833,000
1904....	1,933,000	1,026,000	911,000	683,000	4,553,000
1905....	2,000,000	1,267,000	877,000	682,000	4,826,000
1906....	1,976,000	1,317,000	922,000	748,000	4,963,000
1907....	1,853,000	1,264,000	897,000	897,000	4,811,000
1908....	1,684,000	1,179,000	867,000	684,000	4,404,000
1909....	1,662,000	1,351,000	924,000	727,000	4,664,000
1910....	1,741,000	1,286,000	904,000	799,000	4,730,000
1911....	1,715,000	1,241,000	865,000	728,000	4,549,000
1912....	1,681,000	1,069,000	903,000	589,000	4,202,000
1913....	1,631,000	1,129,000	800,000	530,000	3,990,000
1914....	1,481,000	1,053,000	771,000	545,000	3,700,000
1915....	1,381,000	878,000	747,000	608,000	3,614,000
1916....	2,488,000	1,149,000	921,000	843,900	5,401,900
1917....	3,753,000	1,114,000	1,706,000	1,017,000	7,590,000
1918....	3,422,000	1,815,000	1,192,000	1,156,000	7,685,000
1919....	3,032,000	1,630,000	1,128,000	1,131,000	6,921,000
1920....	2,693,000	1,200,000	903,000	921,000	5,716,000
1921....	2,377,000	1,200,000	661,000	829,000	5,067,000
1922....	2,797,000	1,406,000	734,000	915,000	5,852,000
1923....	2,813,000	1,659,000	544,000	997,000	5,913,000
1924....	2,889,606	1,552,429	544,019	1,103,513	6,089,567

The following compilation shows the number of sheep slaughtered yearly at the four centers. Sheep slaughtered:

	Chicago.	K. City.	St. Louis.	Omaha.	Total.
1899....	3,296,000	645,000	534,000	744,000	5,019,000
1900....	3,061,000	644,000	380,000	724,000	4,789,000
1901....	3,281,000	785,000	488,000	752,000	5,306,000
1902....	3,744,000	743,000	468,000	879,000	5,834,000
1903....	3,582,000	791,000	482,000	972,000	5,827,000
1904....	3,142,000	745,000	643,000	935,000	5,465,000
1905....	3,880,000	962,000	598,000	939,000	5,879,000
1906....	3,464,000	1,144,000	540,000	969,000	6,117,000
1907....	3,069,000	1,091,000	525,000	1,016,000	5,701,000
1908....	3,138,000	1,098,000	595,000	993,000	5,824,000
1909....	3,501,000	1,172,000	718,000	1,187,000	6,578,000
1910....	3,736,000	1,189,000	695,000	1,291,000	6,911,000
1911....	4,453,000	1,515,000	914,000	1,413,000	8,295,000

*Top and average prices for 1919 were highest on record. Top and average prices for previous years are for the full twelve months.

From 1881 to 1893 average prices in the lamb column are for sheep. In the earlier days hardly enough lambs were marketed to establish quotations, almost everything being aged stock.

ANIMALS IMPORTED.

Following is a statement of the number of horses, cattle and sheep imported to the U. S. for a series of years, for fiscal years ended June 30 by years named:

	Hogs.	Cattle.	Horses.	Sheep.
1905.....	27,855	5,280	186,942	
1906.....	29,010	6,021	240,747

¹Calves included with cattle. ²Disposition of stock not reported. ³Feeders from Lancaster reported for last half of year only.

Note.—This report does not include direct shipments to packers, except when such shipments pass through the stockyards.

We are very much pleased with all features of your Price Current-Grain Reporter. Personally, I like your "Business and Trade Conditions" best.—W. A. Wilson, Scottsville, N. Y.

The Price Current-Grain Reporter solicits signed contributions to its columns on current topics of interest to the grain trade. It also would appreciate criticism of its policy and suggestions to improve its contents.

NUMBER AND VALUE OF HOGS AND SHEEP ON FARMS IN STATES NAMED.

Following is the estimated number of sheep and hogs on the farms of the U. S. on Jan. 1, 1924 and 1925, with estimated value per head and total value on Jan. 1, 1925, as returned by the Bureau of Agricultural Economics (final 000 omitted from number and total value columns):

State.	Swine				Total value. Jan. 1, 1925.	Sheep				Total value. Jan. 1, 1925.
	Number—	1925.	1924.	Value per head—		Number—	1925.	1924.	Value per head—

LIVE STOCK FOR SERIES OF YEARS.

The United States Department of Agriculture's estimates of live stock population of the country on January 1, for forty-two years are given below. Although somewhat inaccurate for the earlier years, the figures are the only record extant of the live stock population up to comparatively recent years and as such are worth preserving:

Years—	Cattle.	Hogs.	Sheep.
1925.....	64,928,000	54,234,000	39,134,000
1924.....	66,506,000	66,130,000	38,300,000
1923.....	67,240,000	68,427,000	37,223,000
1922.....	65,632,000	57,834,000	36,327,000
1921.....	65,587,000	56,097,000	37,452,000

1920.....	67,120,000	59,344,000	39,025,000
1919.....	68,560,000	74,534,000	48,866,000
1918.....	67,422,000	70,978,000	48,603,000
1917.....	64,583,000	75,587,000	49,863,000
1916.....	61,920,000	67,766,000	48,625,000
1915.....	58,329,000	64,618,000	49,956,000
1914.....	56,592,000	58,933,000	49,719,000
1913.....	56,527,000	61,178,000	51,482,000

BUSINESS AND TRADE CONDITIONS

CHART exponents are finding that each week shoves the price index number down, and even those who do not follow curves or charts notice the same recession. It is reported in domestic and foreign business and is particularly noticeable to those firms or individuals dependent upon a fixed income from rather uniform sales.

A consideration in this matter which is so big that it is difficult to grasp in its bearing upon declining prices, is the steady world movement towards a gold standard. Nations establishing gold as the backbone of their monetary system thereby give higher values to their money and lower prices for their commodities. It is usually conceded that an international gold standard is desirable but it is not quite so easy to allocate one's business or personal income to lower prices on salable goods. Neither is it always possible to trace definite results from presumed lower prices which seem to be natural on goods which one has to buy.

The official announcement, therefore, that Great Britain and her wide dependents will adopt the gold standard has excited great interest, one commentator stating that it was easily the feature news of the week. Discussion here of its favorable bearing upon business or of the many issues involved in the application of the gold standard would be impossible in the limited space available. Suffice it to say, that the movement involves many early difficulties offset by the definite assurance that much good both individually and internationally will come to those countries which guarantee their currency systems with gold. It is conceded that never has the world faced monetary problems and evils as serious as those with which it must now contend. Undoubtedly discussion of substitutes for gold as a standard of value will continue, and with increasing insistence. The only thing that could prevent such a development would be comparatively early and measurably complete stabilization of prices. That would seem to be largely out of the question.

The Trade Outlook

Last week's Washington press notices again referred to the considerable attention given by President Coolidge and his cabinet to the business outlook.

Secretary Davis reported that there was an active demand nearly all over the country for building trade workers.

Facts as to increased bank clearings and increased railroad car loadings were introduced into the discussion by other members, and the President was given the impression that the prospects for prosperity are very good.

Business has slowed down somewhat within the month, following the same general seasonal course as during the two years preceding. It will be recalled that early expansion was halted to a considerable extent by the realization during the Spring that production considerably exceeded demand. However, it is believed that there was less over-production in 1924 than in 1923 and an even smaller ratio in 1925. Students of such matters are stating that between now and mid-summer, the trend of business will be largely determined by the crop outlook and agricultural prices. There are only a few industries in which business is termed "poor" and otherwise fundamental conditions are better than at the beginning of the year and for any corresponding period since the close of the war.

Agricultural Land Values

If there is any subject more generally discussed in offices, in the homes or on the streets, than agricultural land values, we do not know it. The farmer has a rather intimate knowledge of land values in his own county and usually gets his money's worth in adding an "eighty" to the old farm. If data were available, it would doubtless show that the sharp and often uncalled-for advance in farm values in boom times was traceable to the outside buyer.

We doubt very much if many farmers carry a capital account item on their books, or in fact we question whether many farmers have a good set of books. This capital account should show the original

THE MAY FIRST ESTIMATES

WARNINGS are being sounded by a good many prominent traders, against over-speculation in wheat due to the bullish note in the May first private estimates and while we are sure the legitimate traders thoroughly understand just what those estimates mean, made thus early in the crop year, and therefore take them for what they are intended to be, great care should and doubtless will be exercised in quoting these estimates to those who are not thus familiar with the whole situation.

cost of the land and the additional investment, such as clearing, drainage, fencing, etc. Then there is the farm operating expense item including machinery, fertilizer, etc. It is doubtless unfair to expect each year to take care of its expenses and earnings from the net value of the year's crops, but an average of several years must do so or the farmer is bankrupt.

In the period ending with 1920, farm prices steadily advanced and much unwise speculation in farm lands resulted. The settling down of farming operations and farm values to the proper basis has been a slow process and we doubt whether a respectable percentage of American farms could be sold today at a profit.

The question of taxation enters into this discussion of land values and many feel that in proportion to its earning possibilities, farm land is over-taxed and that for this reason primarily farm values must come down. Maybe so, but it largely depends upon the farmer's correct understanding of the capital account invested in his farm and the net earnings or loss as ascertained from year to year.

The Farm Situation

Ex-Governor Lowden of Illinois, frequently mentioned as a Presidential possibility, was recently in-

terviewed in connection with the future of agriculture. He is bearish on the farming industry as a whole, predicting disastrous results in the near future, citing the increase of farm bankruptcy; the abandonment of farms; the lack of stabilized markets and the need of co-operation. It is presumed that a man of Mr. Lowden's unquestioned ability knows the facts concerning the cash and future grain markets, and without a full copy of his address to the Newspaper Publishers' Association of New York City, it may be unfair to criticize the Governor for what seems to be in the press notices an unfair prominence given the difficulties of the farm class and sharp criticism of certain other features of the present marketing machinery.

Associated with these factors in the interview at the time of his New York address was the oft-discussed matter of the high prices charged the farmer for his purchases, often coming at times when he is getting low prices for his farm products.

The Governor is first a politician; second a farmer and he has always lent the full weight of his unquestioned ability towards improving farm affairs. It is still our conviction, however, that his opinion is over-pessimistic and that the farmer as a business man, suffers or profits mainly through his own poor or good judgment, a detail of which is discussed above.

Rail Mergers and Rates

Frequent reference is noted, concerning the mergers of various industries, ranging from our great railroad systems down to concerns of lesser importance. In the movement of agricultural products, deserved attention is given freight rates as they may be affected by the several pending railroad mergers.

Before securing popular approval of farming communities and industrial manufacturers, it is proper to learn whether the broad principle of railroad consolidations points towards lowering the cost of transportation or whether it is intended to increase the dividends of stockholders. The Interstate Commerce Commission is wisely conducting a searching investigation into such matters. It is just stated in connection with the Nickel Plate merged with several carriers which the Van Sweringen interests are promoting, that the operating economies will exceed \$4,000,000,000 annually. It is only fair to expect this to be apportioned both to increasing stock dividends and to lowering freight rates. In matters of such basic interest to the entire country, and beyond the hard, cold facts which will be assembled by the Interstate Commerce Commission, is the very considerable factor of public opinion. It would be most unfortunate if such opinion endorsed the matter and to subsequently discover that freight rates on agricultural products, for instance, were either not affected or, through the greater power and rate-adjustment influence of the consolidated railroads, were increased.

The National Industrial Traffic League, in session in Indianapolis last week, adopted a resolution opposing congressional or executive interference with the present freight rate structures. The league objects to the control of such matters by the legislative branch of the Government with its political influences. Irrespective of any merit of proposed rate changes, it is the sense of the league that the administrative body of the Government should have supervisory and corrective authority and that the freight shippers of the country should have representation on any labor board which might be established in conformity with the proposed Howell Barkley bill.

A traveler in several foreign countries enjoying particular advantages in grasping the true economic status of their peoples, has just offered his opinion and suggestions throughout the press of the United States.

He urges the early entrance of Germany into the League of Nations, believing this will bridge over a great gulf which now exists between the allied and German nations. Sitting in the league, Germany would contribute much to the quicker adjustment of world affairs and more particularly the settling down of her own commerce.

This writer refers to Russia as still being the great enigma; not a democracy and certainly militant. If, in the course of the next ten years, this military trend becomes sufficiently dominant Russia's frontiers will carry a potential menace of large proportions against peace and disarmament.

From a strictly commercial standpoint, this reference to Russia reminds the publishers of the PRICE CURRENT-GRAIN REPORTER of the present difficulties in securing dependable Russian data on crop products and exports required in the compilation of the PRICE CURRENT'S 76th Annual Year Book.

REGULATION OF SPECULATION

AS a part of the very natural publicity given the present investigation of the grain futures market by the Department of Agriculture, we have had severe criticism from several of the flour milling papers. The millers of the West were among the first to personally and concertedly object to the violent fluctuations of grain futures in appeals to President Coolidge; to Sec'y Jardine; to Julius Barnes, and others in official or semi-official positions.

In our judgment, much of this criticism misses the mark, centering upon the heavy outside speculation of the public. This class of speculation has always been construed as a balance wheel to the professional and hedging operations on the six grain exchanges in which future operations are conducted on a large scale. It was believed that the world-wide opinion of the probable trend of grain prices through several thousand minds was preferable to the limited speculation which would follow the opinions of only the professional grain trade. The former method has been proven more dependable in establishing a fair market value for cash grain as it moves in domestic channels or was offered for export.

The construction of the present law applying to future trading classifies a speculator in substance as one who is successful in his operations.

If large professional speculators with a great wealth of crop information and allied statistics at hand is courageous enough to sell heavily in the futures market at a time when thousands of smaller speculators are buying, he balances the market and avoids a sharp increase in values at the expense of consumers and foreign importers of grain.

If statistics of the same character seem to justify large purchases on the part of this hypothetical speculator, he correspondingly supports the market and prevents heavy declines at the expense of grain producers, country elevators and other domestic owners of grain.

Officials of the Chicago Board of Trade and other exchanges have always been entirely frank in discussing these matters with the Government representatives, throwing open their records to the most searching investigation, at heavy expense in the compilation of reports and other bookkeeping details.

It may be that the government feels that some further regulation of speculation is needed beyond the Grain Futures Act and if so, the exchanges, with the full and complete information at their command, may be expected to properly supervise the private operations of their membership.

The question before Sec'y Jardine of the department seems to be whether or not the grain markets may properly be used as the expression of the speculative opinions of men of considerable means, whose

business is primarily or entirely the effort to profit by speculative transactions.

As indicative of the volume of this business, official figures in the six leading markets where speculative transactions are made, total for the year 1924, 20,398,595,000 bushels. As indicative of the division in the various grains for the year, the following totals are interesting:

Wheat	11,222,909,000 bushels
Corn	6,215,720,000 bushels
Oats	1,938,321,000 bushels
Rye	935,744,000 bushels
Barley	22,345,000 bushels
Flax	63,556,000 bushels

RADIO NECESSARY EQUIPMENT

THE radio has come to be, in a short space of time, a necessary part of the office equipment of any well-managed elevator. Most country elevators are located in small rural communities where telegraph and telephone communication, although available, is not as quick as it should be. With the various grain exchanges having the markets broadcast, at frequent intervals, the radio offers an opportunity for prompt service which will keep the dealer in close touch with what the markets are doing. A good radio set is a profitable investment and should pay for itself in the saving of telephone and telegraph tolls. Country dealers who wish to know the names of satisfactory outfits for business use can secure this information by writing to the PRICE CURRENT-GRAIN REPORTER.

ON THE "OTHER FELLOW'S" FOOT, NOW

THE DEPARTMENT of Justice, at Washington has begun an investigation concerning coffee, prices on which were boosted and held at a high level in Brazil, in something of the same way, it is proposed to boost and hold up prices of farm products in this country.

The present investigation was of course started in the interest of American coffee drinkers and we are curious to know whether or not the aid of the department can be invoked in the interest of users of wheat and a dozen other products, produced in the United States, if and when the Utopian dream of co-operative marketing shall have reached its ultimate goal and have brought us face to face with a similar situation as to these home-grown commodities.

The shoe is on the "other fellow's" foot just now. What will happen when it is on our own?

SPENDING OUR MONEY FOR PROPAGANDA

THE last session of Congress appropriated \$960,000 for the first year's work under the Purnell bill, the measure which gives increasing aid in the support of state experiment stations.

A number of these state institutions have done and are now doing some very outstanding work in combatting plant and animal pests and diseases, in testing and in growing new varieties of grain and in experimenting with soils and fertilizers, as well as in doing many other things that are for the betterment, both physical and financial, of farmers, stock raisers, poultrymen, etc.

When these state experiment stations, however, undertake a program such as the one outlined by the Colorado institution at Fort Collins, much of which is paternalistic propaganda, we desire to register our humble protest.

That program, according to an announcement just made is as follows:

The causes for success and failure of coöperative farmers' organizations.

What happens to the main Colorado crops while enroute from the farm to the consumer—suggestions for the elimination of extra expense in marketing.

A more extensive survey and analysis of farm business methods similar to those which have been conducted in

WEEKLY STATISTICAL SUMMARY.

The following tabulation is a summary of figures from various statistical exhibits appearing weekly in detail in "The Price Current-Grain Reporter," these figures representing the past week, the preceding week and corresponding time last year, here assembled for ready reference:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Wheat—			
Primary receipts	2,848,000	1,952,000	2,921,000

small sections of the state previously and which have given the farmers very reliable and accurate information for the improvement of their methods.

A more effective method of poultry production under the high-altitude and dry-climate conditions met in Colorado, including the problem of incubation.

The economic use of electricity on the farm and in the farm home as a means of eliminating drudgery and improving the social life of farm communities.

Means of better selection of crops and agricultural practices in high altitudes.

A study of the best system of cropping in certain sections to avoid alkalies and niter problems.

BOOST YOUR HOME TOWN

WE ARE indebted to the Burk Elevator Co. of Decatur, Ind., for an interesting booklet published by the Decatur Industrial Ass'n, entitled "Decatur Can and Will." Community spirit is a wonderful thing and always makes for better business conditions in a rural community in which it is fostered. When business men get together and boost, better business is reflected in the town and the town is a better market place for the farmers.

The latest political move on the part of politicians in North Dakota is an endeavor to make Grand Forks, where the state mill and elevator is located, a terminal market. Terminal markets are not made that way. It will be interesting to read of the plans that are being formulated to try and bring this about.

If you would be classed with progressives, place your announcements in the trade's only weekly, which is always first to get the live, up-to-date news to its readers.

CHICAGO, MAY 6, 1925.

GRAIN TRADE REVIEW

WHILE the condition of the new winter wheat crop has improved as the result of recent rains over practically the entire territory, the indicated crop is considerably short of last year due to extremely heavy losses in acreage, due to the drought and ice covering which prevailed over various parts of the belt. The private crop estimates suggested a yield of around 438,000,000 bus. on the average which compared with the Government's figures of 474,000,000 bus. in April, and 590,000,000 bus. harvested last year. The average condition as shown by the reports of the leading experts is 74.1, compared with 68.7 a month ago, while the abandoned acreage averages 20.7 per cent of the area seeded last fall, leaving 33,466,000 acres for harvest. The loss in area this season is the largest known, with one exception, and under the most favorable conditions from now to harvest it is hardly probable that the crop will come within 100,000,000 bus. of last year's harvest. One private report suggests that on the basis of average yield as applied to the indicated acreage of around 19,000,000 the spring wheat crop will be 245,000,000 bus., or somewhat less than last year's large return. On this basis there is around 675,000,000 bus. of all wheat available for the new crop season, which might suggest 50,000,000 bus. available for export providing consumption remains in 1925-26 at the same level as it has been the past year. Between the outlook for a small yield in the United States which must supply importers needs for July-August and September and a good part of October, and the close adjustment of supply to demand for the old crop, there is a strong probability that the reduced estimates may frighten foreigners into taking liberal quantities of wheat for deferred shipment. At the present time there is no scarcity of supplies of old wheat abroad, but a tight situation seems to be developing in the United States with very little hard winter available for mills or for export, and what little export business is done from now on promises to be in Duluth springs. However, there is only a small quantity of the latter grain available and it would not take much business to clean up the supply at the head of the lakes.

Domestic Export Figures.

Domestic exports of wheat for the first 9 months of the crop year aggregated

234,000,000 bus., indicating clearances for the full year even at the lowest estimate of around 250,000,000 bus., which would be in line with the figures given by conservative statisticians early in the season. The liberal exports promise to result in a carryover smaller than the 100,000,000 bus. of last year. The outlook in the American Northwest at the moment is most favorable with plenty of surface moisture in practically all sections. Seeding is practically completed, and the Government report, when issued in June, is likely to show a high condition. Rains have interfered with seeding to some extent in parts of the Canadian Northwest, but taken as a whole the season in that section is still ahead of normal. Dry weather reports are now coming from parts of Australia and it is hardly probable that recent estimates of an increase of around 1,000,000 acres will be exceeded. Should anything happen to any of the leading exporters besides the United States the 1925-26 season would find a very close adjustment of supplies to demand and might result in establishing wheat around a \$2 per bu. level, as there will be only a small carryover from the old crop. Russia can again be counted out of the exporting column, and may be an importer. The European crop outlook is generally favorable, aside from dry weather in parts of Austria and Hungary, which accounts to some extent for the relatively slow foreign demand for North American wheats of late. Australia continues to export at a heavy rate, while the clearances from North America and Argentina are only fair.

Coarse Grains.

A little export business has been done in corn for about the first time on the crop, and moderate quantities of oats have also been taken. This, with the cleaning up of the May situation here by large deliveries on May contracts, combined with the marked increase in interest in wheat and the higher level of values for that grain, had a decided effect on coarse grains, and they advanced sharply after a small break early in the week, due to belated May liquidation. Argentine exports of corn have become very small, but the movement of the new crop promises to get under way in a week or so, and from then on Europe will not have to depend on the United States or any other country for supplies.

Should a good foreign demand for cash corn develop, it would not take long to make a material reduction in the supply held at terminal markets, especially as stocks are largely held at two points. The deliveries on May contracts went into strong hands and with small reserves in the country, sentiment has become more bullish than of late. Outlook for the new oats crop is generally excellent as the result of early seeding and the rains which have fallen since the grain went into the ground. Domestic cash demand has been relatively slow. Outlook for both corn and oats in Texas is regarded as poor, as the rains came too late.

GRAIN MARKET SUMMARY.

Receipts of wheat, corn and oats at primary markets the past week, with comparisons, follow:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Wheat	2,850,000	3,729,000	3,070,000
Corn	2,295,000	2,042,000	4,756,000
Oats	2,471,000	3,219,000	3,721,000

Combined primary receipts of wheat, corn and oats for the past week and for the season to date, with comparisons, as shown by THE PRICE CURRENT-GRAIN REPORTER:

	1924-25.	1923-24.
Past week.....	7,616,000	11,547,000
Preceding week.....	8,990,000	12,137,000
Since July 1.....	936,275,000	891,458,000

Wheat market fluctuated in a most erratic manner the past week within a wide range, breaking early on rains over the Southwest only to advance 14¢@17¢ from the low point and close well toward the top with net gains of 10¢@11¢. Heavy profit taking developed on the extreme upturn, but the bulge was well held. Foreign demand

showed no improvement despite the prospect of a small winter wheat crop in this country. Government report which will be given to the trade later in the week is expected to suggest a larger yield than the private estimates, as it was compiled to May 1, and the crop has had a chance to respond to the rains which fell late in April.

Corn market was unsettled, being depressed by scattered liquidation early on the week only to rally later when heavy deliveries on May contracts passed into strong hands, and then break again toward the last closing 1½¢@2¼¢ higher with July showing the most strength. Weather the latter part of the week was too cool for planting, and some damage was done in parts of the Southwest by freezing temperatures. No improvement was noted in the cash demand after the May deliveries were made. A little export business was put through at the seaboard but it was at a very low price basis.

Oats held within a range of around 3¢, and showed moderate strength in the face of favorable crop reports, closing ¼¢@1¼¢ higher with May leading, the latter delivery being only ¾¢ under July at the last. Trade was largely of a local character or in spreading between the various deliveries. Export business had but little effect. Rye closed 2½¢@5¼¢ higher, with May leading. Liberal deliveries were made on May contracts and grain is being moved from Duluth to Chicago to fill contracts. Range of prices the past week follows:

	High.	Low.	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Wheat—					
May	\$1.61½	\$1.44½	\$1.59¼	\$1.48½	\$1.03½

Season	229,932,000	205,235,000

WORLD'S OATS EXPORTS.

Exports of oats last week, compared with the previous week a year ago, as reported to the Broomhall service and forwarded to this paper:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
American	1,195,000	500,000	256,000
Argentine	77,000	627,000	840,000
Others
Total	1,272,000	1,172,000	1,096,000

Exports of oats since Aug. 1, 1924, and comparisons for three years:

	1924-25.	1923-24.	1922-23.
American	19,987,000	16,930,000	28,208,000
Argentine	38,145,000	28,093,000	19,228,000
Russian	180,000
Others	1,714,000	1,070,000	3,760,000
Total	59,846,000	46,273,000	51,886,000
Season	67,500,000	65,765,000

CANADIAN GRAIN IN U. S.

The following table exhibits the quantities of bonded grain in the United States reported last week compared with previous week and one year ago:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Wheat	7,680,000	7,019,000	11,052,000
Oats	2,009,000	2,152,000	732,000
Rye	124,000	527,000
Barley	2,096,000	2,262,000	140,000

FUTURE CONTRACTS---THEIR USE

Address Before the Western Grain Dealers' Assn. at Des Moines, Ia.

By J. M. MEHL.

AN interesting talk was made at the annual meeting of the Western Grain Dealers' Ass'n held at Des Moines recently by J. M. Mehl, Federal Grain Exchange Supervisor of Chicago on the "Legitimate Use of Trading in Future Contracts," and was as follows:

The first and most important link in the present system of grain marketing is the country dealer. I feel quite safe in making that statement here. At the same time, I doubt whether the real significance of the situation is at all times fully appreciated, even by the dealers themselves.

The country grain dealer has a larger and more direct responsibility to the producer than most any other marketing agency. By country dealer I mean and include every local agency, co-operative as well as independent, that undertakes the business of receiving and handling grain at the local shipping point. Unless it is assembled properly and economically in the country and started to the right market at the right time, the farmer can not get out of his grain all that he is entitled to get, no matter by whom or by what means it is handled thereafter.

What I want to discuss with you today, in particular, is the matter of hedging in the futures market and I shall try to tell you something about the Grain Futures Act and the Grain Futures Administration of the Department of Agriculture.

The Grain Futures Act is better known to you, no doubt, as the Capper-Tincher Law. I was going to say "more popularly known" and then I remembered that this might not be strictly accurate, considering that the law in its essential parts went twice to the U. S. Supreme Court before being accepted. Now, that it has been accepted and is in effective operation, you naturally want to know something about it and about its application to the recent disturbance in the futures market.

I know of no federal law in regard to which there is greater misunderstanding and misapprehension than the Grain Futures Act, considering the columns upon columns of editorial matter that have been written about it. That is the trouble. Too much has been written and said about it—too much that isn't so. We don't blame anyone for it. This inevitably follows anything and everything of controversial nature. But, do you remember about a year ago when the country was being told, in substance, that the Grain Futures Act had frozen a coat of thick ice over the speculative market and that this was responsible for the then low price of wheat? That the speculator had become offended at our government and had picked up his toys and gone to Winnipeg? Well, we have learned several things since then. We have learned, for example, that the wheat market can move both up and down without any apparent great difficulty. We are also pretty thoroughly convinced that if the speculator did pick up and go to Canada he was not so angry but that he retained his citizenship in this country and managed somehow to "keep the home fires burning" in Chicago as well as in Winnipeg. As a matter of fact our records show that the so-called large speculators were in our market all the time. Their accounts were reported to us consistently during the entire period. If there was any ice on the speculative market it is pretty well out now. I know some folks, and you know some too, who got their feet wet in the spring thaw.

Speculation Quickens Competition.

You will please not misunderstand me. I am not speaking disparagingly of the speculator. Every man who dares reach out beyond the confines of his paternal roof to touch new fields and develop new resources is a speculator. The pioneer who dared push across the Ohio and the Mississippi rivers into Iowa and Illinois was a speculator, in a sense. Without the speculator, willing to risk some of his present wealth to gain a possible larger share, industry may easily become a stagnant pool. Within reasonable limitations, I believe that speculation in the grain markets whets the intellect and quickens competition among those charged with the business of distributing, and indirectly reflects some benefit both to producer and consumer. But let no one suggest that speculation "gone wild" is a good thing for the grain trade—any more so than excessive speculation in land, following the war, was good for the Iowa farmer. And let no one suggest again that large volume speculation in the grain markets is always preponderant on the buying side and that it always has the effect of pushing prices upward.

On March 13, this year, there was traded in Chicago wheat futures the largest volume for a single day for which records are available—149 millions in all wheat futures and in all grain futures over 256 million bushels. On that day May wheat fluctuated through a range of 13½ cents and closed 15 cents below the previous close. A similar situation occurred on March 17th when 126 million bushels of wheat futures were sold and the price dropped 11 cents from the previous close. The next day 72 million bushels were sold, and the market went back up 9 cents. Now, it would be equally unfair on my

part if I tried to leave the impression that large volume trading in futures has a tendency to force prices down rather than up. The point is that the price moves up or down accordingly as there is a preponderance of buying orders on the one hand or of selling orders on the other. To the extent that the market is unable to absorb one or the other at any one time, to that extent will fluctuations become more violent and of wider range.

Commencing about the middle of March, our office was flooded with complaints and charges that the markets were being manipulated and that the Grain Futures Act was not being enforced. Many seemed to be under the impression that the act placed a limitation upon the amount of trading that any person or firm might do, and that this limitation was being violated. This was partially the result of careless statements that have persisted in circulating for two years now, to the effect that no person or firm may be long or short at any one time in excess of one-half million bushels. The only possible foundation for such rumors is the fact that under authority of the Secretary's Regulations members of the Clearing Association of the Chicago Board of Trade must report specially, by secret symbol or number, all customers on their books who are long or short at any one time as much as 500,000 bushels of any one future in any one grain, except rye futures where the amount is fixed at 200,000 bushels. The amount varies in different markets. In Kansas City and St. Louis the amount is 250,000 bushels for all grains. The Grain Futures Act does not place any limitation upon the amount of trading that may be done by any person nor does it limit trading to any particular class of persons. The Grain Futures Administration is without present authority to stop any one from trading in any amount, except upon proof that such a one is engaged in unlawful manipulation. It does not require that all trading in grain futures be conducted on what are known as "contract markets," that is, boards of trade and grain exchanges that have been licensed for the purpose by the Secretary of Agriculture. There are ten such "contract markets" at the present time, among them the markets at Chicago, Minneapolis, Duluth, Kansas City, St. Louis, Milwaukee, Baltimore, San Francisco and Los Angeles. Chicago is by far the largest, handling approximately 90 per cent of all the grain futures business of the ten markets combined.

Future Trading Under Certain Conditions.

If there is no limit upon the amount of trading that one may do and the Government is without authority to stop it when it becomes excessive to the extent of running price down eleven cents one day and running it back up ten cents the next, you may well ask just what is the law good for and what can its effect be to prevent similar occurrences. The answer is that unless these rapid and violent price changes are the result of manipulation, or of false or misleading statements and reports, the law is without any effect, except as an influence in supporting the boards of trade in any remedial measures they may wish to apply. However, it should be remembered that the theory of the law is that the boards of trade and grain exchanges themselves are better able and are in a better position to prevent manipulation and unwarranted fluctuations than any one else, and to that end the Government through the Grain Futures Administration licenses certain of the boards of trade as contract markets and gives them the right to carry on trading in grain futures, when and only so long as they meet certain conditions. Among these conditions are (1) "When the governing board thereof provides for the prevention of dissemination by the board or any member thereof, of false or misleading or knowingly inaccurate reports concerning crop or market information or conditions that affect or tend to affect the price of grain in interstate commerce."

(2) "When the governing board thereof provides for the prevention of manipulation of prices or the cornering of any grain by the dealers or operators on such board." (Paragraphs c & d, Sec. 5 of Act). So you will see that the boards of trade are still their own policemen in these matters, as they ought to be, with this difference, that they have no choice in the matter. They must do a good job of policing and must expel from the market and deny the privilege of trading to those found guilty, under penalty of losing their own right to continue as contract markets and carry on trade in futures at all.

To Investigate Manipulation.

The Grain Futures Administration, at the direction of the Secretary of Agriculture, was ordered to investigate the recent charges of manipulation in the wheat market. It has gone carefully into the books of board of trade members, and with the aid of the daily reports required to be filed, has traced to original sources a large proportion of the trading which took place during the time when manipulation was supposed to have occurred. We hope to determine definitely whether the recent disturbance has been the result of manipulation and deliberate raiding of the market by powerful groups or whether it just happened as the result of the public generally becoming inoculated with a speculative craze and losing all sense of direction. I sincerely hope, and know you do, that regardless of cause some sensible means will be found to prevent these violent and wide price swings, and that it may be done without further legislation and without destroying the value of the futures market for hedging purposes.

In concluding what I have to say about

the Grain Futures Act I want to add that one of the chief purposes of the law is to enable a careful study of the entire system of future trading so that underlying causes of certain evils may be understood and the way pointed to correction and improvement without destroying what is good. The work of administration is bringing to light much valuable experience and reliable data on a subject that always has been clothed in mystery. Gradually the trade is learning to appreciate that it has something to gain and nothing to lose in letting the public in on just what takes place in the grain markets. American business succeeds best when it is conducted openly, and its internal parts exposed to public view. The grain business is no exception.

Now, getting back to what I came to talk about, or rather, what I came to hear you talk about, the subject of hedging. We are not interested at this time, I take it, in anything but the strictly economic side of future trading. With the fellow who occasionally starts hedging and winds up by losing his business and home in a purely speculative transaction we have no concern. What we want to know is whether the country grain dealer can use the futures market to narrow his risk, and if so, what is the best policy to pursue. On this question I want you to know I have no new theories to expound and no old ones to urge upon you. There can be no such thing as the laying down of definite rules for hedging. One person will follow one plan and succeed where six others may try to follow the same plan and fail. But I am wondering if out of the practical experience of a considerable number of country operators and others we might not be able to segregate certain fundamentals, or at least be able to describe certain conditions that must be considered and certain danger signals that must be observed.

From a purely theoretical standpoint, there should be some rather definite and tangible advantages in hedging certain classes of country purchases, providing, of course, the futures market is functioning normally in relation to cash grain. For example, the country dealer is required to buy grain in various positions and under most difficult conditions. He must buy grain currently as delivered to him from day to day. Competition and trade custom forces him to buy grain also for deferred delivery, delivery periods ranging all the way from five days to ninety days. At the time of making the latter kind of purchases he frequently does not know just what grade or quality will be delivered to him and has no means of determining what markets may at the time be most favorable for its sale. If he does not hedge his purchases in the futures market he is practically forced to choose between assuming a large speculative risk or of confining himself to the acceptance of "on track" or "to arrive" bids. The latter limits his choice of markets and may force him to ship to one market which at the time of actual shipment might be sold to much better advantage in some other market. In filling sales with grain other than of the grade sold he is subjected to discounts imposed under conditions favoring the purchaser. On the whole, country conditions should favor the sale of grain by sample on competitive bidding where buyers may examine and discover any premium qualities. It would seem that if the practice of hedging really furnishes insurance against loss through price fluctuation, the country dealers could be expected to hedge their purchases more consistently in the futures markets, and either let their cash grain run to market on consignment or commit it to sale "on track" or "to arrive" only when there is a known price advantage is so doing.

Is Hedging Advantageous?

Now, several questions immediately present themselves. (1) Does the futures market really offer the country dealers the same opportunity for hedging that it does those operating in the terminal markets? (2) Does the country dealer know as much about the technic of hedging as he ought to know? (3) Are the advantages of hedging really brought down to the country dealer in the form of "to arrive" or "on track" bids? In other words, is some one else doing the hedging for him who is possibly in a better position to do it than he is himself.

I would like to hear you men discuss in your own way these and related questions, and especially would I like to know whether you think the matter is of sufficient interest to the country dealer to justify some special study, would it be worth while, for example, to try to bring together the experience of others and attempt to show by concrete example just what is involved. To show where the country dealer is at fault, if any, in the way he does his hedging or whether there may be some inherent difficulties that can be brought out and remedies suggested. We know, of course, there are times when the futures fail to maintain a proper parity and relationship to cash grain prices, and the value of futures is partially if not wholly destroyed for hedging purposes. Can we get at some fundamentals and try to discover some means whereby the futures markets can be made to serve better the purposes and requirements of the country dealer and, if possible, relieve him of some of the speculative load that tends to make his life miserable.

There has been a lot of loose talk about the country dealer speculating in cash grain and losing his profits that way. I am satisfied that the average country dealer does not want to speculate in cash grain if he can help it. He wants to run his business in a way to assume the least possible risk. He has the same right to

speculate as any one else, but he can not mix his speculative dealing with his cash grain business and expect to succeed in either one. The least he can do is to keep the two separate so as to know which is profitable and which is not. I am not convinced that he wants to run his business that way.

Our office has no desire to undertake any new work along the lines suggested unless there is some definite, practical and constructive object in view and only then if it can be done with the co-operation and assistance of the several state grain dealers' associations, both farmers and independent, and the grain trade as a whole. On the other hand we want you to feel that the Grain Futures Administration has a friendly and human interest in your problems and within reasonable limitations will try to assist in their solution.

CORN IN PRIMARY MARKETS.

Receipts of corn last week at 14 primary markets, compared with the corresponding week last year and also for the period beginning Nov. 1 to May 2, (final 000 omitted):

	May2, 1925.	May3, 1924.	May2, 1924-25.	May3, 1923-24.
Chicago	877	1,486	51,181	59,482
Sioux City	30	192	3,144	5,813

Dec.63½	.49½	.50	.49½	.49½	1.29

U. S. GRAIN IN CANADA.

The Canadian Bureau of Statistics reports the following amount of grain in store in Canada on Apr. 24:

	Apr. 24, 1925.	Apr. 17, 1925.	Apr. 25, 1924.
Wheat	1,023,590	1,126,577	329,641
Oats	1,896,849	1,642,044
Barley	132,298	140,632
Rye	3,426,113	2,934,402	315,562
Corn	970,062	962,093	67,191
Total, bus.	7,448,912	6,805,748	715,394

A decrease of 2,284,000 acres is reported in the Brazilian corn acreage. The land planted to corn in 1924-25 is estimated at 6,178,000 acres against 8,462,000 harvested in 1923-24.

BRITISH WHEAT NEEDS

By JACK BROOKS.

England Will Need 50,000,000 Hundred-weight in Six Months—Will be a Bull Factor in the Market.

LONDON, Apr. 25.—Although American price fluctuation in wheat has kept the trade more or less on the jump here the past week or two no real control seems to be exerted either by New York or Chicago on spot prices, here present values for No. 2 red winter (Liverpool cargo prices) being \$3.10 per 100 pounds. A week ago the spot price was \$2.95. Red winter futures are now \$3 compared with \$2.72 a week back. The milling trade has been able to get a good mixture of imported wheats at such prices as to allow a fair profit on "Town Household" flour sold here at \$6 per bag, cash on delivery.

Market statistics show that up to Easter the sales of British wheat here total 16,500,000 hundredweights, thus leaving less than 12,000,000 hundredweights from the 28,000,000 hundredweights crop, to which can be added 2,000,000 hundredweights floating reserve. This 13,000,000 must last until the end of August. Between now and the end of August the nation's needs in wheat may be placed at around 60,000,000 hundredweights. With around 12,000,000 hundredweights available locally some 50,000,000 hundredweights will need to be imported. It is estimated that there are some 11,500,000 on the high seas bound for Britain. So there still remains around 39,000,000 hundredweights of wheat to be purchased this season from countries that can guarantee delivery within the next six months. The Times says that this last condition really controls the situation and makes for market recovery far more than any American crop reports. The country during the period Jan. 1 to Apr. 1 imported 1,181,000 tons of wheat as compared with 1,325,000 tons in the same quarter last year. The March bear raid on prices was thus accomplished in circumstances rendering reaction almost inevitable. When the collapse came the pressure on sale of fine quality wheat undermined the entire market. London wheat prices this week-end average \$3.60 per hundredweight for Canadian best and \$3.40 for Argentine. Early in March Canadian best was \$4.50 and Argentine \$4.15 per hundredweight. These prices are still trending downward. Good Canadian flour prices show a rise of five or six cents per bag of 140 pounds on the week, and the same with All English. Town household remains steady at just over \$6.

Price comparisons of No. 2 red winter wheat (Liverpool cargo prices) for the past three months show that the first week of February No. 2 realized \$3.92 per 100 pounds for spot and \$3.72 for futures, as against \$3.10 spot and \$3 futures this week. Around 90 per cent of the total offerings here of maize, better known in America as Indian corn, are from the Argentine and the prevailing average price just now is \$2.28 per hundredweight. Australian maize is fetching around \$2.32 and some good Indian is finding buyers at nearly \$2.40 per hundredweight. Average quality maize-meal is worth here today \$2.56. At the beginning of the year it fetched around \$3.05. "Gluten feed is now worth \$2.53 per hundredweight. Imports of maize for March totaled 1,319,000 hundredweights and these have not yet been fully absorbed by the market.

BOOK REVIEW.

"The Agrarian Movement in North Dakota" is the title of a book that has recently been issued by the Johns Hopkins Press of Baltimore, Md.

Material gathered and written by Paul R. Fossum, Ph.D., instructor in economics and social science at Wesleyan University, the book deals with the agrarian movement as it has evidenced itself in the economic and political life of the people of the Northwest from the year about 1859 to the

present date. It reviews early rumblings of farmers' co-operative movements in building elevators, the rise of the Non-Partisan League, and general tendencies in public ownership of industries, besides presenting a preliminary survey leading to conditions, and numerous graphs and maps.

SUSPENDS DUTY ON U. S. CORN.

Import duties on American corn have been suspended by the Mexican government for a period of two months beginning Apr. 27.

The standard tariff rate imposed by Mexican customs on imports of corn has been about 7c an American bushel.

Consul General Weddell, at Mexico City, reported to the State Department that the duties had been suspended by executive decree issued April 27. No details were given in the brief message.

Officials are inclined to believe that Mexico's corn crops have not produced the quantities of that product needed for internal requirements.

A NORTH DAKOTA ELEVATOR.

The country elevators of North Dakota have had a better year the past season than for sometime. This was evidenced by the attendance at the Farmers' Grain Dealers' Convention held at Bismarck, and the report of the secretary showing an increase in membership. North Dakota has many fine country elevators and we show in the accompanying illustration the plant of the Farmers' Coop. Elevator Co. at Noonan. This company was organized in 1909 and at that time erected an elevator with a capacity of 23,000 bushels. In 1916, the present manager, C. O. Larson, took charge and the business has been conducted by him in a most successful way. In 1919, it was decided to wreck the old elevator and build on the same site, a modern 40,000 bushel plant which is shown herewith.

The building and equipment represent an outlay of more than \$36,000. The elevator has five cleaners, a car puller, four legs, and an eight-bushel automatic scale. The power plant is located under the office and consists of a 25-h.p. engine. One of the features of the plant is a modern office with rooms for a book-keeper, directors, and the public. It goes without saying that Mr. Larson is an efficient manager for, since he has

had charge of the plant, it has earned \$111,000, and the last semi-annual statement as of Dec. 31, 1924, showed a profit during the seven months of the fiscal year of \$19,525, less depreciation.

A country elevator business will not run itself. One of the first requisites is to have a modern well arranged elevator with the necessary equipment for preparing the grain handled in a merchantable condition. This business has shown the earnings it has without the aid of side lines.

WEEKLY CROP REPORT NO. 4.

The condition of the grain crops in the Northwest states, Minnesota, North Dakota, South Dakota and Montana, is extremely satisfactory. Exceptional spring weather has continued and outside of a few local districts, seeding and other farm work have gone ahead without interruption.

There are a few spots in South Dakota where rains are needed, while in Northwestern North Dakota the ground has been too wet. These conditions, however, are only local.

The crops are now from two to three weeks earlier than an average year. With favorable growing weather, they should be in condition to withstand the usual hot winds of July. The seeding of wheat is practically completed and coarse grain will be finished within a short time.

In the southern districts farmers have started corn planting. With favorable weather it will be general next week. There is apparently a sufficient amount of good seed for all requirements.

A slight decrease in the durum acreage is reported in some sections of North Dakota, but in South Dakota durum will probably show an increase.

There have been good rains during the past week which have put the ground in shape for new breaking. This land will be used for flax. While it is too early to estimate the flax acreage, indications point to an increase over last season.

With the exception of winter wheat, the state of Montana has the best crop conditions in a number of years. There has been plenty of moisture, which is so necessary in that territory.

We believe that present prospects for the Northwestern crops could hardly be more promising.—*The Van Dusen Harrington Co., by W. H. Hudson, Apr. 29.*

FARMERS CO-OPERATIVE ELEVATOR AT NOONAN, N. D.

CANADIAN WHEAT ACREAGE.

Estimates of Canadian wheat acreage for 1925 are premature. The area over seed by the middle of May is not easy to measure in the last week of April. The first weekly crop report of the Canadian Pacific Railway of wheat sowings, according to its preliminary figures, indicate that Manitoba will sow about 2,643,000 acres this year; Saskatchewan, 8,555,183, and Alberta 2,721,689, making a total area of 13,919,872, which compares with 14,153,905 in 1924. Saskatchewan is the only province to show an increased acreage this year. New breaking and summer fallow in that Province remain about the same as last year. Fall plowing, however, increased, mounting to 2,838,454, compared with 483,128 in 1924.

The Provincial Department of Agriculture of Alberta says there will be very little increase in Alberta acreage to wheat. In the Southeastern districts there will be a reduction of wheat acreage. In the irrigated districts surrounding Lethbridge the farmers are giving their attention to the planting of sugar beets in preparation for the opening of the new sugar beet factory, and there are now upward of 6,000 acres ready for this crop. Greater attention is also being given throughout the South to corn growing, and the acreage of this crop will show a considerable increase over last year.

Greater acreage than ever will be in corn in southern Alberta the coming season, it is reported. Last year the acreage in the southern part of the province was about 50,000 acres and it is expected this will be doubled.

VISIBLE SUPPLY OF GRAIN.

Following is the visible supply of wheat, corn and oats by weeks (final 00 omitted), with comparisons:

SUMMER PACKING RECORD

Summary of Packing Operations in the United States for Summer Season 1924 and 1923.

OWING to the numerous requests and demands on the packing houses by the Government bureaus and commissions for official information of one sort or another, it has become somewhat more difficult for us to obtain information promptly on which to base the following calculations. However, the data finally has been received and compiled. THE PRICE CURRENT-GRAIN REPORTER desires to hereby sincerely thank all who sent information for their patience and cooperation.

SUMMER PACKING IN THE WEST.

Number of hogs packed in the West during the summer season, March 1 to November 1, 1924:

	1924	1923
Chicago	4,386,900	5,236,828
Kansas City	2,034,162	2,366,462
South Omaha	1,937,717	1,694,781
St. Louis	2,209,004	2,453,407
South St. Joseph	849,167	1,103,630
Indianapolis	895,444	1,103,379
Cudahy	446,421	580,521
Milwaukee	333,951	414,270

GENERAL PACKING SUMMARY.

Packing operations in the West during the summer of 1924 compared with the summer of preceding year in leading exhibits, as follows:

	1924	1923
No. hogs killed	24,458,600	25,529,000
Decrease	1,070,400
Ave. live wt., lbs.	242.82	241.04
Increase	1.78
Av. yield lard, lbs.	38.61	37.58
Increase	1.03
Percentage of lard	15.90	15.60
Increase	.30
Cost, lv. hogs, cwt.	\$7.80	\$7.42
Increase	.38
Total live wt., lbs.	5,939,037,452	6,152,489,000
Decrease	213,451,548
Gr. mts. made, lbs.	3,313,982,938	3,433,089,000
Decrease	119,106,102

Lard made, lbs.	944,346,546	959,380,000
Decrease	15,033,454
Total product, lbs.	4,258,329,444	4,392,469,000
Decrease	134,139,556
Total cost of hogs	463,244,921	453,297,000
Increase	9,947,921
M. pork made, bls.	7,327	16,720
Decrease	9,393
Other pk. made, bls.	500,214	300,600
Increase	199,614
Total pk. made, bls.	507,541	317,320
Increase	190,221

WESTERN STOCKS, NOV. 1, 1924.

A comparative statement of stocks of hog products in the West on November 1, 1924, is shown in the following:

	1924	1923
Sides, lbs.	*76,302,759	*81,416,000
Shoulders, lbs.	15,795,802	13,594,000
Hams, lbs.	132,351,126	162,724,000
Other meats, lbs.	28,326,476	53,139,000
Total meats	252,776,163	310,873,000
Pork in bbls., lbs.	3,438,050	6,040,000
Meats and pork	256,214,213	316,913,000
Lard, lbs.	23,012,795	29,955,000
Meat and lard	279,227,008	346,868,000

*Includes D. S. bellies.

The Bureau of Agricultural Economics reported all stocks of hog products in store on Nov. 1, 1924, exclusive of frozen meats, trimming and offals, as follows, in pounds:

	1924	1923
D. S., cured	35,802,000	43,972,000
In process of cure	46,094,000	64,794,000
Pickled, cured	108,414,000	115,126,000
In process of cure	177,102,000	209,532,000
Total meats	367,412,000	433,424,000
Lard	31,566,000	37,489,000
Total products	398,978,000	470,913,000

PORK PACKING IN THE EAST.

Following is a statement of packing operations in the East, compiled from returns made to THE PRICE CURRENT-GRAIN REPORTER for the summer seasons of 1924 and 1923:

	1924	1923
Boston, Mass.	519,752	657,970
Worcester	70,699	72,620

NORTH AFRICAN CROP REPORT.

A preliminary estimate of the Algerian wheat acreage received by the United States Department of Agriculture from the International Institute of Agriculture at Rome, together with estimates of French Morocco and Tunis, brings the total of the three North African countries reported to date up to 7,570,000 acres against 6,920,000 acres

for the same countries last year, an increase of 650,000 acres.

The Algerian estimate of 3,407,000 acres for the current crop is slightly below the estimate of 3,480,000 acres for the area harvested last year. Increases, however, have been reported for both French Morocco and Tunis which more than offset the decrease in Algeria.

Harvesting in these countries is now beginning and latest reports of conditions are generally favorable. In some districts of Algeria the effects of the drought remain, but in most sections conditions are satisfactory. The conditions in Tunis and Morocco are average. Although it is too early to forecast production, it may be safely assumed that, barring unusual circumstances, the outturn will be considerably in excess of last year.

The barley acreage of Algeria amounts to 3,105,000 as compared with 3,053,000 acres harvested in 1924.

CASH PRICES OF LARD.

Following is the monthly range of cash prices of contract lard at Chicago for a series of years (fractional $\frac{1}{2}$ c omitted):

The Letter Box

Wheat Presents an Improved Condition.

Price Current-Grain Reporter: A drought started early in the year covering a large part of the grain producing sections of our country. This condition has recently been alleviated by rains in many places; on the other hand the writer has never seen Illinois bedecked with a more wonderful dress of brilliant green verdure than one sees today. Present condition of growing oats could not be improved upon, even such wheat fields as were partly winter killed, under the influence of sunshine and moisture are stooling out and presenting an improved appearance. During April the Illinois thermometers had to race up and down in the tubes from the thirties to the nineties. Calm, beautiful days alternated with fierce tornadoes and already two baby earthquakes.

Adventurous and speculative spirits who wish to tackle the grain markets have all the thrills they might hope for, while the more conservative are content to take refuge in the shadows of the tall timber. However much one may deplore the wide swings in the grain markets, knowing that same prevent the orderly marketing of grain, it does appear that these wide variations in grain prices are likely to continue until the amount of grain raised this crop season is more nearly known.

Present prices for oats have finally met favorable consideration in the eyes of foreign buyers, so that we now have both a foreign as well as a domestic demand tugging away at our oat bins, with the natural result that both the visible and invisible stocks of oats are reducing in a fairly satisfactory manner.—H. I. Baldwin & Co., Decatur, Ill., May 2.

Indiana Grain Dealers' Convention.

Price Current-Grain Reporter: I have just returned from a trip over the northern part of the state in connection with President E. K. Sowash. We visited many dealers, secured half a dozen applications for membership. We visited Michigan City, and with Mr. W. K. Greenbaum, the secretary of the Michigan City Chamber of Commerce, outlined the program for our convention which is to be held there June 25 and 26, headquarters at the Spaulding hotel.

We were greatly pleased with the hotel and the general situation and believe we have made a wise selection of that place for our convention.

In addition to the general plan for the convention and the entertainment of the guests, we are expected to attend the Rotary luncheon at the Spaulding hotel at 12 o'clock the 25th, and some of our grain dealers will be expected to address the club.

We will report progress in the development of our program, but in the meantime we submit an outline of the general entertainment features, and as noted, special attention will be given to the entertainment of the ladies, so all who attend are expected to bring their ladies. We might say, for those who have not heretofore visited Michigan City, they will be greatly pleased with this effort, since there are no other places in the state that afford better facilities for the entertainment of visitors. This relates to both the natural scenery and the hospitable attitude of the people as well.

The following is the outline of the public program as contemplated:

TENTATIVE PROGRAM.

THE INDIANA GRAIN DEALERS' ASSOCIATION CONVENTION.

Michigan City, Ind., Thursday, June 25, and Friday, June 26.

The arrangement of business sessions and program for 1925 convention has been especially designed to provide good entertainment and to care for the ladies.

Convention headquarters—Spaulding Hotel, Thursday, June 25.

Morning—Registration. Badges to be provided by the Grain Dealers' National Mutual Fire Insurance Company.

11:00 A. M., to 12:00 M.—Session of the Board of Managers.

12:00 M. to 1:30 P. M.—Luncheon with the Rotary Club of Michigan City. Remarks by E. K. Sowash, President, Indiana Grain Dealers' Association. Address to be made by some other speaker representing the grain dealers.

2:00 to 3:30 P. M.—Convention Session—Spaulding Hotel.

3:45 P. M.—Auto Tour of the Dunes. Evening—Dance at the Big Lake View Casino.

Friday, June 26.—8:30 A. M.—Visit to State Prison.

10:00 A. M.—Business Session—Spaulding Hotel.

2:00 P. M.—Exhibition Drill by Coast Guard Crew. Boat Trip on Lake Michigan.—Chas. B. Riley, Sec'y.

"COST OF PRODUCTION, PLUS."

Uniting of all middle western farm organizations to work in common for a plan of insuring a profit on farm products will be attempted at a meeting in Des Moines, Ia., May 12.

Milo Reno, president of the Iowa Farmers' Union, has issued invitations to various farm organizations following the authorization of such an attempt by the directors of the Farm Coöperative and Educational Union of America in Kansas City last month.

This invitation to attend the meeting here has been extended to Iowa, Minnesota, Missouri and Nebraska Farm Bureau federations, the Iowa State grange, the Indiana Agricultural association, the Oklahoma and Washington Wheat Growers' associations, the Oregon Coöperative Grain Growers' association, the Corn Belt Meat Producers' association and to a score of other farm groups including various branches of the National Board of Farm Organizations.

Reno's letter of invitation admits the difficulties of merging different groups of producers into one farm organization because of the disposition to retain their organized identity that they have labored to establish. The intent of the conference is to coordinate these different groups by having them agree upon some fundamental principle of solving the farmers' problems.

This solution he states is admitted by every organized farm group to be "cost of production plus a profit," and all organizations are to meet upon an equal footing to consider needed legislation, organization, transportation and other relative problems which make up the whole.

TO ALSO HANDLE COARSE GRAINS.

At the quarterly meeting of the South Dakota Wheat Growers' Association here recently, directors voted to give the association the right to handle all coarse grains, establish an organization bureau, to increase the council of agriculture and to aid in securing more practical farm legislation.

The adding of coarse grains will allow all coöperative elevators incorporated under the co-operative marketing act the privilege of joining the association.

It will also allow the association to better coöperate with the farmers' elevators through the handling of larger crops.

It was said that the handling of coarse grains would come only in locations where the volume of business warrants. In other words, when farmers combine to market their whole crop through the association then the handling of all grains would be practical.

If you are looking for paying results in business, have the confidence to advertise.

CASH PRICES FOR GRAIN.

preliminary								

*Figures include the crops harvested during the calendar year in the northern hemisphere and the succeeding harvest in the southern hemisphere except where otherwise noted.

•Harvest year beginning about August 1.

•Unofficial estimates place the China crop at 70,219 million pounds in 1917; 52,788 million in 1920 and 50,056 million in 1923.

•These figures are a revision of the estimated world total as prepared by the U. S. Dept. of Agriculture, Bureau of Economics. The change is caused by a revision of the Java and Madura figures based on official information recently received to the percentage of cleaned rice obtained from a certain amount of rough rice or "paddy" in that country.

RANGE OF CONTRACT GRAIN PRICES.

PERCENTAGE OF CROPS MARKETED.

The recent drop in the grain markets makes the accompanying chart of peculiar interest. Drawn from figures supplied by W. F. Callander, statistician for the U. S. Bureau of Agricultural Economics, it shows the percentage of total grain crops marketed during each month of the year by farmers, as based upon a ten-year average. As a general rule, therefore, farmers market most of their wheat during the summer and autumn months. Farm marketing of oats follows a similar trend. For example,

ing in the disposal of nearly 50 per cent of the corn crop.

It would seem that farmers were not very heavy losers from the sharp fall in grain prices during March, which month ordinarily sees but 7.9 per cent of corn, 3.6 per cent of wheat, and 5.5 per cent of oats sold from farms. Lest it be thought, however, that marketings of last year's crops may have followed a different trend from the average, Bureau of Agricultural Economics figures show that the trend was apparently normal. The six months ending in December, for example, saw 77.1 per cent of the year's wheat crop marketed from

FARMERS NOT SUFFERERS FROM RECENT TUMBLE IN GRAIN PRICES

76.2 per cent of wheat, on the average, is sold from farms during the six months commencing in July. This same period normally witnesses the marketing of 64.8 per cent of the oats crop. The corn marketing situation is somewhat different,—November, December, January and February being the heavy selling months for farmers, this period as a rule result-

farms as compared with the 76.2 per cent ten-year average. Of the oats crop, 64.7 per cent was marketed between July and January.

These figures bear out the recent assumptions of commentators that speculators, not farmers, have been the chief losers from lower grain prices. As a matter of fact, it was speculation which boosted prices over-high in the first place, for those in a position best to know declare that fundamental conditions warranted neither the extremely high prices to which grains soared nor the much lower levels to which they have subsequently fallen, both positions being extreme.

MILLING AND OTHER USES OF CORN.

Bushels of corn ground by the wet process:

1906	..36,408,128	1916	..63,306,933
1907	..39,221,321	1917	..59,423,595
1908	..34,774,000	1918	..73,703,176
1909	..38,861,877	1919	..64,934,394
1910	..47,887,377	1920	..54,167,994
1911	..46,084,854	1921	..58,440,656
1912	..47,542,157	1922	..66,854,435
1913	..50,340,735	1923	..66,212,516
1914	..45,801,973	1924	..75,349,181
1915	..55,969,456		

The above tonnage figures are furnished by the Associated Corn Products Manufacturers. Dry corn milling process for mixed feeds, corn meal, grits, etc., does not have available the tonnage of corn consumed. Department of Agriculture Bulletin 872 for the year 1921 estimates for a ten-year average that 40 per cent of corn was fed to hogs on farms; 20 per cent to horses and mules on farms; 15 per cent to cattle on farms; 4 per cent to poultry on farms; 1 per cent to sheep on farms. Human consumption on farms, using the output of either water ground mills or some other form of home milling is 3½ per cent. Merchant mills grind 6½ per cent. Natural corn fed to stock in dairies and cities not on the farms and not included in mixed feeds is 5½ per cent. Exports total 1½ per cent and other commercial uses 3 per cent.

A COURSE IN MARKETING.

Iowa State college at Ames, will launch this spring the first of a series of special short courses on agricultural marketing which during next year will reach Iowans connected with all of the

Make Big Money with this Grain Loader

The Boss Air Blast (Fordson Type) Portable Car Loader loads cars without scooping in a dirty, dusty car. Improves grades. Moves about under its own power. You can load grain on the other R. R. if you cannot get cars on your own line.

SOON PAYS FOR ITSELF

Send for blue print No. 12. It shows low cost plans for receiving, storing and shipping grain.

If your present elevator is not large enough this plan will solve your problem at low cost, and give you additional storage and shipping facilities.

WHEN ELEVATOR BURNS this plan makes for small stations with no fire risk. Handles loose grain, ear corn, pop corn, maize, kafir corn, cotton seed, etc.

TIME PAYMENTS. Sold on time payments if desired. Soon pays for itself. We also make stationary outfits for installation in country elevators to save scooping grain. Combination cleaners and car loaders. Write today for complete information. It will pay you. Hundreds in use.

NOTICE!

MILLS AND ELEVATORS

The U. S. Department of Agriculture recently recommended a new mixture for killing WEEVIL in grain, stating that the mixture was Non-Inflammable and Non-Explosive and could be used without injury to man—at the same time leaving NO ODOR or TASTE in the grain.

"TETRI-CIDE"

For your convenience we are placing on the market the above mixture ready for use, in 30 and 50 gallon Drums, at \$2.25 and \$1.95 per gallon respectively, F. O. B. shipping point. The drums are charged extra at \$6 each, but returnable for full credit within 90 days. Our name and trade-mark for this mixture is "TETRI-CIDE."

For a General Non-Poisonous and Non-Explosive Insecticide for killing moths and spraying for insects generally in mills and warehouses, we recommend

55-gallon drums @ \$3.25 gallon
30-gallon drums @ \$3.50 gallon
10-gallon cans @ \$3.75 gallon
No extra charge for containers.

Gen. Offices: Fort Worth, Texas
State Distributors Wanted.

important branches of the distribution of agricultural products.

The first of these courses, from May 23 to June 5, is being arranged for the stockholders, directors and managers of grain marketing organizations, either cooperative or private. It will be given by the department of agricultural economics and under the immediate direction of P. L. Miller and Frank Robotka, specialists in marketing.

The short course is being offered as a result of a demand from men engaged in the grain marketing business who feel that there has been a rapid development and broadening of the marketing business since the war. The course will offer an opportunity not only for instruction but for an interchange of ideas and experiences among those who attend.

During the first seven days the course will take up problems of management, finances, business practices, administrative problems, grain markets and cooperation. In connection with this work actual practice will be given in grain grading, seed analysis and testing, and weed identification and control. The last three days will be devoted to practice in elevator bookkeeping.

Registration for the course must be

made in advance by mail. A registration fee of \$2 will be charged residents of the state and \$5 for non-residents.

AMERICAN GRAIN EXPORTS.

The Department of Commerce reported the following exports of grain from the principal ports of the United States to foreign countries during the week ending April 25, 1925 (000 omitted):

Articles and countries	Week ending Apr. 25, 1925.		July 1, 1924, to Apr. 25, 1925.
	Apr. 25, 1925. Bus.	Apr. 18, 1925. Bus.	
Barley	203	300	18,387
Corn	426	240	6,787
Oats	198	214	5,708
Rye	2,107	2,269	38,335
Wheat	1,909	2,796	177,492
To Italy	441	361	21,992
United Kingdom ..	64	593	37,682
Other Europe	1,080	1,827	58,448
Canada	309	48,927
Other countries...	15	15	7,443
Total U. S.	4,843	5,819	246,709
Canadian in transit:			
Barley	234	177	11,391
Oats	223	10,277
Rye	466	108	3,926
Wheat	1,650	2,132	51,867
Total Canadian.	2,350	2,640	77,461

*Including via Pacific ports this week: Flour, 9,000 barrels.

SUCCESSFUL SERVICE

Edwards Licensed Formula Service is backed by 30 years' experience and a thorough knowledge of feeding problems.

Let us inspect your plant, offer expert advice on manufacturing systems, supply tested formulas for quality feeds for poultry, hogs, dairy cows, calves and all animals.

We handle sales and advertising campaigns to develop your business.

75 MANUFACTURERS USE OUR FORMULAS

Legal, Traffic and Arbitration Decisions

COURT DECISIONS.

Purchaser of cotton, though in good faith from one believing it had right as factor to sell, held liable for conversion. Where plaintiff placed cotton in warehouse of G., to be there stored and kept by him till he was directed to sell it, and, without further word from plaintiff, G. shipped it to L. who sold it, believing it had a right to do so as cotton factor of G., to defendant, who purchased it on the faith that L. had the right to sell it, held defendant was liable for conversion.

Measure of damages for conversion of cotton stated. The measure of damages for conversion of an article like cotton, the market value of which is liable to frequent and great fluctuation, is the highest price for which the same grade has been sold between time of conversion and a reasonable time after notice to owner of the conversion.—Newburger Cotton Co. v. Stevens. (Ark. Sup. Ct., S. W. Rep. 267-777.)

Bound to receive goods offered for transportation, and to carry for a just compensation. Generally, common carriers are bound to receive goods which are offered by owners or their agents for transportation, and to carry them for a just compensation.

Point of time marking commencement of carrier's liability for goods offered for transportation stated. Generally, point of time marking commencement of carrier's liability is that moment when shipper surrenders entire custody of his goods, and carrier receives complete control of them for purpose of shipment at earliest practicable opportunity in usual course of business.

Liable for loss of goods if placed in freight house for purpose of shipment, due to failure to furnish cars. Generally, although a shipper has agreed to load his property in cars, and has not yet done so, carrier is liable for its loss if it has been placed in his freight house for purpose of shipment with consent of his freight agent, and is ready for immediate transportation, and cause of delay is carrier's failure to furnish requested cars.

Plaintiff held to have made a constructive delivery of cattle for shipment. Plaintiff's act in purchasing cattle, ordering cars, and telling carrier's agent that he was ready to ship, and asking that he be notified on arrival of cars, stating that he would load and be ready to ship in two or three hours thereafter, constituted a constructive delivery of cattle for shipment, notwithstanding placing of cattle on pasture, since it was a temporary arrangement to end on arrival of cars for shipment.

Whether delay of 30 days in furnishing cars for shipment of cattle was "unreasonable delay" held for jury. In action of unreasonable delay in furnishing cars for loading of cattle, whether delay of 30 days in furnishing cars was an "unreasonable delay" which is defined in Sess. Acts 1921, p. 268, as any delay exceeding 24 hours from date cars are required to be furnished shipper for shipping of live stock, and in view of prior car orders which carrier was required to fill first, under Rev. St. 1919, § 9985, held for jury.—Fewell v. St. L. & S. F. Ry. (K. C. Court of App., S. W. Rep. 267-960.)

TRANSPORTATION MATTERS.

Traffic League Resolutions.

A resolution opposing congressional or executive interference with freight rate structures was adopted by the National Industrial Traffic league in its session at Indianapolis last week.

The league also placed itself on record favoring the general principles of

the Hague rules governing ocean transportation of freight.

The league took up the position that the regulation of the common carriers should be vested in the properly constituted administrative body, rather than in the legislative branch of the government, and that no political influence should be exerted on this body by either the legislative or executive branches.

Recommendations to be submitted to the interstate commerce commission concerning the managing and the application of the Hoch-Smith joint congressional resolution were adopted. The resolution calls for an investigation of the freight rate structure of the country by the commission.

The resolution says, in part: "Our conclusion is that the Hoch-Smith resolution does not change existing law" its statement said, in part. "Its only effect is to direct the commission to institute a comprehensive, general investigation into the entire rate structure of the country."

"If reductions in rate important in amount be made upon particular commodities, it is obvious that increases in rate must be made upon other commodities. . . . We urge that the commission adopt a construction of the resolution which will not impair the fundamental principles of the interstate commerce act; that it prescribe rates which in and of themselves are just and reasonable, which give no undue preference or advantage to any class, industry or commodity and throw no undue burden upon any commodity, person or community, and which will maintain individual carriers and an efficient transportation system as a whole."

A report of its legislative committee which was adopted included the recommendation that if congress creates a labor board to settle differences between the carriers and the employees, such as was proposed by the Howell Barkley labor board bill, the shipping public have the opportunity of representation on such and participation in the adjustment or adjudication of disputes. The committee report also condemned efforts to equalize freight rates from inland points to the Atlantic ports. The resolution placed the league in opposition to such efforts without respect to the merits or demerits of the proposed rates, on the ground that it is a form of statutory rate making.

Tariffs Suspended.

The Interstate Commerce Commission, in I. & S. docket No. 2388, suspended from April 20 to August 18, schedules carried in supplement 13 to Union Pacific tariff 3432, which proposed to increase rates on grain and grain products from certain U. P. stations in Kansas to St. Joseph, Mo., routed via Maryville, Kan., and St. J. & G. I. R. R.

Suit to Enjoin Salt Rates.

Application for an order enjoining the commission's order in the so-called salt cases, the one in which it used its minimum rate power to prescribe rates which Louisiana salt miners assert will have the effect of keeping them out of the Chicago market, has been made to a court in the northern district of Ohio by J. V. Norman, in behalf of the Jefferson Island Salt Mining Company and the Myles Salt Company.

NEW GRAIN EXCHANGE.

The North Dakota Terminal Grain Exchange has been incorporated at Grand Forks by P. E. Lee, secretary North Dakota Grain Dealers' Association, O. L. Spencer and H. M. Webster, State Mill and Elevator. The exchange will be located in the office building of the State mill. The incorporators hope to build up a cash grain market at Grand Forks and, in time, bring about more favorable transit privileges for mills west of Minneapolis.

COTTON NEWS

Cotton in Brazil.

The Brazilian cotton acreage for the current crop is estimated at 1,573,000 acres as compared with 1,966,000 for the preceding year, according to a cable to the Department of Agriculture from the International Institute of Agriculture. Estimates previously received on production amounted to 605,000 bales of 478 pounds for the current year as compared with only 575,900 bales for 1923-24.

Grading Conference May 20.

The conference between officials of the Department of Agriculture and representatives of the various European cotton exchanges to be held in London, has been definitely called for May 20. On that date consideration will be given to various suggestions heretofore made by representatives of the Liverpool Cotton Association for changes in the agreement covering observance of American cotton standards.

Will Grow Cotton in So. Africa.

The formation of the biggest cotton venture in the history of South Africa is described by the commercial editor of the Johannesburg "Star." He says papers just registered in the transvaal show that a company acquired 75,000 acres of Portuguese territory with a frontage of 12 miles on the Delagoa Bay railroad line and intends to cultivate 15,000 acres of cotton in the next three years.

World Crop Estimate.

A world cotton crop of approximately 24,700,000 bales of 478 pounds lint for the cotton year beginning Aug. 1, 1924, is predicted by the Bureau of Agricultural Economics of the Agriculture Department on the basis of latest available data. This will exceed by more than five million bales the crop of 19,590,000 bales of the preceding cotton year. The figures are a revision of the statement issued by the bureau on the world cotton crop in February.

This estimate includes statistics of cotton production, exclusive of linters, in the United States as shown by the Bureau of the Census on the basis of ginners' reports; the latest government estimate of cotton production in India; the Chinese Cotton Millowners' Association estimate of cotton production in that part of China producing the commercial crop, and the department's estimate of production in Egypt based upon receipts at Alexandria. The estimates for China and India, it is explained, include some cotton not consumed in mills.

Chicago a Permanent Market.

Chicago is to be a permanent cotton market. The pioneering period of five months, which ended May 1, has proved the project to be a commercial success, according to Frank L. Carey, president of the Chicago Board of Trade. The steady growth of the cotton futures market since its creation Dec. 1, said Mr. Carey, has been ample proof of its importance in the world of commerce. All the obstacles of a new market have been met and surmounted, and there is every assurance that Chicago is to be a permanent cotton market.

AMERICAN STEEL & WIRE COMPANY CROP REPORT.

An outstanding feature of this week's reports is the fact that the season is from three to five weeks earlier than for a number of years past. This is true of practically all sections of the country. The exceptions are to be found in the northeastern part of the United States. Here the development has been somewhat slower, but nevertheless is very encouraging. Dry areas that have existed for a considerable period in the

more southeasterly states have been relieved by good rains. Although the southeasterly sections of the United States still are in need of water.

Temperatures the latter part of the week have been nearer to normal, and in some instances have been accompanied by frosts in the more northerly parts of the country. What damage was done by this sudden change in temperature it is still too early to predict.

Crops in general look as follows: Wheat as a whole is good to very good. Corn in the more southerly parts of the country is generally making good growth and is being planted in the more central portions with the ground rapidly being prepared for the crop in the more northerly sections. The acreage will be large.

The acreage of oats is also larger and is in excellent condition.

Cotton is coming up and is making fair stands where it has not been too dry. In the dry localities it has been a little slow in germinating. The acreage is larger than last year.

Due to the excellent condition of forage crops in the Pacific Coast section cattle and sheep are in a considerably better than average condition. In other sections of the country live stock is generally in good condition although somewhat scarce. This is true particularly of hogs.

Summing this week's reports in as few words as possible, we must say that it is decidedly optimistic. And farmers as a whole seem to be well satisfied.—By F. Baackes, Vice-Pres. & Gen. Sales Agent. Week ending May 2.

TO STUDY EUROPEAN AGRICULTURE.

Congressman Cyrenus Cole, of Cedar Rapids, Ia., plans soon to visit Europe for the purpose of studying political and agricultural conditions, he announces.

Mr. Cole desires more information regarding the new countries of Europe that sprung up as a result of the World War, in order that his foreign relations committee of the house may deal more intelligently with such matters.

The agricultural situation will be studied with particular attention to the success of cooperative ventures. Cooperatives have been developed in Europe, Mr. Cole says, without government aid, and he desires information especially on that phase of the projects.

CORN TO MEXICO.

The United States must supply Mexico the bulk of her corn requirements this year, according to advices received. The U. S. exported 789,000 bu. to Mexico in 1924 and 129,000 bu. in 1923. The Mexican Government has removed the import duty on corn. This amounted to 25 to 30c a bushel. Kansas City is expected to be benefited, particularly by this development in the Mexican situation.

ARGENTINE FLAXSEED CROP SHORT.

A cut of nearly 7,000,000 bushels in the estimate of the 1924-25 Argentine flaxseed crop is reported to the Department of Agriculture by the International Institute at Rome. Production is now estimated at 45,076,000 bushels. The revised figure of the wheat crop is 191,139,000 bushels against 247,036,000 bushels for 1923-24.

CANADIAN VISIBLE.

Canadian visible supply of wheat decreased 4,244,000 bus. and oats, 2,850,000 bus. last week. These statistics represent terminal stocks only:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Wheat	34,431,000	36,245,000	33,344,000
Oats	15,244,000	15,790,000	10,055,000
Rye	2,469,000		1,927,000
Barley	4,759,000	5,075,000	2,565,000

SUPERIOR ELEVATOR CUPS

THROW THE MATERIAL OUT

They do not slowly drop it on the back of the preceding cup, as do the ordinary cups.

Discharge at high speed, very rapid throw with Superior Cup.

Discharge at medium and low speed, rapid throw with Superior Cup.

Superior Elevator Cups have a perfect discharge. They throw out every particle of material that flows into them. That is the reason they give a larger capacity than any other cup made, at the same speed. Other cups discharge but a portion of the material that flows into them. That means loss of capacity, and waste of power!

Terminal Markets

MILWAUKEE.

D. K. Steenberg, Correspondent.

The May rate of interest has been determined by the finance committee of the Milwaukee Chamber of Commerce at 6 per cent.

The steamer Oglebay has cleared for Port Colburn with 180,000 bushels of rye loaded at the North Western road Kinnickinnic and Rialto elevators.

William A. Hottensen of the Wallace M. Bell & Co., grain firm at Milwaukee, has purchased a membership in the Minneapolis Chamber of Commerce.

The firm of Priewe & Stiehm, feed dealers at Johnson Creek, Wis., has recently been succeeded by Robert Priewe, who will continue the business under his own name.

A. M. Marsh of the flour mill division, Allis-Chalmers Mfg. Co., recently secured another Canadian contract for a 250-barrel mill owned by McDonald & Robb of Valleyfield, Quebec.

Shipments for last week were 129,862 bu. of oats, 195,193 of corn, 29,160 of barley, 41,548 of wheat, 10,570 of rye, total 406,033 bu., against 586,811 the preceding week and 894,565 a year ago.

Receipts for last week were 131 cars of barley, 44 of corn, 25 of oats, 22 of wheat, 5 of rye, 1 of flax and 6 miscellaneous; total 234 cars, against 306 the week before, 274 a year ago and 350 in 1923.

William H. Eiring, who became a member of the Milwaukee Chamber of Commerce in 1897 when he was connected with the old firm of F. Kraus Company, died at his home in Milwaukee on Wednesday, April 22.

Higher prices rule and wheat is 10@12c higher for the week, corn 2@3c, oats 2@2½c, rye 6@7c, while barley is unchanged. Movement light and demand fair. Private crop estimates were bullish on the winter wheat crop.

The firm of Leinenkugel & O'Connor, feed dealers at Sauk City, Wis., is reported to be seeking another partner to take the place of Mr. O'Connor, who, because of a death in his family, has been obliged to take over the management of a large farm near Sauk City.

Capt. Frankworth, who commanded the W. A. Reiss, which was the first ship to leave Milwaukee for an eastern port this season, was the first to enter the port of Goderich, according to word recently received at Milwaukee, for which he was presented with a silk hat by the mayor of that city. The W. A. Reiss carried a cargo of corn and rye.

J. L. Bowlus, manager of the transportation department of the Milwaukee Chamber of Commerce and recently re-elected alternate general chairman of the Midwest Regional Advisory Board, is now extremely busy with arrangements for the next meeting of the board, which will be held at Milwaukee on Wednesday, July 15. The meeting will be held in the Red Room of the Hotel Pfister and present plans include a noon luncheon and evening banquet in the same hotel.

The Grain and Warehouse Commission bill raising the salaries of grain inspectors from \$200 to \$300 a month and increasing the hold-over fund from \$35,000 to \$65,000 was recently voted to engrossment in the Senate of the Wisconsin legislature. A motion to non-concur lost 22 to 10. The increased hold-over fund will enable the State Grain and Warehouse Commission at Superior to retain more experts for work during the grain months.

M. H. Ladd has been reappointed to the position of chief weigher of the Milwaukee Chamber of Commerce, according to announcement by the board of directors. Allen A. Breed was reappointed chief grain inspector. The directors also voted to continue the membership of the Milwaukee Chamber of Commerce in the Chamber of Commerce of the United States, and President A. R. Templeton was authorized to send delegates to that organization's annual meeting at Washington, D. C., May 20-22. Mr. Templeton was also reappointed as national counselor, the official representative of the Milwaukee unit in the national organization.

MEMPHIS.

George Williamson, Correspondent.

H. I. Ruth of Poplar Bluff, Mo., was registered at the Merchants' Exchange Saturday.

J. W. Setters of Pueblo, Col., was introduced on 'change Friday by E. W. Sommers.

Asa T. Boles of St. Louis was a visitor during the week at the offices of the Dixie-Portland Flour Co.

Fire in an alfalfa bin at the plant of John Wade & Sons did about \$1,000 damage during the week.

M. W. Hunt of Portland, Ore., formerly engaged in the flour business here as a member of the Stout-Hunt Milling Co., was a visitor during the week.

Fred R. Cook, assistant manager of the local office of Fenner & Beane, is an applicant for membership in the Merchants' Exchange, to take the place of W. E. Richmond, formerly with this firm.

The Missouri Pacific announces that its plug track for hay inspection has been changed to Tennessee and Carolina, which is right near the other inspection tracks, and will be more convenient for the trade.

The membership of Eugene Wade has been transferred to Charles S. Kenney, general manager of John Wade & Sons, while Henry C. Mills, who succeeded Kenney with the Quaker Oats Co., will be the exchange representative of that concern. Sam E. Rison has purchased the membership of the late Sim Tate.

This territory continues in urgent need of moisture, although during the past week some portions received relief. At this station moisture deficiency since January 1 is nearly 12 inches. The past three days have been abnormally cool, the only reason frost was not had on two mornings being the high wind. Crops have suffered to some extent, but chiefly because rain is so badly needed. Much cotton that has been planted has not germinated and will not do so until it rains. Corn is now growing as it should after so early a start.

Demand for grain and feedstuffs continues small, as the consumer is buying just as little as possible. Corn is especially slow sale, being regarded as so much higher relatively than oats. Receipts of corn for the week were 73 cars, while oats were 154. The latter are not moving as they usually do at this time of the season. Quotations are not showing much change. Cash No. 3 white corn quoted May 2 at \$1.15, No. 3 mixed at \$1.05 and No. 3 yellow at \$1.17. Cash No. 3 white oats are steady at 49¢49½¢. No. 3 white kafir is steady at \$1.35 and No. 3 yellow milo at \$2.25.

OMAHA.

Leigh Leslie, Correspondent.

W. H. Chambers of the United Grain Co. returned to Omaha Thursday from his ranch in Texas where he spent three weeks.

E. A. Beardsley, for many years with the Merriam & Millard Elevator Co., is now with the M. C. Peters Mill Co. in an important capacity.

H. L. Boudreau, representing the Ballard-Messmore Grain Co., St. Louis, was a visitor on the floor of the Omaha Grain Exchange Thursday.

The elevator of the Farmers Grain Co. at Bancroft, Nebr., was destroyed by fire Wednesday with 4,372 bushels of oats and 200 bushels of corn. The loss is estimated at \$15,000.

Nelson B. Updike, the well-known Omaha grain man, said: "I took a 200-mile drive through eastern Nebraska yesterday, and from what I saw, that section will not produce more than 50% of a wheat crop. While the country is green, there is a general complaint that it is too dry and that good rains are needed."

Advices received here are to the effect that there was a killing frost in northern Nebraska and in other parts of the state Wednesday night. Grain crops were not damaged. Whatever damage there was was to fruit.

A Lincoln, Nebr., wire says: "The wheat outlook in western Nebraska is the best in

the history of the state in the opinion of General Superintendent Lyman of the Burlington railroad, who has just returned home from a ten-day trip through the wheat belt traversed by that road."

Bryant, the crop observer, wired from Omaha last Wednesday: "Of the 3,358,000 acres of Nebraska land seeded to wheat last fall, 83% will be left for harvest, or approximately 2,816,000 acres. The par for this month works out to 18.2 bushels per acre. Applying this to the acreage left for harvest, a normal production would amount to 51,251,000 bushels. The condition of the crop at this time is estimated at 70% of normal, which reduces the crop prospect to 35,876,000 bushels. In a few fields some improvement can still be made if weather conditions are favorable, but in most fields no improvement can or will be made no matter what the weather may be. Much further deterioration can take place unless the weather may be exceptionally favorable."

Rates on grain from western Nebraska and South Dakota producing territory to California milling points may be calculated on basis of a shipment via primary markets on the Missouri river, as Omaha and Sioux City, it was held Wednesday by the Interstate Commerce Commission at Washington. The Burlington road filed a schedule which would have been effective Jan. 1 last had not the commission intervened, imposing extra charges on the movement of grain through the market cities en route to California. The commission ordered the schedules cancelled, and the existing rates, which have not been disturbed, will remain in effect indefinitely. The Omaha Grain Exchange, through its traffic manager, John A. Kuhn, asked that the proposed schedules be cancelled. "The decision of the commission," said Mr. Kuhn, "means a saving of about ninety dollars a car, or about a quarter of a million dollars a year. It means that farmers in this territory may ship grain to Omaha, leave it in storage here, and later reship it to California without paying extra transit charges."

DULUTH.

S. J. Schulte, Correspondent.

The Occident Elevator Co. and the Barnum Grain Co. have figured prominently during the last few days in chartering boat space to move spring wheat to Buffalo for delivery to millers down there.

A feature in the grain trade on this market during the last week was the chartering of boat space to move spring wheat to Chicago to be applied on May delivery contracts. The amount so far was placed at around 1,000,000 bushels.

R. M. Knox, vessel agent, who had offices in the Board of Trade building during the last four years, specializing largely in the grain business, has left for Florida where he will enter dredging operations with his father's company. J. H. Ogle of Cleveland, with whom Mr. Knox had been associated here, has taken over his vessel agency business.

Under the influence of sharp competition for any business going, lake grain carrying rates have broken sharply with space for Buffalo delivery of wheat and durum offered at only 1½ cents a bushel during the last week. Shipping men claimed that they cannot play even at that rate. Improvement in grain shipments is looked for in the near future, however, and considerable wheat and durum is scheduled to be moved East during the next ten days.

R. M. White of the White Grain Co. has returned from a three months' vacation and business trip during which he covered about 10,000 miles of which 7,000 were by auto. He drove from Cincinnati down to Florida and the whole way from down there home. He got into touch with the feeds trade at the various centers and he feels sanguine that he succeeded in forming some new connections for his house.

Holders of oats on this market commented on a considerable revival of trading interest in them attributable to traders coming into the game to some extent attracted by the current low level of prices. Stocks of oats in the elevators have been reduced since the opening of navigation from over 13,000,000 bushels to a little more than 10,000,000 bushels, and boat space has been taken for other shipments within the next ten days. The market in No. 3 white oats gained 1c during the last week.

Specialists in the durum market, including the Barnes-Ames Co., were prominent in that trade here during the past week. The first burst of export buying in durum in several weeks back developed on Thursday and its market was run up sharply then and on Friday on the best bidding

noted in some time. Under expectations of a broad demand for durum developing during the next fall and winter months, grain men here have been advising the seeding of a larger acreage to it over the Northwest this spring, and it is believed that production returns will show that their advice was followed to some extent.

TOLEDO.

S. M. Bender, Correspondent.

Grain inspections for April were 82 cars of wheat, 84 cars of corn, 126 cars of oats, 6 cars of rye and 3 cars of barley. Total, 301 cars.

Fred Mayer of J. F. Zahm and Co. and Dave Anderson of the National Milling Co. have returned from French Lick Springs, Ind., where they spent several days.

The demand for soft wheat has improved during the last week with better inquiry from outside mills. Premiums are strong and receipts very light. Flour trade remains rather dull.

Bullish private reports have stirred up the trade in this territory. Dealers say they believe they will be close to the government report. This should be a great stimulant to trade in general which has suffered from the recent nervous markets.

Grain inspections last week were 26 cars of wheat by lake steamer Briton, 110,470 bus. northern spring by steamer Price McKinney, 65,000 bus. wheat, 27 cars of corn, 47 cars of oats by lake steamer Price McKinney, 278,000 bus. oats, 1 car of rye and 1 car of barley. Total 102 cars.

Flour production of Toledo mills as reported for last week was 26,500 bbls., equal to 55 per cent of capacity. The week before it was 26,000 bbls. and a year ago last week was 30,900 bbls. Production during April was 121,900 bbls. versus 109,950 bbls. in March and 141,750 bbls. in April, 1924.

Reports on the new crop are still very pessimistic and most of them predict about a half a crop. Farmers are holding what little wheat they have for two dollars and it is hard for millers to get enough wheat to grind. Good weather for planting corn and sowing oats may presage large crops of both.

The Northwestern Ohio Farmers Grain Dealers met at Jewell, Ohio, last Monday night. Eli Dickey, manager at that station, was the host. Sam Rice, president of the Ohio Grain Dealers, and Dr. Guyer, president of Findlay college, were the principal speakers. Entertainment was furnished by Ben Hofner, local representative of Lamson Bros., and his super-banjo, and Bill Cummings of J. F. Zahm & Co. at the piano. Strawberries and cream was the piece de resistance and no one could resist them.

BALTIMORE.

Robert C. Neu, Correspondent.

Richard C. Wells, head of the grain and hay firm of R. C. Wells & Co. of this city, is visiting in St. Louis with his wife.

The name of George C. Eldridge is posted on the official bulletin as an applicant for membership in the Baltimore Chamber of Commerce.

Blanchard Randall, senior member of the grain exporting firm of Gill & Fisher of this market, has been confined to his home during the past ten days by illness.

The receipts of water-borne corn in the Baltimore market so far this season amount to 94,000 bushels, compared with 275,000 bushels arrived up to the same time last year.

The 70th annual report of the Baltimore Chamber of Commerce is now being distributed to interested parties and organizations. The publication is the work of the secretary's office.

Four steamers took out over a million bushels of rye for export from Baltimore elevators last week, and total exports of rye from this port in the month of April were over 6,000,000 bushels.

Herbert A. Kline, formerly president of the Farmers' Milling & Grain Co., Mt. Airy, Hampstead, Md., is now associated with the

Md., and Malco Milling & Lighting Co., Wilkins-Rogers Milling Co. of Washington, D. C.

Among the out-of-town visitors on the floor of the Baltimore Chamber of Commerce last week were J. A. Walter, president of the J. A. Walter Milling Co., Inc., Buffalo, N. Y.; H. S. Cramer, grain importer of Berlin, Germany.

Hon. Sydney Anderson, president of the Millers' National Federation, will be invited to attend the annual meeting here of the National Federated Flour Clubs in June and will be asked as a guest to the dinner on the evening of June 5 at the Southern Hotel.

Starting Monday, April 27, all operations on the floor of the Baltimore Chamber of Commerce were advanced one hour to conform to the daylight-saving schedule adopted by the Chicago Board of Trade. Business now closes here at 1:15 p. m. daily and on Saturdays at 12 noon.

FORT WORTH, TEX.
G. E. Blewett, Correspondent.

Weather.

Drought conditions over this state were better last week when rains fell over the entire state, ranging from 1/2 to 5 inches with the exception of southwest Texas, around San Antonio and points southwest of there where the drought continues unbroken except with showers insufficient to benefit crops any. Some sections of the Panhandle section also report insufficient rainfall while others report plenty for the time being. In west Texas and in fact all points north of a line drawn east and west through Waco there has been plenty of moisture for the time being and while this came too late to prove of any help to grain it will greatly aid cotton and also encourage the planting of cane seed, milo, June corn and other forage crops. More rain will be needed to insure cotton and these late planting forage crops.

Business.

Business since the rains has shown a decided improvement with a better demand and more confident feeling displayed by bankers and merchants who had become somewhat alarmed over conditions.

Mills, however, report a rather slow flour demand with most of them running on daylight time and advise bookings as coming is rather slow. This, however, is due to the slump in the wheat market and with the advance this week and continued strength shown, it is believed there will be a better volume of buying soon. Prices have ruled firm this week and mills are confining their sales to immediate shipment orders, getting away as far as possible from the old practice of booking for deferred shipments on a guaranteed basis.

Feed dealers and mixed car shippers also report better demand for their feeds and shipments during April were the heaviest on record in this market. This is caused by the shortage of grass which necessitates buying feed for all stock.

Wheat.

Wheat receipts have been very light and country offers are very slow but demand has only been draggy with premiums somewhat higher as elevator stocks here are being gradually reduced and those holding wheat here feel inclined to hold for more attractive premiums, especially on hard and dark hard which seem to be getting rather low for this season. Demand for these has been good to steady while soft red and mixed soft red have been rather slow and stocks have not been materially reduced. Since the recent advance there has been an inclination on the part of country dealers who have wheat in store here to unload and their offerings have been readily absorbed by the mills.

Based on previous years' records, however, the demand has been very disappointing on wheat and in fact should this demand have equalled previous years all the wheat in store here would have been consumed some time ago. Estimates of Texas wheat for the coming crop range from five million to eight million bushels, depending on climatic conditions from now to harvest. Today's (May 2) values here, basis delivered Texas common or Texas Group 3 points, are as follows: Dark hard wheat, No. 1, \$1.80; No. 1 hard wheat, \$1.78; No. 1 soft red wheat, \$1.80; No. 1 mixed, 75 per cent soft red, \$1.76; No. 1 durum, \$1.74.

Corn.

Receipts of corn have been steady while country offerings have been rather light with a steady demand which has resulted in a sharp decrease in elevator stocks here with white and yellow corn stocks completely exhausted, while there seems to be plenty of mixed available here. The demand from the country dealers for corn and corn chops has been very disappointing to elevators and mills here and this has to a great extent discouraged any advance in premiums.

Today (May 2) values, basis delivered Texas Group 1 points, are as follows: No. 2 yellow corn, en route, \$1.22; prompt, \$1.22; May, \$1.23; June, \$1.24; July, \$1.26. No. 2 white corn, en route, \$1.21; prompt, \$1.20; May, \$1.21; June, \$1.23; July, \$1.25. No. 2 mixed corn, en route, \$1.14; prompt, \$1.13; May, \$1.14; June, \$1.15; July, \$1.16.

New crop corn shows the effect of the prolonged drought and is at the lowest condition as well as the smallest acreage in years and it will take ideal conditions during the summer months to permit its maturing.

Oats.

Receipts of oats as well as offerings from the country markets have been very

FOR RESULTS

PHILIP H. SCHIFFLIN & Co.

49 Board of Trade

CHICAGO

light while the demand has been exceedingly heavy and unusually large volumes are being worked daily, in fact, the demand right now is at the highest on this crop and with the prospects of Texas and Oklahoma oats proving a complete failure the demand will become stronger. Some dealers are now contracting white oats for shipment as far away as October. Red oats are very light offerings while the demand continues very strong and the premiums hold firm over white oats basis and they now, as they have been for the past two months, bringing the highest premiums over white oats in the history of this market. Stocks of white oats are rather liberal but with the recent heavy demand it will be readily absorbed in due time.

New crop oats are now heading out in central and north Texas on a stalk about six inches high and while heavy rains have been received recently it is believed by those watching the situation that they cannot possibly make any crop and very few fields will be harvested. This will cause an unusually heavy business in white oats and brokers are now busy on bookings for shipment during June, July, August, September and October. Today's (May 2) values here, basis delivered Texas Group 1: No. 2 red oats, bulk, 62c; en route or prompt, No. 3 red oats, bulk, 61c; No. 3 white oats, bulk, enroute, 55c; prompt, 54c; June, 55c; July, 56c; August, 56c; September, 57c; October, 57c.

Milo and Kafir.

Receipts and country offers have been steady with a fair demand since there has been a decline in values in line with corn prices. Supplies are being gradually reduced however and elevator stocks are being called on to fill the demand as country offerings become lighter. Planting of new crop milo and kafir has been delayed as rains have not been general over the Panhandle, and those sections still dry will show a reduced acreage unless rains come soon.

Today's values of milo and kafir, basis delivered Texas common or Texas Group 3 points, which takes 5c cwt. less to Group 1, or 2c cwt. less f. o. b. loading stations, are as follows: No. 3 or better yellow milo, en route or prompt, \$2.12; June shipment, \$2.15; No. 3 or better white kafir, en route or prompt, \$1.95; June shipment, \$1.95.

Maize and Kafir Heads.

Receipts and country offers of these have been very light while demand has shown some improvement and prices are sharply higher. Today values, delivered Texas common or Group 3 points, are as follows: Maize heads, dry sound, slightly stained, \$34.50; kafir heads, dry sound, slightly stained, \$31.

Cane Seeds.

Rains have stimulated demand for cane seed and prices have shown a sharp advance this week with a better demand while receipts and country shipments have been slow. Red top is strong while amber is steady but orange demand slow. Basis delivered Texas common points today, values are as follows: Red top cane seed, country run, bulk, \$1.75; re-cleaned, tested, sacked, \$2.10; orange cane seed, country run, bulk, \$1.65; re-cleaned, tested, sacked, \$2.

News.

The annual election of officers for Fort Worth Grain and Cotton Exchange was held April 21, resulting in J. A. Simons, manager of Smith Bros. Grain Co., being elected president for the ensuing year, with J. W. Hamilton, vice-president. The directors, including these two are Kent Barker, G. C. Henderson, Kay Kimbell, Chas. Little and A. L. Lovette.

Uhlman Grain Co. has opened an office here with Clarence Wilkins, formerly with Grain Marketing Co., in charge.

Texas grain dealers' annual convention meets here May 22 and 23, and the Fort Worth Grain and Cotton Exchange is making elaborate preparations for entertaining those attending this convention.

PHILADELPHIA.
Geo. A. Rudderow, Correspondent.

Stock of barley May 1, 1924, was 831 bus. Exports of barley during April, 1925, were 16,731 bus. and 29,938 bus. April, 1924. Stock of rye May 1, 1925, was 78,955 bus. compared with 161,577 bus. April 1, 1925, and 89,799 bus. May 1, 1924. Stock of oats May 1, 1925, was 501,060 bus. compared with 220,115 bus. April 1, 1925, and 32,129 bus. May 1, 1924. Stock of corn May 1, 1925, was 208,673 bus. compared with 225,196 bus. April 1, 1925, and 152,768 bus. May 1, 1924. Exports of grain for the week ending May 2 were: Wheat, 716,575 bus.; oats, 170,000 bus.; rye, 192,318 bus.; barley, 16,731 bus. Stock of wheat on May 1, 1925, was 2,150,583 bus. compared with 2,265,750 bus. April 1, 1925, and 828,458 bus. May 1, 1924. Exports of corn during March and April, 1925, none. In April, 1924, 227,843 bus. were shipped, and in April, 1923, there were 741,139 bus. shipped. Exports of oats in April, 1925, were 113,397 bus. against 95,968 bus. in March, 1925.

None shipped in April, 1924, but 90,000 shipped in April, 1923.

Receipts of flour and grain were: Flour, 30,690 bbls.; wheat, 614,074 bus.; corn, 5,168 bus.; oats, 423,942 bus.; rye, 153,076 bus.; and barley, 16,731 bus.

Exports of rye in April, 1925, were 450,436 bus. compared with 181,212 bus. in March, 1925, 723,469 bus. in April, 1924, and 93,897 bus. in April, 1923.

Exports of wheat in April, 1925, were 2,373,071 bus. compared with 3,736,147 bus. in March, 1925, 3,545,368 bus. April, 1924, and 3,512,346 bus. in April, 1923.

Stocks of flour and grain in Philadelphia public warehouses on May 1, 1925, were as follows: Stock of flour May 1, 1925, was 105,874 bbls. compared with 162,675 bbls. April 1, 1925, and 138,446 bbls. May 1, 1924.

Exports of flour and grain during the month of April, 1925, were as follows: Flour, 26,621 bbls. compared with 38,020 bbls. March, 1925, and against 18,809 bbls. in April, 1924, and 70,633 bbls. in April, 1923.

The Philadelphia & Reading Railroad Co. has just awarded a contract to the Fegles Construction Co., Ltd., Minneapolis, Minn., for the construction of a reinforced concrete grain elevator at 20th street and Pennsylvania avenue, Philadelphia. The contract includes the furnishing and erection of the plant complete, with the exception of the cement, which will be furnished by the Reading company. Certain items of machinery and equipment will be purchased direct through the purchasing department. The structure will replace the antiquated elevator destroyed by fire two years ago. The same contractors, it is said, have made favorable bids on the construction of the proposed new export elevator at Port Richmond, Philadelphia.

Philadelphia Flour Market.

Philadelphia, May 2.—The flour market is dull but prices are firm and higher, reflecting the advances in wheat. Offerings are plentiful but buyers are cautious and only purchase enough to satisfy them from day to day, while holders are firm and not disposed to force business at the cost of concessions. Receipts the past week were 30,690 bbls. We quote per 196 lbs. packed in 140-lb. jute sacks: Soft winter straight, western, \$8.25@8.75; soft winter straight, nearby, \$8.25@8.50; hard winter straight, \$8.25@8.50; hard winter, short patent, \$8.50@9; spring first clear, \$7.75@8.25; spring patent, \$8.35@8.75; spring short patent, \$9@9.50; fancy spring and city mills patent family brands, \$9.75@10.40. Rye flour, \$7.25@7.75 per bbl. in sacks, as to quality.

NEW ORLEANS.
M. L. Davis, Correspondent.

James Thomas has returned from a business visit to Havana.

J. W. Mooney, general agent of the Mississippi-Warrior Service, is on a business visit through Mississippi.

The Mexican government has notified interested parties that import duty on corn has been removed until further notice.

Eugene V. Ansemann, for many years with the grain firm of J. T. Gibbons, Inc., died at his New Orleans home this week.

Standard blackstrap molasses is firm at 13c f. o. b. tank cars New Orleans; medium at 13 1/2c, and light blackstrap at 14c per gallon.

F. A. Godat, traffic manager of the New Orleans & South American Steamship Co., has returned from a business trip through Texas and the Middle West.

Export shipments for the month of April from New Orleans were: Wheat, 2,834,424 bus.; corn, 338,464 bus.; oats, 87,450 bus.; rye, 8,571.24 bus. This shows an approximate increase of 2,600,000 bushels over the corresponding month of last year. Stocks in elevator as of today: Wheat, 1,424,000 bus.; corn, 126,000 bus.; oats, 105,000 bus.; rye, 88,000 bus. Cars on track: Corn, 1.

NEW YORK.
J. M. Nugent, Correspondent.

There appeared to be an active business in oats for export during the week but the total volume could not be accurately ascertained.

During the past week the following gentlemen visited the floor of the New York Produce Exchange: Barnett Faroll, E. P. Hinds and E. E. O'Neill, all of Chicago; S. Lancaster of Boston, F. B. Mendolph of San Francisco, Fred Lond of Philadelphia, and J. W. Hickson of Toronto.

The sharp and erratic fluctuations in futures prices during the week tended to restrict export business to a large extent. However, there appeared to be a fair scattered trade amounting in all to about three to four million bushels. Most of the business was in Manitobas, but there was also about one-half to three-quarter million bushels of hard winters worked, and about one-half million bushels of Duluth spring wheats.

Flour Situation.

New York, May 2.—Somewhat stronger prices featured flour, but as far as business was concerned, trade was unusually dull.

There was a little interest in the Northwest, but aside from that the market lacked feature.

In the export line business was also quiet. On Saturday there was cleared from New York the last boat containing the original purchase of flour for Russia.

Spring patents are quoted at \$8.25@8.75; soft winter straights, \$8.25@8.75, and hard winter straights, \$8.10@8.60 per 196 lbs.

OKLAHOMA CITY, OKLA.

W. F. Kerr, Correspondent.

C. D. Ewart has sold his interest in the Fairview (Okla.) Milling Co. to John Bohlen of Bessie, Okla., and the present owning firm is Kobus & Bohlen.

Among recent Oklahoma City visitors in milling and grain circles was Paul Leonard,

junior member of the food brokerage firm of Flinkenberg & Leonard of Finland.

The Guthrie Mill & Grain Co., which recently was organized, has begun erection of a small flour mill at Guthrie. A. F. Sullins, formerly a miller at Elk City, Okla., is in charge.

An operation was performed recently in Oklahoma City on Cecil Munn of Enid, sales manager of the Southwest Wheat Growers Associated. It is said to have been successful.

T. C. Thatcher, general manager of the Oklahoma City Mill & Elevator Co., and his wife and daughter left last week for a 30-day cruise in southern waters. They will visit Havana and Panama.

The plant of the Caldwell Mill & Elevator Co. at Medford, Okla., consisting of an elevator and a small flour and feed mill, was destroyed by fire last week. The loss is said to have been \$75,000. Only a small quantity of grain was in storage.

Permits to sell milled feeds in Oklahoma were asked of the state board of agriculture recently by the Lindsay (Okla.) Grain & Elevator Co., the Tonkawa (Okla.) Milling Co., J. W. Swisher of Fairland, Okla., the American Agricultural Chemical Co. of East St. Louis and the Chetopa (Kan.) Mill & Grain Co.

The probable yield of winter wheat in southwestern Oklahoma this year will not exceed 25 per cent of a normal crop, says

State Senator Harry Cordell who recently has toured a large part of this territory. Damage was done by freezes in winter and the spring drought caused improper stooling. A great deal of the wheat acreage, he says, will be planted in cotton.

A fair wheat crop is in prospect for this section of the state as a result of several rains in April, says Preston Boles, manager of the Garfield County Co-operative Shippers Association. Winter freezes caused a thin stand and a drought later did much damage. If rains come as they are needed, he says, Garfield county will have a fair crop.

An oats stand of 20 per cent of normal is reported for the southern section of Arkansas by C. S. Bouton, federal agricultural statistician for that state. He reports 80 per cent of a stand in the northern section. About 20 per cent of the rice acreage in southern Arkansas has been planted. Planting was delayed by the drought which appears to have been effectively broken. The prospect is good for a corn crop in Arkansas, Mr. Bouton says.

A petition in bankruptcy was filed in federal court recently by Richard H. Conyers, operating as the Conyers Grain Co. of Oklahoma City. Assets amounted to but a few dollars, according to the petition, and liabilities to \$32,647. Among creditors listed are the W. B. Stowers Grain Co., the Ponca City Mill & Elevator Co., the Shawnee Milling Co., the Yukon Mill & Grain Co., the Pickens-Holmes Grain Co. of Holdenville and the Robertson-Archer Co. of Purcell.

MINNEAPOLIS.

By H. A. Paul, Correspondent.

Harry Miller of the Miller Elevator Co. was laid up several days with a mild attack of the "flu."

Jud Williams of the Hoover Grain Co. leaves very shortly for an auto trip to Denver, Colo.

Sam Hoover of the Hoover Grain Co. has returned to Minneapolis after wintering in California.

Lawrence Solberg of the Hoover Co. returned Wednesday after spending the winter in California.

H. S. Cramer, formerly Berlin representative for the Washburn-Crosby Co., was a Minneapolis caller this week.

John Tresise of the Cargill Co., who has been in the hospital undergoing treatment, returned to his duties on the trading floor this week.

M. R. Nelson of the Atwood-Larson Co., who has been taking the mud-bath cure for rheumatism, returned home this week. He expects to be back in the office very shortly.

Lawrence Gregory of the Gregory-Jennison Co. is back from an extensive trip through southern Europe. His father, in whose party he was, will remain there for a couple of months, returning to this country in July. Bud Converse of the Occident Elevator Co., Duluth, was in Minneapolis on Thursday.

Among the visitors on 'Change this week were the following: H. P. Russell of Linesville, Pa.; L. O. Wampler, J. H. Sanford and L. Gasper of Sioux City, Ia.; A. B. Treadway of Los Angeles, Cal.; O. Hindie of Greeley, Colo.; G. O. Ramsdell of Superior, Wis., and J. A. Linderholm of Omaha, Neb.

Cash Markets.

Wheat—The past week has witnessed a marked falling off in the demand for wheat of high protein content, the mills apparently being content to either take a chance of what the country run will bring or else they figure that there is considerable quantity of the kind of wheat which they will need in store in local elevators and which they will be able to secure on May contracts. Deliveries in this market on the first day of the month were the heaviest of any market in this country, being nearly 700,000 bushels. A local house tendered one lot of 300,000 bushels on May contracts today, interior mills getting the wheat.

There has been a great deal of talk relative to shipping sales of wheat to go to Chicago to apply on their May deliveries. Reports out early Friday said that between six and seven hundred thousand of bushels had been worked there but a close check-up shows only about half that amount. There are a good many in the trade who figure that the Chicago bear interests will be forced to make heavy inroads on Minneapolis stocks in order to save themselves. The month is still young and much can happen before the end.

Today there was a fair demand for wheat running between 12 and 13 per cent protein which could be worked into Duluth from various outlying diversion points but outside of that the market here continued to show the same narrow tone that it has all the past week. Today's range of sales was as follows: No. 1 hard spring, 4@43c over May; No. 1 dark northern, 3@41c over; No. 1 northern, 2@39c over.

Durum offerings continue very scarce and there has been a pretty fair demand for the limited offerings. Today's sales showed No. 1 amber bringing 5@42c over Duluth May; No. 1 mixed, 8c under @ 40c over, and No. 1 durum, 5c under @ 38c over.

There was a limited amount of trading done today with July as the basis as the May seemed rather congested. There was no trade here in May until the market had been open about a half hour. Naturally, it is a difficult thing to hedge in a market of this kind and it probably will not be long before the big bulk of the cash trade

will be based on the more deferred future. Local stocks made public today show 11,247,329 bushels vs. 11,673,630 last week and 12,683,596 a year ago.

Corn—As was the case last week, much of the current receipts are hardly what might be termed as merchantable quality and this kind of stuff is hard to get rid of. On one or two days of the past week there was a little shipping demand but nothing out of the ordinary. Quite a lot of the corn coming in now, either shows evidence of heating or else has been hot and has been cooled artificially. Today there was a slight improvement in the demand for the limited offerings of dry corn and the bulk of the sales were made on the following basis: Yellow; No. 3, 4@7c under Chicago May; No. 4, 8@12c under; No. 5, 14@16c under, and No. 6, 18@20c under. Mixed corn brought: No. 3, 8@11c under; No. 4, 12@15c under; No. 5, 16@19c under, and No. 6, 20@22c under.

Local elevator stocks show a total of 571,333 bushels vs. 676,519 last week and 1,257,874 a year ago.

Oats—The demand for local stocks of oats seems to be keeping up in fair shape but even at that they are not decreasing sufficiently fast to offset the receipts in the ratio which they should, provided that the totals be brought down to somewhere near the level which they should be at the tail end of the season. Today's totals show 16,661,834 bushels vs. 17,453,977 last week and 2,623,048 a year ago. In other words, there are eight times as many oats here today as there were last year on the first of the month. Any real demand, either foreign or domestic, could make some sharp inroads on this total, of course, but it will have to develop mighty soon in order to bring any joy to the holders of the May option who figured that they were a good buy a little lower than the current market.

There has been some trading going on all week on both the July and the May basis; at the end of the week all of it was being quoted on the July basis. Taken all in all, the demand for anything but the choice quality oats has been of rather sluggish character. Shipping sales just fair.

Today's range of sales shows No. 3 whites selling at July prices at 1/2c over and No. 4 whites, 1/2@2c under.

LOS ANGELES, CALIF.

C. G. White, Correspondent.

Louis Prenot of the Albers Bros. Milling Co., who has been very ill for the past month, is now reported well on the road to recovery and we look for him to be back on the floor of the exchange within the next 10 days.

C. C. Stafford, prominent grain dealer of El Monte, Calif., invited the public to attend the opening of his new storage warehouse at El Monte recently. Mr. Stafford arranged a very nice program for the occasion. There was a luncheon at noon and dancing until midnight.

Six hundred acres of cotton will be planted in Glenn county, Calif., this year in the vicinity of Orland. R. P. Parker, formerly of Kern county, and R. G. Thomas, formerly of the Imperial Valley, are planting cotton this year and believe Glenn county well suited for the purpose.

Cash Markets.

The grain, hay and feed market at this terminal during the past week shows very little change over a week ago. No. 2 yellow corn is being offered at \$2.35 with a bid of \$2.31; No. 3 yellow corn is being offered at \$2.33 with a bid of \$2.25; No. 3 eastern oats, 36 lbs. or better, for prompt shipment, is offered at \$2. Spot barley in carloads for prompt shipment is offered at \$1.95 with a bid of \$1.87 1/2, while December barley in 100-ton lots is being offered at \$1.51 1/2 with a bid of \$1.47 1/2. The grain arrivals for the week were about normal.

The hay arrivals for the week amounted to 359 carloads, the demand fairly good, and the prices unchanged. No. 1 alfalfa selling at \$22; No. 1 barley hay, new crop, \$19; No. 1 oat hay, old crop, \$30 per ton.

The ground feed arrivals amounted to 29 cars, prices unchanged and demand good. Utah-Idaho millrun selling at \$37; Kansas bran, \$34.50; alfalfa meal, medium, \$31; alfalfa molasses mixed, \$29; cottonseed meal, \$45; beet pulp, \$40.65; rolled barley, \$38; copra meal, \$31.

ST. JOSEPH, MO.

N. K. Thomas, Correspondent.

Visitors on the St. Joseph Grain Exchange during the week ending May 2 included Paul Norton, Wymore, Neb.; J. Redman, Maysville, Mo.; Albert Johnston, Maryville, Mo.; D. Archer, Stanberry, Mo.; S. F. Horn, Gower, Mo.; D. W. Sandy, Kidder, Mo.; H. N. Moore, Graham, Mo.; D. W. William, J. B. Shamm, Tarkio, Mo.; A. D. Robinson, Sabetha, Kan.; W. Idol, Robinson, Kan.; R. E. Harrington, Baker, Kan.; F. S. Bray, Sanborn, Mo.; Wm. Stamper, Platte City, Mo.; H. E. Brenner, Turney, Mo.; R. M. Pease, Beatrice, Neb.; L. R. Bryan and L. O. Girdner, Chillicothe, Mo.; F. G. Howitt, King City, Mo.; L. W. Ried, Morrill, Kan.; Homer Musselman, Gallatin, Mo.; Paul Sharp, Hemple, Mo.

**We Buy and Sell
Ear Corn
RICHTER GRAIN CO.
Cincinnati, Ohio**

J. Roberts, Union Star, Mo.; Edw. Hoerman, Herkimer, Kans.

Arrivals of all grain continued light during the week ending May 2. The wheat received was practically all on contract and floor offerings were scanty each day. The upturn in futures was followed by cash grain, and at the close of the week hard wheat values were 12c up as compared to previous Saturday. Soft wheat advanced 5@7c, and there was a good demand at the upturn. No. 2 red sold today at \$1.77. Corn in fairly good demand, with shipping firms good buyers. Offerings generally moderate. Yellow corn 3@4c up for the week, white 3c up, mixed 2@3c higher. Oats offering small and demand fair to good. Prices are unchanged for the week.

Receipts and shipments of grain, St. Joseph, Mo., for the month of April, 1925, with comparative figures of April, 1924 (figures are in bushels):

Receipts—	1925	1924
Wheat	359,800	603,400
Corn	631,500	1,221,000
Oats	80,000	86,000
Rye	1,500
Barley	1,750
Kafir	3,000
Total, April	1,074,300	1,913,650
Total, 4 months	7,608,700	7,424,750
Shipments—		
Wheat	163,800	85,400
Corn	733,500	868,500
Oats	74,000	86,000
Rye	1,500
Barley	1,750
Total, April	974,500	1,041,650
Total, 4 months	4,865,100	4,366,300

KANSAS CITY.

T. J. Tanner, Correspondent.

James N. Russell of the Russell Grain Co. served on the federal grand jury this week.

The Kansas Grain Inspection Department will remove its headquarters from the Glover building to the sixth floor of the new Board of Trade building during the coming week.

At its next meeting the Kansas City Flour and Feed Club will choose delegates to the annual convention of National Federated Flour Clubs, scheduled to be held in Baltimore, June 5-6.

Among the week's visitors at the Board of Trade were D. W. Dietrich, Philadelphia, Pa.; W. H. Chambers, Omaha, Neb.; J. Knowlton, San Antonio, Tex.; W. Shipley, St. Louis, Mo.; D. Moore, St. Joseph, Mo.; L. J. Chapman, Great Bend, Kan., and R. Pleas, Beatrice, Neb.

The Kansas City Grain Club will hold its annual meeting for the election of officers on the evening of May 7. B. C. Christopher, Jr., is president of the club and H. C. Gamage is vice-president. W. W. Fuller is secretary-treasurer. A banquet will precede the election in the Kansas City Club rooms.

Recognizing his service of 10 years as president, the Southwestern Millers' League has presented a silver loving cup to L. E. Moses, who is living a retired life in southern California. Mr. Moses was for many years president of the Kansas Flour Mills Co., with an office in Kansas City. He still holds the position of chairman of the board of directors.

Discussing the frost damage reports circulated by wheat bulls this week, Frank Bruce of the Bruce Bros. Grain Co. said: "Unless wheat is in the bloom, frost is not likely to hurt it. When wheat in the bloom is frost bitten, you can not detect the damage at the time, but the heads will have no grains in them at harvest. I have observed the frost effects since 1881, and I know something about them."

J. H. Moore of the Moore-Lowry Milling Co., Kansas City, Mo., and Wichita, Kan., said Thursday that wheat fields in Kansas had improved rapidly since the recent rains. He looked for a yield of 130,000,000 bus. In contrast with this view, W. C. Fuller of the Ernst-Davis Commission Co., Kansas City, reported after a trip that wheat conditions in Kansas, as a whole, were unfavorable. Mr. Fuller said the rains had fallen in spots. He estimated the crop at 92,000,000 bus.

Near exhaustion of interior supplies and the activity of farmers with their spring work cut the April wheat receipts in Kansas City down to 874,000 bus., the smallest for the month since 1918. Corn offerings were 723,750 bus., as against 2,410,000 in March and 1,915,000 a year ago. There was an increase of 251,600 bus. in the oats arrivals, making the total 595,000 bus. Receipts of all grains and grain products were 2,303 cars, while shipments were 7,592 cars.

Appeal in Christopher Case.

In the Circuit Court of Pettis county, Mo., April 29, the case against James K. Christopher of B. C. Christopher & Co., Kansas City, charged with violating an obsolete state law against trading in grain futures, was decided against the defendant. A. W. Walker, the judge, fined Mr. Christopher \$1,000 for operating a commission house in Sedalia.

Mr. Christopher was convicted on a technicality after he had conceded all of the charges made by the prosecuting attorney of Pettis county for the sake of testing the law. His attorneys, including the legal talent of Kansas City and Chicago Boards of Trade, contended for immunity on the ground that the Missouri law against transactions in grain futures was superseded by the Capper-Tincher law, a federal statute, which legalizes future trading.

An appeal to the Missouri Supreme Court

WEEKES COMMISSION CO.

SHIPPERS

CORN OATS CHICKEN WHEAT
409 Merchants Ex., St. Louis, Mo.

was promptly taken. In the meantime Mr. Christopher's business will not be disturbed.

Big Elevator for Co-operators.

The erection of an elevator of 1,000,000 bus. capacity, with provision for a second unit of the same size, has been decided upon by the Chicago & Alton Railroad. This house will be in the East Bottoms industrial district where the railroad has its yards. The elevator is to be leased to the Kansas Co-operative Grain Co., a subsidiary of the Kansas Wheat Growers' Association. It will cost \$500,000, and completion is expected early in the fall of 1925. W. W. Young is sales manager for the Kansas Wheat Growers' Association. He will automatically assume the same position in the Kansas Co-operative Grain Co. John Vesescky is president. The Kansas Wheat Growers' Association has one membership in the Kansas City Board of Trade in the name of Ernest R. Downie, and its secretary-treasurer, L. L. Wilson, is an applicant for admission. Another step in the plans of the Kansas Grain Growers' Association is to turn over the Kansas Central elevator in Leavenworth and many other country houses to the Kansas Co-operative Grain Co.

Cash Grain Markets.

Wheat—Receipts for the week, 113 cars, against 165 a week ago and 401 a year ago. Except the first and last days, the market advanced with light offerings and strength of futures as the bull motives. Flour production was reduced to 91,772 bbls. and there was no urgency in the outside mill demand, while exporters seemed to be interested only in filling their old sales. Hard and dark closed with a net gain of 8@12c, with No. 1 at \$1.57@1.63, No. 2 at \$1.56@1.73, No. 3 at \$1.54@1.71, and No. 4 at \$1.52@1.71. Notwithstanding the scarcity of arrivals, soft wheat was slow, only the choice samples being wanted. It finished 5@13c higher, as follows: No. 1, \$1.70@1.76; No. 2, \$1.69@1.75; No. 3, \$1.67@1.73; No. 4, \$1.65@1.71. Elevator stocks decreased 419,000 bus., to 3,519,000, as compared with 3,428,000 last year. Additional rains were favorable to the new crop in most of the southwestern territory and abnormally low temperatures checked the rank growth. A few reports indicated slight damage from frost in jointed fields. Local estimates on the Kansas yield continue to run around 100,000,000 bus. Oklahoma and other states, aside from Missouri, are expected to harvest less than in 1924. The harvest should be early.

Corn—Receipts, 116 cars, against 142 a week ago and 484 a year ago. The market had very irregular action, with demand shifting from one variety to another. Feeders were fair buyers of yellow and mixed and mills took white freely on some days. Elevator men bought, but declared the southern shipping demand was disappointing. Final prices were 1/2@3c higher, with No. 2 white at \$1.04 1/2@1.05 1/2, No. 3 at \$1.01@1.03 1/2, No. 2 mixed at 99c@1.01 1/2, No. 3 at 98c@1, No. 2 yellow at \$1.05@1.07, and No. 3 at \$1.02@1.05. The stocks decreased 341,000 bus., to 4,633,000, against 1,274,000 a year ago.

Oats—Receipts, 60 cars, against 121 a week ago and 80 a year ago. Reductions of offerings stimulated the demand for choice white oats, but poor qualities sold slowly. The net gain in prices for the week was only 1/2@1c and prices closed as follows: No. 2 white, 45@45 1/2; No. 3, 43 1/2@44 1/2; No. 2 red, 45c; No. 3, 44c. Local stocks were reduced 50,000 bus., to 881,000, as compared with 224,000 a year ago. There is an excellent prospect for the coming crop.

Kafir and Milo—Receipts, 45 cars, against 98 a week ago and 97 a year ago. Orders from manufacturers were limited and the demand fell largely from local handlers. Restrictions of arrivals was attributed, in part, to the California bids in Texas and western territory. Kafir advanced 3@4c per cwt. and milo closed 1@3c higher, as follows: No. 2 white kafir, \$1.69@1.70; No. 3, \$1.68; No. 4, \$1.66@1.67; No. 2 milo, \$2.05@2.06; No. 3, \$2.03@2.05; No. 4, \$2.01@2.02. An increase of 5,000 bus. in stocks was recorded, bringing the total up to 284,000, against 455,000 last year.

PORTLAND, ORE.

A. C. Wasard of this city was a recent visitor in New York.

L. J. Pettijohn of Washington, D. C., a member of the Federal Farm Loan Board, was a Portland visitor last week.

Freights quoted for the opening of the new season are said by steamship operators to be 35s to 36s 6d. It is not indicated that there is any prospect that a considerable amount of space will be booked under present conditions.

S. A. Levy, for the past eighteen months with the Mikkelsen Grain Co., is organizing with his father the Levy Grain Co. The company has been incorporated with a capital stock of \$10,000, and will have offices at 409 Board of Trade building.

In the recent windstorm in Umatilla county a 50x100 warehouse belonging to the Pacific Coast Elevator Co. was wrecked, the roof and sides of the building being

the company for the past three years. The new contract takes effect July 1. Officials of the company stated that he has made an enviable record for himself in grain circles since coming to Sioux City.

State Senator B. M. Stoddard and Representative Ralph C. Prichard and L. B. Forsling were guests of the board of directors of the Chamber of Commerce at the regular meeting of the board last Tuesday noon. D. P. Mahoney, president of the Chamber of Commerce, expressed his appreciation of the work the legislators had done for Sioux City during the past session. Response was made by each of the legislators.

Tuesday, May 12, will mark the official opening of the new Chamber of Commerce headquarters. Members of the board of directors will constitute a reception committee. The membership of the chamber has been invited to visit and inspect the headquarters during the day. The annual meeting of the organization will be held at the headquarters at 6 p. m. Herbert Quick, internationally famous author, lecturer and political expert, will be the principal speaker at the banquet, which will precede the business meeting. Mr. Quick is well known in Sioux City, being a former resident and an ex-mayor of the city.

CINCINNATI.

George Mosbacher, Correspondent.

C. C. Groff & Son, flour millers and jobbers at Mt. Healthy, Ohio, have applied for membership in the Grain and Hay Exchange.

The demand for oats while only moderately active exceeded the daily arrivals and a firmer market and advances of 2@2 1/4c over last week resulted. Retailers were good buyers of the smaller offerings.

Wm. Fedders of J. H. Fedders & Son, feed dealers in Covington, Ky., was on the floor of the Exchange Wednesday receiving congratulations and passing the cigars incident to a visit of the stork at his home. The baby, a girl of nine pounds, is the ninth child born to Mr. and Mrs. Fedders, who declare it to be the prettiest in the city of Covington.

The demand for immediate milling wheat was very much improved the past week and orders from southern mill for two and five car lots were materially increased, but receipts were disappointingly small and terminal stocks were largely drawn upon to supply the demand. Low grades, however, were not wanted and discounts were considerably widened.

Receipts of corn continue very light and far below last year's arrivals at this time but the demand was only fair and market easy and lower early but firm and higher on option strength at the close. Buying was mostly confined to milling grades of white and yellow with mixed neglected. There was little inquiry for eastern shipments as prices were relatively above the

participate investing are approximately \$750,000. Replies for the 20-month period in which the department has been active in this form of work totaled 12,000, of which 1,087 definitely specified they were coming to this state.

More interest is being shown in new crop wheat than in old wheat. New crop export wheats were being bought on a basis of \$1.37 a bushel last week, with a few buyers in the field around that price. This is a drop of about 15 cents a bushel over the price offered about a month ago, but with better crop prospects in sight all over the country, buyers are hesitant about paying fancy prices for the new crop. This price is way above that offered at the same period last season, but is hardly a reflection on what conditions may be in this territory when the new crop wheat comes on

WAGON LOADS RECEIVED

A book for the use of country grain buyers in keeping a record
of grain received from farmers.
Its column headings are: Month, Day, Name, Kind, Gross
and Tare, Net Pounds, Bushels, Pounds, Price, Dollars, Cents
and Remarks.

The book, 9 1/2 x 12 inches, 160 pages, 20 lines to each page, giving
room for recording 3,200 loads, is printed on Linen Ledger
Paper and is well bound in strong board covers with leather
back and corners. Order form 80. Price, \$1.75.

export basis. Terminal stocks showed a liberal reduction.

Stocks of wheat held in Cincinnati elevators and warehouses, which during the crop season totaled more than 3,000,000 bushels, were reported as down to 123,215 bushels on May 1, distributed as follows: Weidmann Brewery (Newport, Ky.) 85,230 bushels; Cleveland Grain & Milling Co., 25,850 bushels and the Early & Danil Co., 12,135 bushels. Total supplies of other grains in storage last week with comparisons of the previous week are as follows:

	May 1, 1925	Apr. 24, 1925
Wheat, bus.....	125,215	141,608
Corn, bus.....	238,053	228,245
Oats, bus.....	99,920	128,456
Rye, bus.....	3,474	3,361

ST. LOUIS.

W. Shipley of this city was a Kansas City Board visitor last Thursday.

H. G. De Pew has again taken charge of Central Elevator B, which was recently sold to the Ralston Purina Co.

Willbur Christian has been elected secretary of the St. Louis Grain Club to succeed Eugene Gissler, deceased.

Albert Stump of Indianapolis was the principal speaker at the annual meeting of the St. Louis Traffic Club on April 28.

W. E. Meek of the Meek Milling Co., Marissa, Ill., and A. H. Gilster of the Gilster Milling Co. of Chester were in the city on business last week.

Elmer Smith of the Leuhrman Milling & Grain Co. was in Jackson, Tenn., and other points in the south during the past week.

Among the recent St. Louis visitors were H. P. Bell of the Colorado Milling & Elevator Co., L. B. Chapman of the Walnut Creek Milling Co., F. A. Welk of the Northern Flour Mills Co., W. J. Simms of the Claffin Mill & Elevator Co., and L. A. Arneson of the Larrabee Flour Mills Corp.

Some critics of the private crop reports are calling the attention of the trade to the fact that the Government forecast for winter wheat last year in June was 509,000,000 bus., which finally proved much too low, and on this basis it was attempted to create the impression that private reports might prove to be equally wide of the mark this year; on the other hand, it was

argued that in this connection it is worth noting that the June forecast last year made by the private reporters were much greater and it was the Government report that was most in error.

WINNIPEG, CAN.

Geo. H. Measham, Correspondent.

Weather conditions throughout the week have been most favorable to the progress of seeding operations. Early sown wheat is through the ground and the probability is that all wheat will be sown by May 10. There has been light frosts at night.

Wheat has displayed a strong tone throughout the week making advances daily except on Monday. Private estimates of the U. S. winter wheat crop which came out on Friday caused a sharp advance and strong market. May wheat for the week has advanced.

Export buying has been light but many members of the export trade think business

The Bell Telephone Laboratory in 1884. From an old wood engraving published in the "Scientific American"

Winning nature's secrets

Every day that passes records some new advance in the telephone art. Constant experiment and observation are winning new secrets of chemistry, of electricity and magnetism, and of matter. Nature's unseen quarry is yielding to the researches of the laboratory that exact scientific knowledge which is among the telephone engineer's most priceless resources. The workshop of the telephone engineer is a scientific laboratory. Here he studies and experiments with principles and laws of our physical environment and sets them to aid us in our daily lives.

Forty-nine years ago the telephone was born in a scientific laboratory—a very small laboratory, to be sure, as it numbered in its personnel none but Bell and his assistant. As the Bell System has grown that laboratory has grown, and as the laboratory has grown the telephone has grown in efficiency, in distance covered, in numbers, in perfection. Countless are the milestones marking progress in the telephone art that have come from the laboratory.

Today the laboratory numbers among its personnel 3000 employees, more than half of whom are skilled scientists and engineers. Headed by a vice-president of the American Telephone and Telegraph Company, it is known as the Bell Telephone Laboratories, Inc., and forms an indispensable department of the Bell System.

will improve with advancing prices arguing that foreigners will be eager to buy when they find out that they have missed the market at its low. There has been little doing at this end for immediate shipment but considerable wheat has been sold for July.

There is little wheat left in the west. In-

terior elevators are being rapidly cleaned out and the quantities in farmers' hands are small. The 40 millions of wheat in the visible about represents what is yet left for export and this is far less than statisticians have been figuring on as Canada's available supply for world needs until the new crop comes in.

In the oats and barley markets there has been good steady export demand and the movement of oats east from the lakes terminals has been on a large scale. Large quantities of flax have also been shipped out but there has been nothing doing in rye. It continues to be a drug on the market.

Flax has been dull and apparently under moderate liquidation during the early days of the week but gathered strength at the week's end in sympathy with other commodities. There is now little seed left to market and there is a general belief in the trade that higher prices will prevail later in the season. The terminal stocks are believed to be in the hands of Canadian and American crushers and they have been steady buyers of any cash flax offered on dips.

BOSTON.

C. E. Russey of this city has been visiting in Chicago, his old home.

J. Cushing & Co., grain dealers, Fitchburg, have purchased the grain plant of the Foster Grain Co., Lowell, Mass.

W. S. Harrison, Boston representative of Samuel Knighton & Son, New York, was a recent business visitor at headquarters.

The steamer Raifuku Maru, announced last week as having sailed from Boston with 48,000 bus. bonded wheat and 261,827 bus. bonded rye for Hamburg, sank off Nova Scotia on April 21, due to a shift of cargo in a heavy storm.

PEORIA, ILL.

L. L. Eckard, Correspondent.

J. J. Badenoch opened their new office at rooms 15 and 16, Board of Trade building, Friday with Mr. Frank Dalton in charge.

James E. Bennett, president of James E. Bennett Grain Co., was among those who attended the grain dealers' association meeting at Peoria Tuesday.

Winter wheat throughout this section reported to be looking very good, but has not made much headway the past week due to the cool weather. Light frost was reported Friday morning, but no damage was done.

Corn receipts remain light, with 15 cars Saturday. Spot prices followed the futures. There was a fair demand at prices 2@3c lower. All offerings were cleaned up at the decline. Local industries were the best buyers. No. 6 yellow, \$1.01@1.02; No. 3 mixed, \$1.04; No. 6 mixed, \$1; No. 5 white, \$1.03; No. 4 yellow, \$1.04; sample yellow, \$1.01.

Oats receipts were only 1 car. Offerings were small and no fresh business was reported. Bids were unchanged.

Grain receipts and shipments for week ending Saturday, May 2, as compared with same week last year, as reported by the secretary, Peoria Board of Trade, as follows:

	Receipts—	1925.	1924.
Wheat	20,200	25,200
Corn	241,350	178,100
Oats	96,100	243,000
Rye	1,200
Barley	4,200	8,400
Flour, bbls.	361,850	455,900
Shipments—	1925.	1924.
Wheat	14,400	24,000
Corn	105,450	154,400
Oats	66,600	204,600
Rye	2,400
Barley	1,400	5,600
Flour, bbls.	187,850	391,000
	34,400	30,000

Hogs at local yards were reported steady, with a top price of \$11.40. The bulk of good stuff sold from \$11.25@11.40, with 120 to 170 lb. averages at \$10@11.30. Packing sows, \$9.75@10, with stags, \$8.75@9.25. Trading was fairly active, confined to light receipts, less than 1,000 hogs arriving.

Cattle prices remained steady with the week's stronger market. Best calves sold at \$9.50 down. Receipts were very light.

CHICAGO.

M. E. Dickson was a recent business visitor in Philadelphia.

F. E. Hawley of the Norris Grain Co. was in Buffalo the latter part of April.

Lloyd Ellingwood of the J. R. Short Milling Co. was in New York on business last week.

Chauncy Abbott, Jr., of the Omaha Flour Mills Co., was in the city on business last week.

Wm. Simons has been reinstated as a member of the Board of Trade and is handling brokerage business.

F. A. Hallett of Hallett & Carey of Minneapolis visited the trade in Chicago last week on his way to the east.

E. A. Roeber, for nine years in charge of the Chicago office of the Bay State Milling Co., on May 1 took charge of the company's New York office. Noble M. Coe of Winona, Minn., succeeds Mr. Roeber as Chicago manager.

J. A. Rohleder, formerly of Minneapolis, is now purchasing agent of the feed department of the Grain Marketing Co., succeeding J. A. Adam, who recently removed to St. Louis in charge of the grain feed and jobbing business of Anheuser Busch, Inc.

Production of 427,000,000 to 448,000,000 bu. in the winter wheat crop were given in the three private reports issued by Chicago statisticians. The average of the three reports suggests a yield of 438,000,000 bus., compared with 474,000,000 bus. by the government in April, 590,000,000 bus. harvested last year, and a 10-year average of 535,000,000 bus. Condition ranges from 71.6 to 75.6 per cent. Murray's figures are the highest. The government last month was 68.7 and in May last year 84.8 per cent. Abandoned acreage ranges from 8,510,000 to 9,060,000, leaving an average acreage for harvest of 23,466,000. The percentage ranges from 20.1 to 21.2. A summary of the three reports, with the six ciphers omitted on the total production and three ciphers on the acreage, follows:

	Crop.	Cond.,	Cond.,	May 1.	March.	Acreage.	Loss.
Snow	..427	71.6	75	33,807	8,510		
Murray	..448	75.6	73	33,335	8,982		
Bryant	..440	75.2	..	33,257	9,060		
Avg.	..438	74.1	..	33,466	8,851		

There has been wide publicity given to the bullish crop estimates and this has resulted in a broadening of commission house business, with the public showing considerable interest on the buying side of the market. Eastern traders who have been long wheat at materially lower prices have been good sellers on the advance, but their offerings are readily absorbed by the new outside buying. Export demand, according to eastern advices, remains exceedingly dull, and it would appear as though foreign buyers are eating into the passage stocks and cutting down their new purchases to an absolute minimum. Crop reports from abroad are generally favorable. The Chicago & Northwestern Ry. report

says that the crop situation in Minnesota and the Dakotas continues to be very satisfactory. The southwest reports a very dull flour business, with a reduction in output on the part of some mills.—Cross, Roy, Eberhardt & Harris.

We believe that the world position in wheat is now the strongest in many years and that it insures a higher range of prices for the 1925-26 season than those now prevailing. Prior to the world's war, the world wheat acreage was adjusted upon a basis where a normal rate of yield furnished a moderate surplus to insure against possible crop yield deficiencies in some country in the occasional poor year. With the elimination of Russia as an export factor the possibilities of production and requirements became so closely adjusted that this margin of safety became very small. In order to barely meet world needs, the world acreage is now so low that full production per acre must be secured in every country. Last year a partial failure in Canada resulted in trouble the world over. This year we start with a very low prospect in the U. S., the greatest producer of all. This situation, with no appreciable supplies to carry over and draw upon, presents a most serious condition and one to which the grain trade must give earnest consideration.—Bartlett-Frazier Co.

The heaviest abandonment recorded, with the exception of 1917, is indicated by our crop correspondents. The average for the United States is 21.2 per cent of the area planted and amounts to 8,982,000 acres. This is somewhat larger than indicated by our correspondents a month ago. The 10-year average abandonment is 11.1 per cent of the planted acreage. In 1917 the abandonment was 31 per cent, or 12,437,000, and the crop in that year was 413,000,000 bushels. In 1912 the abandonment was 20.1 per cent and the crop 400,000,000 bushels.—Clement, Curtis & Co.

Murray's figures suggest 33,335,000 acres for harvest and show the heaviest abandonment on record except in 1919, when a winter wheat crop of 413,000,000 bus. was raised. There was naturally heavy covering by shorts, and commission interest increased perceptibly. The Liverpool market sympathized with our strength, closing 5 1/4c higher. We would not hesitate to take profits on today's advance in prices, but believe purchases on setbacks are in order for the moment, as undoubtedly there will be excellent support on all good declines. We would not care to follow advances in the corn market at this time.—J. J. Badenoch & Co.

European buyers were not impressed with the advance on this side, nor convinced by the latest estimates of American crop experts. Liverpool made fractional gains, and there was a very small business for export. Weather over the eastern area is more favorable. Corn was dominated largely by local activities; some individual support early; on the advances the selling was more impressive and confident and more general. The trade for shipment was moderate. Receipts light and partly from western terminals direct to the Corn Products plant. Strength and higher prices at Liverpool must be accepted as a reflection of the important crop losses in Argentina, the smaller exports from that country and the consequent reduction of available supplies for northern Europe.—Pope & Eckhardt Co.

Liverpool views our wheat estimates with interest, but is inclined to be skeptical over the final out-turn and was further influenced by a revised estimate of the Australian crop, the total yield being raised some 17 million bushels. Unless the foreign demand improves materially, our market is likely to hesitate, pending the receipt of the official crop estimate to be issued on the 8th of the month. Sentiment is somewhat mixed, largely because crop estimates a year ago at this time were so widely variant from the final yield. The close cleaning up of world's reserves of all previous crops necessitates better than an average yield the world over for this year. We think the essence of the situation lies herein and believe that this should be kept in mind at all times. Although foreign markets do not furnish inspiration for an immediate advance, we cannot see that the underlying situation has been weakened in any way; on the contrary, the unanimity of the private crop reports precludes the idea of lower prices.—Thomson & McKinnon.

The trade should not overlook that the United States is the main source of import wheat from July to October, inclusive. In the last five years our exports have averaged 123 million bus. for this period. While European reports are rather sketchy, they imply that there are prospects of a larger world's wheat crop than last year. The U. S. Dept. of Agriculture, however, points out that with average abandonment and average yield per acre, the European yield on the acreage reported to date would be less than 1 per cent greater than last year. There is nothing in these reports to indicate that importing countries would draw on the United States for less than an average of 123 million bus. from July to October, if that amount can be spared. In fact, it would appear that importing countries will be unusually dependent on the United States during those months in the coming crop season, as indications are for small carryover of old wheat in all European countries. Altogether, with the close cleanup of old crop supplies the world over and prospects for a small new crop in the United States, it appears to us that the wheat world is confronted with a more bleak situation than at any time last year, unless there develops vast improvement in crop prospects in the United States. Until such a turn becomes evident, we believe that prices will continue to ascend.—Charles Sincere & Co.

Barley

CHICAGO BARLEY PRICES.

Following is the daily range of quotations for spot malting barley quotations at Chicago:

Apr. 27....	\$0.85@0.90	Apr. 30....	\$0.85@0.95
Apr. 28....	.85@.95	May 1....	.85@.93
Apr. 29....	.85@.92	May 2....	.85@.92
Receipts of barley at Chicago for week ending May 2, 1925, were 129,000 bus., compared with 167,000 bus. same week 1924; shipments, respectively, 24,000 bus. and 121,000 bus.

BARLEY MARKETS.

MILWAUKEE.—The Milwaukee barley market continued firm and strong with prices unchanged throughout last week. Malting grades were in demand but inferior qualities, especially black oats mixtures, moved slowly. Offerings, however, were all absorbed. Receipts in the period were 131 cars as compared with the same number in the previous week and 106 in the same week of 1924. Choice to fancy, 48 to 50 lb. test, quotable at 93¢@94¢; fair to good, 44 to 47 lb. test, 85¢@92¢; light weight, 40 to 43 lb. test, 80¢@88¢; feed, 70¢@82¢. Iowa quoted 80¢@94¢, as to quality; Wisconsin, 80¢@94¢; Minnesota, 80¢@94¢; Dakota, 80¢@93¢; feed and rejected, 70¢@82¢.

FT. WORTH, TEX.—Receipts and offers are nil with a good demand and prices have shown some advance. Prospects are very slim for another crop and it is apparent that supplies will have to come from out of the state sources. Today, May 2, barley is worth basis Group 1, No. 3, 91¢; No. 4, 90¢; 40 lb., 88¢.

MINNEAPOLIS.—The first three days of the week the demand for the cash article was very slow and neither shippers, feeders, nor maltsters seemed interested in current offerings. After mid-week, however, there was a marked improvement in interest, especially for the lower and medium grade stuff. Today's range of sales was from 68¢ at 84¢. Minneapolis elevator stocks showed a slight decrease, being 1,403,771 bu. vs. 1,617,197 last week and 162,054 last year.

DULUTH.—Trade in barley was dull on this market during the last week. Receipts from day to day were limited with bulkhead cars making up a percentage of the inspections, and some of the cars were also applied on sales.

Some rye was reported as having been sold from the elevators for eastern shipment. Receipts during the week were only 18 cars. The price range closed 1c up at from 71 to 85¢.

KANSAS CITY.—Barley offerings were more liberal this week, but still light. Receipts were 6 cars. There was a good demand for manufacturing account, locally and southeastward. Prices rose 2¢@4¢ per bushel, to 91¢@92¢ for No. 3 and 87¢@91¢ for No. 4. Stocks increased 1,500 bus. to 6,000. A year ago there were 48,000 bus. in store here. The crop news continues to indicate a large yield westward this year.

CHICAGO.—Receipts extremely light and demand good. Feeling firmer and prices compared with the sales of Saturday unchanged. Prices here attractive to buyers, being somewhat lower than a nearby market. On that account good shipping directions continue to be received here from the East. Car loaded out with exports for week, 642,000 bu., against only 11,000 bu. last year. Crop outlook favorable in Illinois. Visible increased 64,000 bu.; last year decreased 201,000 bu.; totals, 2,847,000 bu.; last year, 836,000 bu. Local stocks decreased 14,000 bu.; total, 254,000 bu.; last year, 172,000 bu. Malting quotably 85¢@90¢; extra quality higher; feeding and mixing, 76¢@86¢; screenings, 40¢@66¢. Local inspection, 17 cars. Shipping sales were 5,000 bu.

RYE MARKETS

CHICAGO RYE FUTURES.

Following is the range of future prices for rye for the week ending May 2:

	Apr.	May.	July.	Sept.
27 1.01½@1.06	1.00½@1.05	.94 @ .97		
28 1.03½@1.08	1.02½@1.06½	.96 @ .99½		
29 1.05½@1.08	1.03 @ 1.05½	.97½ @ .99½		
30 1.06½@1.08	1.04½@1.06	.97½ @ .99½

Year .151½	.89½	1.11	1.73	2.41		

RYE MARKETS.

CHICAGO.—Closed with gains of 6¢@11½¢ for futures and 4¼¢ on car lots. Trade moderately large and the market quite active. A very strong feeling developed, due largely to the covering by prominent "shorts" and buying by houses with seaboard connections. Strength in wheat also something of a factor. Offerings were light and confined mainly to profit-taking on the advance. Visible supply decreased 1,730,000 bu. and total is now 12,126,000 bu.; last year, 20,374,000 bu. Local stocks increased 130,000 bu. to 2,778,000 bu. Exports for the past week were 2,605,000 bu., against 516,000 bu. a year ago. Deliveries on May contracts were 191,000 bu. Charters were made for 350,000 bu. to Buffalo. Car lots were in good demand and basis firmer at ½¢ over May for No. 2. Offerings light. Local inspection, 30 cars. No. 2 sold at \$1.18½. No. 3 sold at \$1.15½.

DULUTH.—A feature in trading in the rye market during the last week was a sharp bulge on Friday as a result of export activity and the putting through of a good volume of business for immediate shipment. Stocks of rye in the elevators were reduced in the week, leaving an aggregate of 5,053,000 bu. Closing prices of No. 1 rye are 5½¢ up at \$1.10.

MINNEAPOLIS.—The local market for rye was generally slow and featureless throughout the week just passed. Offerings were rather scant and whatever demand there was, was entirely for the choice milling quality. An effort was made early to change the cash basis to the July future but on Thursday, they changed back to the May again; going back to the July again today.

Local elevator stocks made public today show a total of 843,462 bushels vs. 881,039 last week and 7,772,380 a year ago.

No. 1 rye sold today at 2¢@3¢ over the July and No. 2 July at 2¢ over.

MILWAUKEE.—Rye was generally strong in the Milwaukee market throughout the past week but continued its price fluctuations within slightly smaller margin and closed 6¢@7¢ higher for the period. Offerings were mostly offgrade with high moisture content and discounts were liberal. Considerable Wisconsin sold on a forward shipping basis. Wisconsin mills and shipping interests were both fairly active in the market. Receipts were five cars as compared with eight the previous week and four in the same week of 1924. Market closed at \$1.11@1.12½ for No. 2, inside for Wisconsin, ranging at May price to 1¼¢ under.

NEW YORK.—Export business in rye for the week approximated two to three million bushels, mostly to Germany and Finland.

EXPORTS REDUCING RYE STOCKS.

Again last week the principal feature of the rye market was the heavy exports—making a total for the past four weeks of almost ten million bushels, and leaving in terminal elevators a little less than fourteen million. With available supplies almost entirely concentrated at terminals, it is quite apparent that a continuance of exports at the same rate would exhaust stocks long before new rye will be obtainable. Liquidation by "longs" in May has continued with resultant weakness, but should be completed this week.—Frank H. Blodgett, Inc., Janesville, Wis.

BEANS AND POTATOES.

Quotations follow for bids of good quality condition beans and potatoes sacked, per cwt., unless otherwise specified, as of week of May 2:

Beans—Chicago—Prices the same. Supplies limited. New crop making seasonal progress. Per 100 lbs.—Spot navy beans; Mich. fancy, \$6.25; red kidney, fair stock, \$10; large dark, extra quality, \$10.50. St. Louis —Quote choice hand picked Michigan white beans at \$6.25 and prime machine picked at \$6 per 100 lbs. Scotch peas, 7¼¢; green split peas, 9¢,

and yellows, 7¢ per lb. California lima beans at \$15.50 per 100 lbs. Boston—Car lots, per 100 lbs., N. Y. and Mich.—Choice hand picked pea beans, \$6.25@6.50; fair to good, \$6@6.15; California small white, \$8.35@8.50; yellow eye, extra, \$6.25@6.50; red kidneys, choice, \$10.50; fair to good, \$9@9.50; California limas, \$14.50@15; native green peas, \$7@7.50; Canada, \$5.25@5.50; split, \$5.50@5.75; jobbing prices; 25 to 50 cents above car lots.

San Francisco—Whites, small, 8¼¢; do, large, 7¢; pinks, 9¢; limas, 15¢; cranberry, 8¼¢; kidney, 12¢; Mexican garavanzas, 11½¢; lentils, large, 9¢; do, small, 8¢; black eye, 11¢; Mexican reds, \$8.85 per cwt.; speckled bayos, 8¼¢; bayos, 8¢. Peas (per lb.)—Split peas, yellow, 7½¢; green peas, 8½¢.

New York—Market continued very quiet Friday and goods were pressed for sale at mostly the inside quotations. Pea beans offered liberally at \$6.25 and some business being done lower. Red and white kidneys very dull. California limas easy and \$15 reported shaded by about 10¢. Black eye peas irregular and \$10.75 is the more usual selling price. Splits dull and unchanged. Domestic, 100 lbs.—Marrow, \$9.50@9.75; pea, choice hand picked, \$6.15@6.25; pea, screened and prime, \$5.75@6; red kidney, \$10; white kidney, \$8.50; lima, Cal., \$14.90@15. Imported, 100 lbs.—Marrow, \$8.50@8.75; white kidney, \$7.75@8. Lima, mad.—1924-25, \$12.25@12.50; 1923-24, \$11.50@11.75; 1922-23, \$9@9.50; Lima, Europe—Large, \$11.50; medium, \$11; small, \$10.25. Peas, domestic, 100 lbs.—Black eye, \$10.75; yellow split, \$6.25@6.50; green split, \$7.50@7.75. Imported, 100 lbs.: Green—Japan, \$6.25@6.50; Holland, \$5.25@5.50; yellow split, \$5.50@6; green split, \$7.75@8. Chick, Mex.—Imperial, \$11.75; monster, \$11.50; large, \$9.50; small, \$7@7.50.

Potatoes—

Chicago—Market steady. There was a fair trade for a week-end and quite a little business transacted. Buyers were somewhat inclined to be particular and were favoring the offerings of sound and better quality. Shippers were not very active in the market today and were confining their purchases to urgent orders. Bulk, per 100 lbs., Wis., dustys, 85¢@95¢; ordinary and poor, 60¢@75¢; round white, sacks, Wisconsin, 85¢@95¢; ordinary and poor, 70¢@80¢; Idaho russets, \$2.60@3; Ohio, Red Rivers, 80¢@95¢. New Potatoes—Are increasing; receipts, 12 cars; demand fair. Sales reported today were: Sacks, per 100 lbs.—1 car Louisiana at \$3.25, 1 car Texas at \$3.25. Barrels, Florida, Spaulding Rose, \$5.25@5.35; No. 2, \$4.25; sacks, Texas Triumphs, 100 lbs., \$3.25; hampers, Texas, \$2.50; old, boxes, Idaho, repacked, \$2.25@2.50. Sweet Potatoes—Arrivals moderate; light demand noted. Hampers, Tenn., Nancy Halls, \$2.75@3; Illinois, \$3; Jerseys, eastern, kiln-dried, ordinary, \$2.50.

New York—Florida potatoes showed no material change; Bermudas dragged; old sack potatoes demoralized. Texas onions firm with best marks held higher, though values not well defined and quotations omitted; Chilean and Argentine irregular and poor stock dragged; Egyptian unchanged; old bags in light receipt. New Potatoes—Fla., bbl., No. 1, \$2@5; No. 2, 75¢@2.75. Bermuda, bbl.—No. 1, \$7@8; No. 2, \$4@4.50. Old Potatoes—Me., bulk, 180 lbs., \$1.65@1.90; carlots, cwt., 90¢@1.10; 150 lb. sk., \$1.35@1.65. State, bulk—180 lb. sk., \$1.40@1.75; 150 lb. sk., \$1.15@1.35. L. I., bulk—180 lbs., \$3.25@3.40; 150 lb. sk., \$2.50@3. Sweet Potatoes—Jy., bsk., \$1@3.50; Del. and Md., bskt., \$1@2.65.

CROP OUT OF FARMERS' HANDS

HART, Mich.—Oceana County is a red kidney bean section; very few white beans are grown here. The 1924 crop is practically out of the farmers' hands and very few are held by dealers. There are not to exceed five cars of red kidney beans in the elevators. I know of but one car of white beans and feel very certain that two cars would take every white bean in Oceana County. Without a doubt all of the above remaining beans will be shipped out in the next thirty or sixty days. It is my opinion that the planting this season will be normal or a little above, as the price has been good this last season.—D. Burns Hutchins.

BUCKWHEAT MARKETS.

MILWAUKEE.—Prices, per 100 lbs., continued unchanged, with silver hull quoted at \$2.10@2.15 and Japanese \$2.20@2.25. Offerings were light and movement very restricted.

CHICAGO.—Fancy mixed and silver hulled buckwheat, \$1.90@2.00; Jap., \$2.20@2.25; dirty seed quotably less.

St. Louis.—Quote nominally at \$2.05 per 100 lbs.

BUFFALO.—Mixed, per 100 lbs., \$2.15; silver hull, do., \$2.00.

News of the Country Grain Trade

ARKANSAS.

Hiwasse, Ark.—F. M. Brinegar has purchased the grist mill of N. A. Johnson.

Piggott, Ark.—B. L. Royall, president of the Clay County Mill & Elev. Co., died here recently at the age of 57.

Morrilton, Ark.—Webb-Reynolds & Sharp, dealers in livestock and feed-stuff, has just completed a large building.

CALIFORNIA.

Corcoran, Cal.—The Corcoran mill and warehouse has installed new machinery for the manufacture of feed stuffs, including two Monitor cleaners, a Fairbanks-Morse Automatic bulk scale, a barley roll, a corn cracker, a large grinder, a batch mixer and three packers.

Patterson, Cal.—The Patterson Elevator Co. filed articles of incorporation for the purpose of buying, selling, packing, treating and mixing all kinds of grain. Capital stock is placed at \$25,000. Three directors have been named: R. H. Zacharias, William Jones and Manuel Rogers.

CANADA.

Vancouver, B. C.—The Coast Service, Ltd., has been incorporated for \$20,000 by grain and grain products dealers and merchants.

New Westminster, B. C.—A syndicate of Waskatenau, Alta., men, under the leadership of G. G. Fowler, will soon erect an elevator on a site they leased here recently.

Vancouver, B. C.—The safe of McLellan & McCarter Feed Co., Ltd., was looted by safe-crackers and \$600 in cash and approximately an equal amount in checks taken.

IDAHO.

Malad City, Ida.—After June 1st Vinton I. Rhodes of Salt Lake City, will be located here as local manager of the Inter-Ocean elevators.

ILLINOIS.

Bethany, Ill.—The Bethany Grain Co. will be managed by Sheffield Marlow.

Towanda, Ill.—New scales are being installed by the Towanda Grain Co.

Longpoint, Ill.—O. B. Wheeler has installed Kewanee Steel Air-Lift Dumps in his elevator.

Strawn, Ill.—Harry Tjardes is installing a Kewanee Truck Dump in the Strawn elevator.

Wing, Ill.—E. J. Overly succeeds L. R. Tinker who resigned as manager of the Wing Grain Co.

Lanesville, Ill.—The Decatur Construction Co. has the contract for the painting of the Mansfield Ford Grain Co.'s elevator.

Ottawa, Ill.—The Wallace Farmers Farmers Grain & Supply Co. has installed new buckets, spouts and two Kewanee Truck Dumps.

Lewistown, Ill.—An addition will be added to the Bader & Co. elevator and the main part of the building strengthened, also changes will be made to give additional storage room.

Taylorville, Ill.—The Peerless Mill & Elevator Co. opened a branch store here recently. They sell direct from the mill to the consumer and are opening twenty stores in Central and Southern Illinois.

East St. Louis, Ill.—On April 20th The Marshall Hall Grain Co. purchased

the 3,600 bbl. mill and 500,000 bu. elevator of the Kehlor Flour Mills Co. at an approximate price of \$300,000. It is rumored a separate company will be formed for their operation.

Cairo, Ill.—Last week's decision of the Appellate Court in favor of the Illinois Central R. R. and permitting the financing of the Edgewood cut-off, will be appealed to the Illinois Supreme Court. Cairo and other Southern cities have joined in this effort to retain their present standing on the Illinois Central line and fighting the railroad's move to divert traffic over the shorter Edgewood line into Kentucky and points South.

INDIANA.

Kirklin, Ind.—C. R. Paul and Cecil Milner have purchased the Sedalia Feed & Grain Co.

Poneto, Ind.—The Poneto Grain Co. has replaced its old grinder with a large Bauer Motor Driven Mill.

Michigan City, Ind.—The Indiana Grain Dealers Ass'n will meet here on June 25-26 with headquarters at the Hotel Spaulding.

Glenwood, Ind.—The farmers cooperative movement here has not materialized and the property has been sold to private parties.

Francesville, Ind.—The Gutwein Milling Co. is erecting a grain elevator with a capacity of 30,000 bushels of grain which will reach a height of sixty feet in the air.

La Crosse, Ind.—T. B. McDonald, who recently purchased the elevator property of Chatterton & Son, has leased the elevator to Arndt & Wein-kauf of Hamlet, Ind.

Tipton, Ind.—The Townsend-Ward Commission Co. is suing the Windfall Grain Co. for about \$650, for failure to deliver 5,000 bushels of wheat in entirety, previously contracted for.

Speicherville, Ind.—William Mattern, manager of the Farmers Coop. Elevator, was appointed receiver for the company, which not only operated the elevator but sold feed, coal and other materials.

Clifford, Ind.—John M. Holder, who recently purchased the elevator of the Clifford-Coop. Co. is placing the elevator in first class condition and adding the following lines: stock feeds, coal, fencing and twine.

IOWA.

Algona, Ia.—Lightning destroyed the Farmers Coöperative elevator and grain.

Merrill, Ia.—The Plymouth County Elevator Ass'n will meet at the court house May 14th.

Galva, Ia.—The W. J. Joyce Lumber Co. has been purchased by the Farmers Elevator Co.

Merrill, Ia.—Fire destroyed the Frank Veidt grain elevator. Loss partially covered by insurance.

North English, Ia.—O. F. Runion purchased the flour, feed and implement business of Glenn Pittibone.

Galva, Ia.—The J. B. Adams Grain Co. is wrecking its old building and will replace it with a new elevator, equipped with the latest machinery.

Lanesboro, Ia.—The Independent Elevator Co. will install lightning rods on both of their elevators. They will also be installed on Manager R. A. Maars-nigh's home.

QUALITY and SERVICE

Kansas City, Missouri

Buckeye, Ia.—The Lowry line elevator together with a carload of oats, was destroyed in fire that did \$12,000 damage to this city. The elevator was partially insured.

Linn Grove, Ia.—The old grain elevator building owned by the Western Elevator Co., was purchased by Gust Wahlquist, who is wrecking the building and will dispose of the usable material.

Sioux City, Ia.—Members of the state railroad commission met scores of elevator and grain warehouse men from the state recently and discussed reasonable storage rates for grain, and promulgation of reasonable rules, regulations and practices for warehouses and elevators in conformity to the existing warehouse law.

KANSAS.

Beeler, Kans.—The farmers have formed an organization for the purpose of buying the west elevator.

Florence, Kans.—E. E. Rohrer of Abilene, has purchased the Hacker elevator and has taken charge.

Caldwell, Kans.—W. A. Parr has been selected as manager of the Farmers Co-operative Grain & Coal Co.

Caldwell, Kans.—Fire destroyed the Caldwell mill and elevator, causing a loss of \$75,000. There was little grain in the elevator.

Wichita, Kans.—The Kans. Wheat Growers Ass'n and the Chicago & Alton Ry. are planning for the construction of a terminal elevator at Kansas City by the railway company.

St. Paul, Kans.—A large storage house has been built at the O'Brien Elevator by Frank O'Brien for the storage of feed. He will handle chicken feed in car load lots.

Hutchinson, Kans.—C. A. Wollard has been removed as inspector in charge of this office of the state grain inspection bureau and George Douglas, an assistant is Acting Inspector.

Climax, Kans.—Due to the large export of grain from Climax during the past winter and spring, H. A. Bonnell will construct a new mill and elevator which will cost approximately \$12,000.

Winfield, Kans.—Charles M. Wallace of the Alexander Milling Co. will manufacture in Winfield the Just Right brands of Chick Foods, Chick Mash, Just Right Scratch foods and kindred foods.

Salina, Kans.—Work will begin at once on additions to the Shellabarger mills to take the place of the part of the plant destroyed by fire last month. The additions will cost approximately \$100,000. One of the new structures will be a warehouse with a capacity of 50 car loads of flour.

KENTUCKY.

Fountain Run, Ky.—The W. J. Dossey & Sons mill was slightly damaged by fire recently.

Mayfield, Ky.—The sheller house of the Mayfield Milling Co. was totally destroyed by fire on April 29th.

Lexington, Ky.—Fire originating in the rolls of the Lexington Roller Mills Co., slightly damaged the machinery.

MICHIGAN.

Maybee, Mich.—Four tile tanks and a wooden head house are being erected by Liedel & Sons.

Detroit, Mich.—The annual convention of the Michigan Hay & Grain Ass'n will be held July 27th at the Hotel Tuller.

Eaton Rapids, Mich.—Willard D. Hulst has purchased the business interest of the J. E. Crane estate in the firm of Crane & Crane and the business will be conducted under the name of Crane & Hulst.

Lansing, Mich.—A stock dividend of \$20,000, declared by the board of directors of Michigan Elevator Exchange, is to be distributed among patrons of some 150 local coöperative elevator companies of the state. In addition, the board authorized payment of 7% interest on all stock outstanding at present.

MINNESOTA.

Duluth, Minn.—The Occident Terminal Co. has installed a costly dust collection system in its terminal elevator here.

Marshall, Minn.—The Farmers Elevator & Milling Co. has installed a new attrition feed mill in their Great Northern house.

Amiret, Minn.—The Amiret Farmers Elevator Co. expect to build a 7-bin, 15,000 bu. capacity rapid transit house in the near future.

Henderson, Minn.—A new elevator will replace the Nagel Grain Co. elevator, destroyed by fire April 22, and will be complete to handle this year's grain crop.

Melrose, Minn.—The Independent Grain Co. of Minneapolis contemplates taking over the milling property here and conducting a general milling and feed grinding business.

Morgan, Minn.—The Morgan Farmers Elevator Co. plan extensive improvements to their plants here, including installations of large scale and dump and a new leg, costing between \$3,000 and \$4,000.

Northfield, Minn.—L. G. Campbell, who sold the Northfield mill to the Theobald Flour Mills Co., will assume management of the plant on May 1, according to L. W. Huestis who last

fall bought the receivers' equity in the plant, which has now been acquired by Mr. Campbell. The mill will be operated as a flour and feed mill.

MISSOURI.

Raymore, Mo.—A. E. Long has opened up a chop mill and installed a Bowsher Mill.

Appleton City, Mo.—McConnell & Shacklers have installed a Bowsher Mill in their elevator.

Buffalo, Mo.—A sale branch for the products of the Rea-Patterson Milling Co. has been established.

Platte City, Mo.—Samuel Keyer has purchased the idle 300 bbl. mill and 40,000 bu. elevator of the Northrup Mfg. Co.

Ozark, Mo.—K. T. Turrentine of Chadwick has been elected manager of the Farm Elevator Co. succeeding W. C. Lair who has retired.

Ozark, Mo.—The Hawkins Bros. Mfg. Co. has built an elevator, flour mill and warehouse on the site formerly owned by the Ozark Water Mills.

MONTANA.

Dodson, Mont.—Upon the resignation of A. H. Freie, N. J. Rodenburg became manager of the Equity elevator.

Great Falls, Mont.—A 7% dividend will be paid holders of storage tickets of the bankrupt Montana Grain Growers. Creditors will receive a 4% dividend.

Simms, Mont.—The Sun River Valley Seed Co. was recently organized here. J. E. Jones, president; K. W. Bergan, vice-president; E. F. Kahla, secretary-treasurer.

NEBRASKA.

Emmet, Neb.—On May 1st, Otto Claussen took over the Garrett Janzing business, consisting of livestock, coal, grain, etc.

Brock, Neb.—The Farmers Elevator Co. has incorporated with a capital stock of \$25,000 by L. B. Young, G. S. Christy and C. E. Huston.

Nehawka, Neb.—Fire destroyed the Nehawka roller mill owned by C. D. St. John. No insurance was carried and the elevator will not be rebuilt.

Humphrey, Neb.—The R. M. Van Ness Const. Co. have a contract for the erection of a new 25,000 bu. modern cribbed elevator for the Farmers Coop. Lumber & Grain Co.

Ravenna, Neb.—The Nebraska Consolidated Milling Co., Omaha, has equipped its plant here for the production of a line of poultry feeds, including both scratch feeds and mash feeds.

Bridgeport, Neb.—The R. M. Van Ness Const. Co. have completed a new 10,000 bu. cribbed elevator for the Dunlap & Dove Co. It is equipped with motor power, electric lights, Richardson Automatic Scale, Van Ness Overflow Distributor, manlift, truck scale and other equipment. A warehouse for handling feed, flour and seed has also been erected.

NEW YORK.

Gasport, N. Y.—Fire, originating in the elevator legs, destroyed the mill of F. J. and Ursula M. Richie.

Oswego, N. Y.—Another large grain elevator for the Buffalo waterfront is planned to start within two weeks. The Interstate Elevator Corp. of New York City has purchased a site on the Buffalo river.

NORTH CAROLINA.

Autryville, N. C.—I. L. Vinson recently purchased a grist mill and a gasoline engine, and is prepared to grind good meal fine or coarse or crush corn for feed.

NORTH DAKOTA.

Kermit, N. D.—Fire destroyed the Farmers Elevator here.

St. Thomas, N. D.—The Monarch Elevator Co. contemplates the installation of a Globe Dump this summer.

Grand Forks, N. D.—Articles of incorporation for the grain exchange at the state mill and elevator here were filed with the secretary of state, at Bismarck.

OHIO.

Urbana, Ohio.—E. R. Robinson has purchased the J. L. Hewling Elevator in Kennard.

McClure, O.—The McClure Elevator Co. has replaced their steam boiler with motor power.

Jackson, Ohio.—A new fire proof building will be erected by the Peters' Milling Co. on the site of the plant which burned recently.

Waverly, Ohio.—The old Emmitt mill and distillery owned by John Emmitt of New York City has been purchased by James W. Robinson.

Dawson, Ohio.—The C. C. C. & St. L. Railroad has purchased the elevator formerly operated by C. H. Grim. The building will be torn down.

Lima, Ohio.—Hyman & Ackerman, who operate an elevator and a seed warehouse here, has incorporated under the name of The Ackerman Co.

Lancaster, Ohio.—G. A. Graham was elected president and F. W. Kibler, Mt. Orab, vice-president of the Ohio Millers State Ass'n. Frank H. Tanner, Columbus, was re-elected treasurer.

OKLAHOMA.

Childress, Tex.—Bert Wilkerson expects to build a new elevator and feed mill.

Canton, Okla.—The Kell Milling Co. are placing their elevator in condition for the coming season.

Big News On Grinding

Famous Jay Bee now priced within reach of EVERYONE who has grinding business.

Get the best! Save money! Here is an exceptional opportunity. You can have one of 11 sizes of

Jay Bee

to take care of any grinding requirement. Exclusive Air Float System. Manganese steel hammers crush by impact on material. No friction. No wasted power. No grain heating. Lower cost per ton. Write for full description and prices.

J. B. Sedberry

817-S Exchange Ave., CHICAGO, ILL.
Factory and Main Office, Utica, N. Y.

Jay Bee Standard Direct connected to motor, 2 sizes, 30 and 50 H. P. Iron Base. Perfect alignment. Freedom from vibration. Comes fully equipped ready for work. Grinds and delivers to any part of plant.

Hydro, Okla.—El Reno Mill & Ele. Co. have installed a Bowsher Mill.

Calumet, Okla.—The elevator of the Farmers Grain Co. was slightly damaged by fire.

Madill, Okla.—Arthur Alsop and Fitzhugh Lewis have purchased the business of the Industrial Grain Co.

Washington, Okla.—The stock in the warehouse of the Midland Flour Milling Co. was partially destroyed by fire.

Oklahoma City, Okla.—The two story frame building and yards of the Spooner Feed & Coal Co. were completely destroyed by fire, believed to have been caused from faulty wiring in the feed room. Damages were estimated at \$15,000.

Edmond, Okla.—The Eagle Milling Co. will complete by July 1st, the construction of a new fireproof grain elevator with a storage capacity of 300,000 bushels. Additions and improvements to be made by the milling company this spring will cost in excess of \$50,000.

WASHINGTON.

Wenatchee, Wash.—The storage warehouse of Forest Davis is nearing completion.

Rockford, Wash.—L. E. Little of Spokane has purchased the warehouse and business of the Rockford Implement Feed & Grain Co.

Olympia, Wash.—On April 20th, Eric J. Barnes of Yakima took up his duties as Director of the State Department of Agriculture and the Department of Conservation and Development, succeeding F. G. Golyd and Dan Scott.

Charleston, Wash.—J. D. Cain, grain and feed merchant, will in a few days become the owner of the building in which he is doing business. He plans to improve the property to better accommodate his growing grain and seed business.

WEST VIRGINIA.

Weston, W. Va.—The Peter Arnold feed store was destroyed by fire, resulting from a gasoline explosion, at a loss of \$15,000.

WISCONSIN.

Superior, Wis.—Wm. H. Crumpton, a member of the Wisconsin Grain & Warehouse Commission, died at the age of 65.

New Richmond, Wis.—A resolution favoring a measure to repeal the offset provisions in coal and grain taxes under the new income tax law was introduced in the lower house recently by Assemblyman E. B. Minier of New Richmond, and the house voted favorably on it.

OREGON.

Portland, Ore.—Levy Grain Co. has been incorporated for \$10,000 by A. L. Levy, S. A. Levy and H. L. Rosenberg. Portland, Ore.—Tom Shibe of Philadelphia is planning the construction of

one of the largest grain elevators in Portland.

Milton, Ore.—L. L. Rogers of Adams is now the owner of the Milton Elevator Co.'s elevator. The house will be moved to Adams.

Springfield, Ore.—A carload of corn from Omaha, Neb., has been received by the Springfield Mill & Grain Co. for sale in Springfield and vicinity.

SOUTH DAKOTA.

Groton, S. D.—The farmers have organized a shipping association here, of which Henry Foth was elected president. The new association will operate independently, shipping to those it chooses.

Watertown, S. D.—About 20,000 bushels of grain, mostly oats, were damaged by fire and water, in the recent fire, which partially destroyed the Farmers Elevator. Loss was estimated at \$20,000 and insurance fully covered.

TENNESSEE.

Oneida, Tenn.—The Oneida Mfg. Co. will rebuild their burned \$80,000 plant immediately.

Nashville, Tenn.—The Liberty Mills are now owned by the Fourth & First National Bank, who purchased the \$800,000 properties for \$130,000 at auction.

Memphis, Tenn.—The American Grain & Hay Co. has incorporated with a capital of \$50,000, and is doing a general grain and hay business with warehouse facilities on the I. C. R. R. Sam E. Rison is chairman of the board of directors. R. N. Arches is the vice-president and general manager.

TEXAS.

Aiken, Tex.—The McAvoy Elevator Co. has incorporated with a capital of \$10,000, by J. E. McAvoy, L. D. McReynolds, Grace McAvoy.

Sherman, Tex.—The Fant Milling Co. managed by E. T. Fant, will erect a fire-proof warehouse of brick and concrete construction, which will cost about \$20,000.

Dallas, Tex.—The Dal-Tex Grain Co. is erecting a 75,000 bu. capacity elevator including a mill for the manufacture of stock, poultry and sweet feeds; also a warehouse which will cover 12,000 square feet.

TOLEDO SEED PRICES.

The following table shows the range of prices for seed on the Toledo market for cash and the futures of clover, alsike and timothy for the week ending May 2:

	Range for wk.		Close	Close
	High.	Low.	May 2.	Apr. 25.
Clover—				
Cash	\$16.50	\$16.30	\$16.30	\$16.50
Oct.	13.25	13.00	13.05	13.25
Dec.	13.10	12.90	12.90	13.10
Alsike—				
Aug.	12.80	12.50	12.50	12.80
Timothy—				
Cash	3.00	3.00	3.00	3.00
May	3.05	3.00	3.00	3.05
Sept.	3.55	3.55	3.55	3.55

MILWAUKEE SEEDS.

Movement of timothy seed and clover seed at Milwaukee as reported for THE PRICE CURRENT-GRAIN REPORTER by H. A. Plumb, secretary of the Chamber of Commerce, for week ending May 2, 1925:

	Receipts, lbs.		Shipments, lbs.	
	Tim.	Clov.	Tim.	Clov.
1925.....	90,000	3,390	3,345	8,920
1924.....	60,000	8,919	155,255	181,428

CHICAGO SEED MOVEMENT.

Following is a statement of receipts and shipments of grass seeds at Chicago for the week ending May 2, previous week, same week of 1924 and for the season to date, starting July 1 of the years indicated (amounts stated in pounds, 000 omitted):

	Timothy.		Clover.		Other.	
	Rcts.	Shpts.	Rcts.	Shpts.	Rcts.	Shpts.
Week	367	147	1	46	237	198
Prev. wk.	449	345	7	6	122	181
1924	51	508	137	122	114	340
1924-25	35,687	26,369	10,617	5,410	16,422	15,873
1923-24	31,218	20,504	10,626	7,954	23,643	14,063
1922-23	36,696	37,955	4,168	11,320	24,789	13,956

Timothy—Drier weather imparting a better undertone. Late rains not considered ample to carry crop far. More will be needed. Common country run about \$5.75@6.00 per 100 lbs., high grades \$6.15@6.30, extra choice \$6.35@6.40 and fancy seed \$6.50@7.00 bid.

Alfalfa Seed—Prices steady. Recleaned country lots at \$21.00@22.00 per 100 lbs.

Flax Seed—Up 1½¢. No. 1 Northwestern closed at \$2.76@2.79 per bu. of 56 lbs.

Clover Seed—Good demand at lower prices. Country lots \$18.00@20.75 for 100 lbs., good \$21.50@22.50, choice \$23.00

Field and Grass Seeds

@24.00, fancy \$25.00@26.00 and Mammoth \$21.00@26.00, according to quality.

Alsike—Values 50¢@1.00 higher. Good demand. Fair country lots \$16.50@18.00 per 100 lbs. Good seed \$18.50@20.00, choice \$21.00@22.00.

TOLEDO SEED MARKET.

TOLEDO, O., May 4.—Cash clover was lower again the past week. Trade is light and the demand for this season is about over. The carryover is not expected to have much influence on prices. Dealers have had a good trade, although it was smaller than they expected it to be.

October clover was easier but met with good support around \$13.00 and there are indications that it will be stubborn around this level. December was traded in at a discount under October. The present price of clover is considered low compared with prices during the war years and right after. Pre-war years also saw some very low prices for clover. Extreme high prices curtail the demand as farmers will take some substitute even though they know it is not as good as clover. This year was an example as they found that nineteen or twenty dollars was too high when alsike and sweet clover and soy beans could be bought at a big discount. Dealers saw the trend of the demand and immediately cut their prices to meet the competition with the possible exception of domestic grown that could be guaranteed. Clover of known origin sold at a big premium and found willing buyers. Most American farmers have been warned against foreign seed and though it may be adaptable they are still uneasy and will try and get domestic if it is available. The crop now in the making can be a large or small one as the weather dictates. If small prices will likely go as high or higher than they did this season. If a large one they may go lower than records of the past several years. A trading market will be witnessed from now until the crop is made and the fluctuations will be wide, offering opportunities for investment that come only at this time of year.

Alsike and timothy were both fairly steady this past week and while the trade was light the undertone is strong. Crop damage may enter the ring later the same as in clover and create a lively market. Just at present the seasonal dullness is on in both these seeds and will not be shaken loose until more is known of the coming crops.

KANSAS CITY SEED MARKET.

KANSAS CITY, May 2. — Grass seed trade is a thing of the past for this spring, except a few scattered orders for alfalfa emanating from northern territory. Local houses are beginning to think about the new blue grass seed crop, which promises to be liberal. Advice concerning growing fields of timothy and clover are favorable. Except in Nebraska, the new alfalfa outlook is encouraging. Winter killing was the trouble in Nebraska. The demand for forage seeds has not reached its possible extent, but there is a fair distribution. Cane seed is plentiful and the market is weak. Carlots offered on the Board of Trade this week were quoted at \$1.15@1.30 per cwt., as from first hands. Much of the seed is going into feed channels. Millet is firm and scarce, especially the German variety. Sudan seed has been moving in fair volume. It is so cheap that farmers are encouraged to buy it. The soy bean and cowpea trade is awakening, but cowpeas are high and buyers favor soy beans for economical reasons.

Seeds are quoted in a wholesale way as follows, per cwt., sacked: Blue grass, \$20@30; timothy, \$5.50@7; red clover,

\$25@34; sweet clover, \$10@14; alsike, \$17@23; alfalfa, \$17@23.50; red top cane, \$1.65@1.80; orange cane, \$1.65@1.80; black amber cane, \$1.65@1.80; red amber cane, \$1.65@1.80; German millet, \$4@4.50; common millet, \$3@3.50; Siberian millet, \$2.25@2.75; hog millet, \$2.25@2.50; Sudan, \$3.50@4.50; cowpeas, per bushel, \$4.50@5; soy beans, \$2.15@3.25.

ST. LOUIS SEED MARKET.

Quote timothy—fair to good country seed at \$5.50 to \$6.00; low-grade, weedy and dark at \$2.00 to \$4.50; clover—fairly clean to high grade clean seed at \$12.00 to \$20.00 and heavily weedy lots at \$2.00 to \$10.00; German millet at \$4.00; common millet at \$3.00; hog millet at \$2.05, bulk basis; Sudan grass at \$3.30 to \$4.00.

Stock peas—quote whippoorwill at \$3.50 to \$3.75; new era and mixed at \$2.75 to \$3.00 per bu.

Sorghum Cane Seed—Quote black amber at \$1.50 per 100 lbs.

Sunflower seed—quote sound seed at \$3.50 per 100 lbs.

IMPORTING POOR SEED.

Great quantities of clover seed are coming into the port of New York from Europe, much of which will find its way eventually to farms where it is wholly unsuited for planting purposes is the gist of a warning sent out to farmers by the state seed analyst at the Agricultural Experiment Station at Geneva, N. Y.

Samples of clover seed collected by inspectors of the Department of Farms and Markets and sent to the seed testing laboratory at Geneva have been found to be of unquestionable foreign origin. Out of 97 samples, 37 were undoubtedly imported, while 16 were questionable. Many seed dealers do not know that they are selling imported seeds, says the seed analyst, and farmers who buy such seed are doomed to disappointment and loss from the use of the seed as the clover will kill out the first winter due to the severe temperatures to which the seed is not adapted.

WEEKLY LINSEED REVIEW.

NEW YORK, May 4.—United Kingdom: There is a steady to firm tone in evidence in the linseed situation in the United Kingdom. Spot supplies of linseed are scarce, while forward positions have been in fairly good demand recently.

Linseed oil remains firm with a decidedly better consumptive demand prevailing.

Edible cotton oil is meeting with a fair demand.

India: Shipments of linseed last week amounted to 280,000 bushels compared with 188,000 bushels the week previous.

Argentina: Clearances of linseed are being maintained around ¾ million bushels weekly compared with about two million bushels at this time a year ago. Port stocks are increasing gradually and now aggregate 4,600,000 bushels against 4,400,000 bushels the week previous and four million bushels at this time last year. The export demand is improving, especially the inquiry from the Continent.

CONDITIONS IDEAL.

SAN FRANCISCO, Cal.—Growing conditions for seed crops in California have been ideal since planting time. All seed crops are looking in wonderful condition with the possible exception of onion. Many fields of this item have been damaged somewhat by mildew and we believe that the production will be considerably on this account.

"Let's do some trading together"

Lettuce, radish and carrot are looking exceptionally well and no doubt there will be a normal harvest of these varieties.

On beet there has been some few fields that have not come through as they should while others are doing remarkably well. On the average, we think there will be just about enough to go around providing the fields now growing yield a normal crop.

Sweet peas are not looking near as well at the present time as they did a month ago, but believe that there is a very good acreage planted, so that we have no fear but what there will be enough to fill all contracts.—*Sherwood Seed Company, by C. F. Voorhies.*

May and June.—*Purcell Seed Co., G. M. Purcell, Prest.*

DULUTH FLAXSEED MARKET.

DULUTH, May 2.—Apart from moderate advances staged on Friday, slow and draggy conditions prevailed in the flaxseed market during the last week. The cause was ascribed mainly to the belief in trade circles that even offering of the most liberal inducements possible would not bring about any increase in the movement of seed from the country this way at present. They therefore drew upon elevator stocks to cover their moderate needs and let it go at that. Price changes in the six days' operations were small, spot and May seed closed $\frac{3}{4}$ @ $\frac{1}{4}$ c off and the other futures $\frac{1}{2}$ c off to unchanged.

The spot market was quiet as shown in the premium for the best grades being cut 4c to 2c over the May price.

A feature in the week was the arrival here of the first cargo of Canadian seed, a lot of 108,000 bushels. It was delivered to a crusher and an announcement was made by an official of that house that another cargo would be brought over from Fort William next week. It was also intimated that a moderate movement of Canadian seed would be continued this way during the present month.

Operators in the flaxseed market are disposed to play a waiting game just now in order to get a better lineup on the general trade situation for a time ahead. A sobering influence upon the market at present is uncertainty regarding the action of President Coolidge in the linseed oil duty reduction controversy. While the impression is general that no action in the way of duty reduction will be taken at present, it is thought by operators, to play a careful game in the interval.

Including seed brought over from Fort William, receipts of flax here during the week were 166,846 bushels and with shipments of 59,000 bushels, stocks of 273,000 bushels were left in the elevators.

Closing prices of flaxseed on this market on Saturday as compared with the previous Saturday and the same period last year were:

	Saturday.	Wk. ago.	Yr. ago.
Spot	\$2.70-72	\$2.70%-76%	\$2.46 $\frac{1}{4}$ -56 $\frac{1}{4}$
To arrive	2.70	2.70%	2.46 $\frac{1}{4}$
May	2.70	2.70%	2.46 $\frac{1}{4}$
July	2.72 $\frac{1}{2}$	2.73	2.38 $\frac{3}{4}$
Sept.	2.50	2.50	2.21

SEED TRADE GOOD.

EVANSVILLE, IND.—During the past thirty days the farmers in this section have been extremely busy. Climatic conditions being favorable, more corn has already been planted than during the entire planting season of last year. Corn is not the Kentuckians' cash crop, but now that a goodly acreage is in, there is time to put in a good acreage of tobacco, which is their cash crop.

The seed trade in this section has been very good this spring and from all indications there will be a heavy demand for forage crop seeds during

Feedstuffs

Among recent applications for membership in the American Feed Manufacturers' Ass'n are the Fulton Bag & Cotton Mills, New Orleans; The Ladish Co., Milwaukee; and the Famous Molasses Feed Co., Omaha.

DEMAND FAIRLY GOOD.

DURHAM, N. C.—We may state that in our opinion the demand for feedstuff in this section is fairly good at this writing. Production is not heavy and stocks are reasonably light.—Austin-Heaton Company, M. A. Briggs, Sales Manager.

QUARTERLY STATEMENTS.

Archer-Daniels Midland Company of Minneapolis for the quarter ended Mar. 31 last, including subsidiaries, net profits after all charges and taxes were \$518,963, making net profits for six months ended Mar. 31 of \$1,117,487.

Penick & Ford, Ltd., of New Orleans and Cedar Rapids, Ia., for the quarter ended March 31, last, including subsidiaries, net profit was \$489,465, after depreciation and interest, but before federal taxes, equal, after preferred dividends to 97 cents a share on 433,773 shares of no par common stock.

LINSEED TARIFF IN DOUBT.

Last week's reports on the status of the linseed oil tariff consideration credited the President with seeking advice from the Department of Agriculture. A difference of opinion within the tariff commission seems to prevail, some of them recommending reducing the duty on oil from 24½ cents per gallon to 18 cents; others, a flat duty of 20 cents. The matter is still much in doubt but it is believed the President will be swayed by the interests of the flax seed producer in any action he may take. Then, there is the possibility that by taking no action, he will permit the tariff to remain as is, which seems the most satisfactory basis to the trade.

COTTONSEED MEAL.

KANSAS CITY, May 2.—Feeding demand for cottonseed meal continued slow this week. It is expected to remain so during the next 30 days. Oklahoma mills offered meal \$1 a ton less than a week ago, when exporters were buying. Doubtless the rains had a bearish effect. The Oklahoma mill price was \$35.50 and Arkansas asked \$36. There were no Texas quotations here. The Kansas City price on carlots was \$41.70 for 43 per cent protein, which was only 10c lower than a week ago. Cold pressed flake, 25 per cent protein, sold at \$36.20.

The only demand for linseed meal was from the ton-lot buyers, who have to pay \$4 premium on their purchases. Dealers asked \$45.80 for carlots, or \$1 more than a week ago. The Minneapolis carlot price was \$40.50 to \$41.50, with the inside figure being made by resellers.

Manufacturers of tankage yielded to the desire for more business and made another cut of \$5 a ton. This brought the price down to \$50 for carlots. Many buyers had been waiting for this and orders increased on the decline. Meat scrap held firm at \$55, with a good demand.

OIL MEAL MARKET.

The \$40.000 oil meal which was available last week seems to have been absorbed. Sales of a few single cars a day by handlers seem to be sufficient to maintain present prices and the exceedingly strong export market has stimulated values throughout the eastern part of the country enabling Chicago to ship into eastern Ohio, a condition which has not prevailed for some time. In other words, this market has a so much broader territory in which to ship that values will, undoubtedly, be maintained for the present.

When one stops to think about it, oil meal at \$40.50 Chicago is not high priced compared with bran at \$26.50 and midds at \$29.50. However, it is interesting to note that over 1,000,000 bushels of Canadian flax have already been shipped since the opening of navigation, the bulk of this flax having gone to Chicago, Milwaukee and Toledo, and this will undoubtedly assure a fairly steady run of the mills for the next thirty or sixty days.—Bertley Bulletin, Chicago, May 2.

NEW YORK OATS MARKET.

Oats receipts 1,180,000 bushels bonded, 120,000 bushels domestic. The market was inclined to weakness early in the week, but later responded not only to the strength of other grains, but values were influenced by reason of the appearance of an export demand for American oats, which heretofore had been lacking. Sales in considerable volume have been accomplished and there is further inquiry. The reasonable price at which this commodity is selling has finally appealed to foreigners who, it is believed, will continue their purchases around current levels. The lightness of the present movement and a somewhat larger domestic consumption is rapidly decreasing the visible supply and also relieving the pressure. The result is not only a gradual increase in values but in premiums as well. Heavy Northwestern shipments during the present week to lake ports will doubtless be largely distributed through consumptive channels, though a fair proportion of them will finally be loaded out for export. The local and nearby domestic trade are using these oats to a large extent and will continue to do so while they can be purchased at existing discounts under oats of all rail origin. We quote 36-lb. Northwestern No. 3 white oats, lake and rail, at 9 over Chicago May, track New York domestic, or 5½ cents at the close of the market.—L. W. Forbell & Co.

GLUTEN FEED CAMPAIGN.

The Associated Corn Products Manufacturers, with headquarters at 208 South La Salle street, Chicago, comprised of eleven manufacturers of corn gluten feed, have just launched a campaign to educate users and dealers as to the superior qualities of their product.

In the first booklet, "Which Do You Buy—Figures on a Tag or Feed in the Bag?" especial emphasis is laid on ascertaining and using that food which meets the requirements of the animal. Among the statements which are made, to illustrate this specific point, are:

"You cannot tell anything about the quality of a cigar by the brand on the wrapper. It may be stamped with the word 'Havana' in big letters, but you must smoke the cigar before you can know its quality.

"You cannot tell anything about the quality or flavor of a food product by what appears on the outside of the package. You must eat the food yourself. If the quality is poor you never

MINNEAPOLIS LINSEED MARKET.

MINNEAPOLIS, MINN., May 2.—North-west weather continues favorable for seeding flax. Van Dusen Harrington's crop report of April 29th says.

"There have been good rains during the past week which have put the ground in shape for new breaking. This land will be used for flax. While it is too early to estimate the flax acreage, indications point to an increase over last season."

Argentina shipped to the U. S. the past week 120,000 bushels compared with 512,000 bushels same week last year. To date shipments to the U. S. A. have been 3,976,000 bushels compared with 8,772,000 in 1924, and to Europe have been 5,488,000 bushels compared with 19,986,000 in 1924. We figure quite a loss to work Argentine seed on the Atlantic Coast on present quotation of seed, oil and cake.

Receipts of flax in Minneapolis the past week have averaged less than 10 cars daily. We think about twice this amount is being worked. New business is very light, but shipping orders on old contracts are taking oil as fast as it is produced. There are probably about 3 million bushels of Canadian seed to be marketed before new crop. This seed is now moving to mills on the lakes and at New York harbor. Other than this these mills will get no domestic seed until new crop, say 4 or 5 months.

There is plenty of seed in the Argentine, but their prices must decline or our oil values advance before this seed can be worked without loss. The present situation confirms the records of past years. We cannot expect cheaper oil if we reduce the world's production of flaxseed. We get the cheapest oil when the bulk of our domestic seed crop is being marketed, and when we are at the mercy of foreign producers and speculators from December or January forward and they know our needs, oil buyers must pay higher prices.—Archer-Daniels-Midland Company.

MINERAL IN FEED.

The report of researches in the laboratories of the Kentucky agricultural experiment station brings out some interesting facts.

"The conclusion has been reached," said Dr. J. M. McHargue, in charge of the investigation, "that copper, iron, manganese and zinc perform more important functions in agriculture than is generally recognized."

Experiments thus far have been made on Kentucky blue grass, red clover, alfalfa and yellow corn, wheat, rice polishes and polished rice, showing that iron predominates, with zinc second, manganese third and copper fourth.

"The germ of wheat," says the report, "is a rich factor. The association of relatively large amounts of copper, manganese and zinc with this substance, rich in vitamins, is a coincidence of striking interest."

"It was found that when rice is pol-

ished nearly all the copper, iron, manganese and zinc are removed in the polishings. Consequently when pigeons were confined to a diet of polished rice they soon developed polyneuritis, whereas pigeons fed on unpolished rice maintained a normal condition. Apparently the compounds of copper, iron, manganese and zinc contained in the pericarp and germs of cereals are important factors in nutrition.

"Fertile soils, it is shown, contain small amounts of the elements, copper, manganese and zinc. Plants grown in the soil absorb small amounts of these elements, which are stored in the leaves and in the pericarps and germs of the seeds.

"When the cereals, corn, wheat and rice are highly milled the resulting degermed corn meal, patent flour and polished rice are deprived of the greater part of the compounds of copper, iron, manganese and zinc, which appear to be factors in animal nutrition.

"In practical agriculture, depleted soils may require the addition of available compounds of copper, manganese and zinc in order to restore and maintain productivity and to produce a food supply containing the vital factors in normal proportion."

A research problem of fundamental importance in agriculture today, the report declared, is to ascertain which of the elements that occur in soils, plants and animals are necessary and what are their functions.

FEED MARKETS.

MILWAUKEE.

Milwaukee, May 2.—Prices continued strong and practically unchanged in the Milwaukee feed market last week. Demand for wheat feeds for immediate shipment was well sustained, but requests for later shipments lessened. Despite the fact that production continued low, receipts from day to day held up well enough to supply current needs. Hominy feed advanced \$2@2.50, reground oat feed \$1. Prices now are: Winter bran, \$26.70@28; spring bran, \$26@27; standard middlings, \$27.50@28.50; flour middlings, \$32.50@33; red dog, \$40@40.50; rye feed, \$26@27; linseed oil meal, \$41@42; cottonseed meal, \$40.50@45; hominy feed, \$37@38.50; oat feed, \$7@7.50; gluten feed, 30 days, \$32.80; all in 100-lb. sacks, carlots, f. o. b. Milwaukee.

CINCINNATI.

Cincinnati, May 2.—Offerings of mill feeds were much freer this week, reflecting a resumption of mill operations, and a larger output of by-products and as a result the market was easier and lower, with a further downward tendency indicated by the inactivity of demand. Quotations received from western and nearby mills at the close of the week were generally on a lower basis. Quotations represent 100-lb. sacks: Soft winter wheat bran, \$31@31.50; hard winter wheat bran, \$30.50@31; spring wheat bran, \$30@30.50; standard middlings, \$31.50@32; soft wheat middlings, \$37@37.50; gray hard middlings, \$37@37.50; mixed feed, \$34.50@35; No. 1 alfalfa meal, \$29; hominy feed, \$39.50@40.

NEW YORK.

New York, May 2.—Feed prices closed the week at the high of the movement, with city and western feed gaining another dollar per ton. Large sellers continue to stay out of the market and spot goods are now commanding a good premium over prompt shipment stuff. City bran is quoted at \$33.50, middlings \$34.50 and red dog \$47, while western bran rules at \$32.60, middlings \$33.60 and red dog \$47@47.50 per ton.

BALTIMORE.

Baltimore, May 2.—The spot feed situation is firm on spring wheat bran and western middlings, for which there is a fair jobbing demand. Hominy feed is steadier, but not actively inquired for. Alfalfa meal holds its own under moderate spot stocks. Gluten feed is steady as last quoted. Dried beet pulp slow sale with the steady improvement in pasturage. Quotations fol-

low: Spring wheat bran, per ton, 100-lb. sacks, \$32@32.50; western middlings, per ton, 100-lb. sacks, \$32.50@33; hominy feed, per ton, \$42@43; gluten feed, per ton, \$38.75@39; alfalfa meal, per ton, \$30@31; dried beet pulp, per ton, \$37@37.50.

MINNEAPOLIS.

Minneapolis, May 2.—The Minneapolis millfeed market showed considerably more life again and as the week drew to a close there was a much firmer feeling noticeable than at any time for some weeks past. Of course, prices have been mounting steadily all through the month of April, but there did not seem to be much of anything which holders could actually base their bull fever on except the light output.

Grains have begun to pep up again and if there is any marked improvement in the coarse grains, many in the trade here feel that the bottom on millfeed has been seen for some time to come. The east has been into this market and apparently are buying stuff for future delivery. The south-west has also been in, filling requirements which ordinarily have been taken care of by the winter wheat country. With the demand for spot offerings improving and a good demand for the futures right along, the trade cannot see very much in the bear side of the market for the present at least.

Today's asking prices were as follows: Standard bran, \$24.50; pure bran, \$25; standard middlings, \$26.50@27; flour midds., \$31.50@32; red dog, \$40@41. Weekly shipments totaled 10,895 tons vs. 11,230 last week and 11,903 a year ago. Season shipments since Sept. 1 this year: 449,389 vs. 520,482 last year; since Jan. 1, this year, 202,876 tons vs. 377,064 last year.

DULUTH.

Duluth, May 2.—Irregularity was shown in the feed market during the last week. Millfeeds were advanced from 50@75c and ground feeds weakened \$1.25 all around. Demand was light, with the mills reporting stocks accumulating in some items. Closing prices per ton follow: Bran, \$25.50; shorts, \$26.50; Boston mixed, \$26.50; red dog, \$39; flour middlings, \$31.50; ground oats, \$27.50; No. 1 ground feed, \$35.25; No. 2 ground feed, \$33.50; No. 3 ground feed, \$31.50; cracked corn, \$39.25; coarse cornmeal, \$39.25.

PHILADELPHIA.

Philadelphia, May 2.—There is a good demand for nearby feedstuffs, offerings of which are light and prices are a shade higher, but western stock is neglected and quotations nominal. Prices quoted are for carlots in 100-lb. sacks at cost per ton: Soft winter bran, \$36@37; winter middlings, \$33@34; spring bran, \$34@34.50; standard wheat middlings, \$33@33.50; flour middlings, \$38.50@42; red dog, \$46@47; rye middlings, \$32@33; reground oats feed, \$13@14; fine yellow hominy, \$42@43; fine white hominy, \$43@44; low grade flour, \$59.50@60; cottonseed meal, 36% protein, \$43.75@44; cottonseed meal, 41% protein, \$46.25@46.50.

MEMPHIS.

Memphis, May 2.—In feeds activity continues limited, as buying is on hand to mouth basis and disposition is to use what has already been contracted for before taking more. Prices have been steady all the week. Millfeed is slow at \$29.50@30 for wheat bran and \$35.50@36 for gray shorts. Standard middlings are offered at \$33.50. Cottonseed meal is quiet and not quite up to prices asked one week ago, 41 per cent offering at \$38 and 43 at \$40, with mills not pressing anything for sale. Alfalfa meal is slow, but is steady at \$27@27.50 for No. 1 medium. Manufacturers report fairly good demand for poultry and dairy feeds.

SHOULD BE IN ALL MASH FEED

Feed manufacturers who study the reports from Agricultural Colleges and Poultry Experimental Feeding Stations are quick to realize the important role that Dried Buttermilk is playing in poultry feeding. It is a fact that Dried Buttermilk is now practically accepted as an indispensable and most necessary adjunct to all mash feeds by poultry raisers and poultry experts.

You can't ignore this

If you are a manufacturer of mash feed for growing and developing baby chicks, egg production in hens and pullets, or fattening fowls for market, you must consider the "handwriting on the wall," viz: public demand for Collis Process Pure Dried Buttermilk in all mash feeds. Collis Process Pure Dried Buttermilk is manufactured under our patented process which retains all feeding elements and lactic acid found in freshly churned pasteurized buttermilk. Write for further data, authentic feeding reports, cost figures and prices.

FEEDSTUFFS SITUATION.

Mill feeds are very strong with upward tendencies for immediate and prompt shipment. The prices for June to August inclusive are also firm with less sellers' interest for future than for immediate prompt shipment. Flour production is on a very limited basis and with any demand for mill feeds, prices should hold fairly firm throughout May. Nearby shipment commands a premium over prompt.

MINNEAPOLIS.—Bran, \$25 to \$25.50; standard middlings, \$27.50 to \$28.00; flour middlings, \$31.00 to \$32.00; red dog, \$39.00 to \$40.00.

CHICAGO.—Bran, \$27.60 to \$28.10; standard middlings, \$30.10 to \$30.60; flour middlings, \$33.60 to \$34.60; red dog, \$41.60 to \$42.60.

KANSAS CITY.—Bran, \$25.50; gray shorts, \$32.00 to \$32.50.

ST. LOUIS.—Bran, \$27.90; gray shorts, \$34.40 to \$34.90.

ALFALFA MEAL.

Fairly good demand for immediate to prompt shipment with some interest for 30 to 60 days. Nominally quoted second hand bag basis, choice, \$29.50; No. 1, \$26.50; No. 2, \$21.50. Fine ground grades, \$3.00 to \$4.00 a ton premium.

REGROUND OAT FEED.—Nominally quoted, \$7.50 to \$8.00; unground, \$9.00 to \$10.00. Very little demand and very little buyers' interest except that which can be purchased at discounts.

LINSEED OIL MEAL.—The demand keeps pace with the supply and markets hold firm under this condition. Should the mills increase their production with unchanged demand, it is conjectured prices might decline slightly.

HOMINY FEED.—The supply and demand limited. Prices slightly firmer than week to ten days previous. Nominally quoted sack basis white, \$38.50 to \$39.50; yellow, \$38.00 to \$38.50. In bulk, where available, \$1.50 to \$2.00 per ton less.

DRIED BUTTERMILK.—Demand is strong and has been for the past few weeks, the result being that the market is well cleaned up. There has been no change in prices, which are as follows: Creamery in carlots, 6½¢ per lb. and L. C. L. up to 7½¢.

COTTONSEED MEAL.—There has been some improvement in the market, the demand being somewhat stronger. With indications pointing to a smaller cotton crop this year, and consequently higher prices a clean-up is looked for before the new crop. Meal is nominally quoted for 43 per cent protein, Chicago basis, at \$44.75.

PACKERS' PRODUCTS.—Demand is slackening somewhat, and as producers are in the midst of their fertilizer business, no special effort is being made to dispose of feed products. Today's quotations are as follows: Meat scraps in carlots f. o. b. Chicago, \$55@60 a ton; 60 per cent protein digester tankage, \$50@55, with some manufacturers quoting \$50, while others have not yet changed their prices, which remain at \$50; raw bone meal, \$50.

CHARCOAL.—Seasonable demand at a price basis f. o. b. Chicago; Milwaukee carlots, \$33@38 per ton, depending upon size of charcoal. Less than carlots, \$35@50 per ton, standard units of 50-lb. burlap bags (for the finest grades, paper lined) in 13-ton minimum cars.

ELEVATOR OPERATING COSTS.

At the annual meeting of the Western Grain Dealers' Ass'n, week before last, there was discussion regarding the operating expense of the average country elevator. It is a well known fact that the majority of country dealers have not taken into consideration in times past the various overhead items that enter into the direct expense of handling grain. This matter has been discussed frequently at grain conventions. The following estimate is based on the country elevator handling from 100 to 200,000 bushels of grain annually. It is noted that there is a need and necessity for something better than a two cents per bushel buying margin at the average country point.

Estimated expense of operating a country elevator handling 100,000 to 200,000 bushels of grain annually.

OPERATING EXPENSE.

Interest on average investment in elevator building and machinery, \$8,000 at 7 per cent.....	\$ 560.00
Interest on average investment in grain on hand and in transit, \$10,000 at 7 per cent.....	700.00

200 Rats Killed At One Baiting

New Discovery Quickly Got Them
All—Not a Poison.

A remarkable record of rat extermination is reported to Imperial Laboratories of Kansas City, Mo., by H. Stenfort of Redford, Mich., who says: "I was over-run with rats—seemed to be several hundred of them. Dog, ferret, traps, all failed. Tried Imperial Virus, and was rid of them all in short order. Have since found rat skeletons, large and small, all over the farm. Also saved every baby chick."

Mr. Stenfort's experience is only typical of thousands of users of this new method of killing brown rats, mice, gophers and other rodents. Greedily, eaten on bait. Harmless to humans, poultry, pets, stock, etc. Gives the pests a fever, and they die outside, hunting air and water.

So confident are the distributors that Imperial Virus will do as well for you, that they offer to send two regular, full size \$1.00 bottles for only one dollar on ten days' trial.

Send no money—just your name and address to Imperial Laboratories, 1415 Coca Cola building, Kansas City, Mo., and the shipment will be made at once. If at the end of 10 days you are not entirely rid of brown rats, mice or gophers, as the case may be, even this special price will be refunded. This offer is fully guaranteed, so write today as you do not risk a cent.

Alfalfa Department

ALFALFA MEAL MARKET.

KANSAS CITY, May 2.—Though improvement and price stabilization are evident in the alfalfa meal market, present sales are mostly in single carlots. There was a great deal of cheap stuff to be worked off. Mill men here look for activity in May, possibly before the middle of the month. Fresh offerings of raw material are light, but millers have good stocks of both hay and meal. The only change in meal prices during the week was an advance of \$1 a ton on No. 1. Carlots were quoted as follows: Choice, \$25.50@26.50; No. 1, \$23.50@24; No. 2, \$18.50@19; No. 3 or brown, \$17.50@18.50.

Trade in grain and molasses feeds slackened and manufacturers were unable to give any reason except good pasturage. Buying was light, with horse and mule and poultry feeds the only articles moving in respectable quantities. There were few price changes. Horse and mule feeds dropped \$1@2. Scratch poultry feeds fell \$1.50@2. The following quotations are based in carlots, per ton: Dairy feeds, \$36@36.50; cattle feeds, \$39@44; hog feeds, \$45@51; pig meal, \$68; horse and mule feeds, \$32@41; alfalfa-molasses feeds, \$26@33.50; scratch poultry feeds, \$46.50@51.50; mash poultry feeds, \$49@75.

ALFALFA WEEVIL.

The alfalfa weevil will be a limiting factor in crop production for 1925 if weather conditions are favorable for the pest, in the opinion of experts of the department of entomology, University of Idaho experiment station. The only assurance of raising a full crop in southwest Idaho, the portion covered by a recent experiment, is to be prepared to control the pest if the necessity arises. "If one is not prepared to wage war on the pest, he must arrange early for the purchase of machinery and supplies, or they cannot often be procured at the time needed," says a recent bulletin from the department. "The saving on one crop alone will pay for labor and equipment for several years. If control measures prove not necessary, the supplies will not deteriorate and can be considered in the form of crop insurance that need not be drawn upon until another season."

From the time that worms become numerous enough to cause injury until they have reached their greatest numbers and stopped feeding, is the critical period in relation to the amount of damage done.

Entomologists have made a minute survey of fields and have found many weevil beetles surviving, even after all crops of hay had been cut. There are persons who believe that the parasitic enemies of the weevil have it under control, but others maintain the extreme drought and heat of last summer killed many of the weevil. Both of these suppositions are disputed by the department, however, because of evidence that in abundance of weevils entered winter alive after they were supposed to have been killed by parasites or weather. It is pointed out that the parasites would have killed them in the worm stage if at all.

1925 CORN TRADE YEAR BOOK.

Broomhall's corn trade year book for 1925, published in March, has just

been received in this country. It contains records of the world's chief cereal crops, imports, exports, shipments and stocks. It is an international reference book of much value for the grain and milling trades, published by G. J. S. Broomhall, F. R. S. S., editor of Corn Trade News at St. Mary's Chambers, St. Mary Axe, E. C., London, England. It is possible that the New York City office of J. D. Broomhall at 423 Produce Exchange has this volume in stock.

Selling and Most
Profitable Feeds for**

FEED DEALERS

Sugared Schumacher Feed and Boss Dairy Ration are the fastest selling and most profitable feed for feed dealers because—

1. They are **QUALITY** Feeds that exactly meet the requirements of farmers and dairymen.
2. They produce such splendid results for feeders that they always come back for more.
3. They make a **COMPLETE** dairy ration. Sugared Schumacher Feed supplies the carbohydrates and Boss Dairy Ration the protein part of the ration.
4. Sugared Schumacher Feed is an "all 'round" feed—good for hogs, horses and dairy cattle.
5. They are extensively advertised in the farm and dairy publications. These convincing advertisements send thousands of customers to the stores of dealers who handle these feeds.

If you are not handling these fast selling and profitable feeds write us today for our attractive dealer proposition.

A. B. CAPLE, Toledo, O.

Hay Department

THE HAY CROP.

Figures are just available, of interest to those who have complained about the extremely large and cheap 1924 hay crop. It is true that the total tonnage of both wild and tame hay was much above the average, totaling 112,450,000. The 1923 crop was 106,626,000 tons. The average farm value on December 1, 1924, is however surprisingly high, \$13.05, as compared with \$10.96 for the 1923 crop and \$9.85 for the 1922 crop. The trade will recall that the large 1922 crop was practically the same tonnage as the 1924 yield. We quote Government statistics in the above, and the 1924 price which is \$3.20 per ton higher than the 1922 price, may be partly explained by the extremely high grain market during much of 1924.

HAY WELL CLEANED UP.

METAMORA, Ohio—Hay fairly well cleaned up. No inducement for farmers to sell at present prices.

Present prospects for the coming crop rather discouraging. We have had six weeks of the toughest kind of weather on old meadows as well as new.

However, timely showers and a little sunshine will, doubtless, again prove that dame nature never fails us.—S. L. Rice, Manager.

HAY PROSPECTS EXCELLENT.

PETALUMA, CAL. — In this particular section the prospects are most excellent for a crop of hay, in fact it has been many years since we have had anything equal to it. The ground is moist and there is a good stand so that the wind will not have any serious effect that will interfere with growing and maturing.

Our county will produce quite a surplus, which will have to be stored locally. The balance of the state, particularly all the northern portion of it, seems to be enjoying equal conditions and will be able to take care of their own requirements until winter at least. Last season we had a very light pro-

duction and consequently there will be no carry-over, except possibly a limited quantity of alfalfa hay.—G. P. McNear Co., Geo. B. Murphy, Sec'y.

KANSAS CITY HAY NOTES.

T. J. Tanner, Correspondent.

H. A. Dyer of the National Hay & Milling Co. and G. F. Mahon of the Mixed Feed Supply Co. will attend the convention of the American Feed Manufacturers' Association in New Orleans May 6, 7 and 8. Floyd Wilson of Denver probably will accompany the Kansas City contingent.

J. A. Brubaker of J. A. Brubaker & Co. revised his mailing list this week. Among his discoveries was the fact that since 1923 he had handled hay from 400 different shippers. He also found that one shipper to whom market letters had been sent for 25 years had responded with one car in all of that time.

The opening ball game of the season, Wednesday, when the Kansas City Blues met the Toledo team, was attended by many local hay dealers, who closed their offices early.

"As the season for new hay approaches," said Thomas Ennis of the Ennis Hay Co., "I notice an increase in orders from Mississippi and Louisiana for old alfalfa and timothy. I believe there will be a good deal of buying by people who prefer old to new hay during May and June."

"Poor cattle trade conditions at the Kansas City stock yards account for dull local business in hay just now," said N. C. Campbell, president of the Kansas City Hay Dealers' Association, one day this week. "Not only are the cattle receipts light, but there are few of the kinds that interest the speculators. When cattle speculators are busy, they are good buyers of both prairie and alfalfa hay. They take hold of a bunch of cattle that look thin and ragged, feed the animals for a few days and sell at a profit."

The April receipts of hay and straw in Kansas City were 1,473 cars, as compared with 2,650 in March. A year ago the April arrivals were 2,484 cars. During April, 1925, the offerings included 778 cars of alfalfa, 516 cars of prairie, 143 cars of timothy, 15 cars of clover mixed, 12 cars of clover and 9 cars of straw.

At the meeting of the Western Trunk Line committee in Chicago last Tuesday, when the proposed revision of the milling-in-transit privilege on Colorado alfalfa hay was under consideration, the interests of the Kansas City market were represented by N. C. Campbell, president of the Kansas City Hay Dealers' Association; H. A. Dyer of the National Hay and Milling Co. and J. H.

Tedrow, transportation commissioner for the Kansas City Chamber of Commerce. All of the Kansas City men returned confident that no change would be made in the present situation. Mr. Campbell said the demand of the Colorado millers was identical with the one made in 1921. In event that the Western railroads should accede to the Colorado proposition, the matter will be carried to the Interstate Commerce Commission. Furthermore, there is said to be a promise from an outbound railroad in Kansas City that any disadvantage that may be placed on the Kansas City market would be offset by a cut in the rates on hay and meal from this market to the South and Southeast.

HAY PAGE

HAY DEALERS HOLD BANQUET.

For the first time since the war days, the hay dealers of Kansas City were rounded up on the evening of Sept. 30. The occasion was a banquet given by the Kansas City Hay Dealers' Association in the Hotel Savoy. Including members, non-member hay dealers, grain men and bankers, the attendance was about 80. The object was to discuss various matters pertaining to interests of the market and to strengthen the membership of the exchange.

When the cigar stage of the dinner had been reached, President Newton C. Campbell of the association, acting as toastmaster, threw the meeting into an open forum and led off with a speech, in which he said there was evident a tendency on the part of certain markets eastward to place obstacles in the path of Kansas City, the greatest hay center in the world. As an instance of this he cited the recent unsuccessful attempt of St. Louis, Cairo and Memphis to induce the railroads to advance the freight rates from Kansas City to the Southeast \$1 a ton.

"Just now," continued Mr. Campbell, "St. Louis is backing the Colorado alfalfa meal manufacturers in a move to deprive Kansas City of its milling-in-transit privilege on Colorado hay."

Mr. Campbell said the natural difficulties of the hay business were sufficient without the envious jabs of competitors. In this connection he referred especially to the necessity for a general lowering of freight rates to a level that would move the commodity from all sources of production. The only hope for relief, he said, was in the Hoch-Smith resolution, to which grain, flour, cement, lumber and other industries were looking. He added: "The Kansas City Hay Dealers' Association is negotiating with the law firm headed by Clyde M. Reed of Kansas for the beginning of a suit to correct the abuses in hay transportation. We have assurance of co-operation by the St. Joseph exchange, but the Omaha dealers are procrastinating and pleading lack of funds. This suit will cost about \$7,500, and the Kansas City exchange is ready to put up its share of the expense."

Mr. Campbell touched the subject of federal inspection of hay, which, he said, was inevitable. He said the degree of compulsion and possibly objectionable application would depend upon a hearty co-operation by the hay dealers.

The president laid before the assemblage a proposition, formulated by certain members of the association, for the establishment of a public warehouse in Kansas City to take care of distressed hay in periods of excessive receipts. This progressive step, he said, would be in line with other achievements of the association, which had been responsible for upbuilding the market.

In the discussion following Mr. Campbell's address the speakers were C. M. Funk and D. B. Tilson, who

favored the warehouse plan; J. D. Cole and J. A. Brubaker, who approved the contest for freight rate revision, and C. J. Riffe, who advocated steps to induce independent dealers using the hay tracks to clear trades through a member firm or operate under a bond. R. B. Shof stall, a non-member, but who is connected with an exchange firm, gave a warning against any effort to restrict competition.

HAY MARKET REVIEW.

Seasonal dullness prevailed in the hay market during the week ending May 2, with New York and Chicago the only markets displaying firmness, according to the weekly hay review of the Department of Agriculture. Good pastures were cutting down country takings, while the early season was reducing the amount of hay going to Southern mines. General rains favored pasture growth and the condition of pastures was generally satisfactory, except in Arizona and New Mexico where drought still persisted.

The large surplus of hay remaining on farms has caused a depressed market, especially for the lower grades of hay. Prices of No. 1 hay at the principal markets have averaged decidedly lower than at this time in either 1922 or 1923, while low grades have moved only at wide discounts. No. 1 timothy has averaged practically steady since February and is about \$6 per ton lower than a year ago and \$1.50 under two years ago, while No. 1 prairie averaged about \$4.50 lower than a year ago. Alfalfa prices have declined since the end of February, possibly being affected by the short spring feeding season, and No. 1 alfalfa averages \$5 lower than a year ago and about \$3.50 lower than two years ago.

Timothy prices sagged. Hay was \$ lower at Pittsburgh on a dull market and receipts at Cincinnati were in excess of the limited demand while prices declined 50 cents at St. Louis and Memphis. The New York market advanced slightly on light receipts and there was an urgent demand for top grades at Chicago, although quotations have been lowered.

Alfalfa held practically steady. The Omaha market was practically unchanged and good alfalfa moved readily at Kansas City. Many of the cars arriving at the latter market appeared to be clean of shipments. The Los Angeles market held steady but alfalfa was easier at San Francisco.

The prairie market was weaker. Quotations were unchanged at Omaha and Kansas City, but prices declined \$1 per ton at Minneapolis and St. Louis, while there was practically no demand for feeding prairie at Chicago, although there was some inquiry for packing hay.

HAY MARKETS.

MILWAUKEE.

May 2.—The Milwaukee hay market continued in largely nominal status through the past week. Prices were unchanged. Closing quotations on Saturday, May 2, were: No. 1 timothy, \$14@15; No. 2 timothy, \$12@13; No. 1 mixed, \$13@15.50; No. 2 clover mixed, \$11@12; sample hay, \$6@7; marsh feeding, \$10; packing, \$9; rye straw \$9@10; oat straw, \$9@10.

KANSAS CITY.

May 2.—Reductions all along the line, due to wet and cold weather and farm cultivating operations, limited the hay receipts this week to 187 cars. A week ago the arrivals were 402 cars and the total a year ago was 299.

The alfalfa offerings were 140 cars, or 9 less than for the previous week. At the outset a car of select dairy sold at \$28.5 a ton, or \$2 above the regular quotation but no general advance followed. The market was practically unchanged for the week. Demand for dairy and medium ship good hay was fair, including southern shipping orders. Common, poor and damaged hay moved slowly.

There was a dearth of prairie receipts with only 32 cars on sale. Quality was generally ordinary and buying was slow except on good kinds. Interest was not sufficient to change the price list.

All other hay offered aggregated 15 cars. There was some inquiry for timothy, emanating from the south, but clover mixed and clover were quiet. Prices were unchanged.

Six cars of straw came in, but they had been contracted to arrive. Previous nominal quotations were allowed to stand.

Carlots of hay and straw are quoted as follows per ton f. o. b. Kansas City:

Alfalfa—Select dairy, \$23.50@26.50; choice, \$21@23; No. 1, \$18.50@20.50; standard, \$15@18; No. 2, \$11@14.50; No. 3, \$7@10.50.

Prairie—No. 1, \$9@10; No. 2, \$7@9; No. 3, \$5@7; packing, \$4@5.

Timothy—No. 1, \$14.50@15; standard, \$13@14; No. 2, \$11.50@12.50; No. 3, \$9@11.

Clover mixed—Light, \$14@15; No. 1, \$12.50@13.50; No. 2, \$9@12.

Clover—No. 1, \$9.50@12; No. 2, \$7@9.

Straw—Wheat, \$8@8.50.

PHILADELPHIA.

May 2.—Baled hay and straw: The market for hay is quiet and unchanged, with moderate but ample offerings. Straw is in small supply and the market ruled steady, but there is little trading. Hay, federal grades: Timothy—No. 1, nominal; No. 2, \$18@19; No. 3, \$16@17; sample, \$10@15. Light clover mixed—No. 1, \$17@18; No. 2, \$15@16; No. 3, \$12@14. Medium clover mixed—No. 1, \$15@16; No. 2, \$13@14. Heavy clover mixed—No. 1, \$14@15. Light grass mixed—No. 1, \$17@17.50. Straw—Straight rye, \$15@15.50; wheat, \$15@15.50; oat, \$14@14.50.

DULUTH.

May 2.—Illustrating the dullness of the hay market here for some time back, inspections on this market during April amounted to only 46 cars, just about a midsummer volume. Demand was all for the best grades of timothy, mixed timothy and prairie, which gained \$1. Closing prices per ton follow: Timothy—No. 1, \$16; No. 2, \$15. Mixed timothy—No. 1, \$15; No. 2, \$10. Prairie—No. 1, \$16; No. 2, \$13; No. 3, \$11. Midland—No. 1, \$10; No. 2, \$8. Straw—Rye, \$9; oat, \$8.

TOLEDO.

May 4.—The hay market is showing no signs of life and dealers might as well go fishing or help with the spring house cleaning. If they could all clean out some of the large stocks on hand there might be a different story to tell. Prices remain unchanged, as they have for several weeks, and will not vary much before the hay crop is made. Receipts are of course light and shipments the same, with very little indication of any increase in the trade.

Prices for the past week were as follows per ton: No. 1 timothy, \$14; No. 2 timothy, \$12; No. 1 light clover mixed, \$13.50; No. 1 heavy clover mixed, \$12.50; No. 1 red clover, \$11; No. 1 first cutting alfalfa, \$15; No. 1 second cutting alfalfa, \$20; sound dry wheat straw, \$8.50; sound dry oats straw, \$8 f. o. b. Toledo.

PITTSBURGH.

May 2.—Hay: Receipts of all grades, with the exception of strictly No. 1 timothy, are ample for the light demand and prices are gradually working lower. Quotations: No. 1 timothy, \$20@20.50; standard, \$17.50@18; No. 2, \$14.50@15.50; No. 3, \$12.50@13.50; No. 1 H. C. mixed, \$16@16.50; No. 1 L. C. mixed, \$16@16.50; No. 1 clover mixed, \$16.50@17; No. 2, \$10@13; No. 1 clover, \$16@16.50; No. 2, \$10@13. Straw: Receipts of wheat have increased and the market is weaker on all grades, only good long straw wanted at reduced quotations. Quotations: No. 1 wheat straw, \$11.50@12; No. 2, \$11@11.50; No. 1 oat straw, \$11@11.50; No. 2, \$10.50@11; No. 1 rye straw, \$12@12.50; No. 2, \$11@11.50.

BALTIMORE.

May 2.—Of the top grades of timothy and choice light clover mixed hay the offerings are not burdensome, and for good hay there is a fair demand at quotations, but medium and low grade stock is in full supply and for poor stuff there is scarcely any outlet. Straw is holding its own under moderate spot supplies and a fair jobbing inquiry. Quotations follow: No. 2 timothy, \$18@18.50; No. 3, \$15@16.50; No. 1 light clover mixed, \$17@17.50; No. 1 clover mixed, \$16.50@17; No. 2, \$15@16. Straw—No. 1 straight rye, \$18.50@19; No. 1 wheat, \$15@15.50; No. 1 oat, \$15.50@16.

CINCINNATI.

May 4.—The dullness of the hay market characterized each year toward the close of the crop season was very apparent the past week and an easier tone and lower prices were recorded for nearly all kinds. The restricted demand caused by the increased pasturage feeding at interior points and the materially lessened shipping outlet, attributed largely to the curtailed buying by Kentucky and West Virginia mine operators, who have practically suspended production of coal because of the extreme dullness of this market, were principally responsible for the depressed condition. The fact that there was no diminution in the daily receipts and that buying was limited to local needs was also a weakening influence, and indicative of little immediate improvement in the situation. There was a fair demand from racing stables for No. 1 and choice timothy and light mixed, but shipping interests usually supplying these needs have apparently anticipated their wants, and prices for the best hay suffered declines with the medium and commoner kinds. No. 1 timothy, \$17; No. 2, \$15.50@16; No. 3, \$12@13.50; threshed, \$8.50@10.50; no grade, \$8@10; No. 1 heavy clover mixed, \$14.50@15.50; No. 1 light clover mixed, \$15@16; No. 1 clover mixed, \$14.50@15; No. 2, \$12@13.50; no grade, \$10@11; No. 1 clover, \$15@16; No. 2, \$11@13; no grade, \$8@9; No. 1 second cutting alfalfa, \$19.50@21.50; No. 2, \$15.50@17.50; No. 1 first cutting alfalfa, \$14.50@15.50; No. 2, \$10@12; sound sample grassy hay, \$9@10; wheat straw, \$9.50@10.50; oats straw, \$9@10; rye straw, \$13@14.

MEMPHIS.

May 2.—Although receipts of hay were smaller for the past week, 60 cars having come in, prices are slightly easier, as de-

large, however. Quote: Timothy, one, \$21@21.50; standard, \$20@20.50; two, \$18@19; alfalfa, one, \$27@27.50; standard, \$24@24.50; two, \$20.50@21.

NEW YORK.

April 30.—The New York Hay Exchange Ass'n has issued the following weekly report, with latest quotations:

	Hay.	Straw.
Receipts for week, tons	608	28
Receipts last week, tons	755	30
Receipts from Sept. 1, tons	11,288	899

Rail receipts have continued very light and values have been well maintained during the week. Buying at the advanced levels, however, seems to be limited to urgent needs and this, combined with the usual month-end slack trading, has curtailed the volume of business and somewhat checked further advance in prices.

All grades and sizes, with the possible exception of real common low grade stock, have moved off freely and offerings at all times have been very light.

At the close there is very little hay on hand, market being well sold up at quotations.

Invoices are reported light.

Rye straw in moderate supply and meeting with slow call.

Federal grade quotations for large bales follow: Timothy—No. 1, \$26; No. 2, \$23@25; No. 3, \$20@22. Light clover mixed—No. 1, \$23@25; No. 2, \$20@22; No. 3, \$17@18. Medium clover mixed—No. 1, \$20@22; No. 2, \$15@16. Light grass mixed—No. 1, \$23@25; No. 2, \$20@22; No. 3, \$17@18. Heavy grass mixed—No. 1, \$15@16. Rye straw—No. 1, \$15@16.

PORTLAND, ORE.

April 29.—Buying prices f. o. b. Portland: Alfalfa, \$20@21 ton; valley timothy, \$20@21; eastern Oregon timothy, \$23@24; clover, \$16.50@17; oats, \$19@20; oats and vetch hay, \$19.50@20.50; straw, \$8@8.50.

CHICAGO.

May 4.—Weather wet and interfered with trade. Supply ample and demand only moderate. No. 1 timothy quotable at \$20@22—outside for choice; No. 2, \$16@18; No. 3, \$10@14. Timothy and clover, light mixed—No. 1, \$18@20; No. 2, \$14@17. Heavy mixed—No. 1, \$14@16; No. 2, \$12@13. Timothy and grass, light mixed—No. 1, \$16@18; No. 2, \$13@15. Heavy mixed—No. 1, \$15@16; No. 2, \$12@13. Clover—No. 1, \$13@14; No. 2, \$9@11. Mixed grass—No. 1, \$12@14; No. 2, \$10@12. Oklahoma, Kansas, Nebraska and South Dakota prairie hay, \$12@15. Marsh hay—Feeding, \$10@12; packing, \$10@12. Rye straw quotable at \$12@13; oat straw at \$9@10.50; wheat straw at \$9@10.50.

ST. LOUIS, MO.

May 4.—The receipts of hay are considered light for a Monday. The market, however, remains steady for the best qualities of timothy hay as well as light clover mixed. All medium and low grades plentiful and still hard to place at reasonable figures.

Clover—Very little demand, even for the best grades, and poor qualities difficult to sell.

Alfalfa—Light arrivals. Demand fair for choice qualities. Other grades neglected and low prices.

Prairie—In fair demand for best qualities. All medium and lower grades still difficult to place.

Straw steady.

No. 1 timothy, \$21@22; standard, \$19@20; No. 2, \$15@16; No. 3 and sample, \$10@12; No. 1 clover mixed, \$17@18; No. 2, \$13@14; heavy mixed, \$14@16; No. 1 clover, \$16@17; No. 2, \$12@13; threshed hay, \$9@10; choice alfalfa, \$24@26; No. 1, \$22@24; standard, \$16@18; No. 2, \$13@15; No. 1 prairie, \$14@15; No. 2, \$11@13; rye straw, \$9@10; wheat straw, \$8.50@9.50.

BOSTON.

May 1.—No. 1 timothy, \$25.50@26; No. 2 timothy, \$22@24; No. 3 timothy, \$17@19; eastern, \$16@23; clover mixed, \$21@24. Straw—Rye, \$21@22; oat, \$13@15.

CHICAGO HAY NOTES.

Market quiet though steady, with quality just fair. Country loading showing some decrease, so the feeling is better than it has been. Looking for prairie and marsh. Demand for alfalfa rather slack but fair for straw.—*Bridge & Leonard.*

The better grades of tame hay are in demand and market for these holding firm. No. 3 and sample grades continue dull and require considerable peddling to dispose of even at low prices. This being the first of the month, we look for a better demand; we also expect a lighter run of hay on account of corn planting.—*Walters Brothers.*

All offerings of good hay meet a ready sale. We look for demand to improve and advise routing your loadings this way for the present. Supplies in store here now very low and trade will be obliged to go to market to fill orders. All kinds of straw wanted.—*Albert Miller & Co.*

BIG INCREASE IN FLOUR EXPORTS.

The United States is the principal flour exporting country in the world and ships each year over one half of all the flour which goes into international trade, according to a comprehensive report on "Trade in Wheat and Wheat Flour" released May 6, by the Department of Commerce.

This trade, the report discloses, has made marked advances in the past decade, exports increasing from a pre-war average of 10,679,000 barrels to an average of 16,796,000 for the five years, 1920-24.

Of the pre-war shipments 4,605,000 barrels, or 43 per cent, went to Europe, according to the report. The United Kingdom alone took over 25 per cent of this total, 7½ per cent went to the Netherlands and nearly 2 per cent to Germany. Other countries of Europe received 8.2 per cent of the total average exports.

The North American countries took about 2,450,000 barrels, or 23 per cent, of our total pre-war shipments of flour, most of this going to the West Indies. South America's share was 11 per cent and Asia's 22 per cent. Japan took over one-fourth of the total amount shipped to the Asiatic countries, or nearly 6 per cent of the exports to all countries. Only about 1.5 per cent of our flour found its way into Africa and Oceania before the war.

In 1920 our total exports of flour amounted to 21,600,000 barrels, nearly three-fourths of which went to Europe. In 1921 the percentage of our total shipments going to Europe fell to 68 per cent, in 1922 to 59 per cent, in 1923 to 47 per cent, and 1924 to 49 per cent. These percentages are still very much higher than the pre-war figures, and when it is considered that the average exports of flour during the years 1920-1924 were nearly 17,000,000 barrels, it is seen that European countries have taken in this period a great deal more flour than during the pre-war period.

Of all the European countries the United Kingdom is the most important buyer, taking during the years 1920-1924 an average of 2,648,754 barrels, or approximately 16 per cent of our total flour shipments. Ordinarily, France takes a very small percentage of our flour exports, generally less than two-tenths of 1 per cent, but in 1920 France took 13 per cent of the 21,651,961 barrels which were exported. From 1921 to 1924, however, very small amounts of flour have been exported to France. In the same way Italy, which imports minimum amounts of flour from the U. S., took nearly 2,500,000 barrels in 1920, or 11.5 per cent of the total flour export, but very little flour has been exported to Italy since then.

The Netherlands is a consistent purchaser of U. S. flour, having taken 7.7 per cent of the total pre-war flour exports and 7.8 per cent during 1921, 5.8 per cent during 1922, and 6.6 per cent during 1923. Finland is another consistent buyer of flour from the United States, the average pre-war exports to that country amounting to nearly 250,000 barrels, or 2.3 per cent of the total exports.

According to a recent report, grain importers in Naples, Italy, are distressed over the falling off of local imports of grain. During February, only 1,800,000 bushels of wheat were imported, while 2,232,000 bushels were imported in January. This decrease has been laid to the European shortage and to the high prices in North America and South America. It is said that a search is being made for new sources, as shown by the fact that the February imports from Australia greatly exceed those of last year. Of the 1,800,000 bushels imported into Naples in February, 844,000

American Bale Ties

To conform with the rules of the National Hay Association, hay must be well baled. The use of American Bale Ties accomplishes this. A broken wire on a bale of hay condemns the hay. Broken bales cost more than Bale Ties.

OTHER USES

For baling Excelsior, Shavings, Rags, and Paper. For bunding Barrel Heading and Staves.

No other form of wire has to stand more strain and abuse. Bale Tie Wire must be made in the highest perfection possible. American Bale Ties meet every requirement for which they are intended.

Complete descriptive catalog sent free for the asking.

bushels, or nearly half, originated in Australia.

WILL HOLD DEMONSTRATIONS.

J. B. Sedberry Co. of 817 S. Exchange avenue, Chicago will hold nineteen big and unusual demonstrations in Iowa, Illinois and Michigan in May and June as follows:

Iowa—May 4 to 9, Oelwein; May 11 to 16, Marshalltown; May 18 to 23, Cedar Rapids; May 25 to 29, Ottumwa.

Illinois—May 11 to 16, Quincy; May 18 to 23, Galesburg; May 25 to 29, Springfield; June 1 to 6, Freeport; June 1 to 6, Bloomington; June 8 to 13, East St. Louis; June 9 to 13, Elgin; June 15 to 20, Danville; June 22 to 27, Olney.

Michigan—May 4 to 9, Lansing; May 14 to 16, Grand Rapids; May 21 to 23, Kalamazoo; May 27 to 29, Jackson; June 3 to 6, Dearborn; June 11 to 13, Saginaw.

At these demonstrations five machines will be demonstrated. Farmers are invited to bring in their grain, hay or any roughage to be ground and their limestone to be pulverized, free and without obligations. Power for the grinding will be furnished by a local tractor dealer. The demonstrations will be advertised two weeks in advance in the newspapers of all the principal towns adjacent to the demonstrations.

The five machines to be demonstrated are the famous "Jay Bee" Humdinger Feed Mill, the "O. S." Limestone Pulverizer, the famous Hocking Valley Ensilage Cutter, the Hocking Valley Hay Loader, and the H-V Combination Mixer-feeder.

Provisions, Etc.

RECEIPTS, TWENTY MARKETS.

Combined receipts of cattle, hogs and sheep at the seven leading Western markets and thirteen other points for the week, with comparisons:

	Cattle.	Hogs.	Sheep.	All kinds.
Past wk.	224,000	663,000	266,000	1,153,000
Prev. wk.	223,000	619,000	258,000	1,100,000
1924	231,000	802,000	243,000	1,276,000
1923	225,000	800,000	212,000	1,237,000
1922	230,000	619,000	224,000	1,073,000

Combined receipts at the twenty markets for 1925 to date, with comparisons, as compiled by the *Drovers' Journal*:

	Cattle.	Hogs.	Sheep.	All kinds.
1925..	4,111,000	13,672,000	4,671,000	22,454,000
1924..	4,050,000	16,264,000	4,424,000	24,738,000
1923..	4,115,000	15,429,000	4,647,000	24,191,000
1922..	3,878,000	11,549,000	4,315,000	19,742,000
1921..	3,765,000	12,591,000	5,122,000	21,478,000

CHICAGO PROVISION REVIEW.

CHICAGO, May 4.—Prices for provisions had a good range the past week and closed with lard futures 10 to 15c higher; short ribs unchanged to 17½c higher, and bellies 10c lower to 5c higher than a week ago. Trading was fair and liquidation of May contracts run its course. There were deliveries of 21,000,000 lbs. cash lard the first three days of the month, all of which went into the hands of carriers. The bulk of the deliveries were out on the first day of the month, and came from the Armour interest, but had little effect on values. Traders who believe in lard values were willing to sell the May and buy July, while shorts in both months were taking profits.

Stocks in Chicago May 1 were 82,752,000 lbs., compared with 77,255,000 lbs., April 1, and 46,364,000 lbs. May 1 last year. This increase was due to an

LIVESTOCK PRICES AT LEADING MARKETS.

*Part load.

increased manufacture here and at other points, most of which was moved to Chicago for storage. It is a good sized stock, and with the hog supply larger than was expected two months ago, showed a limited consumptive demand. Shipments for the week, however, were fair sized, but the cash trade was not heavy, either in lard or meats. Prices abroad closed with a fair rally. Hogs have had a good decline and conditions in the provision trade are less bullish, although the decline discounts bearish factors. Prices for the week follow:

HOG SLAUGHTERINGS.

The reports to THE PRICE CURRENT-GRAIN REPORTER show the number of hogs packed in the West in the summer season beginning Mar. 2, 1925, compared with the same period of previous year:

	Through May 2, 1925.	Through Apr. 26, 1924.
Chicago	814,700	1,295,800
Kansas City	258,500	393,200
Omaha	450,700	629,300
St. Louis	416,800	566,500
South St. Joseph	141,200	233,300
Indianapolis	184,600	238,200
Milwaukee	71,800	98,000
Cudahy	51,600	123,800
Cincinnati	113,800	148,200
Ottumwa	91,800	147,600
Cedar Rapids	64,500	112,200
Sioux City	407,200	396,700
St. Paul	479,200	525,200
Cleveland	120,200	227,200
Louisville	34,500	51,400
Wichita	104,000	125,600
Detroit	135,500	206,500
Nebraska City	40,200	57,100
Fort Worth	69,900	61,000
Oklahoma City	57,600	49,000
Above and all others	4,949,000	6,833,000
For the week	631,000	726,000
Previous week	574,000	649,000

Weights are reported as follows: 204, 210, 235, 218, 246, 229, 324, 244, 223.

HOG PRODUCTS.

Market somewhat unsettled. Outside buying moderate, but offerings free. Quotations for meats as of May 4:

Mess pork	\$36.00
Lard, round lots	15.12½
Short ribs	16.37½
D. S. Bellies	18.62½
Green meats. Pickled.	
Hams, 10-12 lbs.	18½ @ 19
Hams, 12-14 lbs.	18½ @ 19
Hams, 14-16 lbs.	18½ @ 19
Hams, 18-20 lbs.	20 @ 21½
Skinned hams	15½ @ 22½
Picnics	12½ @ 12½
Bellies	20½ @ 24½
Pork loins	23 @ 24
Butts	17 @ 18
Sk. shoulders	15 @ 16
Tenderloins	53 @ 55

Bkfst. Bac.	31-31½

MOVEMENT OF PROVISIONS.

Following were receipts and shipments of provisions at Chicago for week ending May 2, 1925, and since Oct. 25, 1924, compared with the corresponding time in 1924:

	Received—	For week.	Since Oct. 25, 1924.	Same time 1924.
Cut meats,				
lbs.	5,396,000	172,002,000	97,324,000	
Lard, lbs.	5,161,000	200,780,000	128,676,000	
Shipped—				
Cut meats,				
lbs.	17,170,000	425,902,000	476,039,000	
Lard, lbs.	7,479,000	233,180,000	324,519,000	
Av. 1920-24	\$ 9.55	\$ 9.65	\$ 9.15	\$14.75

WEEKLY AVERAGE PRICES.

Weekly average prices at Chicago for good beef cattle, hogs, aged sheep and lambs, as compiled by the Chicago *Drovers' Journal*:

	Cattle.	Hogs.	Sheep.	Lambs.
Last week	\$10.00	\$11.60	\$ 7.10	\$14.80
Previous week	9.90	12.20	7.00	13.60
Cor. week 1924	9.65	7.30	7.50	15.85
Cor. week 1923	9.05	8.00	8.35	13.75
Cor. week 1922	8.25	10.25	9.00	14.85
Cor. week 1921	8.15	8.35	6.75	10.35
Cor. week 1920	12.65	14.35	13.10	18.95
Av. 1920-24	\$ 9.55	\$ 9.65	\$ 9.15	\$14.75

EXPORTS OF HOG PRODUCTS.

The past week's clearance of hog products compared with previous week and last year:

	May 2, 1925.	Apr. 25, 1925.	May 3, 1924.
Pork, bbls.	205	480	720
Pork, lbs.	38,950	91,200	136,800
Meat, lbs.	8,261,000	7,577,000	11,334,000
Total meat	8,299,950	7,668,200	11,470,800
Lard	10,293,000	5,184,000	11,877,000
Total products	18,592,950	12,852,200	23,347,800

The Ross Milling Co., Ottawa, Kans., is increasing its storage warehouse space to a capacity of 100 carloads of flour. New corn grinding equipment and storage facilities for corn products are being installed.

MOVEMENT OF CATTLE.

Weekly receipts and shipments of cattle and calves at 6 Western centers the week ending May 2, 1925, and totals with comparisons for corresponding time last year, compiled by THE PRICE CURRENT-GRAIN REPORTER:

BUSINESS AND TRADE CONDITIONS

THERE seems to have been, within recent weeks, somewhat of a toning down of the note of optimism in this country's business and while there is doubtless quite a perceptible slackening in some lines of industry, a part at least of which is seasonal, the immediate future continues full of promise, and the long look ahead presents a picture of boundless possibilities.

As to business at this time, President W. B. Storey of the Atchison, Topeka and Santa Fe, is optimistic regarding the country as a whole. He suggests that if business were not good the railroads would not be handling close to 1,000,000 cars of revenue freight a week. While much will depend upon the crops, President Storey said he expected business to continue at a good average level throughout the year. The outlook in the Southwest in particular is more encouraging than it was three weeks ago, he said, as there have been good rains in Texas, Oklahoma and western Kansas. One of the most encouraging features of the agricultural situation, he added, is the extent to which farmers are buying farming implements. Inquiry shows that buying movement is common to all sections of the country.

Some Good Signs

A new high monthly production total of 420,373 cars was reached in the automobile industry in the United States in April.

The largest month previously on record was May, 1923, when the total was 404,430. The biggest single month last year was March, when 393,270 cars were manufactured. These previous totals also include the Canadian output, which were not figured in the April, 1925, estimate.

Shoe production in March showed an increase of 2,725,000 pairs over the preceding month and more than 1,000,000 pairs over the same month of 1924, figures issued by the Census Bureau show. The total production for the month was 29,926,513 pairs, as compared with 27,201,568 pairs in March of last year.

Production during the first three months of 1925 was more than 1,250,000 pairs heavier than for the same period a year ago.

President Parsons of Woolworth Company said that he considers retail business good and apt to continue very good and, he noted, "business in general shows an increase." His barometer for the occasion is the report of April sales of his stores, which last month registered a \$1,600,000 gain with two Easter shopping weeks against three weeks a year ago.

Large engineering and construction operations are at least 6 per cent larger than on the corresponding date a year ago, while building costs are about 6 per cent lower. Total value of contracts let from January 1, amount to \$726,604,000, which compares with \$684,630,000 in the same period a year ago.

New Enterprises

Complete returns now available indicate that 825 new enterprises with an authorized capital of \$100,000 or over were incorporated under the laws of the different States in April representing a grand total of \$886,592,491. In March 916 companies took out charters involving the sum of \$806,402,000. During April a year ago 801 companies were incorporated with a combined total of \$528,857,000. Delaware easily led all other States in the showing followed by New Jersey, New York and Pennsylvania.

Since January 1, 3,104 new enterprises were formed with an authorized capital of \$2,801,906,791. During the corresponding period a year ago 3,152 concerns were chartered representing \$3,157,600,600, while in the first four months of 1923 3,332 companies were organized with an aggregate authorized capitalization of \$2,612,039,000.

Steel Ingots and Pig Iron Less

April production of steel ingots dropped 14½ per cent from March, according to figures just compiled by the American Iron and Steel Institute. The calculated total production of all companies was 3,587,524 tons, compared with 4,798,520 tons the pre-

WINTER WHEAT ESTIMATES

WHILE the government May first report indicates a winter wheat crop of 444,833,000 bushels, and private estimates range from 427 to 448 million, these are all based upon the law of averages, and while that is a pretty fair basis, when production for a period of years is involved, it means but little more than simply a basis for speculation as applied to just one year's crop.

By way of illustration, the yield per acre in 1924 was 16.1 while in 1923 it was but 13.5 and on that basis alone, this year's indicated acreage would mean a difference of 85,313,800 bushels or more than 19 per cent, and on that basis this year's crop might be only 442,975,000 bushels, or it might be 528,289,000 bushels.

vious month. Production for the first four months of this year was 15,740,851 tons, as against 15,031,324 tons for the corresponding period in 1924.

Production is still being cut down and the May figures will probably be less than those for April. The industry as a whole is working at 71 per cent of capacity, as against 90 per cent for first quarter and 29 per cent in March.

Steel ingots were the second commodity to show a drop in production in the steel industry. Daily production of pig iron was 108,632 tons, as against 114,975 tons the previous month.

Cutting Governmental Expenses

General H. M. Lord, Director of the Budget, in the course of a recent address said:

"We went into the World War with a gross debt of one and one-quarter billions of dollars. We came out of the World War November 11, 1918, with a debt of nineteen and a half billions, which on August 31, 1919—in less than a year—had increased to twenty-six and a half billions. We also came out of the war with a swollen expense account and a habit of thinking and spending in billions. We had acquired a greatly expanded public service, and we faced the necessity for immediate National economy. Congress furnished the President an agency—the Bureau of the Budget—which he could use in imposing control over estimates and for prosecuting a campaign of retrenchment in expenditures.

"The past three years have been years of earnest striving on the part of the Budget Director to achieve what is regarded by many as the impossible—to bring our annual spending below \$3,000,000,000. Federal expenditure in 1931, the last pre-budget year, was \$5,115,927,689.30. This was exclusive of the amount applied to the reduction of the public debt. In 1924, expenditures were \$3,048,677,965.34; we were but \$48,000,000 short of our goal. In 1924, the third budget year, we expended \$2,000,000,000 less than we spent in 1921, the last pre-budget year. In three years under the budget we absolutely cut the ordinary expenses of Government in half.

"Estimates of expenditures for the current year, as given in the 1926 budget, exclusive of debt payments, show a total of \$3,062,277,407, which is \$62,000,000 too much. In reaching that total we have absorbed an estimated expenditure of \$120,000,000, on account of the World War Adjusted Compensation Act, which did not figure in our operations last year. With that out of the picture our \$3,000,000,000 would have been attained this year at a walk.

"August 31, 1919, we reached the peak of our national debt. At that date the gross debt was \$26,594,267,878.45. July 1, 1924, at the completion of three budget years, the gross debt had been cut to \$21,250,812,389.49, showing a reduction during the three budget years of \$3,095,632,771.20, and this, too, in spite of the reduction in tax rates effected by the acts of November 3, 1921, and June 2, 1924, which materially curtailed Federal receipts. Reduction in expenditures, all along the line, that and that alone, has made reduction in taxation and reduction in indebtedness possible.

The Long Look Ahead

Charles M. Schwab, Chairman of the Board of the Bethlehem Steel Corporation, in a recent address said: "I believe the next twenty years will see the greatest expansion and the greatest accomplishment American industry has ever known," and why should that not be true?

There are in this country today about 115,000,000 people to be fed and clothed, and given the comforts and pleasures of life. They are educated to a high standard of living, they are ambitious, they are resourceful and they have the will to live well in every way.

But some one will say that the "pendulum" cannot continue indefinitely to swing in that direction, that some day it must swing back and then, "Look out."

As we see it, however, continued good business in this country depends very largely upon the way the people who live in it, think and just so long as we keep uppermost in our minds the thought that we have right here a home market this year of a hundred and fifteen millions of people, and that the number is increasing at a rate of something like 40,000 a month, any other thought than one of optimism is hardly conceivable.

INCREASING MEMBERSHIP AND INTEREST

TWO questions frequently heard at conventions, and they are by no means limited to those in the grain trade are: "Why don't more of the members attend?" and "How can the old membership be held and a lot of new members secured?"

Both are vital questions and we confess our inability to answer them just as we are unable to answer the question as to why more of the men who are in the grain trade and whose very bread and butter depend upon keeping up to date upon every phase of the grain business, do not carefully and regularly read one or more good grain papers.

As to the problems of the associations, giving more of the members definite and worth-while tasks to perform, might help some, more enthusiasm upon the part of those who know the value of the work of the associations might help some and more

publicity for the real worthwhile things the organizations have accomplished, might help some.

Some men, as we all know, can hardly be moved with a stick of dynamite and these are perhaps hopeless, but vigorous campaigns among those who are progressive with a proper setting forth of what the associations have done, and of what they can do to benefit every man in the trade will, we are sure, eventually enlist the active support of practically every last one of these wide-awake dealers.

In conclusion we should just like to say that insofar as our experience goes, we do not think there is any occasion for pessimism about these matters for the various conventions we have been privileged to look in on, have all been well attended, with a large percentage of the men taking an active part and with real worth while things always accomplished.

IMPORTANT INDIANA LAW

THE new law in Indiana relating to weights and measures is now in force. Inspectors will be appointed and grain dealers and millers should use their influence to help get competent men appointed for this important position. The law provides that scales and measures shall be inspected at least once a year and county inspectors have the authority to test and seal all scales. The law provides that commodities must be sold by weight only with some minor exceptions. This prohibits the practice of selling ear corn by measure and it would be well for dealers to acquaint themselves with all the provisions of this new law. Country shippers thoroughly recognize the value of correct weighing facilities for both their own and customers' protection and as the inspection and testing is a free service when performed by the public inspectors, it behooves the trade in their various communities to secure the appointment of inspectors who are thoroughly competent.

THE METRIC SYSTEM

AGITATION for the adoption of the Metric System in the United States is persistent and the World Metric Standardization Council now announces that a movement is under way to secure liberal Metric legislation at the next session of Congress. This matter has been discussed a number of times in the trade press and at some of the grain conventions. The adoption of the Metric system would no doubt entail a heavy expense upon the country elevator men and it certainly would be well for the secretaries at coming grain conventions to find out the feeling of their members on this subject. One thing the trade can rest assured of is that the agitation will be kept up until Congress does something, or until there is enough opposition to counteract it. What is the grain trade going to do about it?

CARELESSNESS

ACCUMULATIONS of dust and dirt in pit, workfloor and cupola of elevator, neglect to lubricate motors and bearings, untidiness and bad housekeeping inside and about the premises are the causes of most of the fires recorded as "Unknown," and the result of CARELESSNESS. It is obvious that the burden of reducing the cost of insurance rests upon the policyholders and the habit of CARELESSNESS should be corrected.

CAR LINERS

THE few weeks before the movement of the new crop is always a slack time with a country elevator man unless he is handling a number of side lines and it is a good time not only to make improvements around the plant but to take inventory of necessary supplies that will be needed for the first movement of new grain.

Every little while, country dealers write us that car so and so passing through their town was leaking grain. This is an economic loss and can be overcome by the use of paper car liners which can be purchased at a reasonable cost per car. Every country elevator should always have on hand a supply so that bad order cars can be lined and thus prevent this useless waste in transit. The time to be prepared for the emergency is before the emergency arises.

A BEACON LIGHT

THE new elevator at Deshler, Ohio, built by the farmers to replace the one destroyed by fire, is a fine modern concrete structure and is topped off with an electric light which can be seen for miles from the surrounding country. Country visitors, when they come to the city, usually like to go to the top of tall buildings for a view of the surrounding country. It would be equally interesting to go to the top of some of the modern country elevators. The Deshler house has an iron railing around the top evidently to make it safe for those who have occasion to go on the roof. As most plants are equipped with a man lift, it is an easy matter to reach the upper floors. Therefore, an invitation could be readily extended to all to make the trip.

FARM STATISTICS HELD UP

WORD comes from Washington that much valuable agricultural data which has been collected by the Census Bureau, cannot be analyzed and thus made promptly available, because of lack of funds.

It would seem, therefore, that a lot of the \$3,500,000 which was appropriated for this 1925 farm census, might as well have been thrown into the fire, for by the time congress convenes again and another appropriation bill has been shaped up and passed, and an analysis made of the figures, a whole year or more will have passed and agriculture will be confronted by a new set of problems. The figures may then be interesting, but they will be of doubtful value, especially to the farmer.

GET POSTED

GRAIN dealers in the seed belt should post themselves on how to treat wheat that is to be used for seed so as to prevent smut and, if necessary, in small rural communities, to purchase and be prepared to sell the chemicals used. Copper carbonate is the best fungicide to prevent stinking smut of wheat. The ordinary dose is two ounces of the dust to a bushel of seed. Formaldehyde is considered the best fungicide for preventing smuts of hulled oats and barley. Definite information can be secured by addressing various state agricultural colleges.

PROTECTION FROM LIGHTNING

ACCORDING to a statement made at the convention of the Illinois Grain Dealers, at Peoria, last week, lightning in 1924 caused thirty-one elevator fires entailing a loss of \$80,000 and it was said that a wooden elevator with shingle roof could be rodded and thus made immune from lightning danger, for from sixty to one hundred dollars, while an iron clad, metal roofed elevator could be fully protected at as trivial an expense as \$5.00.

As there are many elevators of both kinds that are not thus protected, it would seem either that their managers did not believe lightning would ever strike their building, or that they did not think "rodding" or "grounding" would be a protection, if it did strike.

The answer to the first of these is that no one can tell where the next bolt of lightning will strike and it actually did hit eighty unprotected elevators

WEEKLY STATISTICAL SUMMARY.

The following tabulation is a summary of figures from various statistical exhibits appearing weekly in detail in "The Price Current-Grain Reporter," these figures representing the past week, the preceding week and corresponding time last year, here assembled for ready reference:

	May 9, 1925.	May 2, 1925.	May 10, 1924.

last year, and the answer to the second is that regardless of what any one else may think of the adequacy of such methods of protection, the fire insurance companies believe in it and reflect their belief in reduced rates.

If the amount of money involved, was large, we can readily appreciate why some men would feel that they could afford to take a chance, but when it is recalled that the maximum figure named was only \$100.00, while the minimum was \$5.00, taking a chance seems most illogical.

ON A PAR

SECRETARY JARDINE is quoted as having recently said all the really intelligent and public minded farmer desires, is to be put on a par with other business men.

It occurs to us that laws which permit farm pools for the sale of their products, and at the same time, denying the pooling privilege to business men, who are not farmers, gives them a pretty good start toward parity.

John F. Weedon, superintendent of the advertising department of the People's Gas Light & Coke Company, Chicago, described the development of the gas industry and the efforts that have resulted in heavy industrial consumption of gas. He referred to the advertising campaign of the American Gas Association, which was described in the April issue of CLASS.

THE ADVERTISING value of The Price Current-Grain Reporter as a medium for reaching the buying power of the grain, feed, seed, bean and hay industries is unquestioned. The character of advertisements in its columns testifies to the favorable opinion of and value received by our advertisers. If you would be classed with progressives, place your announcements in the trade's only weekly, which is always first to get the live, up-to-date news to its readers.

CHICAGO, MAY 13, 1925.

GRAIN TRADE REVIEW

PROSPECTS that the winter wheat crop of the country would be materially smaller than last year, with private estimates suggesting under 450,000,000 bu., have become the dominating influence in the market, and while there was immense profit taking on at times, the trend of values was distinctly upward, with considerable increase in the outside interest in the market during the closing days of the week. Sentiment has become more bullish than for sometime past, as the result of the small crop estimates, and there was also a belief that foreign buyers would be formed to come into the market for new crop winters, for deferred shipment, on a big scale sooner or later, especially as old crop supplies are not abundant. At the high point the past week July showed an advance of over 20c from the low of the previous week which probably discounts considerable bullishness in the general situation, but the May suddenly developed tightness, and there is still a good chance that many of the theories regarding the close adjustment of supplies to demand during the old crop will work out. At least there is no pressure of hard winter wheat on the market, which has necessitated bringing down liberal amounts of spring from the northwest to fill contracts for May delivery. There was liberal buying of May and selling of July at times with hedgers changing over to the deferred delivery. Foreigners took domestic wheat on a fairly liberal scale the past week, largely Duluth springs, although Spain took some hard winter and there was also some of the latter kind sold, at the Gulf, to Greece.

Since the government report was compiled there have been further rains over a good part of the winter wheat belt, and the dry weather talk has vanished, although a return of high temperatures would probably disclose a lack of reserve moisture in parts of the southwest. The American northwest will also need rain in the immediate future as the moisture received of late has been light and there is but a limited reserve. At the moment however, the outlook this side of the international line is very favorable, as it usually is at this season of the year. A private report indicated a spring wheat acreage of 20,500,000, and on the basis of the average yield per acre for the

past 10 years, suggested a total crop of 258,000,000 bu., compared with 283,000,000 bu. actually harvested last year. The combined total of winter and spring wheat, as suggested by private estimates is for a yield of around 700,000,000 bu., compared with 873,000,000 bu. harvested last year. From a statistical standpoint this showing cannot be regarded as other than bullish. On the other hand the new crop deliveries are nearly 50c higher than last year, and it is not to be expected that importers will enthuse on the buying side at such a level, especially in view of the generally favorable crop outlook in Europe. There are some countries where a change in weather conditions would be decidedly beneficial. Heavy rains are delaying plowing in Argentina, but at the same time, indications are for an increased acreage, and the seed promises to go into the ground with plenty of moisture to insure germination.

In view of the small Canadian crop last year it would not be surprising if the yield north of the International line to a large extent made up for the deficit in the United States as compared with 1924, but unless Europe comes through with a big yield the world is again confronted with a close adjustment of supplies to demand for the 1925-26 season the same as was the case during the season drawing to a close. Latest reports from Russia indicate that country will not have much grain for export during the coming year, while the Danubian countries are importing. New Indian wheat is moving but that country need receive little consideration as an exporter this season owing to the relatively small crop.

Coarse Grains.

Prospects of small holdings of corn back in the country more than offset the large visible supply and corn values were on the upgrade the past week, with sentiment much more favorable to the buying side than for sometime past, and there was also an increase in the outside interest noted, which helped along the advance. At times corn showed much more strength than wheat. The private report suggesting 621,000,000 bu. back on the farms compared with an average disappearance from March 1 to November 1 during recent years of around 1,100,000,000 bu., cannot be regarded otherwise than bullish. Continued cool weather with complaints that replanting would be necessary, attracted considerable attention, and unless there is a change in weather conditions part of the advantage gained by the early spring in field work may be lost. Frost damaged some early planted corn in Iowa. The general eastern demand for cash corn remains slow which has counted rather heavily against the market at times, but the showing in farm reserves served to call attention to the fact that the visible supply was not very large and was steadily decreasing despite the slow demand. Outlook for the new oats crop remains very favorable, the wet and cold weather being just what was needed. Private reports suggested an increase of 3.5 per cent in the corn acreage as compared with last year, while oats increased 3.2 per cent.

GRAIN MARKET SUMMARY.

Receipts of wheat, corn and oats at primary markets the past week, with comparisons, follow:

	May 9, 1925.	May 2, 1925.	May 10, 1924.
Wheat	3,175,000	2,850,000	3,730,000
Corn	2,001,000	2,295,000	4,542,000
Oats	2,177,000	2,471,000	3,531,000

Combined primary receipts of wheat, corn and oats for the past week and for the season to date with comparisons, as shown by THE PRICE CURRENT-GRAIN REPORTER:

	1924-25.	1923-24.
Past week.....	7,353,000	11,803,000
Preceding week.....	7,616,000	11,547,000
Since July 1.....	943,628,000	903,261,000

Wheat values were on the upgrade the greater part of the week, and while the finish was on a good reaction from the top there were net gains of $\frac{3}{4}$ @3c. Expectations that the Government re-

port would be bullish were confirmed by the statement when it was issued, but it showed a larger total than many in the trade anticipated and heavy selling followed which made the break from the best figures. Outside interest was larger, and it is claimed that the bulk of the available spring wheat in the Northwest has now been disposed of. Crop reports generally indicate that the condition of winter wheat is somewhat better than on May 1.

There was a material broadening in the outside trade in corn the past week, and prices moved up readily and closed with net gains of $\frac{3}{4}$ @ $\frac{5}{8}$ c, the late weakness in wheat having some effect on values. Movement to terminal markets the past week was decidedly small, and the visible supply showed another fairly good reduction for the week. Messages from the interior reported increased offerings from farmers at points where around \$1 per bu. could be paid.

May oats acted rather tight the past week, and advanced to a premium of $\frac{3}{4}$ c over the July with some improvement in the domestic and export demand for the cash grain. Trade in futures was somewhat more active with cash interests taking the May, and at times there was a liberal business in the deferred deliveries. Closing trades were at gains of $\frac{3}{4}$ @ $\frac{1}{2}$ c as compared with the previous week. Rye showed more strength than other grains and gained $\frac{5}{8}$ @ $\frac{1}{2}$ c for the week with May leading. Liberal deliveries were made on May contracts but were readily absorbed. A large quantity of cash rye is being brought down from Duluth for delivery here. Range of prices the past week follows:

	High.	Low.	May 9, 1925.	May 2, 1925.	May 10, 1924.

ILLINOIS GRAIN MEN

Meet in Peoria.

Instructive Talks on Income Tax Laws;
Legitimate Use of Trading in Future
Contracts.

IDEAL weather, with Peoria at her best, in new spring attire of green, greeted the members of the Illinois Grain Dealers' Association, who gathered there for their thirty-third annual convention on May 5-6.

The members were so busy renewing old friendships and making new ones that they seemed somewhat loath to begin the first session, but when the convention was finally called to order, the Gold Room in the Hotel Jefferson was comfortably filled.

After a couple of songs in which all apparently joined with spirit, Dr. B. G. Carpenter, pastor of the Universalist Church, delivered the invocation and the president, C. E. Graves, of Weston introduced Mayor-elect Mueller, who in a few well chosen words gave the members a cordial welcome to Peoria. He said that as an old grain man he felt a particular pleasure in bidding the association welcome and he expressed the hope that the time might come when it might be deemed wise to make Peoria the permanent place for holding the annual meetings.

President Graves, in responding, told a story of "his honor's" boyhood. He said that as a boy, "Louis" was just like a lot of other boys, going to school, and playing "hooky" once in a while, going to Sunday school, and staying away from that, sometimes when he thought he dared, and he said that his Sunday school teacher was one day telling what a terrible being the devil was, picturing him with horns, and breathing fire, and apparently all of the boys were very much awed thereby, but that "Louie" finally said that he never had seen him and didn't know much about him, but that if he was anywhere near his size he would bet he could lick him."

President's Address.

President C. E. Graves, of Weston, Ill., in his annual address, spoke in part as follows:

"The Independent Grain Dealer, and in fact the entire grain trade has cause for rejoicing during the past year at having escaped some of the pernicious legislation advocated by the professed friends and would be saviors of the agricultural class. The defeat of the McNary-Haugen Bill was due in a great measure to the untiring efforts of Congressman Rainey, who is to honor our Association with an address this evening, and who aroused the best minds in Congress to the danger of such unwise legislation. Our National Association valiantly opposed this sort of class legislation, and was instrumental in its political demise. It was never intended as an economic measure, but only a sop to the farmer that would enable the job-hunter to get on Uncle Sam's pay roll, and assist the "bunk" politicians to remain in office.

Coöperative Marketing Legislation.

"There are now 37 states that have what are known as Sapiro-Coöperative Marketing Laws, including all of the surplus grain states. Some sections of this law have proven to be such a monstrosity that the marketing committee of the Minnesota State Legislature recently held a public hearing at St. Paul with the view of repealing the obnoxious and vicious sections of the Minnesota law. This hearing brought out the fact that the wheat pools of Montana, South Dakota, North Dakota, and Minnesota have failed to benefit the farmer, and an unbiased audit of the Minnesota Wheat Growers' Associations' records show that organization to be insolvent, with a probability that it will soon join the defunct and disbanded pools of the far Northwest. A few figures as to cost of operation may not be amiss. The total expense, including organization, purposes and handling 523,644 bu. of pooled wheat was \$162,336.09, which is over 30 cents per bu. Of this extravagant expense to the farmers for marketing their wheat, \$86,426.59 was charged to commissions to organizers and office expense, a shining example of "farming the farmers" via the "coöperative route" as advocated by Sapiro, Lowden, Petet and others of coöperative marketing fame. By way of comparison a group of eight elevators outside the pool handled an equal amount of grain at one-fifteenth of the organization expense under the pool, proving the present marketing system to be the most economical and most satisfactory method of marketing grain. It is pleasing to the grain trade that other states are questioning the constitutionality of such drastic and un-American legislation, and it is to be hoped the farmer will soon realize

the injustice to himself and the business world in general by demanding the repeal of laws breeding socialism and paternalism whose advocates desire only a professional fee or a political office as a reward for their activities.

Federal Trade Commission.

"There is further cause for rejoicing in the grain trade to know that the Federal Trade Commission has at last learned the intent and purpose for the creation of this organization. Almost from its inception the members of the commission have acted as self-constituted spies upon commerce and industry. A recent revision of the rules, brought about by a decision of the Supreme court and proposed legislation by Congress, as a result of frequent fishing expeditions into the records of corporations together with just complaints from business organizations throughout the country, now assures business in general, the courtesy and fair treatment to which it is entitled.

Coöperators Object to Accounting to Uncle Sam.

"It is amusing to note the wailing of the "coöperators" (?) who objected to accounting for the \$500,000 appropriation they wished our government to legislate from

C. E. GRAVES, Re-elected President,
Weston, Ill.

the U. S. Treasury for their special benefit as proposed by the McNary-Haugen Coöperative Bill. This is simply another case of whose ox was gored, and it happened to be the proponents of coöperative legislation.

The Grain Trade Brief Presented to the Agricultural Commission.

"When President Coolidge appointed his agricultural commission to investigate farm conditions the legislative committee of the Grain Dealers' National Association, whose chairman is A. E. Reynolds, prepared a brief entitled "The Grain Trade," and presented it to the agricultural commission for its careful consideration. This brief should be read by every grain dealer and farmer in the United States, as its contents are a matter of record based on facts pertaining to the grain trade during the past 34 years.

"Let the government supply information to the farmers "which they cannot get for themselves." To go further than this is to injure the grain dealers and also "to injure rather than aid" the farmers themselves. Here is a safe, progressive, just and permanent policy. On it we stand.

Secretary of Agriculture Jardine has also said "The government possesses no magic wand, the waving of which will cure all agricultural ills, but the farmer must learn to help himself through the educational facilities supplied by his government." It is true President Coolidge and Secretary Jardine are committed to further coöperative legislation, but let us hope that the intense feeling between the "coöperative" factions continues to broaden; also that the merry fight between the Grain Marketing Co. and the Illinois Agricultural Association (the latter organization having sponsored the defunct U. S. Grain Growers), become so disgusting to the President, his Secretary of Agriculture, Agricultural Commission, Congress and the real farmer himself to the extent that all legislative action of a coöperative nature be cancelled. One more crop to dispose of at prices in line with those of the past year would do much to eliminate the activities of the farmers would be saviors. Let the farmer alone and he will work out his own salvation and be the better for having done so. The only true coöperation is that with his local banker, merchant and grain dealer, all of whom are dependent on each other, and when this is done in each and every community, real coöperation will have become a fact instead of a fancy as now painted by the professional fee grabber and the standing office seeker.

Warning to County Agents.

"The government has also recently found it necessary to warn county agents that

their work was purely educational and not of a commercial nature in opposition to established business that did not interfere with their work.

Freight Rates.

"The present high grain rates are the cause of much dissatisfaction to both shipper and producer. At the same time the increased cost of operating the railroads, due to higher priced material, better pay to employees, building hard roads parallel with some of the short lines, and as a natural result reducing the income of both the passenger and freight departments, raises the question as to whether rates can be reduced without curtailing the efficiency of the railroads. The railroads are essential to the grain trade, and have had more to do with the commercial development of our country than any one thing. The Regional Advisory Boards, composed of shippers of all commodities, which have operated so efficiently the past year in conjunction with the American Railway Association, has promoted a get-together spirit between shipper and carrier, resulting in much benefit to both. Let us hope that the best minds on both sides of the rate controversy may bring about a happy solution of this important question at the earliest date possible.

The Relationship of Grain Dealer to the Farmer.

"The independent grain dealer has no quarrel with the farmer or farm organizations, in fact many grain men are also farmers and members of farm organizations. His interests is in the prosperity of the farmers and on many occasions that interest has been manifested in timely financial aid during depressions and low prices, also good advice in selling at a remunerative price to the producer. However any legislation that will enable any particular class of people, farmer or otherwise, to extract money from the federal, state or county treasury to fight some one in the same line of business, and who is conducting it in a lawful and legitimate manner, is not conducive to good government and furthermore is a violation in both spirit and letter of the principle embodied in the constitution of the United States of America. The opinion of your humble servant is that what our country is most in need of at the present time is a thorough study of the preamble to our national constitution and a closer application of the Golden Rule to our fellow men. Then indeed will the millenium have arrived in the grain trade."

Secretary's Annual Report.

Secretary Culbertson's report being called for, he said: "Before giving you a resume of the activities of your association for the convention year, I ask your indulgence if I speak of a matter of deep concern to me, and one which I trust may be of more than passing interest to all of you, namely, the condition of the country grain dealer in Illinois. He is not now nor has he been making a fair return upon his investment. This applies to both the independent and co-operative alike. The reason this condition exists is that he can no longer do business upon the same buying margin that has been in vogue for the last decade, and as a result is depending more and more upon speculation for his profits. This is economically wrong. Speculation may be the cornerstone for wealth, but no one has the right to speculate that cannot afford to lose. It has been my observation that any business that must depend upon speculation for its profit will ultimately bring financial ruin to its owner. This is emphasized by the number of co-operatives that are in financial difficulties and the number of independent elevators that are for sale.

"The country grain man for the last twenty years has been one of the most maligned of all business men and this is due to the general public having an erroneous idea of just what his function was and is in the business life of this nation. It may be of interest to you to know that in our high schools, colleges and universities, where economics is taught, in many instances the lesson and explanations are direct attacks upon our business, our methods and ourselves. That the general public do not understand our business is small wonder, when we who are engaged in the business cannot understand the motives that prompt some dealers to offer more for grain than they can obtain for it, and to resort to other unethical practices in order to keep their competitors from handling it. The country elevator is necessary to the handling of grain and cannot be dispensed with. That the elevator is entitled to a reward for the service performed is conceded, but it is up to the elevator owner to obtain it. It is high

time that the trade realize this and make an effort to put their business upon a sounder base. This can best be done by the dealers following the plan of the bankers of this state and organizing in county units as such organization will permit the dealers to get better acquainted with one another and afford an opportunity to discuss the evil practices of the territory and devise a means for their eradication. I leave this as a suggestion."

The secretary's report is in part, as follows:

Since the last annual meeting the work of the association has been largely of a routine nature. The Arbitration Committee has held no meetings; however, your secretary's office has been used as a medium through which several controversies have been settled.

The Scale Department has so grown in popularity that in addition to Messrs. J. B. and L. C. Sowa, we have put on another inspector, Mr. W. T. Kramer. Each inspector is assigned to a fixed territory which he covers at least once each year, traveling via auto truck and carrying his necessary test weights and repairs. The charge permitted to be collected by the inspectors is \$4.00 for the first scale and \$3.00 for each additional scale together with \$5.00 in lieu of actual traveling expenses to our members and \$5.00 straight for all scale inspection for non-members, together with the \$5.00 expense charge. Any repairs furnished are charged for at factory prices, and the labor of installation is an extra charge. Of course, where a special trip is made for the convenience of the individual dealer the inspector is permitted to charge his actual traveling expenses in addition to the regular test fee, so it will be seen that it behooves our members to take advantage of the services of the inspectors when they are making their regular trips over the territory.

During the past year the Claim Department has handled very few claims. Either this department is not patronized by the members as it should be or else they are fortunate in having few claims. We trust that the latter may be the case. To make up for the loss in revenue in this department we have taken an agency with the Integrity Mutual Casualty Co., of Chicago, and are now in a position to handle all kinds of Casualty Insurance.

The compiling of the 1925 directory of the grain trade was begun in August and completed in time to be issued to the trade January 1st. The expense of publishing and distributing this is taken care of through the advertisements it contains, and in this connection I desire to state that the association solicits advertisements from only those whom we believe to be reliable people and worthy of the patronage of our members, and we urge the grain trade generally to consider and give preference to these advertisers when in need of the services they can perform. The co-operation of the trade in this manner will be beneficial and mutually helpful.

Early this year the Department of Agriculture gave notice of a proposed change in the official standards for oats and held a series of public meetings that those interested might be heard. These proposed changes were for the purpose of giving the wild oats grown on the foul lands of the North west a grade status. Your association was represented at the hearing in Chicago and protested any change in the present standard, it being our belief that if any change should be made that it should be a tightening up of grades whereby the present liberal allowance of these wild oats would be reduced.

Due to the absence of the treasurer, M. J. Porterfield, his report was not presented, the finance committee, through Chairman T. E. Hamman, reported having audited the secretary's books and of finding them carefully and properly kept. Mr. Hamman, in concluding his report said he felt sure that if the members would use as much care in keeping their books as the secretary had in keeping the books of the association, some of them would know a good deal more about their business than they now did.

Report of Executive Committee.

E. M. Wayne, of Delavan, chairman of the executive committee, said there had been no meeting of that committee. This being the third consecutive year in which that committee had not been called upon to hold any session and he felt that perhaps some of the members did not know just what its function was. He said the men on that committee wanted to earn their salaries and that its job was to hear disputes which could not be settled by the arbitration committee, and he rather hoped some of the members would get into trouble during the next year and give the committee something to do.

Resolutions Committee.

President Graves, at this time appointed the resolutions committee as

follows: H. A. Hillmer, chairman; F. G. Winters, John Brennan, H. I. Baldwin, and H. A. Shelby, the members of the previously appointed committee not being in attendance.

Secretary Culbertson said that he had recently talked with United States Senator McKinley who had expressed regret that he could not be present at any of the meetings, but who offered his services at any time that he could be of assistance either to the association or to any of its members.

Secretary of the National Association Speaks.

The first speaker at the Tuesday afternoon session was Charles Quinn, of Toledo, O., secretary of the Grain Dealers' National Association, who explained how he and President Horner had been forced to divide the 18 affiliated associations up, each of them attending a part of them. He said that he had supposed that of course President Horner would attend the convention of the Illinois dealers because of his previous association with the organization, but that Mr. Horner had insisted that the Illinois convention was his to attend and he was glad to be present. He reviewed, briefly, the tendency in farm legislation through the Alliance, the Grange, the 16 to 1 movement, the Non-Partisan League, etc., the farmer being told in each of them that he was being discriminated against and should have his wrongs righted by Congress, until his wail had become so loud that when he now said to legislators "I am a farmer" they all "sit up and take notice."

He spoke of the propaganda now being conducted in favor of coöperative marketing, by the U. S. Department of Agriculture through the weekly bulletin on that subject which is now being sent out at the expense of the taxpayers and he referred, rather sarcastically to the plan inaugurated by the Ohio State University, to instruct elevator men in how to properly market their grain, calling attention to the fact that of the \$683,000 which was to be spent by that institution, \$205,000 would come from the state, \$239,000 from the county, and \$238,000 from the U. S. Treasury.

McNary-Haugen Bill.

He told of the hard fight the national association had waged to defeat the McNary-Haugen Bill and said a similar fight would unquestionably be necessary to defeat some measure of a similar character in the next session of Congress.

To counteract the coöperative marketing propaganda which is being put out, the national association is having a brief, similar to the one used in the McNary-Haugen fight, prepared, the new one being written by Prof. Boyle of Cornell University, who has access to the finest agricultural library in the whole world. This brief will be entirely impartial, showing among other things where coöperation has succeeded and why and where it has failed and why.

He said the national association did not take credit for the defeat of the McNary-Haugen Bill, but did take credit for causing the war tax to be taken off of the telephone and telegraph tolls.

Income Tax Laws and Regulations.

R. C. Conway, internal revenue agent in charge of the Springfield division gave a brief sketch of this country's income tax laws, the first of which was passed in 1909 and was only a tax on corporations. In October, 1913, the first individual income tax act was passed followed by the others, which were made necessary by the war.

In explaining some of the difficulties with which the government was confronted in the handling of income tax matters and by way of explanation as to the delay now, in making audits, he said that before 1913 the large part of the internal revenue came from the tax on liquors and tobaccos and the mass of detail being comparatively small, only a small force of men were employed in that work. As the new taxes were added, the amount of detail increased at an almost incredible rate and it had taken a lot of time to find

competent men and to train them in the work.

By way of illustration, he said that in 1916, collections were \$500,000,000, in 1917, \$809,000,000, in 1918, \$3,968,000,000, in 1919, \$3,850,000,000, and in 1920, \$5,407,000,000, while in 1916 there were 800,000 tax returns made, in 1917, 3,800,000, and in 1918, 5,000,000.

He said that there were now approximately 3,000 field officers, making audits and that they were working on 1920 and 1921 returns, and it was the hope of the department that within a reasonably short time audits would be made on current year returns.

The Legitimate Use of Trading in Future Contracts.

Dr. J. W. T. Duvel, in charge of the Grain Futures Administration, who was next on the program, expressed his pleasure at being present, and said it had been 10 years since he had been privileged to attend a meeting of this kind. He said that 90 per cent of the trading under the Grain Futures Act was on the Chicago Board of Trade, some of the other markets having practically none of this business, Baltimore for example, having made no such trades within the past five months and Los Angeles, none within the past three months.

He spoke of the criticism that had been made because they were reporting sales rather than purchases, and said that the matter had been carefully considered and that they had decided to report sales as that was what was done by all of the exchanges. In so far as volume is concerned, the reports are given out because it is felt the public is entitled to that information.

He believes in hedging, not only by the country and terminal elevator men, but also the miller and the farmer, and he believes that the reason more of them do not do it is perhaps because they do not properly understand the value of the hedge and how to use it.

Dr. Duvel said they were preparing a questionnaire on hedging, as to quantity hedged, how and where, etc., and he hoped that the grain men who received it would carefully and promptly answer it, and he assured the members that the information thus given would be considered confidential.

He said the question of news and gossip was one of the hardest things to contend with, and that the time had come when the wild scare head type of newspaper gossip about grain must be stopped. By way of illustration, he spoke of an item in one of the Chicago papers last Saturday about one individual's having sold several million bushels when as a matter of fact he had not sold a bushel.

He doubted the right of the Grain Futures Administration to limit trading, but he was of the opinion such change would be made in the law as would give them that power. He preferred, personally, to have the various exchanges themselves put some limit on fluctuations.

He said there were some things about limiting fluctuations that he did not like, but that he believed the benefits would far outweigh the defects.

He invited the views of the members on the subject, saying they wanted to build up the exchanges and make them better, that while this country now has the best marketing system in the world, it is not yet perfect and they were anxious to find ways to improve it.

E. M. Wayne of Delavan asked if the present law had any teeth in it, and Dr. Duvel replied that in so far as volume was concerned, the law had as many teeth in it as any law on the subject that Congress had ever passed.

Mr. Wayne said he had always been friendly to the Chicago Board of Trade but felt that it was now dominated by the private wire houses and the "shoe string" gamblers, and he presented what he termed a resolution, saying he wanted to go on record as being opposed to the present methods of operation on the Chicago Board of Trade. In his resolution he asked that the rules on short selling be so amended as to put

a stop to the wide fluctuations such as had been recently recorded.

Charles Quinn, secretary of the Grain Dealers' National Association, asked the doctor how the government would approach a situation like many of those of a sensational character that had appeared in the daily papers, which heralded in bold headlines such things as "Woman Farmer Makes a Million on the Wheat Market," or "Stenographer Makes \$50,000 on Wheat Advance."

A Note of Warning.

Mr. George Hubbard said he wanted to sound a note of warning on the proposed resolutions. He felt that perhaps the price of wheat had gone 20 or 25 cents too high, but that he had bought some of it from the farmer at \$1.87½ and had made money on it and he had paid the farmer from \$1.30 to \$1.50 for a lot more, when without the speculator the price would perhaps have been around a dollar or \$1.20. He said a stabilized market had forced him to buy corn from the farmer at from 16 to 22 cents, and he felt that the real trouble was that too many of the grain men were not satisfied with buying all of the farmers' grain, but were also buying every bushel they could possibly finance, on the Chicago Board of Trade.

He suggested the desirability of making a change in the hedging rules so they would permit delivery at Omaha, Wichita, Kansas City, etc., of grain hedged on the Chicago market at the Chicago price plus the freight rate from the market at which delivered, to Chicago.

Upon being asked by Mr. Quinn as to whether fixing a price fluctuation limit would not freeze the market, Dr. Duvel said that as he saw it, the law of supply and demand must eventually rule and that a limit as small as 2 cents a day would mean 52 cents within a month, and a range of that amount would more than take care of any change which might be registered in actual market conditions.

As he sees it, the speculator is needed to make an active cash grain market.

Dr. Duvel said Chicago was the future grain market of the world and he wanted it and he believed everybody else did, to continue such, and what he was striving for was to find just what was wrong with it and in some way have that wrong corrected, and he asked the coöperation of the members in that direction.

Nominating Committee.

At this time President Graves named the following members as a nominating committee: C. C. Miles of Peoria, W. H. Boies of Gridley, Fred Davis of Toulon, L. B. Walton of Mayview and L. W. Railsback of Weldon, after which recess was taken for the day.

Banquet at Hotel Jefferson.

About two hundred and fifty of the members, including their friends, many of whom were ladies, gathered for the banquet on Tuesday evening at which Colonel Grant M. Miles, president of the Peoria Board of Trade, was the toastmaster.

At the conclusion of the banquet, Major McQuaid and Lieut. Donnelly entertained for a brief time with funny songs and stories, when Congressman William E. Hull of Peoria was introduced and expressed his very great pleasure at being present. He said he felt that he was a brother-in-law to the grain trade for he was born on the farm and stayed there until he was twenty. Then he came to Peoria and engaged in the distilling business. In the latter connection, he said that when the distilling business was banished the grain dealers lost one of their best customers. Mr. Hull spoke briefly about the Hull-Rainey Deep Waterway Bill and urged the members to keep everlastingly behind it.

He then introduced Congressman Henry T. Rainey and the latter, in glowing terms, praised Congressman Hull, saying that he had served in Congress with 1,800 different men, and he had never known another one of them who had progressed as successfully and as

rapidly as had Congressman Hull. He said that surrounding Peoria there were two hundred thousand farms and two hundred thousand farmers who raised enough grain to feed half of the continent and he believed that it would be a great benefit to them, and that they were entitled to have the deep-waterway. He spoke of how big this nation is and of what makes it big and said we were at the present time in the "coal and iron" age. He referred to the battle between the Monitor and the Merrimac as having been the start of the iron age and then proceeded to enumerate some of the things making this country great. Among them are: We produce 51 per cent of the world's lumber and consume 52 per cent of it; we produce 42 per cent of the shoes and use 39 per cent; we produce 91 per cent of the automobiles and use 93 per cent; and we have half of the world's railway mileage. Congressman Rainey said this is an era of financial miracles and referred somewhat at length to the appropriations made by Congress at the beginning and throughout the war period, stating that in the first bill, the appropriations were six times bigger than there was money in the country at the time. He referred to the financial failure of the French company which first undertook to build the Panama Canal, the failure being for \$500,000,000, and of how very seriously that affected the whole financial world. He also spoke of the failure in London of the Berings Bank and of what a profound effect that had upon world finance. He then referred to the recent failure of the Chicago, Milwaukee & St. Paul Railroad with \$800,000,000 involved or almost as much as both of the two previous ones, and said it hardly created a stir in financial circles. He spoke of the bills which had been introduced in the 68th Congress and said it would take a man twenty years working eight hours a day every day, just to read them, and he felt that the time had come for leadership such as that shown by Andrew Jackson, Grover Cleveland, or Theodore Roosevelt to stop this flood of legislation.

He said that the creation of new bureaus through congressional action was a serious menace and that it must be stopped, and he referred specifically to a "Children's Bureau" which had been established some years ago, and for which \$25,000 was primarily appropriated and of how, the next year, \$65,000 was asked for the continuance of the work and then of how, when that part of appropriation bill was finally presented, it was amended to read \$350,000, and that amount was given for the work of that bureau.

Wednesday Morning Session.

The opening address on Wednesday morning was made by Mr. Charles E. Morris, assistant chairman of the Western Railways Committee on Public Relations. He said that if the railroads were to continue to properly function, there must be a change in the attitude of the people generally and of politicians in particular. He said that the Northwestern railroads were very seriously affected in 1922 by reductions in rates on hay and other agricultural products, and if the Interstate Commerce Commission, in its present investigation, which was ordered by the last session of Congress, should by any possibility find that rates on agricultural products should be still further lowered, these roads would all be in serious difficulties similar to those now confronting the Chicago, Milwaukee & St. Paul. He referred to the state of Illinois as having over 12,000 miles of first track and said that if all of the corn and all of the wheat that was grown last year in Illinois, and was sold out of the county in which it was raised, had been shipped to the Chicago market, the revenue to the carriers would have amounted to \$7,420,000, or less than one-third of what the railroads of Illinois had paid back to the state in taxes.

Referring specifically to the Chicago, Milwaukee & St. Paul failure, he said that road was one of the best in the

United States and that their electrification which had been very generally condemned, was a wise and a mighty economical move and that if it had not been for the savings affected through the consequent more economical handling of traffic because of this electrification, the crisis in the Milwaukee's affairs would have come sooner than it actually did.

The trouble with this road, as he saw it, was a light density of traffic coupled with low rates, the figures showing this density of traffic to be 10,000 a mile against a density of 25,000 on the Illinois Central, of 26,000 on the Union Pacific, of 29,000 on the Chicago, Burlington and Quincy, and 15,000 on the C. R. I. & P. If there had been only 3,000 more per mile added to the density on the Milwaukee, it would have been possible for that road to have met everyone of its obligations.

He next spoke of the loss of traffic due to competition from truck lines and to the use of automobiles and called attention to the fact that in 1920, the New York Central carried 123,000 passengers between Altamont and New York City, while in 1924, the number had decreased to 60,000, all because of the Ford car.

He then called attention to the fact that last year, there were delivered to the ten leading live stock markets, 40,000 carloads of hogs in motor trucks. He said that traffic last year was 6 per cent less than it was a year before, but that in spite of the fact that there was the shrinkage and that wages were constantly going up and rates going down, last year had been the best one in a long time for the carriers due to other economies in operating costs.

In closing, Mr. Morris urged the members to impress upon their members of Congress that they treat the railroads as industries and the railroad problem as an industrial problem and not look upon them as being in the realm of politics.

Elevator Construction and Lightning Protection.

Mr. V. E. Butler of the Western Grain Dealers' Mutual Fire Insurance Co., the first speaker under the general discussion part of the program, talked on the topic "Improvement in Elevator Construction and Lightning Protection," and said that as he saw it, this gave him an opportunity to talk shop. He observed that they were not having much trouble at the present time with new elevators because these were practically all being properly constructed and properly protected, the chief difficulty being where improvements or changes were made in old elevators, in electric wiring and other work being done in such a way as to very greatly increase fire hazards, and yet they found that in a good many cases, elevator owners resented either suggestions or criticisms concerning the installation of these improvements.

He said that in twenty-two years of his company's existence, it had paid in losses, \$3,250,000; that last year there had been saved through the use of the barrel and bucket, what would have amounted to a loss of \$188,000, and that since the company was started, the barrel and bucket had been responsible for the saving of \$1,708,000.

He said if he was to write a story of the mutual companies, he could do it with the one word "service," and he went on to explain what the mutual companies were equipped to do in the way of supplying plans, specifications, and in making estimates, and he urged the members whether they were insured in his company or not, to feel perfectly free to avail themselves of these facilities. He said that last year, lightning caused thirty-one fires with a loss of \$80,000, and during the past thirty-one years, it caused three hundred and forty-five fires with a loss of \$259,000, and he said that wooden elevators with shingle roofs could be made safe from lightning by being rodded and at a cost of from \$60 to \$100, while iron clad elevators can be protected at a cost as low as \$5.00.

Of the subjects which had been dock-

eted for general discussion, under the heading "Cost of Operating a Country Elevator" and "Side Lines," no one apparently had anything to offer and under the heading "Proposed Change in Oats Grades," the secretary explained just why that item was docketed and what it meant and offered the opinion that inasmuch as comparatively little wild oats came into the Illinois country elevators, the members of the organization would be favorable to permitting present grades remain.

Scale Inspection.

Mr. Joe Schmitz, chief weighmaster in Chicago who talked on the subject of scale inspection, said that one of their difficulties arose from the fact that in some instances there was an apparent unwillingness to cooperate between competitive dealers in the same town. If one of the dealers called for an inspection and tried to get the other one to have an inspection made at the same time thus lessening the expense to both, the other fellow would be unwilling and then later he would call for an inspection and would want dealer No. 1 to cooperate with him in the same way and he in turn would be met with the same kind of a refusal.

He said that it had been found in Docket No. 9,009 that 8 per cent of the capacity of the scale was enough weight to be used in making a test of that scale but that anything under that would not be a fair test.

Mr. V. E. Butler in discussing the question of reasonable buying margins, said that the cost of handling a bushel of grain would not be exactly the same in any two elevators and he suggested the desirability of having a large number of the elevator members work up very carefully a statement as to their handling costs and sent to the secretary so that an average could be struck and sent to all of the members for their information.

Election of Officers.

The nominating committee made its report at this time and its recommendation was that the old officers should be re-elected for the ensuing year, the only exceptions being a change in the board of directors. T. E. Hamman of Arcola being named as one of the new ones, Oscar Rink of Edinburg, another, and Louis J. Cohlbow of Wenona, the third.

On motion, the report of the committee was accepted and then on motion, the secretary was instructed to cast the unanimous ballot of the members for the nominations as made. This being done, the following were declared elected: President, C. E. Graves, Weston; vice-president, A. C. Koch, Breese; second vice-president, L. A. Tripp, Assumption; treasurer, M. J. Porterfield of Murdock, and new directors: B. P. Hill, T. E. Hamman, E. M. Wayne, Oscar Rink and L. J. Cohlbow. There being no further business, the convention was declared adjourned.

Adopt Important Resolutions.

Chairman H. A. Hillmer of the resolutions committee, presented the following resolutions, which were unanimously adopted:

Whereas, the Department of Agriculture is making an investigation of the future trading of the Chicago Board of Trade market, and that no report of such investigation is as yet available, your committee is of the opinion that the great problems of national and international commerce and banking demand that this association should approach the question of limitations in quantities and prices in future trading with great caution and.

Whereas, the crop forecasts for the wheat this year indicate that this country may be on a domestic basis, that is, that we will raise no more wheat than we will consume, and that this is a year when the placing of limitations might react unfavorably upon the farmer,

Be it resolved, that a committee of three members of the association be appointed by the president to work with the Chicago Board of Trade to devise practical and reasonable ways and means to meet the demand of the general trade that radical swings in the future market be as far as possible eliminated.

Be it further resolved, that this convention declares itself to be in favor of a deep water way from the lakes to the gulf. We believe the time has come for aggressive action on the part of Illinois in this matter. We realize, as shippers of grain, the im-

portance of water way transportation on a route wholly on American territory, connecting the farms of Illinois and of all the Mississippi Valley states with the consuming nations of the rest of the world. We believe the dams should be removed in the Illinois River; that there should be government aid for levees on the Illinois River; that there should be an adjustment of just claims of farmers in the Illinois Valley against the Chicago Sanitary District; that there should be a nine-foot water way in the Illinois River; that there should be a sufficient flow from Lake Michigan to maintain at all times that depth in the river; that there should be in the interest of the tax payers of Illinois the largest possible revenue from water power in connection with said water way to be controlled by the state of Illinois. We are advised that the Hull Bill is the only bill pending in Congress which embraces all the features. We therefore unreservedly endorse the Hull Bill and we commend the efforts of Congressman Hull and Congressman Rainey in the fight they are making for this water way and we pledge to them our cordial co-operation and our aid in accomplishing the results for which they are so strenuously fighting.

Whereas, the railroads of the country are now meeting the keen competition of the hard roads and trucks in a commendable manner, and,

Whereas, the prosperity of the railroads enabling them to give good service goes hand in hand with the prosperity of members of the Illinois Grain Dealers' Association,

Therefore be it resolved, that we, the members of the Illinois Grain Dealers' Association in convention assembled, do declare ourselves as favorable to reasonable and just rates for rail transportation.

Be it further resolved, that the convention expresses its profound sorrow at the death of the late Hiram N. Sager of Chicago, Illinois, who was one of the outstanding figures in the grain trade of the Middle West and the memory of whose honorable career will long be cherished by us all.

Be it further resolved, that the thanks of this convention be extended to Congressman Rainey, Dr. Duvel, Mr. Chas. Quinn, Mr. R. C. Conway and Mr. Chas. D. Morris for their very able and instructive addresses and that we do further extend our thanks to the Entertainment Committee of the Peoria Board of Trade and the management of the Jefferson Hotel for their entertainment and hospitality and to the Grain Dealers National Mutual Fire Insurance Co. for their efficient services in registration of members and we do further extend our grateful thanks to the retiring officers.

VISIBLE SUPPLY OF GRAIN.

Following is the visible supply of wheat, corn and oats by weeks (final 00 omitted), with comparisons:

	1925.	1924.	1923.	1922.

ANNUAL MEETING MISSOURI GRAIN DEALERS' ASSOCIATION

Splendid Meeting at Which Legislation Hedging and Other Important Topics Were Discussed and New Officers Elected.

THE 1925 convention of the Missouri Grain Dealers' Association which was held in St. Louis on May 7, while not largely attended was an exceedingly interesting meeting, the members seeming to feel that because they were relatively so few, they could be more readily got together and talk about their troubles.

The convention was called to order by President Ed. S. Harte of Boonville who said he had no speech to make but that he desired to make just a little change in the program as it had been printed.

He said that quite a number of members were either on the board or they still had business to attend to which would take them all of the morning and that, therefore, only the routine in business would be taken care of until after the lunch hour when the formal talks would be made.

Secretary's Report.

President Harte first called for the secretary's report and it is substantially as follows:

You no doubt have noticed in your convention call the fact that we were only holding a one-day meeting. We are trying this out this year because of the fact that most meetings become tiresome to some when spread out over two or three days and the delegates become inclined to drop in and out of the meeting from time to time as they run out of something else to do, and spend the rest of the time taking care of personal matters and in taking part in about everything else going on except the actual business of the convention.

This has been a very peculiar year from the standpoint of trade activity, markets and of profits to all. We have had a combination of business conditions and prices that have never been known before in my brief experience in the grain and milling industry. We started in the convention year with prices for all our commodities at a low tide and then we had a more or less gradual upturn on most commodities covering a period of some ten or eleven months to peak or war prices, and then in the short space of about thirty days we had one of the severest reverses ever known.

This of course resulted in some nice profits for some, and in losses for others, but taking it all and all we feel that the past convention year has been a profitable year for most everyone engaged in the grain and milling industry in this state. The effect of prosperous conditions on trade associations is not generally felt until the following year, and while the past fiscal year resulted in a net loss in membership to us, and while our financial situation is not quite as good as last year, we feel that the coming year will show quite an improvement and interest generally, which will result in an increase in our membership, and which will naturally improve our financial situation.

One interesting fact that seems worthy of mentioning at this particular time was the decision to move the office to St. Louis. This move was decided on at the directors' meeting following the close of our last meeting, and it has resulted in an increased efficiency and service of the association to its members. Your secretary is in closer touch with terminal problems and our office is now much more accessible to the membership as a whole.

Our correspondence has almost doubled since we moved and we have been able to be of service to our members in handling a number of problems that we were not called on to look after heretofore. I would like to say right here that we are anxious and willing at all times to take care of anything in the way of personal matters for our members and to call attention to the fact that this office is your office, and we want you to feel free to use it.

There is just one thought in regard to national legislation that I want to leave with you at this time, and that is so far we have been successful in avoiding radical legislation such as the "McNary-Haugen Bill," but our troubles are not over, and we are just in the middle of our difficulties along this line.

President Coolidge is committed to a program of sponsoring some kind of a so-called farm relief legislation, and our new secretary of agriculture, Mr. Jardine, is also committing himself to the same cause in every public utterance he has made since his appointment. We do not know as yet just what the character of the new proposals will be, but we do know that some kind of legislation favoring the passage of a bill that will put the government in the position of fostering and sponsoring the cooperative marketing movement in this country.

Our recent state legislature, and the action of it, was a puzzle indeed. I think we had more bills introduced this time

than ever before, but few of them were passed. We had a Republican House and a Democratic Senate, and both of them had very definite and determined ideas on what was and what wasn't going to be done, which of course cluttered up the legislative machinery to such an extent that in reality nothing was done by them that is worthy of special mention.

We had a bill drawn up and introduced by Senator Hollingsworth, which gave the Public Service Commission authority to act as arbitrators in disputes between the carriers and shippers on the leasing of railroad right-of-way proportion and the amount of fair rentals for same. There has been a very concentrated effort on the part of the carriers for the past five years to raise these rentals in some sections, and as we felt that a six per cent rental charge on the value of the property occupied by the shipper was a fair yearly rental we felt justified in trying to get a disinterested party to pass on the fairness of these rental charges. The bill we presented was identical with the present laws in Iowa and Kansas, and we felt that it was fair, but we were unable to get the committee to which our bill was referred to see the justice of our claims. Their contention was that the bill took away the right of private contract from the carriers and would be unconstitutional if passed. We are expecting to re-introduce the bill again at the next meeting of the legislature, and hope to have it received with more consideration.

One measure that was introduced, which was of interest to every manufacturer and dealer in feedstuffs, was Senate Bill No. 241. This bill provided, among other things, for a ten cent a ton tax on all commercial feedstuffs manufactured and sold in this state. We opposed the passage of this bill on the ground that the ten cents per ton tax was too excessive and would place too great a burden on the farmers of this state. One peculiar thing about this bill was that it was sponsored by one of our farm organizations.

We, together with other interested parties, were able to convince them that the tax was excessive, and the bill was passed with only a five cent a ton tax. The law becomes effective July 1.

It has also been our policy to try and encourage the managers of the farmer elevators to join the association and be a part of us. Our association enters into activities that are not covered by the different farm organizations, and we feel that the experience of our trade leaders is much more valuable in judging what is of benefit to our farmer customers than some of their advisors who don't know anything about the grain business. This statement is based on the assumption that our farmer elevator companies are anxious to be of service to their customers and want to be able to pay a dividend to their stockholders each year.

We would give a great deal to see the day that our trade papers were being read in the farms the same as in the elevators. I am sure if this could take place that the farmer promoter and the money raising schemes would soon be out of existence forever and that our farm organization's activities would soon be confined to educational and farm improvement methods which is their natural and legitimate field of endeavor.

Neither our arbitration committee nor appeals committee have had to meet this year on account of not having had a single case to consider. We feel this speaks well for our grain and milling trade, and it is only natural to assume that our members are keeping their contracts. We feel that it is of special interest right now on account of the activities of trade organizations in building and promulgating a code of ethics or loyalty program.

Every organization needs the moral and inspiring assistance of a code of ethics. It is a breeder of satisfaction to yourself and to your competitor. It helps build up our morale and also our neighbors'. A code of ethics is nothing more or less than loyalty to yourself and to your friends.

Elbert Hubbard says: "Loyalty is that quality which prompts a person to be true to the thing he undertakes. It means definite direction, fixity of purpose, steadfastness. Loyalty makes the thing to which you are loyal yours."

Treasurer's Report.

The treasurer's report then being called for, it was made by Mr. W. W. Pollock of Mexico, the association's treasurer. This report was as follows:

Salaries	\$ 2,982.87
Traveling expenses	403.70
Printing	308.84
Office expenses	580.43
Loan repaid	900.00
	<hr/>
Balance May 7, 1925	\$ 5,675.84
	<hr/>
Balance on hand	544.39
Fees and dues	2,490.00
Advertising	1,515.75
Loans	900.00
Miscellaneous	673.77
	<hr/>
	\$ 6,123.91

Following this report, the president named a resolutions committee comprised of A. C. Harter, chairman; Geo. Wolff, Jr., A. H. Meinershagen, J. D. Ballard and C. A. Morton. He also named a nominating committee comprised of D. B. Kevil, chairman; J. D. Mead and D. J. Rootes, as well as an

auditing committee comprised of Turner Morton, chairman; Mr. Scott, and D. B. Kevil.

Two representatives of the Department of Justice who were present were invited to say a word but both said they were simply out for the purpose of making a general investigation of the grain business and were endeavoring to obtain the views of as many grain men as possible as to what, if anything, was wrong with present marketing practices as well as to obtain if possible information concerning the recent violent fluctuations in grain prices.

Secretary Quinn Addresses Convention.

In the afternoon session of the association, Mr. Charles Quinn, secretary of the Grain Dealers' National Ass'n of Toledo, made the opening address giving to the Missouri members a somewhat similar message to the one given to the Illinois association on Tuesday, adding however a number of important things not spoken of at that meeting.

He pointed out the fact that while there were perhaps twenty or twenty-five thousand grain dealers there were approximately 7,000,000 farmers and the views of the latter could, therefore, be heard much more easily as well as much more emphatically by the members of congress, and particularly those who were politicians, than they would hear the grain dealers.

He felt that the farmers had already been given too much help and that there were too many associations spreading propaganda about farm coöperation and talking too much about the farmers' hard luck.

Mr. Quinn then spoke of the recent statement of the Secretary of Agriculture which was that the way to get rid of the surplus of grain in this country was to organize the 7,000,000 farmers and then have them plant only enough acres to produce the approximately 650,000,000 bushels of wheat which this country needs each year. Mr. Quinn pointed out how impossible it would be in the first place to get all of the farmers thus to coöperate and then how impossible it would be to regulate the sunshine and the rain and other matters which have to do with the making of the crop of wheat so that just enough would be produced each year to take care of the domestic needs. He said that one year we would be sure to have a surplus and the next year, we would be equally sure of being short of wheat and of having to import it.

Mr. Quinn then told of the new brief which was in the course of preparation and said it would unquestionably be needed when the fight for coöperative marketing legislation came up in the next session of Congress. He also said the assistance of all the members of all the associations would be needed and President Harter assured him that insofar as the members of the Missouri association were concerned, he could depend upon that in the next fight just as fully as in the recent one.

President Horner of the National Association Makes Informal Talk.

President Harter said that the Missouri convention was unquestionably fortunate in having present not only the secretary of the Grain Dealers' National Ass'n, but also its president, F. G. Horner, and he asked the latter if he did not have a few words for the members.

President Horner said that the present time was what might be termed "between grass and hay." The problems of the association have to do with legislation and as far as the grain trade was concerned, sentiment on that subject was already crystallized so that no further educational work in that direction was necessary, but that some of the grain dealers had apparently become discouraged at what seemed to be overwhelming demand for coöperative marketing legislation and were possessed with the thought that the worst was bound to come.

He assured the members that the best way to prevent the worst from happening was for each man to take an active interest in the work of his local

association and then to use every effort to interest those dealers who were not members to join.

The Transportation Question.

Mr. Charles D. Morris, assistant chairman, Western Railways Committee of Public Relations, who talked on the transportation question, made some of the same points made in his talk at the Illinois convention.

Many new facts, however, were presented to impress upon the members just what the situation was with respect to this country's railroads as a whole and urged upon each one of them to use his influence with his members of Congress in order that the carriers might be treated as industries rather than political footballs. He said that every person in the entire United States was interested either directly or indirectly in the success of the railroads, 26 per cent of all of the life insurance companies' reserve funds being invested in railroad securities, 30 per cent of all of the educational institutions' endowment fund being thus invested, 15 per cent of all deposits in trust companies and savings banks that are invested in any kind of securities being invested in those of the carriers and finally that the bread and butter of 10 per cent of all of the people in the country came from railroad salaries while 6 per cent of all of the people that were gainfully employed draw their salaries either directly or indirectly from the railroads.

As Mr. Morris sees the situation, one of the greatest difficulties of the carriers and one of the great difficulties of the whole country lies in the number of people who are employed by the various governmental departments, city, county, state and national, and who are thus not gainfully employed and who therefore are living off the others. He said that last year alone 10,000 names were added to the government payroll.

In response to an inquiry from Secretary Quinn, Mr. Morris explained what the "recapture clause" of the transportation act was and he was of the opinion that some of the money now being borrowed from that fund never would be paid back. He also said that quite a few of the more important roads had not yet paid in to that fund any money, the Interstate Commerce Commission at this time claiming approximately \$76,000,000 to be thus due and the chief reason for this failure to pay was, that as the government had not yet fixed the valuation for these lines, they were not in a position to determine how much would be needed to pay their stockholders the 5¾ per cent which was found by the commission to be a proper rate on the investment and that for this reason, they did not know how much should be paid into this particular fund.

The Grain Futures Act.

Jos. M. Mehl, Federal Grain Exchange Supervisor of Chicago, made a very interesting talk and one which brought out a number of questions in quite an extended discussion of the Grain Futures Act and the proposal to limit either range of price or quantity traded in. Replying to a question from the floor as to the desirability of placing a limit on the amount of grain that could be dealt in during any one day, he said that in his opinion it was not so much a question of the amount dealt in on one day as it was the amount accumulated by any one dealer or speculator.

He felt that the speculative market was not being used as much as it should be, particularly by the farmer and the country elevator man and he was anxious to know whether or not it would be considered worth while to gather information on the subject of how to hedge and how it would be useful and why, passing that information on perchance, to the secretaries of the various organizations and having them in turn pass it on to their members.

When he asked for a show of hands on this question, a number of those present indicated their desire for such information and then in response to a question from the floor as to whether

or not he could tell what percentage of the big day's trading on the Chicago board was hedging and what pure speculation, he said he did not have the figures.

In a general discussion of the question of hedging which followed, one member said that one of the difficulties on the part of the country dealer arose through the fact that the country banker to whom he must go for money will have nothing to do with him if, as he sees it, the elevator man is speculating.

Another member called attention to the fact that the city banker would not loan to the terminal elevator man unless he would hedge his grain. Another member called attention to the fact that, if a country elevator bought 10,000 bushels of grain from a farmer, if the market went up before the grain was delivered, he would not get over half of it, while if he sold 10,000 bushels to the terminal elevator, every bushel of it would be shipped.

The auditing committee at this time reported that they had checked over the records and vouchers of the secretary and of the treasurer and had found all of them correct.

Report of Resolutions Committee.

The report of the resolutions committee being called for, it was presented by Chairman Harter. Among other things these resolutions approved and endorsed the efforts of the State University to demonstrate the value of flour made from Missouri grown wheat for all baking purposes, and approved and endorsed the efforts of the state officials to have state institutions supported by the state of Missouri use flour made from the wheat grown in Missouri.

Extended a vote of thanks to President Horner and Secretary Quinn, of the Grain Dealers' National Association, and also to Mr. Morris and Mr. Mehl for their attendance and remarks, and commended the State Marketing Bureau for its radio broadcasting of the market quotations of all the various grains believing that this service is of inestimable value to all our members as well as the farmers of the state.

Election of Officers.

The topics under the head of "General Discussion," because of the lateness of the hour, were dispensed with and the report of the nominating committee was called for.

This committee recommended A. C. Harter of Sedalia for president; H. H. Green, Pattonburg for vice-president; W. W. Pollock of Mexico for treasurer, and all of the old directors except that the name of the retiring president, Ed. S. Harter, was submitted for that of Vice President-elect Green. On motion the report of the nominating committee was accepted and on further motion, the secretary cast the unanimous ballot of the members of the official's names and they are declared duly elected.

At this point, the secretary read a letter from THE PRICE CURRENT-GRAIN REPORTER concerning the adoption of the Metric System.

After a brief discussion, the association went on record as approving the stand against the Metric System, at this time, which had been previously taken by the National Association.

There was some brief discussion concerning the new Missouri feed law and, as apparently no one seemed to be familiar with it, the members were all asked to send to the secretary such problems or questions as they might have concerning the new law when he would endeavor to secure proper information and bulletin all of the members with reference thereto. At this time the new president, Mr. A. C. Harter, was called to the chair and said he had no speech to make except that he wanted immediately after the close of the meeting to call the members of the new executive committee together so as to discuss the financial problems of the organization for the new year. There being no further business, the meeting was declared adjourned.

Crop Reports

Compiled by GEO. A. WELLS

CROP REPORTS.

The soil condition is almost entirely "favorable" in the states of Ohio, Indiana, Illinois, Missouri, North Dakota, Montana, Nebraska and Oklahoma. Considerable portions of the states of Iowa, Minnesota, South Dakota and Kansas are reported "too dry."

The growth of winter wheat as reported by our correspondents on the average for each state is as follows: Ohio 67, Indiana 79, Illinois 90, Missouri 92, Nebraska 84, Kansas 76 and Oklahoma 60. The Government Report of May 8th gives abandonment of acreage for each of the above states as follows: Ohio 30.0, Indiana 14.0, Illinois 3.7, Missouri 1.5, Nebraska 21.0, Kansas 24.8 and Oklahoma 17.0.

We do not compile crop reports for the state of Texas. However, the Government report of May 8th shows growth condition of 38 per cent and abandonment of acreage 62.0. The forecast, 1925, production for this state is 4,102,000 bushels as compared with 1924 harvested crop 25,826,000 bushels. The total wheat crop of all states 1925 forecast is 444,833,000 bushels as compared with harvested crop 1924, 590,037,000 bushels.

Our correspondents report the growth condition of spring wheat as compared with normal based at 100, is as follows: Minnesota 97, North Dakota 95, Montana 105, and South Dakota 95.

Of oats, Ohio 92, Indiana 97, Illinois 111, Missouri 89, Iowa 94, Minnesota 106, North Dakota 86, Montana 100, South Dakota 95, Nebraska 91, Kansas 81 and Oklahoma 65.

Basing the estimated acreage of corn sown last year at 100 the percentage comparison of corn sown this year is estimated as follows: Ohio 107, Indiana 107, Illinois 100, Missouri 106, Iowa 104, Minnesota 93, North Dakota 100, Montana 105, South Dakota 99, Nebraska 107, Kansas 110 and Oklahoma 101.

General Reports.

The general reports as to the growth condition of winter wheat and oats given below are self explanatory.

OHIO.

Lima, Ohio (1): Winter wheat crop will be short here. Oats crop very promising.

Bucyrus, Ohio (4): Since the rains have come, winter wheat and oats are doing nicely.

Middletown, Ohio (3): Growing wheat looking bad. Too wet for corn planting but soil condition very good.

Springfield, Ohio (2): Too early to tell much about oats growth but what wheat is left is not doing any good in this territory.

Sidney, Ohio (2): Some improvement in wheat outlook but cannot hope for more than a 75% of average yield on the small acreage that will be harvested. We don't want our oats to look any better.

INDIANA.

Angola, Ind. (7): Had good rains. All crops growing nicely.

Winamac, Ind. (1): Wheat and oats condition generally good.

Frankfort, Ind. (2): Winter wheat and oats not doing well. Too dry and windy.

Winamac, Ind. (1): Wheat prospect fair. Small corn surplus and no hogs or cattle shipping in.

Marion, Ind. (5): Early sown wheat making good growth. Late sown not nearly so good but improving.

Jasper, Ind. (3): Fine growing weather for wheat. Oats and pastures, if weather permits big acreage of corn will be put out.

Decatur, Ind. (7): Winter wheat growth good. Fields spotted. Oats fine. Ground in good condition. Farmers ready to plan corn.

Monticello, Ind. (1): Wheat in this locality good growth. Oats are excellent standard. Unusual growth for this early. Very little corn planted.

Tipton, Ind. (5): Basing the government term normal at 100 the growth of the winter wheat crop on acreage that has not been abandoned is considered as normal.

Winchester, Ind. (8): What winter wheat left looks fine. 90% of it good but can't have over 25% average crop. Oats doing fine. Good stand and two weeks ahead of last year.

Rensselaer, Ind. (1): Wheat looking fine but about 10% shorter than normal. Oats best ever seen in this territory at this time of year. Ground too cold and wet yet for corn planting.

ILLINOIS.

Sparta, Ill. (6): Weather cool for all crops except wheat.

Morris, Ill. (7): Winter wheat and oats far above average.

Belleville, Ill. (3): Winter wheat never looked better than now.

Ashton, Ill. (4): Winter wheat spotted, thin stand. Oats are excellent.

Mt. Carroll, Ill. (4): The past ten days has given grain good growth and color.

Odell, Ill. (7): Cold, dry weather causes slow growth of pastures and oats. Very little corn planted.

Lostant, Ill. (4): Wheat showing very spotted growth. Oats are sown too thick and have poor color.

Mt. Pulaski, Ill. (5): Wheat spotted. Many thin places in fields. Wheat doing fairly well. Oats are excellent.

Riggston, Ill. (5): Both wheat and oats are a good growth and look fine. Been too cold for corn last ten days.

Wenona, Ill. (4): Winter wheat looks like about one-half a stand. Frosts have had a tendency to stunt growth of oats.

Paris, Ill. (8): Wheat and oats is growing fine. Have had showers in this locality pretty regularly and

CARELESSNESS

Accumulations of dust and dirt in pit, workfloor and cupola of elevator, neglect to lubricate motors and bearings, untidiness and bad housekeeping inside and about the premises, are the causes of most of the fires recorded as "Unknown," and the result of CARELESSNESS. It is obvious that the burden of reducing the cost of insurance rests upon the policyholders and the habit of CARELESSNESS should be corrected.

groundworking fine for corn. Some planting.

Freeport, Ill. (4): Very little wheat grown here but conditions are very good. Oats stand thick, color and growth very good.

MISSOURI.

Bethany, Mo. (1): Wheat and oats are fine.

Higginsville, Mo. (2): Weather favorable for growing wheat.

Harrisonville, Mo. (1): Spring is late. Wheat and oats look good.

Paris, Mo. (5): No killing frost but weather too cool for normal growth.

Salisbury, Mo. (4): Winter wheat is in good shape. Oats has good growth.

Marionville, Mo. (3): Winter wheat doing all right. Not a good growth on oats.

Lamar, Mo. (3): Winter wheat and oats are making good growth and promise to make a good crop.

Springfield, Mo. (1): Wheat showing signs of heading. Oats generally good. Some evidence of chinch bugs; but no apparent damage.

Chillicothe, Mo. (1): Too much rain for wheat and oats on low lands. Plant slightly yellow. Corn planting being displaced on account of rains.

Corning, Mo. (1): For the past two weeks we have had ideal weather for the growth of winter wheat. We have had cooler temperature with an occasional shower. Oats are also doing fine.

IOWA.

Williamsburg, Ia. (8): Corn is about 50% planted.

Indianola, Ia. (6): Pastures are showing effect of dry April.

Lowden, Ia. (8): Wheat fairly good stand. Oats rather thin stand.

Belmond, Ia. (4): Small grain looking fine. A hard frost last night.

Whitten, Ia. (4): No wheat. Too dry for oats and not looking very good.

Wall Lake, Ia. (2): Growth of winter wheat and oats fully up to normal.

Clemons, Ia. (5): Wheat is very uneven. Wheat and oats needs more moisture.

Oakville, Ia. (9): The weather condition has been very favorable to the growth of small grain.

Gilbert, Ia. (5): No wheat in this locality but oats are doing fine. Could stand more rain. Farmers are planting corn now.

Moulton, Ia. (6): Oats crop never looked better. Not much of a wheat crop. Good rains is making grass and oats crop.

Osceola, Ia. (6): All small grain and grass crops are beginning to show the effects of cold, dry weather, but nothing serious as yet.

New Sharon, Ia. (5): All early sown wheat looks pretty fair but late sown is poor. Oats coming very unevenly. Needs more moisture.

Henderson, Ia. (3): Winter wheat is spotted and runs very irregular, bottom land is fine, hill land is poor to fair. Oats are looking fine.

Hamlin, Ia. (2): Oats are not making much headway as the weather is too cold. Hardly any corn planted yet as the weather is too cold. It froze ice here last night.

New Hampton, Ia. (7): The ground is rather dry for the growth of grass and grains. Very little spring wheat here and no winter wheat. Oats are looking well and fully 100% of an acreage. The acreage of corn will be fully 100%.

NORTH DAKOTA.

St. Thomas, N. D. (7): No winter wheat.

Cavalier, N. D. (7): Conditions of winter wheat and oats very favorable.

Fargo, N. D. (8): Growth of winter wheat and oats slow due to cold weather.

Carrington, N. D. (5): No winter wheat raised here. Oats are just being seeded now.

Monango, N. D. (9): Weather a little cold for good growth of wheat or any other grain.

MINNESOTA.

Minnesota, Minn. (3): Condition ideal so far for all small grains.

Warren, Minn. (1): No winter wheat here. Oats just up. Frost last five nights.

Grand Meadow, Minn. (9): Early sown flax frozen. Temperature 25° on the 5th.

Wall, Minn.: Growth of winter wheat slow to start. Dry and cold killing frost this week. Small damage to early flax.

Donnelly, Minn. (2): Spring wheat and oats are up and fields quite green.

WHEAT AT TURNING POINT

A change in the grain market is at hand—shrewd traders who are closely in touch with statistical data, crop reports and price influences are prepared for a turn.

MARKET CHART advice by letter or telegram recognizes all of the above factors

Our service is broad, including stocks and cotton as well as grain. Market Chart customers in cotton have been advised absolutely right recently. All futures are now in a debatable position and the information and advice we are in position to give may pay the entire, although small, cost of our service on a single trade.

Market Chart furnishes dependable service.

MARKET CHART

HENRY RANG & CO.

Established 1862

Grain Merchants

CHICAGO MILWAUKEE
SIOUX CITY

Although the past week has been cold and froze some each night.

Eden Prairie, Minn. (6): Corn has not been planted and ¼ corn planted this year as before.

Hutchinson, Minn. (6): Winter wheat and oats looks O. K. but there is small acreage of winter wheat here. Spring wheat could not look better.

London, Minn. (6): There will be about the same acreage of oats as last year. Wheat and oats are looking good but we need rain and warm weather.

MONTANA.

Glendive, Mont.: Winter wheat poor. Oats good.

Missoula, Mont.: Weather is warm. Good rains.

Lewistown, Mont.: Winter very spotted. Worms doing damage. Season is 30 days earlier than normal but wild oats bad. Very little oats in.

Valer, Mont.: Most moisture we have had in many years. Farmers very busy seeding. About 35% of crop seeded. Farmers are working soil well before seeding to kill weeds and volunteer grain. Conditions as a whole are fine but could be bettered by a little warmer weather.

SOUTH DAKOTA.

Brookings, S. D. (8): Oats looking good.

Brentford, S. D. (7): No winter wheat. Oats fair.

Canton, S. D. (9): Very few oats in for this time of year.

Beresford, S. D. (9): Growth of winter wheat and oats is excellent to perfect.

Flandreau, S. D. (8): Corn closely marketed with only a trace left to move prior to a new crop.

Flandreau, S. D. (8): Only a trace of winter wheat, but stand is excellent, healthy color and good growth. Oats are an excellent stand.

Miller, S. D. (5): Dry all spring with considerable frost the last few days makes all small grain crops look bad.

Elk Point, S. D. (9): Winter wheat has good growth but is spotted, plenty of winter kill. Oats shows good growth, has been damaged by frost.

Bridgewater, S. D. (8): Very little winter wheat in this territory on account of dry weather last fall. Oats acreage decreased about 5%. Conditions are fair to good.

NEBRASKA.

Superior, Neb. (9): Conditions very good.

Neligh, Neb. (7): Oats and winter wheat doing very well.

Swanton, Neb. (9): Wheat spotted. Has good color. Oats fine.

Roseland, Neb. (9): Winter wheat is spotted. Good color but thin in places.

Nebraska City, Neb. (9): Oats have as good a growth as wheat just now. Wheat thin, spotted and backward.

McCook, Neb. (6): Wheat is apparently in a healthy condition and is an excellent stand and is now jointed. Not an acre abandoned around here.

Central City, Neb. (9): Both wheat and oats been doing well but checked and color hurt by repeated frosts. Need warm rain and warm weather.

Superior, Neb. (9): No wheat left for harvest. Oats look fine. Weather been very favorable until about week ago, turned too cool and been too cool for past week.

KANSAS.

Concordia, Kan. (4): Moisture badly needed.

Plainville, Kan. (4): General conditions very favorable.

Uniontown, Kan. (9): Winter wheat and oats growing fine.

Logan, Kan. (4): We must have moisture soon for all crops.

Wichita, Kan. (6): Recent rains have put soil in good growing condition.

Ashland, Kan. (3): We are placing the abandonment 20% now but unless rains come at once the abandonment will increase. We have had just about

an inch of rain all told the last few months. With favorable conditions will probably have six bushels to acre.

Sedan, Kan. (9): Wheat never looked better. Will commence harvesting June 1st.

Neodesha, Kan. (9): A few hessian fly infested fields manifest. 15% of whole acreage.

Alta Vista, Kan. (8): There is not much wheat left in this country. Oats are full of bugs.

Minneapolis, Kan. (4): 80% abandonment on wheat will be replanted by oats, barley and corn.

Satanta, Kan.: Wheat is heading out about 10 inches above ground. Not stooling. Average yield about 7 bus.

Greensburg, Kan. (6): Wheat will make half crop and oats will be a failure owing to continued drouth this spring.

Wellington, Kan. (6): Most of wheat looks bad. No stool, beginning to head about 6-in. to inch high, small head. Oats not doing much, too cool.

Belleville, Kan. (4): 95% of the wheat acreage was abandoned and the 5% left has a condition of only 50%. The oats are looking fairly good.

Pittsburg, Kan. (9): Winter wheat in this territory about 75% to 80%. Oats look well, plenty of moisture. Weather cool. No old corn moving.

Hillsboro, Kan. (5): A good deal complaint about hessian fly damage to winter wheat. Oats has fair growth. Some early wheat is beginning to head.

OKLAHOMA.

Enid, Okla. (4): Wheat condition slightly improved by rains but still will have a light crop.

Enid, Okla. (4): The wheat and oats have improved since the rain but will not make a full crop.

Kingfisher, Okla. (4): This county will not average over 7 bushels per acre. Abandoned acreage has increased to 25%.

Geary, Okla. (2): Remaining wheat acreage very thin stand, average yield with favorable conditions will not exceed 8 bushels.

Marshall, Okla. (5): The wheat was in a critical condition when rains came two or three weeks ago. A wonderful improvement is noted with prospects now for 75% of normal crop. A good prospect now for oats.

MAY CROP REPORT

Government Figures Indicate Smallest Winter Wheat Crop Since 1917.

A WINTER wheat crop of 444,833,000 bu., the smallest since 1917, was suggested by the Government crop report for May. It compared with 474,000,000 bu. in April, 553,000,000 bu. in May last year, and 590,000,000 bu. harvested last year. It is 140,000,000 bu. short of the ten-year average.

The rye crop of the United States is estimated at 57,968,000 bu., a loss of more than 4,000,000 bu. in April, and compares with 63,446,000 bu. last year and 68,442,000 bu. as the ten year average.

With favorable weather to harvest, the winter wheat crop might be materially improved, but it is not regarded as possible for the crop to overcome the

loss of 145,000,000 bu. as compared with last year.

Acreage abandoned was 9,504,000, from that of 42,500,000 seeded last fall, leaving 32,813,000 acres for harvest, compared with 36,438,000 acres harvested last year. The yield per acre on the basis of present conditions is 13.6 bu. Condition May 1 was 77, compared with 68.7 last month, 84.8 last year, and 55.2 as the ten year average.

Favorable weather enabled farmers to do 5.5 per cent more spring sowing than in 1924, there being an average of 65.8 per cent, with spring plowing 82.7 per cent, against 71.3 per cent for a ten year average. Pastures are 2.4 per cent better, at 86.5, and meadows show a condition of 87.8, against 89.6 per cent as a ten year average.

Details for principal producing winter wheat states, with acreage and condition, follow:

*000 omitted.

On May 1, 1925, the acres of rye in the United States standing and intended for grain is estimated at 4,184,000 acres, compared with 4,173,000 acres, the harvested acreage in 1924, 5,171,000 acres in 1923, 6,672,000 acres in 1922, and 4,831,000 acres, the average harvested acreage for the past ten years.

The average condition of rye on May 1, 1925, for the United States was 86 per cent of a normal, compared with 84.0 on April 1, 1925, 88.2 on May 1, 1924, and 89.5, the average condition for the past ten years on May 1. A condition of 86.8 per cent on May 1, 1925, is indicative of a yield per acre of approximately 13.9 bushels, assuming average variations to prevail thereafter. The average yield per acre for the last ten year period was 14.2 bushels. On the estimated area to be harvested (4,184,000 acres), 13.9 bushels per acre would produce 57,968,000 bushels, compared with 63,446,000 bushels, the harvested production in 1924, 63,077,000 bushels in 1923, 103,362,000 bushels in 1922, and 68,442,000 bushels, the aver-

age harvested production for the past ten years.

Rye Average Crop by States.

Terminal Markets

DULUTH.

S. J. Schulte, Correspondent.

The Duluth Board of Trade membership of Douglas C. Moore has been transferred to W. J. McCabe Jr., and the membership of E. J. Maney to J. H. Ogle, vessel agent.

Deliveries on May contracts were light on this market during the last week, being restricted to a few small lots of durum, rye and flaxseed. Holders of long contracts on this market so far have not been showing any disposition to back away, but claimed to be ready to accept deliveries.

The Barnes-Ames Co. was credited with having put through a good export trade in spring wheat during the last week. Percy Ginder, the company's secretary reported good inquiry for durum, and he predicted that heavy business would be booked in it later, as soon as the importing countries in Europe get around to it. Italy is expected to be a heavy buyer of durum later on.

Commission men and elevator houses here are looking for a fair run of grain to this market as soon as seeding and spring work has been completed over the Northwest, their advices being that considerable grain of various kinds are held in interior elevators over the winter on account of storage space here and at Minneapolis being plugged up. After the break in prices during the spring, holders were not inclined to ship, in the belief that some recoveries might be looked for later.

So far vessel interests operating their fleets in the grain trade have been very much in the doldrums, but they are hopeful of more grain being offered for eastern shipments from now on. Bookings were so light here early in the week, and so much boat space was offering that the rate for Buffalo delivery was pushed down to 1½ cents a bushel. At that figure the vesselmen backed away, and the rate was marked up to 1¾ cents, at which some space was taken. That rate was obtained on some rye that was booked for movement down to Chicago.

Holders of oats have been feeling better on this market lately as a result of the stronger situation developing in them. Some good trade for eastern shipment was put through in oats during the week, and as a result of the receipt of a batch of loading orders for Buffalo delivery stocks in the elevators were reduced 939,000 to 9,286,000 bushels. Some holders of oats claimed to be not anxious to sell at present quotations. One elevator man that is a substantial holder received an offer for a round lot of oats, but its management refused to let go, being of the opinion that higher figures will be set in them later on. In the meantime the house is making its storage charges, its manager pointed out. Business in oats was more active here during the last week than at any period since early in the winter.

FORT WORTH.

C. E. Blewett, Correspondent.

Weather.

Weather in Texas the past week has been rather cool for this season with additional rains falling, extending from the northern Panhandle to the Gulf, ranging from one-half to five inches. Total rainfall in Fort Worth the past week, 4.75. Just what this rain is going to do for the wheat in the Panhandle is very much of a guess, while wheat in this section of the state has not shown any response to rains. A recent drive made through Denton and Cooke counties showed less than 10 per cent of the fields were worth cutting. Some sections of the Panhandle as well as west Texas report about the same conditions, so it appears that the state can hardly produce five million bushels unless conditions greatly improve.

Business.

Business the past week has been of a steady volume with a fair demand for wheat and corn and a heavy volume of trading in oats, while milo and kafir also have been active. Wheat has not been in good demand and the premiums are somewhat lower, but elevator stocks are being

gradually reduced and it is believed that higher premiums will prevail as soon as the long expected demand materializes. Mills report a draggy flour demand at around \$8.80 basis high patent delivered, and light runs are about the best the mills can report, while some are closed down.

Wheat.

Receipts of wheat have been very light the past week with very little being offered from the country and what little coming out of storage. Those holding wheat in storage have felt inclined to reduce their stocks and have lowered premiums under last week's quotations. Demand for wheat consists principally for hard and dark hard, with soft red mixed very draggy. Today (May 9) the following values prevail here, basis delivered Texas common or Group 3 points: No. 1 dark hard winter wheat, \$1.83; No. 1 hard wheat, \$1.79; No. 1 mixed, 75¢ soft, \$1.81.

Corn.

Receipts of corn have been very light and country offering very slow and this has resulted in some corn being worked from terminal markets and further reduction in elevator stocks here. Demand for mixed corn is very slow, but white and yellow are in good demand and supplies other than terminal markets are rather difficult to find as stocks of white and yellow have been completely exhausted. Today (May 9) the following values prevail here, basis delivered Texas Group 1 points: No. 2 yellow, \$1.27; No. 2 white, \$1.26; No. 2 mixed, \$1.20.

Oats.

Receipts have been steady here with a very active demand and unusually heavy volume of trading, both for quick and deferred shipment, and it is expected that this demand will continue as it is apparent that Texas will not raise enough red oats for seed and this fact has stimulated demand for red oats and should increase the premium over white oats. Deferred shipments are in good demand and contracts are being made as far away as October. Today (May 9) the following values prevail here on No. 3 white oats, basis delivered Texas Group 1: en route, 57½¢; prompt, 57¢; June, 57¢; July, 58¢; August, 56¢; Sept., 54¢; Oct., 54½¢.

News.

Don't forget the dates, May 22-23. Annual meeting of Texas Grain Dealers Ass'n. A most cordial welcome awaits you. Fort Worth grain men are noted for their hospitality.

The many friends of H. B. Dorsey, secretary of the Texas Grain Dealers Ass'n, will regret to learn of the death of his wife on April 26.

SALT LAKE CITY, UTAH.

Fred L. W. Bennett, Correspondent.

The Porter-Walton Nursery Co.'s greenhouses at Centerville were damaged during a recent hailstorm which visited Salt Lake and Davis counties.

The directors of the Weber County Farm Bureau, with headquarters at Ogden, are planning a seed show to be held each year at the time of the Ogden Livestock Show.

The Wasatch Produce Co. of Provo, one of the prominent grain houses of that city, is to construct a new, modern one-story business building, according to Karl Kellerstrass, proprietor of the business.

Boys of Salt Lake City visited the Husler Flour Mills as part of their educational activities during Boys' Week here. They were received by the management and escorted over the plant and seemed to greatly enjoy the visit.

Alexander P. Hamilton of Sugar City, manager of the Hamilton Bros. Livestock Co.; manager of the Sugar City Milling Co., and well known in livestock and milling circles of that place, is dead. Mr. Hamilton was born in Utah in 1873.

The alleged discovery of white top seed in clover seed sold in the Spanish Fork district has resulted in a warning from the state board of agriculture that the seed must conform with the state's new pure seed law and that contents must be labeled.

It was stated in the Utah Farmer recently that although flax is a minor crop in Utah, it is probable that it will become an important crop in the state in the not distant future. It is stated that attempts

to grow it on irrigated land have proven a success.

Six valuable horses were recently burned to death in a fire at the barns of the Jeremy Fuel & Grain Co., well known local concern. G. W. Andrus, manager, said about 35 tons of hay were stored in the building at the time and this was also destroyed.

It is stated that 6,000,000 pounds of alfalfa and clover seed were produced in the Uinta Basin district in 1924. In spite of the fact that last year was one of the driest Utah has seen in its nearly 80 years of cultivation the seed in the basin did exceedingly well.

The Rio Grande Western Railroad Co. has filed an application for a permit to construct a line into the Uinta Basin. If this road is constructed it will open up for full development a rich territory that has been held back because of its distance from the railroad and the expense of getting the products to market.

Some more interesting and valuable discoveries regarding the mysterious cliff dwellers who inhabited this state in the dim past were made a week or two ago near Kanab, in southern Utah. There were, among other things, hamperlike baskets and earthenware basins filled with grain and other things. A national monument is to be created to preserve the caves.

Henry L. Goemann, president of the Goemann Grain Co. of Mansfield, Ohio, was in this city during April and while here addressed the members of the Chamber of Commerce on transportation problems. Mr. Goemann is chairman of the transportation committee of the Grain Dealers National Ass'n. His address was entitled "National Transportation as Affected by Legislation." He thought that business men the nation over pay too little attention to transportation matters. He thought it a grave mistake to suppose that these matters are of only local importance and that this section can have nothing in common with the East in this respect.

MEMPHIS.

George Williamson, Correspondent.

A. B. Schreiber of the Schreiber Milling & Grain Co., St. Joseph, Mo., was a recent visitor.

Receipts of corn for the week were 64 cars; oats, 155; hay, 45; and alfalfa meal, 24.

H. A. Merrill of Kansas City was introduced on 'change Thursday by Charles G. Robinson.

L. A. Gray and D. P. Cameron of Hattiesburg, Miss., were registered visitors at the Merchants Exchange Thursday.

J. L. Schofield, manager of the local branch of the Southwestern Milling Co., Kansas City, is on a business trip through Florida.

G. A. Welke of the Northern Flour Mills, Walla Walla, Wash., was a visitor here during the week en route home from New Orleans.

Walter Fellows of Marianna, Ark., joined the local delegation to the convention of the American Feed Manufacturers Ass'n at New Orleans.

Otto Weiss, engaged in the hay and feed business in Wichita, Kans., with Mrs. Weiss, were guests of J. L. Nessly and family en route to New Orleans.

Fire destroyed the Lonoke, Ark., rice elevator with 6,000 bus. of seed rice Thursday morning with loss estimated at \$100,000. The building was comparatively new and five stories high.

Among the lives lost in the river disaster south of here Friday evening was Maj. W. M. Gardner, brother of E. R. Gardner, well known member of the local grain and hay trade and for many years chief inspector at the Merchants Exchange.

Business conditions continue about the same with the grain trade, corn being very slow sale, but oats in good demand. Quotations for cash No. 3 white, May 9, were \$1.18; No. 3 mixed, \$1.10, and No. 3 yellow, \$1.20. Oats have been steady for several days and cash No. 3 white are quotable at 51½¢.

This territory continues in the throes of a drought and complaints are increasing. The moisture deficiency since Jan. 1 is more than 12 inches. Much cotton that has been planted has not come up and some is yet to be planted but will not be until it rains.

Monday visitors at the Merchants Exchange included Flynn Owen, St. Louis; W. H. Bonn, El Reno, Okla.; J. H. Leftwich

The Rocky Mountain Grain Co.

Branch Offices: Nantes Bordeaux Marseilles

and M. W. Smith, Chicago. On Tuesday H. A. Shepard of the Price Current-Grain Reporter was given a hearty welcome by his numerous friends. Most of the visitors were en route to New Orleans.

The local delegation to New Orleans included John B. Edgar, W. R. Smith-Vaniz, L. B. Lovitt, Clark Coe, Harry McCoy, Hugh Humphreys, A. C. Westervelt and Frank J. Gillespie. Those engaged in the cottonseed products branch of the trade remained over to be present at the Interstate Crushers convention which convenes next week.

The Purity Bakeries, Inc., New York, this week exercised an option on the majority of the stock of the Winkelman Baking Co. of this city, the deal having been completed by Henry T. Winkelman, president of Memphis, and R. L. Nafziger, one of the chief owners. This is said to be the first entrance of the Cushman interests into the South, but no immediate changes are contemplated in the local plant, which was only built a year or so ago.

BALTIMORE.

Robert C. Neu, Correspondent.

The name of the Savarese Macaroni Co., this city, has been changed to Savarese Manufacturing Corporation.

Stocks of rye in Baltimore elevators are now down to bushels, having been sharply reduced by continued free withdrawals for export, mainly to Russia.

Receipts of water-borne corn in the Baltimore market so far this season amount to 100,000 bushels, compared with 292,000 bushels arrived up to the corresponding date last year.

The committee on hay and straw quotations of the Baltimore Chamber of Commerce for the month of May consists of Messrs. Walter F. Macneal, Richard C. Wells and J. R. Hudgins.

Among the out-of-town visitors on the floor of the Baltimore Chamber of Commerce last week were Harry M. Hammond of San Francisco, Cal., formerly in the grain business at this port; W. E. Hissey of Shenandoah, Va.; C. M. Horst of Hagerstown, Md.

An announcement made last week which created considerable surprise and genuine regret in local grain circles was that the Baltimore Grain Co., Ferdinand A. Meyer, president, contemplates liquidating its affairs and retiring from the export grain business. Mr. Meyer has for many years been a guiding spirit in the affairs of the local Chamber of Commerce and has been honored by its membership with numerous offices of trust and responsibility, from service on individual committees to the presidency of the chamber in 1911 and 1912, after having served as vice-president in 1910. In all these positions the broad interests of the chamber have always had his serious thought and advocacy, and being regarded as an authority on international trade his advice and counsel were frequently sought where delicate matters required tact and diplomacy in handling. Although he has determined to retire from the active grain business, we have his assurance that he will not sever those friendly relations which have been built up by years of daily contact with his colleagues of the Baltimore Chamber of Commerce, of which he will remain a member.

In a communication received last week by C. P. Blackburn & Co. of this city from E. L. Southworth of Southworth & Co., well known Toledo grain merchants, Mr. Southworth enclosed a visitors' ticket such as is issued to out-of-town visitors desiring to avail themselves of the privileges of the floor of the Baltimore Chamber of Commerce. The ticket bore the date of Jan. 5, 1876, and Mr. Southworth asked whether this ticket would be honored if he presented himself at the door of the Chamber of Commerce today. In those early years the organization bore the name of The Baltimore Corn & Flour Exchange. We have not been advised as to just how Blackburn & Co. answered Mr. Southworth's inquiry, but we hasten to assure him that the Baltimore Chamber of Com-

LOS ANGELES.

C. G. White, Correspondent.

Experiments are being made in cotton planting in Nevada county, California, this year.

Owing to late rains, the rice crop in Colusa county was planted later than usual this year, which will mean a later harvest in the fall.

Charles Bates and G. R. Strickland, members of the Los Angeles Grain Exchange, observed the opening of the trout season by making a trip to the mountain streams, and from reports that is all that they did do.

Frank Rice, for the past fifteen months head state brand inspector at the Los Angeles Union Stock Yards, has resigned to become manager of the Miller & Lux ranch at Dos Palos, Calif. D. J. Miller, for the past two years assistant brand inspector, has been promoted to take Mr. Rice's place.

Cash Markets.

The grain market at this terminal has shown a decided increase in activity during the past week. The arrivals of grain have been about normal and the demand has consumed the supply. There has been considerable trading in December barley.

No. 2 yellow corn for prompt shipment is being offered at the close of the week at \$2.40 per cwt.; No. 1 Imperial milo, sacked, is offered at \$2.42½ with a bid of \$2.35; No. 1 yellow corn offered at \$2.43 with a bid of \$2.41; December barley in 100-ton lots is selling at \$1.55@1.56¼.

The ground feed arrivals for the week amounted to 39 cars. There was but a slight change in prices over a week ago and the demand fairly good.

Utah-Idaho millrun was selling at \$38; Kansas bran, \$35; alfalfa meal, medium, \$30; alfalfa meal molasses mixed, \$28; cottonseed meal, \$41; beet pulp, \$40.65; rolled barley, \$38; copra meal, \$31; linseed meal, \$41.

The hay arrivals were very heavy for the week, showing 220 cars. The market is inactive with many cars on track at the close of the week and prices unchanged.

No. 1 alfalfa selling at \$21@22; No. 1 barley hay, new crop, \$19; No. 1 oat hay, new crop, \$22.

OKLAHOMA CITY, OKLA.

W. F. Kerr, Correspondent.

Frank Wheeler, Watonga grain dealer, was a recent Oklahoma City visitor.

Sales Manager H. C. Hicks of the El Reno Mill & Elevator Co. is back from a tour of southern states.

Frank Kroutil, manager of the grain department of the Yukon Mill & Grain Co., has gone to Holland on a business trip.

S. W. Carmack, grain dealer of Gould, Okla., was a recent Oklahoma City visitor. He reported wheat thin in his section of the state.

Edward Humphrey, grain dealer of Enid, spent last Sunday in Oklahoma City and took part in a band concert at the Masonic temple.

Hampton & Son of Salina, Okla., and E. C. Wegner of Minco, Okla., have applied for permits to sell milled feeds in Oklahoma.

The Okarche (Okla.) Roller Mills, the Marston Mill & Elevator Co., Haskell, Okla., and Harry Branigin, Jones, Okla., were recent applicants for permits to sell milled feeds in Oklahoma.

W. B. Johnston of Enid has sold his elevator at Fond Creek to the Fond Creek Elevator Co., a new concern organized by Orville Caple, former manager of the Johnston plant, William Halcomb and Ralph James.

E. V. Mashburn has resigned from the Shawnee Milling Co. at Shawnee and will enter the grain and feed business in Oklahoma City, June 1. It is reported that Peter Mullen of Dallas, once a grain broker here, will be associated with him and that they also will maintain an office in Fort Worth.

Dealers report a draggy movement of prairie hay with much offered. Alfalfa is in better demand with the market up about \$3 a ton. Cane hay is supplanting mill feeds in many places, retailing at 35c and 40c a bale. A supply of mill feeds to meet the demand is unobtainable. Little wheat is moving and little left to move. The Texas and Oklahoma mill demand for wheat is low.

A. B. Lampert of Brinkman has been elected president of the Oklahoma Wheat Growers Ass'n. Henry Mueggenborg of Okarche, L. W. Shields of Guymon, and Peter Stein of Cherokee were elected directors for the association on the board of the Southwest Wheat Growers Associated, the selling agency at Enid of the Texas and Oklahoma associations. John Manley was re-elected secretary of the association.

S. A. Elliott, director of the feed inspection bureau of the state board of agriculture, says that sales of tags to millfeed

distributors in Oklahoma were only 75 per cent of normal for the winter and spring seasons. At the same time Oklahoma millers experienced an unusually heavy demand for mill feeds. This came, Mr. Elliott says, largely from Texas, Arkansas and other southern states. Oklahoma feed conditions being far better than those of other states.

The plant of the Millers Milling Co. at Enid has been sold to George C. Grogan, general manager of the Acme Milling Co., Oklahoma City, and J. S. Waterman & Co., Inc., flour exporters of New Orleans, and operations will be resumed June 1. E. B. Grogan, a brother of the Oklahoma City man, will be manager. George Grogan will be president and general manager of the Great Plains Mill & Elevator Co., a \$60,000 corporation, which he and the Waterman company are organizing to succeed the Millers company. Oklahoma City will be the general office. The plant capacity will at once be increased from 300 bbls. to 350 bbls. A grain department will be made a part of the company's general business.

BOSTON.

M. B. Hanna, representative of the Northwestern Consolidated Milling Co., was a visitor in New York some days ago.

Elmer E. Dawson, vice-president, Grain and Flour Exchange, sailed from New York May 4 for Great Britain and the Continent.

The Grain and Flour Exchange has adopted a resolution strongly urging that the petition of the Canada-Atlantic Transit Co. be granted, alleging that this is of vital importance to the dealers in New England and setting forth that the line always carried flour and grain on this route until last year, when it was excluded from competition with American vessels on account of the terms of the Merchant Marine Act.

The petition of the Canada-Atlantic Transit Co. (the Grand Trunk lake boat line) to carry bulk grain, flour and feed from Chicago and Milwaukee to Georgian Bay ports for shipment into the United States, chiefly into New England, in competition with American-owned vessels, is attracting interest on the part of local members of the flour and grain fraternity, who were strongly represented at the hearing before the Interstate Commerce Commission in Washington May 5.

BUFFALO.

E. F. Marin of this city has been in Philadelphia on business.

J. A. Walter of the J. F. Walter Milling Co. was a recent visitor with the trade in Baltimore.

The announcement is made that the Clover Leaf feed mill, which was recently purchased by the Eastern States Farmers Exchange, began operating on May 4.

The Monarch elevator has been sold to the George J. Meyer Malting Co. of this city which is regularly in the grain trade. The elevator was owned by the estate of A. J. Wheeler, has a capacity of about 400,000 bus. Price is said to be \$400,000.

Visitors to the Buffalo Corn Exchange recently included: Fred Deyo, secretary, Empire Grain & Elevator Co., Binghamton, N. Y.; J. G. Burt of the Hay Bros. Grain Co., Listowel, Ont.; W. J. Wheelock, LeRoy (N. Y.) Grain & Cereal Co.; Max F. Cohn, sales manager, Tioga Mill & Elevator Co., Waverly, N. Y.

An indictment against four Buffalo grain elevator companies was returned by the federal grand jury on May 8, charging rebate and concession grants of approximately \$200,000, in violation of the Elkins act. The companies named were Spencer Kellogg & Sons, Inc., the Western Elevator Association, Inc., the Great Eastern Corporation, and the Buffalo Elevator Co.

PHILADELPHIA.

Geo. A. Rudderow, Correspondent.

At Twenty-ninth St. elevator there were 27 cars oats unloaded, 4 cars corn and 1 car of kafir corn.

Those unloaded at Port Richmond were: Wheat, 911 cars; oats, 53; barley, 13; and rye, 4. Total, 981 cars.

Ellis McMullin of the grain and feed firm of David Mullin & Co is fishing on the eastern shore of Virginia.

Exports of grain for the week ending May 8 were: Wheat, 729,830 bus.; oats, 473,433 bus.; rye, 68,571 bus.

The members of the Flour Club of Philadelphia held their regular monthly luncheon in the Bourse on Friday last, Stewart Uncles, the president, presiding.

The following cars of grain were unloaded at Girard Point elevator during the month of April, 1925: Wheat, 1,296 cars; corn, 2; rye, 204; oats, 135. Total, 1,637 cars.

Receipts for the week ending May 9 were: Flour, 31,083 bbls.; wheat, 828,635 bus.; corn, 4,073 bus.; oats, 372,822 bus.; rye, 131,979 bus.; barley, 1,344 bus., and 340 tons feed.

Charles C. Frazer, formerly in the grain and feed business here but for the last two years located at Richmond, Va., in the same line of trade, has closed out his business there and come back to Philadelphia again.

The following out-of-town visitors were registered during the week at the Commercial Exchange: C. S. Timmons, Snowhill, Md.; H. K. Goder, Topeka, Kans.; Thomas Rhodes, Pittsburgh, Pa.; Dr. O. B. Kent, Chicago; K. F. Mahlstedt, Buffalo; H. G. Righter, Watertown, N. Y.; L. W.

Stelman, State College, Pa.; E. O. Wright, Menomonie, Wis.; L. A. Kleg, Phoenixville, Pa.; H. C. Veatch, Buffalo, and Charles C. Frazer, Richmond, Va.

Philadelphia Flour Market.

Philadelphia, May 9.—Receipts of flour for the week ending May 9 were 31,083 bbls. Demand for flour is limited and the market unsettled and irregular pending the continued fluctuations in wheat. We quote per 196 lbs. packed in 140-lb. jute sacks: Soft winter straight, western, \$8.65@9.10; soft winter straight, nearby, \$8.25@8.75; hard winter straight, \$8.50@9; hard winter short patent, \$9@9.50; spring first clear, \$7.75@8.25; spring patent, \$8.60@9; spring short patent, \$9.25@9.75; fancy spring and city mills patent family brands, \$10@10.80. Rye flour, \$7.25@7.75 per bbl. in sacks, as to quality.

CINCINNATI.

George Mosbacher, Correspondent.

Ralph H. Brown of Henry W. Brown & Co. attended the Illinois Grain Dealers' Ass'n convention at Peoria, Ill., May 5 and 6.

Will G. Stueve of Henry W. Brown & Co. left on his visit to Eastern cities. He was accompanied by Mrs. Stueve and expects to be gone about three weeks.

The small receipts of oats and the possibility of a continued light movement, coupled with a good shipping and retail demand advanced the market about 4c per bushel the past week.

August Ferger of Ferger Bros., who has a large established acquaintance in the South, is calling on the trade in several southern states and combining his business trip of about a month with a pleasant vacation at Miami, Fla.

Fire of undetermined origin destroyed the feed plant of the J. H. Fedders Feed & Grain Co. at Covington, Ky., early Saturday morning. Four firemen, three of whom were from Cincinnati, suffered wounds and bruises when one of the floors collapsed. The fire spread to other buildings entailing a loss of approximately \$70,000.

The very light arrivals of corn and no prospect of increasing supplies until after planting of the new crop is completed was largely responsible for a stronger market and advance of 3@6c as compared with last week. The demand was urgent for milling grades of white and yellow, but only fair for low grades and mixed. Millers and retailers were the best buyers of the limited offerings.

Cash wheat here was decidedly stronger and advanced about 4c per bushel. The demand was more urgent than for some time and mills who are anticipating a much higher level of prices and who will need supplies before new crop becomes available were active buyers around \$2 for No. 1 and No. 2 red. Buying, though, was only of top grades or No. 3 suitable for milling. Lower grades dull and neglected.

About twenty members of the Grain and Hay Exchange were entertained by A. C. Gale of the A. C. Gale Grain Co. at the formal opening of his summer cottage and fishing camp located on the Whitewater river near New Trenton, Ind., last Tuesday. H. E. Richter, who excels as a chef, had charge of the commissary, which was operated in accordance with Sinton Hotel regulations. The day's outing was a very enjoyable one and all thanked "A. C." for the invitation, which he tenders each year with a view of tightening friendships and good fellowship among the members.

Stocks of grain in Cincinnati elevators for the past week and previous week were as follows:

	May 8, 1925	May 2, 1925
Wheat, bus.....	119,118	125,215
Corn, bus.....	210,747	238,053
Oats, bus.....	91,027	99,920
Rye, bus.....	3,476	2,474

NEW ORLEANS.

M. L. Davis, Correspondent.

Stocks in elevator as of today: Wheat, 1,040,000 bus.; corn, 113,000 bus.; oats, 92,000 bus.; rye, 88,000 bus.

J. H. Jordan, local manager of the Strachan Shipping Co. has returned from a business visit to Kansas City and other points in the Middle West.

Standard blackstrap molasses is firm and unchanged at 13c per gal. f. o. b. tank cars New Orleans; medium is quoted at 13½c per gal., and light blackstrap at 14c per gal.

The 17th annual convention of the American Feed Manufacturers Ass'n was held at the Roosevelt hotel in New Orleans, Thursday, Friday and Saturday of this week. The convention was one of the most successful ever held and over 120 members registered out of a total membership of 140. The business sessions were particularly interesting. Among the subjects discussed was "Hot Feeds," by Dr. Theodore Markowitz. The address of welcome at the opening morning session was by Harry D. Wilson, commissioner of agriculture of the state of Louisiana. Additional addresses were made by W. S. Pen-

Leigh Leslie, Correspondent.

A wire from Lincoln, Neb., said: "There
is very little doing in cash grain in this
territory. It's nearly impossible to buy
either wheat or corn, brokers say. Eleva-
tor stocks are extremely light."

That the recent freezing temperatures in
Nebraska did some damage to winter
wheat and oats is now apparent. The
Nebraska Weekly Crop Bulletin, issued
last Wednesday, says that in the extreme
western part of the state small grains suffered
injury.

In a letter to the writer of this, W. W.
Keech, manager of the Farmers' Union
Co-operative Ass'n at Bushnell, Neb., says:
"What promised to be a bumper crop of
wheat in this territory April 1 now looks
very poor. The crop went back at least 25
per cent in April. Worms, freezing tem-
peratures, winds and drought are making

inroads on it every day. There was a hard
freeze here for three successive nights last
week."

Freezing temperatures in Custer and ad-
joining counties in Nebraska damaged
winter wheat and other crops, according
to N. B. Troyer, well-known elevator man
and farmer of Calloway. "We had a tem-
perature of 24 above zero one night last
week and a hard freeze on two successive
nights after that," said Mr. Troyer. "Win-
ter wheat was well jointed when the freeze
came and the crop was considerably dam-
aged, I think. Crops in Custer county were
at least three weeks ahead of normal when
we had the cold snap. I estimate that not
less than 25 per cent of our land was put
into wheat last fall. It's impossible to tell
just how much the crop has been damaged.
Oats do not look well out that way. Per-
haps a fourth of the corn has been planted
but of course none of it is up."

MILWAUKEE.

D. K. Steenberg, Correspondent.

The steamer W. H. Wolf cleared on
Tuesday with 351,064 bus. of rye for Port
Colburn, loaded at the Northwestern road,
Rialto and Kinnickinnic elevators.

Shipments last week were 130,875 bu.
oats, 99,075 corn, 24,300 barley, 24,750 wheat,
556,825 rye; total 835,675 bu., against 406,-
033 the preceding week and 586,723 a year
ago.

Receipts last week were 112 cars barley,
24 corn, 85 oats, 25 wheat, 10 rye, 2 flax, 4
miscellaneous; total 262 cars, against 334
the week before, 351 a year ago and 281
in 1923.

Markets continued to work upward on
bullish crop estimates last week, though
values receded somewhat at the close.
Wheat is 2@7c higher for the week, rye
12@13c, oats 3@3½c, corn 5@6c, barley
1@2c. Movement continues small.

Large areas of Wisconsin clover, most
of which was planted earlier than usual
this spring, is reported to have frozen in
recent cold spells by W. S. Slugg, travel-
ing representative of the La Budde Feed
& Grain Co., Milwaukee, who have been
out in the territory the past ten days.

Leonard J. Keefe, prominent operator in
the Milwaukee market, spent several days
last week calling on his Minneapolis ac-
counts. While in the flour city he was a
guest at a meeting of the Minneapolis
Grain Shippers Association and delivered a
brief address before that organization
Thursday evening, May 7.

P. P. Donahue of the Donahue-Stratton
Co., Milwaukee, is now spending consider-
able time at Chicago, where he is personal-
ly supervising the salvage of approximately
2,000,000 bushels of grain at the Keith
elevator, which was recently destroyed by
fire. The Donahue-Stratton Co. is han-
dling the salvage jointly with the Brooks
Elevator Co. of Minneapolis.

A. E. Bush of the Bush Grain Co., which
recently discontinued business in the Mil-
waukee market, is now indirectly connected
with the Cargill Grain Co. Mr. Bush is
also a member of the publicity committee
of the Milwaukee Chamber of Commerce,
and has charge of the Milwaukee cash
and future grain market report broadcast
from radio station WEOE at 6 o'clock each
evening.

Milwaukee milling output last week
amounted to 7,000 bbls. of wheat flour, as
compared with 6,600 bbls. the previous
week and 4,000 bbls. in the same week of
1924. Receipts of flour at Milwaukee last
week totalled 53,900 bbls., as compared
with 38,000 bbls. the same week of last
year. Shipments last week were 1,050 bbls.,
a compared with 9,110 bbls. in the same week
last year.

The corn supply at Milwaukee for April
was 356,000 bus., as compared with receipts
of 718,000 bus. in the same month of last
year. Receipts of wheat during the same
month jumped from 84,000 bus. last year
to 123,000 bus. this year. Oats receipts
were 852,000 bus. this year, as compared
with 860,000 bus. last year. Barley re-
ceipts were 669,000 bus., as compared with
617,000 bus., a gain of 52,000 bus. for last
month. Rye receipts were 4,000 bus. larger
last month, as compared with April 1924 or
39,000 bus., against 35,000 bus.

P. A. Smith of Randolph, Wis.; E. H.
Pollock of Cleveland, O.; J. J. Leonard of
Beaver Dam, Wis.; August Kroehnke of
Grafton, Wis.; Thomas Wilson and Alex-
ander Trumbull of Hartland, Wis.; P. J.
Morales of Chicago; E. E. Pantzer of
Sheboygan, Wis.; C. B. McBowell of Chi-
cago; H. J. Grell of Johnson Creek, Wis.;
John Pank of Minneapolis, Minn.; Walter
and William Sadow of Barton, Wis.; M. R.
Freeman of Winnipeg, Can.; S. C. Cahill
and George Enders of Lomira, Wis.; A. B.
Ruhl of Minneapolis, Minn. and M. R. Han-
sen of Franksville, Wis. were among
visitors at the Milwaukee Chamber of
Commerce last week.

MINNEAPOLIS.

H. A. Paul, Correspondent.

Leo S. Hatch of the E. P. Bacon Co., is
reporting the birth of a son, number four
this week.

B. P. Sheffield of the Sheffield Elevator
Co., is viewing his Montana ranching in-
terests this week.

E. J. Grimes of the Cargill Co., is back
on the floor again after being out for a
few days on account of having his tonsils
removed.

H. A. Feltus, traffic manager for the
Van Dusen Harrington Co., just returned
from an extensive trip through the Ken-
tucky coal fields.

R. G. Cargill of the Victoria Elevator
Co., has just left for the West. He will
tour from Tacoma, Washington, to Los
Angeles and then back across country to
Minneapolis.

D. D. Tenney of the Tenney Co., is
spending the week in Boston. Boles Rogers
of the Van Dusen-Harrington Co., just
returned from a trip through the south-
western grain country.

The monthly meeting of the Minneapolis
Grain Shippers association was held last
Wednesday at the Radisson Hotel. Among
those addressing the gathering were Boles
Rogers of the Van Dusen Harrington Co.
and William Gregory of Gregory-Jennison
Co.

Among the visitors on the Minneapolis
Exchange floor during the past week, were
the following: Peavey Hefelfinger of Win-
nipeg; M. R. Trotter of New Zealand; B.
F. Beam of Pratt, Kansas; W. S. Burk-
holder of Cedar Rapids, Ia.; A. Hinder of
Greeley, Colo.; C. L. Weeks of St. Louis;
E. M. Tredway, E. M. White and Warren
Starkey of Duluth; W. H. Holiday of
Davenport, Ia.; E. W. Kanter and J. H.
Eldridge of Chicago; J. H. Keefe of Mil-
waukee; M. C. Hettiger of Escanaba,
Mich., and H. A. Bolich of Deming, N. M.

Cash Markets.

Wheat—The local market was inclined
to be slow and easy early in the week,

firming up toward the middle and tending
to easiness again at the close. Protein
wheat seemed to find a ready market and
holders did not have to look around much
to find a place to put their limited offer-
ings. Receipts are better than they have
been for some little time past, but at that
are considerably below the out movement.

Most of this outmovement, however, was
for old account and new business was rela-
tively light. A local house worked a round
lot out of Duluth and another house hav-
ing protein wheat in store there advise
that they were in receipt of bids which
were very close to a workable basis.

Flour trade has been very light and mills
are buying sparingly of the cash offerings;
besides that they are taking stuff on May
contracts. Deliveries so far this month
total 1,556,000 bushels; this figure however
is only a small percentage of the amount
of wheat still in store here.

Elevator stocks made public today tota-
as follows: 10,621,632 bushels vs. 11,247,32
last week and 11,831,232 a year ago.

Based on today's range of sales, No. 1
dark northern spring wheat will bring 3@
41c over July; No. 1 hard spring, 4@43c
over and No. 1 northern, 2@39c over. Am-
ber durum No. 1 sells at 5@42c over Duluth
May; No. 1 durum, 5c under and 38c over;
and No. 1 mixed, 8c under and 40c over.
Winter wheat about unchanged at 2@28c
over May for No. 1 dark hard Montana
and May price and 13c over for the No. 1
hard Montana.

Corn—There was quite a little corn sold
out of here during the past week, part of
which was to replace stocks at Buffalo
which have been badly depleted. Early in
the week heavy receipts made a slow mar-
ket for both the choice and the medium
grades but as the week drew to a close
road offerings fell off rapidly and there was
a good demand from various sources. This
demand, however, was only for the high
colored and choice yellow quality.

Local stocks show a total of 536,053 bus.
vs. 571,333 last week and 1,080,735 last year.
Today's range of sales shows the following:
Yellow—No. 3, 1@4c under Chicago May;
No. 4, 6@10c under; No. 5, 12@15c under,
and No. 6, 17@19c under. Mixed—No. 3,
7@10c under; No. 4, 10@14c under; No. 5,
15@18c under, and No. 6, 19@22c under.

Oats—Cash oats showed a very strong
tone throughout the week, gaining materi-
ally on the futures despite the advance
in the option. Choice quality, free from
black, oats were in good request and there
was a marked improvement in the pre-
miums paid for that class of goods. The
last day of the week, however, heavier
offerings of No. 3 whites f. o. b. Minne-
apolis flooded the market and holders were
reporting a decline of from ¼c to ½c
compared with Friday. Local stocks de-
clined about three-quarters of a million
again this week. As in previous weeks
this constitutes a fair decrease but with
about seven times as much oats in the local
visible as there was last year at this time
they will have to melt away a whole lot
faster before the influx of the new crop
stuff. Some figures for the week ending
today total 15,842,571 bus. vs. 16,661,834
last week and 2,299,266 a year ago. The
range of sales today shows No. 3 whites
bringing ¾@1¼c over July; No. 4, ¼ over
@1½c under.

KANSAS CITY.

T. J. Tanner, Correspondent.

Jerry P. Parks, former manager of the
mill feed department of the Ferson Hay &
Grain Co., Kansas City, has opened a feed
brokerage house of his own in the New
England building.

An order has been received by the Kan-
sas City Laboratory Supply Co. for a labo-
ratory equipment to be installed in the
flour mill of Noury & Van Der Lande,
Deventer, Holland.

Allen Logan of the Logan Bros. Grain Co.,
president of the Board of Trade last year,
has gone for a vacation in Europe. He will
spend most of his time in France. Mr.
Logan will return about June 1.

The new corn meal and flour plant of the
Rosedale Milling Co. in Kansas City, Kan.,
will not be ready to operate before May
20. It is practically completed and ma-
chinery is being installed and tested.

Kansas City Board of Trade members
will be well represented at the annual con-
ventions of the Oklahoma Grain Dealers'
Ass'n, in Oklahoma City, May 19 and 20,
and the Kansas Grain Dealers' Ass'n, in
Wichita, May 21 and 22.

Visitors at the Board of Trade this week
included W. T. Brookings, St. Louis, Mo.;
J. H. Pryor, Joplin, Mo.; O. S. Mayer, At-
lanta, Ga.; Frank Kroulil, Yukon, Okla.;
E. Adair and L. H. Powell, Wichita, Kan.,
and W. C. Young, Fontana, Kan.

Frank M. Cole and David Sosland were
chosen Tuesday night by the Kansas City
Flour and Feed Club as delegates to the
convention of the National Federated Flour
and Feed Clubs, to be held in Baltimore
next month. Mr. Cole is president of the
Kansas City organization.

Horner & Wyatt, architects, are drawing
plans for the new Chicago & Alton eleva-
tor of 1,000,000 bus. capacity, to be erected
in Kansas City for the Kansas Wheat
Growers' Ass'n and the Kansas Co-operative
Wheat Marketing Ass'n. Eventually the
house may have a capacity of 2,500,000
bus.

F. B. Armstrong, cash grain salesman for
the Denton-Hart Grain Co. for the last
two years, has resigned. Prior to his con-
nection with the Denton-Hart company he
was assistant chief of the Kansas Grain In-
spection Department. Mr. Armstrong has

DANNEN HAY & GRAIN COMPANY
Shippers of Choice Quality Grain & Hay Write or Wire us for Delivered Prices
St. Joseph, Mo.

not announced his plans for the future but he may remain in the Kansas City grain trade.

Governor Baker has signed the bill providing for the establishment of a protein laboratory in Kansas City. Roy Monier, head of the Missouri Grain Inspection Department, says the laboratory will be in operation in 90 days or less. The Board of Trade Building Co. will provide special quarters for the Missouri and Kansas laboratories.

Garage Has Two Presidencies.

The Kansas City Grain Club, at its annual meeting and dinner in the Kansas City Club rooms Thursday night elected Harry C. Gamage president for the coming year. Mr. Gamage is also president of the Board of Trade. The retiring president was B. C. Christopher, Jr. Other officers elected were: W. J. Mensendieck, vice-president; J. J. Wolcott, secretary and treasurer. The new executive committee includes E. F. Emmons, C. M. Hardenbergh, W. J. McNeil, C. F. McCord and H. F. Spencer.

Cash Grain Markets.

Wheat—Receipts for the week, 247 cars, against 113 a week ago and 407 a year ago. Higher prices established during the previous week stimulated freer shipments from the country and a further cleaning up of interior holdings. This week there was much less firmness in the market. In fact, the course of prices was extremely irregular—up one day and down the next. Premiums of hard and dark protein samples over May lost ground. At the same time buyers paid relatively better prices for smutty samples, which were rather numerous. Local millers, shippers and elevator men were buyers, sometimes active and at other times indifferent. Hard and dark closed considerably under the top level, but 1@3c higher than on the preceding Saturday. Final quotations were: No. 1, \$1.58@1.75; No. 2, \$1.57@1.75; No. 3, \$1.56@1.75; No. 4, \$1.55@1.73. Soft wheat came in on a larger scale but the offerings were not heavy. There was no urgency in the demand. Prices failed to show as much strength as in other kinds of wheat. At the close the market was unchanged to 4c lower, with No. 1 at \$1.67@1.75, No. 2 at \$1.67@1.75, No. 3 at \$1.63@1.72, and No. 4 at \$1.60@1.69. Elevator men continued to move wheat from store to fill contracts with mills and foreign buyers. Stocks showed a further decrease of 574,000 bus., to 2,945,000, as compared with 7,954,000 last year. The week brought additional rains to most parts of the Southwest, improving the new crop outlook. Government figures, indicating 95,997,000 bus. for Kansas, were deemed conservative, though some fear existed as to the possible ravages of the Hessian fly between now and harvest.

Corn—Receipts, 190 cars, against 116 a week ago and 373 a year ago. The market was strong on most days with bullishness in futures as one motive and good shipping sales for feeding account as another. Though top prices were not held, the market scored net gains of 4½@6½c, closing as follows: No. 2 white, \$1.10½@1.11½; No. 3, \$1.07½@1.09½; No. 2 mixed, \$1.05½@1.06½; No. 3, \$1.04@1.05; No. 2 yellow, \$1.10½@1.11½; No. 3, \$1.08@1.10. Stocks in the local elevators decreased 311,000 bus., to 4,322,000, as against 1,409,000 a year ago. Planting in the Southwest was checked by wet and cold weather, but ample time remains in which to seed a full acreage. Recent frosts caught a few early planted fields and caused some damage to fruit and other vegetation. Farmers are anxious to see a resumption of the spring weather that featured March and the first half of April.

Oats—Receipts, 33 cars, against 60 a week ago and 93 a year ago. Reduction of offerings sharpened the competition for choice samples of both white and red oats. Shipments southward were liberal, drawing upon stored supplies. White oats closed 3½@4c higher and red scored an advance of 3c. Final quotations were: No. 2 white, 49c; No. 3, 47½@48c; No. 2 red, 48c; No. 3, 47c. Elevator stocks decreased 132,000 bus., to 749,000, as compared with 187,000 last year. Very few crop complaints were heard except from Texas where drought had a disastrous effect some time ago.

Kafir and Milo—Receipts, 62 cars, against 45 a week ago and 58 a year ago. Trade was not active at any time and milo was especially dull. The market did not fully respond to the strength of corn. Kafir closed 1@3c per cwt. higher, with No. 2 white at \$1.70@1.72, No. 3 at \$1.70, and No. 4 at \$1.68@1.70. Milo suffered a net decline of 1@3c, cutting its premium and closing as follows: No. 2, \$2.03@2.04; No. 3, \$2.02; No. 4, \$2. Stocks decreased 15,000 bus., to 269,000, against 479,000 a year ago. Planting of the new crop is going on but there have been few reports as to the intended acreage.

ST. JOSEPH, MO.

N. M. Thomas, Correspondent.

E. C. Meservy of Kansas City was an exchange visitor Thursday, absorbing 18 holes of golf in the afternoon.

Work on the additional storage space for the Burlington Public Elevator is progressing and the new tanks are now about ten feet above the surface of the ground.

P. P. Welty, who has served as doorman for the St. Joseph Grain Exchange for the

past two or three years, has resigned his position and with his wife will take a trip to South America. E. L. Poirier has been chosen as his successor.

Visitors on the St. Joseph Grain Exchange during the week ending May 9 included F. J. Nebrugge, Kansas City; A. Fidler, Stewartville, Mo.; A. G. Hensleigh, Conn. Iowa; C. R. Story, Seneca, Kans.; W. B. Phipps, Weston, Mo.; E. C. Meservy, Kansas City; F. G. Howitt, King City, Mo.; C. A. Hursh, Bolckow, Mo.; M. Graham, Conception, Mo.; E. C. Braley, Maryville, Mo.

Hard wheat prices at St. Joseph are 3c higher for the week ending May 9 compared to the preceding Saturday; soft is 3@4c higher. Corn values 4@5c up on yellow, 4@6c up on white, and 6@7c on mixed. Oats 2@2½c up for the week. Offerings of wheat have been very light although slightly heavier toward the close of the week; demand poor to fair. Corn supplies light to moderate and demand generally fair to good. Oats demand good on an average.

ST. LOUIS.

Marshal Hall Milling Co. has been chartered with \$150,000.

The Checkerboard Elevator Co. has been chartered with a capital of \$150,000.

H. L. Boudreau, representing the Ballard-Messmore Grain Co., was a recent visitor at the Omaha Grain Exchange.

Emil Summa, St. Louis flour and grain merchant and for the past forty years a member of the Merchants Exchange, died at the Barnes hospital recently.

Among recent St. Louis visitors were A. L. Jacobson of Sterling, Kans.; S. S. Carlisle of Omaha, Charles G. Randall of Chester, Ill.; John W. Wood of Birmingham, Ala.; Ed. S. Harte of Boonville, T. A. Dohey of Yukon, Okla.; T. C. Cunningham of Independence, W. W. Pollock of Mexico and A. C. Harter of Sedalia.

Saturday's market for wheat futures closed heavily lower compared to Friday's finish. May 5½c off and July 5½c lower. September was offered 5½c under the previous close, but nothing was placed. Compared to last Saturday, May was 2c higher, July was 1½c higher and September 3½c higher. The decline was due more to a weakened technical position in the market, which had been caused by buying yesterday on a ridiculously low winter wheat estimate credited to an Eastern press source, than to any other factor, according to the general opinion today.

NEW YORK.

J. M. Nugent, Correspondent.

There appeared to be a fairly brisk trade in oats for export but the extent of the business could not be accurately confirmed.

Edward Coker, grain buyer for the Hecker-Jones-Jewell Milling Co., died this week at his home in New Jersey. Mr. Coker died of pneumonia after a short illness.

During the past week the following gentlemen visited the floor of the New York Produce Exchange: F. G. Coe of Chicago, C. T. Stevenson of Minneapolis, P. R. Fawcett of Buffalo, G. Peabody of Boston, J. W. Kirkpatrick of Pittsburgh, W. M. Kirkpatrick of Montreal, and H. Anderson of Toledo.

The export demand for wheat during the week was fairly active at times and the business for the week in total amounted to around four to five million bushels. A substantial portion of this trade consisted of Duluth No. 1 northern spring wheat, and there was also a fair business in Manitobas and some American winters.

Flour Situation.

New York, May 9.—The big advance in the wheat market during the past week has naturally sent flour values soaring. The advance, however, has not been accompanied by any noticeable improvement in business and flour merchants, jobbers and brokers are unanimous in their opinion

that flour is worth what it will sell for, rather than what it cost to produce.

Buyers generally are pursuing a hand-to-mouth policy and under present conditions refuse to anticipate their needs further than a few weeks in advance.

Export interest is limited and it is believed that most of the outstanding contracts have already been filled.

Spring patents were quoted at \$3.75@9.25; soft winter straights, \$8.65@9.10, and hard winter straights, \$8.75@9.25 per 196 lbs.

PORTLAND, ORE.

Fred Knight of the Knight Packing Co., who has been in Europe, is expected home within a few days.

The elevators recently purchased by the O'Neill Grain Co. from the Pacific Coast Elevator Co. are located at Amber, Bengie, Castleton, McCall, Revere, Rodna and Stoner, all in the state of Washington.

One hundred members of the Chamber of Commerce have registered their intention to serve as delegates to the national foreign trade convention, which will be held in Seattle June 24-26.

What winter wheat remains is doing well; it is jointing in Wasco county, says the Oregon weekly crop report of the weather bureau. Spring grains are doing well, though somewhat retarded by cool nights. Winter rye and barley are heading. Considerable spring wheat, barley and rye are being sown where alfalfa was winter-killed. Corn planting is becoming more general, and early corn is up.

First activity toward September grain loadings was indicated yesterday when the report that the Bunge Western Grain Corporation had chartered two ships for the north Pacific. As far as known no other grain companies have yet taken any action toward the fall loadings. It is the usual time for chartering, however, although the general situation has been slower this year. Last year the first ships to be chartered were for August and September loadings.

The Portland Traffic and Transit Association and the Portland Cordage Co., contending that present rail rates on Portland binder twine into surrounding states are out of proportion to those on the same commodity out of Chicago, filed a complaint against the Oregon-Washington Railroad & Navigation Co. with the Interstate Commerce Commission attacking as unreason-

TOLEDO.

S. M. Bender, Correspondent.

Louis Mennel and father, Alphonse Mennel of the Mennel Milling Co. have returned from San Diego, Calif., where they spent several weeks with Louis Mennel's family.

Flour production last week as reported by Toledo mills was 25,900 bbls., equal to 54 per cent of capacity. The week before it was 26,500 bbls. and a year ago last week was 28,300 bbls.

Joe McCord, secretary of the Ohio Grain Dealers Ass'n, and Sam Rice, president, were in Toledo last week completing arrangements for the annual meeting to be held here in June.

M. J. Leake, former representative of the Bemis Bros. Bag Co. of Indianapolis, Ind., has opened a branch office of this company in Toledo and will have entire charge of the northern Ohio territory.

Toledo grain inspections for the past week were 32 cars of wheat by lake steamer Northwind, 113,000 bus. of wheat, 27 cars of corn, 30 cars of oats by lake steamer Coolidge, 284,000 bus. of oats, 2 cars of rye and 1 car of barley. Total, 92 cars.

The government report for Ohio, Indiana and Michigan was about as expected. The dry spell which started early has caused the greatest damage although severe cold the fore part of March also killed a great deal of the late sown wheat. Dealers here believe the report has been largely discounted due to the private reports which were out early.

Ohio soft wheat flour has been selling at an excellent premium and country mills have found ready buyers for it. The local

situation is but little changed with buyers holding off, being afraid of a break in the market after they buy. Millfeeds have been the strong feature of the milling business with firm prices and an excellent demand for bran especially.

The Ohio millers are planning a series of group meetings to be held throughout the state. The object of these meetings will be to secure more members and give more millers an opportunity to meet each other and discuss their problems. Secretary Tanner will tour the state during the campaign and give talks to millers and call on as many as possible.

The milling demand for soft wheat has improved some while receipts are again increasing. The country appears disposed to sell around present levels and the past

few days have shown a great interest in bids being sent out. Corn and oats are also showing more pep and the after-planting movement may be disappointing, thereby stimulating the trade.

The Traffic Association of the Toledo Produce Exchange held its monthly meeting at the Elks Club Thursday night of last week. John Enright, traffic manager of the Mennel Milling Co., spoke on the relation of ratios to each other, and Lester Howard of the C. A. King & Co. announced the committees for the ensuing year. A very fine turkey dinner was followed by discussion of various problems relating to grain traffic in which all took part.

Several representatives of the U. S. Dept. of Agriculture were in the city last week attending a conference of the directors of extension work of the agricultural colleges of thirteen of the northwestern states.

F. B. Brown, vice-president, C. C. Cameron, G. F. A., B. J. Rowe, coal traffic manager, and J. V. Lanigan of the Illinois Central R. R., Chicago, attended the annual meeting of the Sioux City Traffic Club last week.

of nine weeks. Mr. Milligan came to this city from Hanover, Ill., in 1895 and established the first hay market in Sioux City, at Third and Virginia streets.

Thirty-five members of the Sioux City Chamber of Commerce will lend their own services as well as their automobiles in taking the census of the city, this action having been agreed to at a meeting which was recently called by Charles Breun, Jr.

That any movement initiated through the members' forum will be welcomed by the newly elected directors and officers of the Chamber of Commerce was the statement of Roderick L. Macleay, recently elected president, in his first address before the forum meeting since his election. He declared that the directors would not urge this method, but that they would welcome it as a privilege that every member of the chamber had a right to enjoy under the by-laws.

WINNIPEG.

Geo. H. Measham, Correspondent.

The United States government report on winter wheat, though considered bullish for the long pull, was immediately considered bearish. Many looked for something more pessimistic and had gone long on their belief. In other words, the market was over-bought and liquidation of these holdings brought on a break on Saturday. It was a case of evening up. There is no indication of attempts to bear the market. The government report out of the way, attention will now be centered on spring wheat prospects.

There has generally been more interest and more active trade in coarse grains during the week. The top grades of oats continue to obtain a big premium. On Saturday No. 2 c. w. grade sold at 5c over the May. Oats appear to be in strong hands and the demand good, especially for export. Oat crop prospects in the U. S. are good and act as a check on bulls and stocks visible are still very large.

The weather has been exceptionally favorable for seeding operations and wheat seeding is rapidly drawing to a conclusion. Growth, however, during the week has been slow, frosts at night being the retarding influence, and there is a frosty week-end forecast. Not much progress has been accomplished as yet in the sowing of the coarse grains. General indications are that the acreage under all grains will not vary materially from last year's figures.

Stocks in the interior elevators are being rapidly reduced. The Canadian National reports only 3,110,000 in store at country points at midnight May 7, as compared with 27,876,000 at the same time last year. Similar conditions prevail on the Canadian Pacific. Terminal wheat stocks have, however, been going out slowly and the main movement has been in oats, barley and flax. Rye continues to be a drag on the market.

A contract for the construction of fifteen country elevators has been awarded to the Harper Construction Co., Winnipeg, by the

Saskatchewan Wheat Pool and a second contract for the construction of twelve elevators has been awarded to Knudson & Sons, Regina. The points at which some of these elevators are to be located has not been as yet decided upon. These elevators are to be of uniform type, with a capacity of 32,000 bushels.

PEORIA, ILL.

L. L. Eckard, Correspondent.

Oats receipts were only 4 cars. The market was inactive, but No. 4 white sold at 4 1/2 c.

Cattle and calves were firm, with best veals selling at \$9.50 and down. Receipts were light.

Wheat in this section making only fair progress. Many reports of thin and spotted fields. Soil is beginning to show the need of good warm rains.

Hogs at the local yards showed a good advance last week and closing prices were 25c higher, with a top of \$12.65 paid for choice butchers. Bulk of sales, \$12.50@12.60. Average weights of 130 to 160 lbs., \$11.50@12.40; packing sows, \$10.75@11.25; stags, \$9.25@10. Trading was active, with a good demand, confined to light receipts of less than 1,000 head.

Corn receipts at Peoria still remain very light, with 13 cars Saturday. Prices were 1@2c lower. Offerings were in good demand; local industries took the greater part of the corn at the decline. No. 4 white, \$1.09 1/4; No. 3 yellow, \$1.09 1/4; No. 4 mixed, \$1.08 1/4; No. 6 mixed, \$1.07 1/4; No. 3 yellow, No. Iowa, \$1.10 1/4; sample corn, 95c. Offerings of corn to arrive have been extremely light. Farmers do not appear anxious to sell their corn and it looks doubtful for a heavy run after corn planting.

Grain receipts and shipments at Peoria for week ending Saturday, May 9th, as compared with those of corresponding week last year as reported by Secretary, Peoria Board of Trade:

Receipts—	1925.	1924.
Wheat	32,950	20,200
Corn	180,300	202,100
Oats	50,400	158,400
Rye	1,200
Barley	15,400	15,400
	294,050	397,300
Shipments—	1925.	1924.
Wheat	26,400	16,800
Corn	121,850	117,400
Oats	80,700	122,400
Rye	1,200
Barley	1,400	8,400
	239,350	266,200

Plans are being made by the Chamber of Commerce Association for extensive improvements on the Board of Trade building on Washington street. It is planned to redecorate and repaint the four halls in the building and the Exchange floor. The entire outside will be repainted and repaired. With the new improvements the building should be one of the most attractive in the lower part of town.

F. M. Wilson of the Denver Alfalfa Mill-
ing Co. was a recent business visitor in the
city.

Allan M. Clement, senior member of Cle-
ment, Curtis & Co., is taking a short va-
cation in the south.

Roy Hall, of Chapin & Co., was in Min-
neapolis the first of the month calling on
millers and feed jobbers.

Richard Uhlmann, of the Uhlmann Grain
Co., was a visitor at the New York offices
of that company some days ago.

William Bartels, who has been a member
of the Chicago Board of Trade for 50 years,
recently sold his membership, which origi-
nally cost him \$250, for \$7,350.

Paddleford & Lamy moved into their new
and larger quarters, suite 976-978-980, at
208 South La Salle street on May 11. Stead-
ily growing business necessitated larger
quarters. This firm, which is a consolida-
tion of two concerns, was formed on July
6, 1923. For many years Fred A. Paddle-
ford and Joseph E. Lamy have been active
in the grain trade. Mr. Lamy is former
first vice president of the Chicago Board
of Trade.

Trade Opinion.

Crop developments, in our judgment,
continue to be the dominating influences.
It is too early for anyone to state with
any degree of accuracy what the world
out-turn will be. This is something that
must be watched closely from week to
week for the next ninety days at least.
Present prices seem quite adequate to dis-
count a reasonably bullish crop showing.
Our advice to traders is to limit commit-
ments to moderate proportions and watch
very closely the growing conditions in the
United States, Canada and in Europe.—
Ross, Roy, Eberhardt & Harris.

The Government figures prompted the
complete reversal of sentiment from the
action in grain Friday. Snow, following up
his estimate, calls attention to the fact that
the official preliminary figures show for
Kansas, Oklahoma, Texas and Nebraska
20 millions less than was harvested last
year. However, Illinois, Pennsylvania,
Missouri, Colorado and California, other
important states, show in these preliminary
figures prospects for larger yields than last
year. A very light cash trade to millers
here and there was a lack of important de-
mand for foreign account; deliveries on
May contracts were liberal. Some day, we
may soon, the grain exchanges will take
the necessary steps to eliminate such un-
reliable estimates as the one before the
ade Friday.—Pope & Eckhardt.

The Government estimate of wheat yield
has given a bearish construction because
it did not confirm a very radical newspaper
estimate. Any yield of winter wheat below

Hales & Hunter Co.
GRAIN SHIPPERS
Manufacturers
RED COMB BRAND FEED
327 South La Salle St.,
Webster Bldg. CHICAGO, ILL.

500 million necessitates liberal crops in all
other exporting countries in order to pro-
vide for annual requirements. Of course,
it is not possible to determine whether our
crop will improve or deteriorate between
now and harvest, but it is well known that
the weather in the month of June has very
much to do with the final outcome. A lo-
cal authority places a bullish construction
upon the report for the reason that a con-
siderable portion of the remaining area was
sown on timothy or clover land and there-
fore not plowed up. From this basis it is
argued that the average yield at time of
harvest will not be excessive.—Thomson &
McKinnon.

The market has had an upward trend
during the current week. The most impor-
tant stimulus was reduced forecasts of the
winter wheat crop issued by private statis-
ticians on May 1. These estimates ranged
from 427 million to 447 million and com-
pares with the government forecast on
April 1 of 474 million and a production of
590 million last year. An average yield
per acre of spring wheat in the United
States is 12.6 bushels and in the Canadian
provinces 15.1 bushels. Of course, the sea-
son may be more favorable or less favor-
able than the average, but on the basis of
average out-turn on the estimated acre-
age, the spring wheat crop in the United
States would be about 260 million, com-
pared with the unusually good yield last
year of 283 million and in Canadian prov-
inces 335 million, against 240 million last
year. Adding these to a forecast of 447
million winter wheat gives 707 million for
the United States, and for North America
1,042,000,000, against 1,112,000,000 last year.
—Clement, Curtis & Co.

A sentimentally bearish construction
placed on the Government report, coupled
with lower Liverpool cables, started our
market on a sharply lower basis. Scat-
tered liquidation was quite general, and
the wheat sold was absorbed by commis-
sion houses. The bearish construction
placed on the government report does not
appear logical, in view of the fact that our
reports indicate continued deterioration in
the growing crop since these figures were
gathered.—Bartlett-Frazier & Co.

Wheat prices are generally lower on a
bearish construction being placed on the
Government report by the majority of the
trade. It was reported that there were

many bids for spring wheat from the Con-
tinent in the Northwest markets, which
were almost workable. While it is very
possible that this year's winter wheat crop
may approximate 500,000,000 bushels, we
feel that as stocks of wheat are light the
world over, and as our carry-over will be
a small one, that until definite information
is obtainable regarding the size and pros-
pects of the spring wheat crop, prices will

hold firm and we would buy July wheat on
any good break under the \$1.50 mark.—J. J.

CANADIAN MOVEMENT

Navigation Opened April 14 — Movement Small—Seeding Done Under Favorable Conditions.

By E. A. Ursell, Statistician.

FT. WILLIAM, ONT., May 8.—Navigation at the Canadian head of the lakes was opened by the arrival on April 14 of the steamer Thomas J. Drummond from the lower lakes with a cargo of rails, but it was not until the 17th that the next vessel—the John J. Rammacher—arrived for a cargo of grain. As indicated a month ago the opening was a quiet one, the only feature of note being the large shipments of oats, barley and flaxseed. The movement of wheat has been quite small, doubtless owing to the lack of export demand and the congested state of the elevators at Montreal. These conditions are undoubtedly the reflection of the unstable condition of the Winnipeg and Chicago markets. With prices fluctuating within a range of over 30 cents per bushel within a month or so, it is hardly to be expected that overseas purchasers will buy in any quantity. Consequently there can be little hope of a brisk demand for the balance of Canada's wheat surplus until a more settled condition has been established.

In the meantime much speculation exists as to the possible trend of prices. The present statistical position is all in favor of the overseas importer, but there are many who see in the largely reduced winter wheat crop anticipated in the United States, together with the possibility of not more than normal spring wheat crops, the justification of higher prices. It is, as yet, far too early to make any predictions regarding the spring wheat crops. The acreage sown is not yet definitely known and both in U. S. A. and Canada seeding has progressed under conditions highly favorable to the early development of the plant. Indeed, for the last two weeks in April, precipitation was sufficient to retard ploughing and seeding operations in Western Canada. This was, however, highly favorable to the ground already seeded as well as ensuring abundance of moisture for the present.

As regards the statistical position it is important to note that with 13 weeks of the season still to be provided for at an average rate of 15 to 16 million bushels, there are over 75 million bushels of wheat and flour afloat, or approximately sufficient for 5 weeks' requirements. In addition, there are 2 weeks' requirements in hand so that only 6 weeks' requirements, plus a moderate amount afloat, must be shipped from exporting countries—some 115 million bushels in all. India has none to ship, Australia, Argentina and North America, together have considerably more than the required amount. Australia and Argentina together are shipping at the rate of 6½ million bushels weekly, it is reported and tonnage has been engaged for shipments of some 20 million bushels from Australia as well as considerable amounts from Argentina. North American shipments run around 5½ million per week. Ten weeks' shipments at this rate will be sufficient to provide, theoretically, for all requirements of importers, and at the same time, leave a carry-over in exporting countries as well. Incidentally, Canada alone can furnish 8 weeks of the North American shipments at the rate mentioned.

Freight rates are slightly lower than a year ago on the great lakes and from the Atlantic seaboard. At the opening of navigation the rate to Montreal was 10½¢ to 11¢, as compared to 12¢ per bushel, wheat basis, a year ago, and to Buffalo 2½¢ to 2¾¢, as compared with 2½¢ to 3¢ a year ago. Present quotations are 10¢ to Montreal and 2¢ to Buffalo with an odd shipment to Buffalo at 1¾¢ per bushel, wheat basis. From the Atlantic seaboard berth tonnage to U. K. ports is quoted at around 4½¢ to 5½¢ from New York and 5¼¢ to 6¢ from Montreal, but to Hamburg and Antwerp

rates are firmer owing to heavier shipments to that port and last quotations were around 15¢ per 100 lbs. heavy grain.

The total number of cars inspected during the month totaled 10,067 cars of all grains, as compared with 14,942 a month ago and 13,617 a year ago. Of these 6,595 were wheat, as compared with 10,481 a month ago and 9,630 a year ago; while 3,296 or 50 per cent graded into contract grades, as compared with 4,616 or 44.4 per cent a month ago and 8,140 or 84.5 per cent a year ago. The increase in cars of barley and flaxseed inspected over a year ago continues to be well maintained while the percentage of the total barley crop which has already been marketed to date is the highest on record for western Canada.

Comparative tables showing inspections, receipts, shipments and prices follow:

(1) Number of cars inspected in the Western Grain Inspection Division during April:

	—1925—		—1924—	
	Cars.	Bus.	Cars.	Bus.
Wheat	6,595	8,666,100	9,634	13,016,600
Oats	1,916	3,669,200	2,549	5,390,000

Finland's production of grains has been for many years far below its consumption, and in spite of the recent movement for government aid to agriculture, it appears probable that the 3,500,000 people in Finland will be largely dependent upon grain and flour imports for some time in the future. Through years of custom, it is a rye bread country, the characteristic of favoring rye bread being almost universal among the farmers who form about 60 per cent of the population.

The Letter Box

Has Popcorn.

Price Current-Grain Reporter: I am in a popcorn territory and have a good deal of popcorn on hand. I am looking for a wholesaler or jobber of good standing that would buy a carload or more of Jack hullless and white rice popcorn shelled, cleaned and sacked.—*Ronald Meyer, Carnarvon, Ia.*

Babson Needs Us.

Price Current-Grain Reporter: We have need of average price by months of mess pork at Chicago for the year 1924 which you compile and publish in certain issues. If this compilation has already been made, we should much appreciate receiving the data for all the months of 1924. If not, would it be possible nevertheless to give us figures for January and February of that year for which the issues of your magazine are lacking from our files.—*F. G. Perry, Editor Babsonchart.*

A Useful Publication.

Price Current-Grain Reporter: We have put in an order for your Year Book for this bureau. We use your information for statistical studies only, and since we occupy a professional and technical position rather than one in the trade, we have no particular need for more than those necessary for our statistical work here. However, we are very dependent on some of your older tabulations for comparative purposes, and feel that the PRICE CURRENT-GRAIN REPORTER is one of the leading statistical sources of the country.—*Edward N. Wentworth, Armour's Live Stock Bureau.*

A Cordial Invitation.

Price Current-Grain Reporter: We know you are planning on coming out to the Los Angeles convention in June and we particularly invite you to route your ticket returning via Phoenix and take advantage of our invitation to visit the Roosevelt Dam, going over the famous Apache Trail, back by Globe and Miami, Ariz., the greatest copper producing section of the United States, over the Superior Highway to Phoenix as the guests of the Phoenix Seed & Feed Company and Arizona Seed & Floral Company.—*Phoenix Seed & Feed Co., Marshall Humphrey, Phoenix, Ariz.*

Situation in Illinois.

Price Current-Grain Reporter: The best that can be said of the past ten days of crop weather is that it permitted outdoor work to progress. Cool, high winds have licked up the scanty moisture from surface of the ground, four frosty nights this week have not promoted crop growing much. The old saying that light frosts in the light of the moon don't hurt proved true. By the way some learned people now contend that this old saying has been proven to be scientifically true. We are now in the dark of the moon and will observe any further frosts with interest.

Wheat has not stood out on the ground like many had hoped, if better growing weather had prevailed. Most observers say that present prospect is little if any improved over condition of two weeks ago.

Corn planters have run steadily the past week, probably better than two-thirds of the seed is now in the ground. Those who took the risk and planted in April have little to show for it as weather has been too cool to promote germination and growth.

Farmers have been offered a dollar or more per bushel for corn this week; they seem to be thinking about selling some corn before long, the quantity no doubt will be partially regulated by the kind of weather furnished for the growing crop. At some stations the supply of corn on farms is light, at others as much as half the 1924 crop is on hand, a fair guess would be around 30 to 35 per cent average. Shippers may expect an excellent quality of corn from this section

from now on, much will grade number two.

Oat fields do not look as good as ten days ago; they were not heavy enough to shade the ground and protect surface moisture from the attacks of high winds. Showers have been rather light and infrequent of late; there is a general desire for a good warm soaking rain. The fair movement of oats to market meets with a pretty good demand.—*H. I. Baldwin & Co., Decatur, Ill., May 9.*

AMERICAN STEEL & WIRE CO. CROP REPORT.

Cold weather combined with frost which has considerably retarded growth of all crops is the outstanding feature of the week's reports. Very beneficial rains occurred over most of the north central portion of the country, particularly from the Ohio Valley eastward. The southwest as a whole, is still too dry. In spite of the retarding influence of the low temperatures, growth was fairly good. This applies particularly to the grasses and small grain crops. Frost damage occurred in many localities. This, however, is chiefly confined to fruits and early vegetables. Slight damage was also done to spring wheat in some localities. How great this damage will be, no one can definitely say at the present time.

Oats is very satisfactory, making slow, steady growth wherever grown and the acreage is larger than last year.

Wheat as a whole is fair; it is making good progress in most of the producing belt. The winter variety was benefited by the cool weather; in the south of Kansas it is slowly heading out. Spring wheat has been a little slow the past week.

Cotton planting is progressing favorably throughout the southern and southwestern states with much cotton up to a fairly good stand in many localities. The southeast, however, still complains of slow germination due to dry weather.

Corn is doing fairly well in the more southerly portion of the country.

Planting is being delayed in the more northerly sections. The state of Iowa reports some corn which was up damaged by frost.—*F. Baakes, Vice-Pres. & Gen. Sales Agt., May 9.*

VAN DUSEN HARRINGTON CROP REPORT.

The small grain crops of the Northwest have not shown much progress during the past week. The weather has been cold with frosts and freezing temperatures nearly every night except in a few localities. While the color of some grain has been slightly affected, there are no reports of any actual damage. The frosts have done some good by killing weeds which had a good start in places.

There have been good rains at a number of points where they were needed.

The spring wheat crop generally shows a very satisfactory condition and is now from 1 to 5 inches high. At some places the acreage shows a decided increase, while at others it is not as great as last year. Now that wheat seeding is completed, we will soon be able to obtain estimates on the total acreage in the four Northwest states.

The rye crop is not as good as early reports indicated. There is a considerable amount winter killed in local districts. Some of this has been plowed up and will be reseeded to other grains. In other places rye shows a fairly good stand and color.

While the conditions are satisfactory, there is little to report on barley and oats at the present time, as these crops are just showing above ground.

In a few places some early flax had been sown and the heavy frosts undoubtedly have damaged it to some extent. This is a very small percentage of the total acreage, as the major portion of flax is not seeded until the danger of frosts is past. As previously reported, there is considerable new breaking and indications point to an

increase in flax acreage where the soil is suited for it.

Some corn planting has been done, but it has been retarded on account of the cold weather.

We consider the general condition of the small grain crops extremely good up to the present time. In order to maintain the fine start, due to an exceptionally early spring, warm growing weather is now essential.—*By W. G. Hudson, May 6.*

PROGRAM, KANSAS GRAIN DEALERS.

The annual meeting of the Kansas Grain Dealers' Ass'n, which will be held at Wichita on May 21 and 22, has an interesting program prepared, and it will be well worth while for all dealers to be present.

The Wichita Board of Trade will entertain the dealers at a banquet at the close of the convention, and they are "some" entertainers.

Thursday, 9 A. M.

Registration in lobby of Hotel Broadview. (All dealers are requested to register during the morning and secure identification badges.)

(Registration will be in charge of F. S. Rexford, representing the Grain Dealers Fire Insurance Company of Indianapolis, Ind.)

First Session, 10 A. M., Roof Garden, Hotel Broadview.

Convention called to order by president. Singing of "America" by audience. (Leaders: Sam Wallingford and Ed. Welch.)

President's annual address. Secretary's annual report.

Address—F. G. Horner, president of the Grain Dealers National Association, Lawrenceville, Ill.

Address—"Harvesting An Insurance Crop"—Henry Swift Ives, Chicago, Ill.

General discussion. Appointment of committees.

Second Session—Thursday, 2 P. M.

Meeting called to order by president. Community singing.

Address—"Representing Wichita"—L. H. Powell, Kansas.

Address—"Price Trends in the Wheat Market"—Prof. R. M. Green, Manhattan, Kans.

Address—"Reasons Why Shippers Should Not Be Compelled to Pay Interest on Grain Sold F. O. B. Track"—E. D. Clark, Tampa, Kans.

Discussion. Adjournment.

Third Session—Friday, 9:30 A. M.

Meeting called to order by the president. Community singing.

Address—"Reduction in Mid-Continent Coal Rates"—Judge C. M. Reed, Kansas City, Mo.

Address—"Bunc"—J. R. Ladlie, Liberty, Kans.

Address—"Legislative Efforts and the Results"—Hon. C. M. Cave, Sublette, Kans.

Lightning rod demonstration—A. J. Doo-ley, Topeka, Kans.

Discussion. Adjournment.

Fourth Session, Friday, 2 P. M.

Meeting called to order by the president. Community singing.

Address—"Why Privilege Trading Is a Protection to the Country Elevator Operator"—H. P. Trusler, Emporia, Kans.

Address—"The Transporation Question"—C. D. Morris, Chicago, Ill.

Elevator records, preparation of cars, loss and damage claims, delay claims, claim payments—John Baker, Kansas City, Mo.

Secretary's Financial Report.

Report of the Auditing Committee.

Report of the Arbitration Committee.

Report of the Resolutions Committee.

New business. Election of officers. Adjournment.

ANOTHER ANGLE.

In an article a week ago, I stated I believed the worst was known about the winter wheat crop. After yesterday's Government report, I am still of that opinion. The June and July condition of winter wheat will have to be 70, or a loss of 7 points in the condition to realize yesterday's estimate. What is attained by using a fluctuating par yield on grain in making estimates, is hard to conceive. If the object is to advance grain prices, during the growing period, it can be understood. On the other hand, it must be disturbing to business interests to be continually advised of a poor crop outlook, and it no doubt affects producers and permits our competitors to dispose of the balance of their surpluses of old wheat at profitable prices, providing foreign markets advance on our low crop estimates. The unfortunate part for the producer and speculator is that each year when the harvest is over, the crop is found to be larger than the estimate of April and May, and there is a rush to unload both speculative holdings and market the surplus raised, with the result that prices decline and the grain exchanges are blamed for it. It would seem to me it would be far better were one par used from April to July on winter wheat, and in fact, on all grains from their first reports to the last, and the crops estimated on the advance or decline in the condition. The present method is confusing to the larger portion of the grain trade.—*J. F. Jackson, Pyncheon & Co.*

Copper carbonate sustained its reputation in 1924 as a satisfactory control of the bunt of wheat and smut of hullless oats, and in the majority of trials effectively controlled smut of hulled oats.

Security from Lightning Losses

The Mutual Fire Prevention Bureau names lightning as one of the two chief causes of elevator fires during 1924.

Take heed and protect yourself now. Insist on Underwriters' Laboratories Master Label installation. Small in cost in proportion to fixed investment, it assures your insurance reduction.

Fire protection is not available to most grain elevators. Stop this greatest of fire menaces. Saving on insurance pays for a Security System in a few years.

We are manufacturers and installers of Underwriters' Laboratories approved lightning conductor systems for grain elevators, warehouses, factories, smoke stacks and other large structures. Write for specifications and information on how to prevent lightning losses.

News of the Country Grain Trade

ARIZONA.

Glendale, Ariz.—The Country Gin & Milling Co., of which A. E. England is president, will start work at once on a new cotton gin on the England ranch, northwest of here.

ARKANSAS.

Wilmar, Ark.—The feed business operated by J. P. Jolley & Co. has been closed out.

Little Rock, Ark.—Fire destroyed the feed store of H. A. Kollmer, with a loss of \$40,000.

Ellisville, Ark.—The mill north of here, owned by Jim Miller, was destroyed by fire recently; loss about \$1,000 with no insurance.

CALIFORNIA.

Orland (Glenn Co.) Calif.—New and improved appliances are being installed in the Orland alfalfa mill, which is being remodeled.

COLORADO.

Del Norte, Colo.—A. L. Smith will handle hay, grain and feed in a store which he has opened here.

Colorado Springs, Colo.—The holdings of the Liles Grain Co. have been purchased by Conley-Ross Grain Co., which operates elevators at Denver and Matheson. The purchase includes a grain elevator, two warehouses located on the Colorado & Southern and Santa Fe Railway right-of-ways, and all equipment, machinery and appurtenances.

FLORIDA.

Tampa, Fla.—A one-story building occupied by Pedro Martino & Co., wholesale feed and grain dealers, together with a quantity of feed, was destroyed by fire thought to have started from spontaneous combustion. Loss was approximately \$40,000.

ILLINOIS.

Eddyville, Ill.—Geo. Mansen has sold the Eddyville Roller Mill to A. L. Robbs.

Minonk, Ill.—New air dumps are now in operation at the Minonk Farmers Elevator & Sup. Co. elevator.

Crab Orchard, Ill.—The flouring mill, one of the old landmarks here, burned down. It was owned by W. H. Mott-singer.

Ursa, Ill.—The Decatur Const. Co. are remodeling the house of The Farmers Coop. Elev. Co. and installing a new boot.

Decatur, Ill.—Wm. Shellabarger, formerly of Salina, Kans., has moved here to look after the Shellabarger Mill & Elevator Co.'s interests.

Harmon, Ill.—Thieves broke into the Armour elevator and hauled away at least 6,000 bushels of oats, presumably in large auto trucks holding from 150 to 200 bushels.

Grange, Ill.—The Cooperative Elevator Co. have made extensive changes and repairs, which gives them an up-to-date and handy place in which to transact business.

Mendota, Ill.—T. E. Cavanaugh has sold his interest in the grain and commission firm of Cavanaugh & Ray to John A. Eckert and the firm will operate under the name of Eckert & Ray, the junior partner being C. L. Ray.

Alhambra, Ill.—On May 7, fire totally destroyed the elevator and warehouse

of the Prange Milling Co., whose headquarters are at New Douglas, Ill. Insurance partly covered the loss. As soon as plans and specifications can be completed, it will be rebuilt.

Bloomington, Ill.—The National Farmers Elev. Grain Co. has been incorporated with a capital of \$250,000 by D. H. Allan, Lawrence Farlow and D. J. Cottingham. They will deal in grain, hay, feed, seed and agricultural products on commission; brokerage and export business.

Peoria, Ill.—Stockholders of the Farmers Terminal Elevator & Commission Co. organized to purchase an elevator here, but now apparently a dead issue, have been offered an opportunity to exchange their stock in the Grain Marketing Co. Action has been taken to dissolve and return to the stockholders 85c on each dollar invested.

INDIANA.

Millgrove, Ind.—C. V. Riggs of Montpelier has purchased the elevator here.

Decatur, Ind.—William Murphy has purchased the old Gillig mill from Herman Gillig.

Bourbon, Ind.—Krause & Apfelbaum has leased the Inwood Elevator property of J. C. Erwin.

Onawa, Ia.—Machinery is being installed in the Onawa Mills which will be completed soon.

Abbott, Ia.—The Farmers Cooperative Elevator Co., President, U. Beving, has been dissolved.

Albia, Ia.—On May 3d, the mill and stack of Moses Edwards & Sons was blown down and hurled across the street.

Maquoketa, Ia.—The Farmers and Merchants Savings Bank has purchased the implement business of G. A. Leinbaugh.

Grundy Center, Ia.—S. F. Price has been re-elected as manager of the Farmers Cooperative Elevator for another year.

Mt. Vernon, Ind.—J. Fielden Martin, representing the Evansville Grain Buying Co., Evansville, Ind., has opened an office here.

Curtisville, Ind.—The Grain elevator of the Windfall Grain Co. is being covered with corrugated sheet steel as a protection against the elements and fire.

Bloomfield, Ind.—Chas. F. Engle, who has been partner of J. M. Vest in the Bloomfield Mill & Elevator Co., has sold his interest to Mr. Vest's sons, Frank and Parmer Vest.

Ft. Dodge, Ia.—The plant of the Quaker Oats Co. will probably be ready for operation by the first of June. For the present, no other product than rolled oats will be manufactured. The mill has been electrified so that all machinery will be motor driven.

Irvington, Ia.—A new elevator will be built to replace the large double elevator of the Farmers Cooperative Ass'n which was burned recently. It is probable that an elevator of 25,000 bushels capacity of fire-proof construction will be erected, and contract will be let soon.

Sioux City, Ia.—The Beach-Wickham Grain Co. of Chicago will open branch offices here subject to final approval by the Chicago Board of Trade. In conjunction with the opening of the

branch, a private wire service will be operated, and regular cash grain consignments and options will be handled.

Wheatland, Ind.—Fire, resulting from hot ashes dumped against the metal sheeting on the engine room of the Farmers Grain Elevator, threatened for a time the destruction of the building. Due to prompt discovery and efficient work, the damage was confined to the engine room. Insurance covered the damage.

KANSAS.

Damar, Kans.—Fire slightly damaged the Shellabarger Mills & Elev. Co.'s elevator.

Smith Center, Kans.—The Derby grain Co. will soon start remodeling the grain elevator here.

Effingham, Kans.—Charles Hegarty suffered a small loss when his dust house was damaged by fire.

Atchison, Kans.—W. B. Dalton, the state grain inspector, has appointed Warren Hartman and Carl Schmeling as grain inspectors.

Manhattan, Kans.—Fire of undetermined origin completely destroyed the old mill property belonging to A. F. Huse. Estimated loss covering the mill property, mill machinery, stock of groceries and household furniture is said to be about \$15,000. No insurance was carried on the machinery or building, it is reported.

LOUISIANA.

Crowley, La.—C. W. Lyman is re-entering the grain trade under his own name. He was formerly connected with the Louisiana Grain Co.

Shreveport, La.—The large hay warehouse of the Shreveport Mill & Elevator Co. has been completed and the grain warehouse will be complete in a few days. The warehouses are 60x200 ft. and 60x150 ft. respectively.

MARYLAND.

Hampstead, Md.—Frank Switzer purchased the elevator and flour mill of the Malko Mlg. & Ltg. Co. from the receivers for \$40,500.

Hagerstown, Md.—Wheat speculation is reported to be the reason for the bankruptcy of the Reed Grain & Mlg. Co. whose liabilities have been listed at close to \$160,000 and assets about \$20,000 with open accounts close to \$100,000.

MICHIGAN.

Grand Rapids, Mich.—Fire totally destroyed the Star Mill of the Voight Milling Co. on May 1st.

Lansing, Mich.—The annual convention of the Michigan Hay & Grain

Ass'n will be held July 27th at the Hotel Tuller, Detroit.

MINNESOTA.

Fertile, Minn.—Victor Hoglund has purchased the feed mill of Kankel & Chloupek.

Echo, Minn.—Elevator No. 2 of the Farmers Warehouse Ass'n was totally destroyed by fire.

Hancock, Minn.—W. L. Johnson will tear down his present elevator and erect an entirely new plant.

Shakopee, Minn.—The local King Midas mill, managed by E. G. Darsow opened May 1st for the manufacture of rye flour.

Brooks, Minn.—The Farmers Elevator, at present leased by the Crooks ton Milling Co. has been purchased by C. D. Hall.

Green Isle, Minn.—Dan Egan, manager of the Equity Elevator, was found dead in the railroad yards, having fallen off freight.

Ash Creek, Minn.—The Farmers Elevator Co. of Ash Creek sponsored a cooperative booster meeting which was attended by farmers from a large territory.

Duluth, Minn.—April grain shipments from here exceeded the total for the same month in 1924 by 3,826,334 bushels and that of April, 1923, by 7,059,316 bushels.

Richmond, Minn.—The Richmond Cooperative Creamery Ass'n will give up the handling of flour and feed, as it will not compete with the New Mill put in operation lately.

Austin, Minn.—Mrs. C. W. Rosenthal and Mrs. J. B. Nelson will establish a selling agency here for distribution, representing the Whole Grain Wheat Company of Chicago.

Fergus Falls, Minn.—Officials are investigating an attempt to burn the Canton Grain Co. elevator at Foxholm. The fire was put out before much damage was done. Investigation showed that the safe had been emptied of books, papers as well as money.

Fergus Falls, Minn.—The Fergus Co. operative Farmers Elevator has let contract to J. P. Johnson for additions to their elevator at a cost of \$6,557, which will include two new concrete grain tanks, each forty feet high, and an enlarged office, a new dump and other equipment.

MISSOURI.

Conway, Mo.—J. E. Kelly has leased his feed mill to Ed. Miller who is in charge of same.

Sibley, Mo.—Rex Hedrick of Buckner recently purchased the Sibley Elevator for \$1,100.

PITTSBURGH, - - - PA.

Cranby, Mo.—Phil Ratliff of Neosho has opened a branch feed store with Ernest Jaeger in charge.

Bloodland, Mo.—The grocery store and corn mill of Frank Brown burned here recently. He carried no insurance.

Fayette, Mo.—The members of the Farmers Cooperative Ass'n have voted to buy the Fayette Mill & Mercantile Co., and agreed upon a price of \$27,500.

Palmyra, Mo.—Yeager Bros. & Schaffer, are considering the forming of a stock company to put the Peoples' Mills, which they recently purchased, in operation again. The business would be capitalized at \$15,000.

MONTANA.

Cascade, Mont.—The Cascade Milling & Elevator Co. has installed \$5,000 test laboratory.

Harlowton, Mont.—The Montana Flour Mills resumed work this week, on account of a better outlook for the marketing of milling products.

Boyd, Mont.—Fire destroyed the Montana-Dakota Grain Company's elevator, which was managed by C. C. Nordman. 4,000 bushels of grain were burned. Loss was covered by insurance.

Billings, Mont.—Plans have been announced for the immediate establishment here of one of America's big brokerage houses by Logan & Bryan who will have direct wires to leading grain markets.

Great Falls, Mont.—Incorporation papers for a \$50,000 company are expected to be filed here, which company will immediately equip a plant for the manufacture of cereal products. Incorporators will be: P. K. Dill of Lincoln, Neb.; W. O. Buck, Great Falls real estate dealer, and H. J. Strump of Great Falls, former grain dealer. \$8,000 in stock has been subscribed. The plant is planned as the first of 10 to be erected in Montana.

NEBRASKA.

Wood River, Neb.—The Wood River Roller Mills was slightly damaged by fire.

Armour, Neb.—H. Clark has opened produce, feed and flour store in the Kirschner building here.

Firth, Neb.—The Firth Flour Mills, owned by S. Petz, burned to the ground, causing a loss of \$30,000.

Tecumseh, Neb.—A. K. Johnson has sold his interest in the Johnson Brothers Milling Co. to his brother, J. J. Johnson.

Lodge Pole, Neb.—The George A. Roberts Grain Co. elevator has been purchased by F. C. Carlson and H. C. Peterson of Chappell.

Tilden, Neb.—The Tilden Mills has been purchased by Fred L. Crosby, who sold them some five years ago to Al and Howard Neely.

Norfolk, Neb.—A feed and produce station has been opened by C. D. Mulford and will be known as the Checker Board Feed and Produce Station.

Bancroft, Neb.—The Farmers Elevator was destroyed by fire thought to have started from a spark from a chimney or defective flue. The building contained 4,372 bushels of oats and 200 bushels of corn.

Pawnee City, Neb.—J. J. Brown of the Brown Grain Co., who has been operating on the Burlington tracks in Pawnee City, Violet, Burchard and Armour, has disposed of his line of elevators in Pawnee County.

NEW JERSEY.

Woodstown, N. J.—Following the recent formation of a new seed company here, to be capitalized at \$125,000, an industrial development is expected.

NEW YORK.

Van Etten, N. Y.—Fred B. Wilson suffered a total loss by fire on April 30.

NORTH CAROLINA.

Charlotte, N. C.—The Carolina Milling Co. has incorporated with authorized capital of \$40,000 with \$10,000 subscribed. Incorporators: H. B. and J. F. Allen, J. S. Hinson, O. P. Lot-speich, W. F. Berryhill, W. L. McCall, all of Charlotte.

NORTH DAKOTA.

Springbrook, N. D.—The elevator here containing 11,000 bushels of corn, 1,500 bushels of wheat, 1,500 of flax, 300 of rye and barley, were burned to the ground. Ten thousand dollars insurance was carried which will cover three-quarters of the loss. Some wheat was salvaged.

OHIO.

New Bavaria, Ohio—The Farmers Elevator closed for extensive repairs.

New Holland, Ohio—French Bros. purchased the feed mill owned and operated by Chas. G. Hill.

Mechanicsburg, Ohio—The roof of the Mechanicsburg Cooperative Exchange Co. was damaged slightly by fire.

Greenville, Ohio—The Barrett Milling Co. was sold at Sheriff's sale by A. E. Disher, Greenville, Ohio, R. R. No. 2, for \$16,500.

Kingston, Ohio—Fred and Robert Immel of Yellowbud recently bought the Snyder mill and will continue the business where it is located.

Dresden, Ohio—Ray Garrett, who has been employed with Mr. Littick at the Dresden Grain & Supply Co. and later at the Dresden Mill, has resigned his

When in Fort Worth stop at the Texas Hotel where you are sure to meet other grain dealers. It is the grain trade's headquarters and meeting place.

A WELCOME AWAITS YOU

position and has purchased an interest in the Ball Milling Co. at Zanesville.

OKLAHOMA.

Fairview, Okla.—John Bohlen has purchased the interest of Mr. Elwart in the Fairview Milling Co.

Cordell, Okla.—R. E. Rigsby has erected a building which will be used as a grain, feed and seed house.

Grandfield, Okla.—It is reported by farmers along Deep Red creek near here that much of their seed was lost when the stream overflowed its banks.

Guthrie, Okla.—Work has begun on the erection of a new flour mill which will be a three-story frame structure, fully modern and costing, when equipped, \$50,000.

PENNSYLVANIA.

Lewistown, Pa.—On May 7th the Spanogle-Yeager Milling Co. suffered a partial loss by fire.

SOUTH DAKOTA.

Ramona, S. D.—Oscar Heiser has taken over the business of E. J. Heiser.

Wessington Springs, S. D.—J. G. Winter and his cousin Gustave J. Winter have purchased the north Farmers Elevator.

Parker, S. D.—The old Frank Henrichs elevator was destroyed by fire of unknown origin, causing an estimated loss of \$2,500. Salt was the only material stored in the building which has been used as a warehouse.

Aberdeen, S. Dak.—The directors of the South Dakota Wheat Growers Ass'n have changed its laws so that the farmers' elevators may become members and thus provide for them a terminal marketing service for the grain trade. Another outstanding change decided upon was the decision to include all other grains in a pooling contract.

TENNESSEE.

Nashville, Tenn.—R. Hughes Worke, age 72, prominent grain and feed man, and head of the firm of R. H. Worke & Co., died from a heart attack recently.

Memphis, Tenn.—The Maney Grain Co. of Omaha has filed a replevin suit in chancery here against the Fair-Hinshaw Milling Co., the First National Bank, and the Watkins National Bank of Lawrence, Kan., and the Merchants & Farmers Bank of Tonganoxie, Kan., to recover \$4,000 for 2 cars of shelled corn it claims to have shipped the milling company on a shipper's order notify, receiving the milling concern's check in return. It further alleges that when the check was presented,

the Tonganoxie bank refused payment because of its insolvency.

TEXAS.

Chillicothe, Tex.—The Kell Milling Company's elevator was slightly damaged by fire.

McKinney, Tex.—H. H. Crouch, a brother of Lillian B. Crouch, has filed petition to prevent her from disposing of any of the \$300,000 worth of stock transferred to her by J. P. Crouch in the Collin County Mill & Elevator Co., The Burrus Mill & Elevator Co. and several other corporations. It is asked that the transfer be set aside.

WASHINGTON.

Walla Walla, Wash.—The Pacific Northwest Grain Dealers Ass'n will hold its annual meeting here June 5 and 6. Last year, the organization met at Lewiston, Ida., and previous to that held their meetings in either Portland, Spokane or Seattle.

WISCONSIN.

Burlington, Wis.—The Murphy Grain Products Co. of Delavan, Wis., will move to this place.

Neenah, Wis.—Fire damaged the hay warehouse of the H. C. Jasper & Son Flour and Feed Co.

Holmen, Wis.—The Holmen Sorghum mill, owned by Albert Sjolander, will be operated this year by Francis Wall.

W. F. Callander, chairman of the crop reporting board of the Department of Agriculture has gone to Porto Rico, where he will study production on the island from a statistical standpoint, with a view to determining whether it will be feasible to include reference to such production in the periodical crop reports pertaining to the mainland.

SEED WELL CLEANED UP.

GALION, O.—Seed seems to be scarce, and the bulk of seed that is sown around here is shipped in from some of the seed centers, largely from Toledo. There seems to be no seed in the farmers' hands, and well cleaned up at the elevators.—C. E. Switzer & Co.

ST. LOUIS SEED MARKET.

Quote timothy nominally at \$5.50 to \$6.00 (low-grade, weedy and dark at \$2.00 to \$4.50); German millet at \$4.00 to \$4.25; common millet at \$3.00 to \$3.10; hog millet at \$2.05 bulk basis; Sudan grass at \$3.65 to \$3.85.

Stock Peas—Quote whippoorwill at \$3.50 to \$3.75; new era and mixed at \$2.75 to \$3.00 per bu. Sales: 30 sks. new era and mixed at \$2.75 to \$3.00.

Sorghum Cane Seed—Quote at \$1.50 per 100 lbs.

Sunflower Seed—Quote at \$3.25 to \$3.50 per 100 lbs.

WEEKLY LINSEED REVIEW.

NEW YORK, May 11.—United Kingdom: The linseed situation in the United Kingdom has been quiet but steady during the past week. There has been a fair trade in Indian seed. Both spot and nearby supplies are rather small.

The market for linseed oil remains quiet and practically featureless.

Cotton oil continues dull with the trade inactive.

India: Shipments of linseed during the past week amounted to 464,000 bus. compared with 280,000 bus. the week previous.

Argentina: Clearances of linseed from this country are enlarging. Last week's outward movement exceeded 1,000,000 bus. compared with 750,000 bus. the week previous. Port stocks of linseed now aggregate 4,400,000 bus. against 4,600,000 bus. the preceding week and 3,200,000 bus. at this time a year ago. Weather has been unsettled with heavy rains in parts. New crop preparations have been making satisfactory progress, and a larger acreage is expected. Markets for linseed remain steady with moderate foreign absorption.

We buy and sell all standard varieties of grass, clover and farm seeds. Correspondence solicited.
WM. A. WARD SEED COMPANY
Sacramento, Calif.

TOLEDO SEED PRICES.

The following table shows the range of prices for seed on the Toledo market for cash and the futures of clover, alsike and timothy for the week ending May 9:

	Range for wk.		Close May 9.	Close May 8.
Clover—	High.	Low.		
Cash	\$16.00	\$16.00	\$16.00	\$16.00
Oct.	13.50	13.50	13.50	13.50
Dec.	13.35	13.35	13.35	13.35
Alsike—				
Aug.	12.50	12.50	12.50	12.50
Timothy—				
Cash	3.00	3.00	3.00	3.00
Sept.	3.50	3.50	3.50	3.50

MILWAUKEE SEEDS.

Movement of timothy seed and clover seed at Milwaukee as reported by THE PRICE CURRENT-GRAIN REPORTER by H. A. Plumb, secretary of the Chamber of Commerce, for week ending May 9, 1925:

	Receipts, lbs.		Shipments, lbs.	
	Tim.	Clov.	Tim.	Clov.
1925.....		300		
1924.....	90,000	11,553	211,010	152,870

TOLEDO SEED MARKET.

TOLEDO, O., May 9.—Clover seed has ruled firm all week with very little trade. Some buying of October on the theory that if winter wheat had done so poorly, clover must have done likewise. Some reports from this territory however, are very promising. One from Idaho tells of a poor outlook there. Canadian letters say its too early to say much about the crop. The present price of October cannot be called high, neither is it low, and there no doubt will be short sellers of it soon, as well as investment buyers, each influenced, no doubt, by their local conditions.

Timothy also quiet with the holders of September apparently satisfied with their position.

The clover carry-over this year in most positions is smaller than a year ago. Stocks are estimated the smallest in three years. The spring demand from March 15 until recently has been heavy. Shipments during this period have been heavy and as a result of a weak market turned into a normal or firm market. The small carry-over will no doubt add to the speculative activity later. Market is under no pressure at the moment. Very little new buying has appeared in October and December and market is not showing any definite trend.

KANSAS CITY SEED MARKET.

KANSAS CITY, May 9.—Wet weather this week kept seed trade within moderate bounds. The only interest since the passing of the grass seed sowing season has been in forage seeds, soy beans and cowpeas. Millet seed is scarce and firm. Orange cane seed shows some strength and there is a limited distribu-

Field and Grass Seeds

tion of red top and black amber. Country offerings continue liberal. In April the receipts were 40 cars, while shipments were 56. Sudan, though in fair demand, remains cheap, because so plentiful. Soy beans are selling better than cowpeas because of their discount.

Weather conditions are generally favorable for growing meadows and blue grass. There is some complaint as to the condition of fall sown alfalfa in southeastern Kansas and also in Nebraska.

Dealers are no longer quoting those seeds in which trade has ceased. Wholesale prices are given as follows, on carlots, per cwt., sacked: Blue grass, \$20 @30; orange cane seed, \$1.75@1.90; red top cane, \$1.70@1.80; black and red amber cane, \$1.70@1.80; German millet, \$4@4.50; common millet, \$3@3.50; Siberian millet, \$2.25@2.75; hog millet, \$2.25@2.50; cowpeas, \$4.50@5 per bushel; soy beans, \$2.15@3.

CHICAGO SEED MOVEMENT.

Following is a statement of receipts and shipments of grass seeds at Chicago for the week ending May 9, previous week, same week of 1924 and for the season to date, starting July 1 of the years indicated (amounts stated in pounds, 000 omitted):

	Timothy.		Clover.		Other.	
	Rcts.	Shpts.	Rcts.	Shpts.	Rcts.	Shpts.
Week ..	442	225	2	146	75	
Prev. wk.	367	147	1	46	237	198
1924 ..	484	126	107	299	211	
1924-25.	36,129	26,594	10,619	5,410	16,568	15,948
1923-24.	31,218	20,988	10,752	8,061	23,942	14,274
1922-23.	31,375	30,452	10,672	8,684	23,185	6,713

Timothy—Quiet and unchanged. Common country run about \$5.75@5.85 per 100 lbs., good seed \$6@6.15, high grades \$6.25@6.35, extra choice and fancy higher, possibly \$6.50@6.75, but none here.

Alsike—Firm. Fair country lots \$16.50@18 per 100 lbs. Good seed \$18.50 @20, choice \$21@22.

Alfalfa Seed—Recleaned \$21@22 per 100 lbs.

Flax Seed—Firm to 1c higher. No. 1 Northwestern closed at \$2.82½@2.85½ per bu. of 56 lbs.

Clover Seed—Dull. Country lots \$18 @20.75 for 100 lbs., good \$21.50@22.50, choice \$23@24, fancy \$25@26, and Mammoth \$21@26, according to quality.

DULUTH FLAXSEED MARKET.

DULUTH, MINN., May 9.—Trading was dull and draggy in the flaxseed market during the last week. The market held strong, however, with the price movement coming within a narrow range. On the net result of the six days' operations, spot and May seed gained 6¼ cents and July and September 6 cents.

Operators in the market were disposed to pursue a waiting attitude and trading was in limited volume from day to day. Current receipts of domestic seed were small, the total of cars from the country including some small lots of Canadian seed amounting to only 26,259 bushels. Shipments were 33,442, bushels, and stocks in the elevators were 237,000 bushels.

In view of the impossibility of attracting any amount of domestic seed from the country, American crushers have been turning their attention to picking up supplies at Winnipeg. A cargo of 125,000 bushels was brought over here from Fort William during the week, and it is scheduled to be shipped down to Minneapolis. American crushers are also shipping seed from the Canadian Head of the Lakes to Buffalo and Toledo to take care of their linseed oil needs down there. Seed from there is also being shipped to Chicago.

A survey of the market has shown that specialists in the flaxseed trade are generally hopeful regarding the outlook for its market. They are figuring that their linseed oil requirements will

be sufficient over the next few weeks to absorb all the available seed in this country and Canada and that the trade will be well cleaned up in supplies before the new seed becomes available next fall. The acreage seeded to flax over the American Northwest this spring is expected to show a large increase in view of the favorable season for farm work and the large areas new ground being broken.

Closing prices of flaxseed on the Duluth market on Saturday as compared with the previous Saturday and the same period last year were:

	Sturday.	Week ago.	Year ago.
On track.	\$2.76¼-78¼	\$2.70-72	\$2.50¼-55½
To arrive.	2.76¼	2.70	2.50½
May	2.76¼	2.70	2.50½
July	2.78½	2.72½	2.41¼
Sept.	2.54	2.50	2.19½

MINNEAPOLIS GRAIN SHIPPERS MEET.

The Minneapolis Grain Shippers' association held its monthly dinner and business meeting at the Nicollet hotel May 7. After routine business was disposed of, W. H. Holliday, division supervisor, administrator United States warehouse act of Wichita, Kan., gave the members a talk on the spread of the government warehouse idea through the south and southwest, and the confidence bankers had in warehouse receipts issued under the act. No losses have been sustained on collateral issued by warehouses operating under government supervision, he said.

L. J. Keefe of Milwaukee gave a short resume of the commission house situation in this market, and Bolles Rogers, of the Van Dusen-Harrington Co., who just returned from a trip through the south and southwest, had some interesting information to impart to the association regarding the use of a margin call clause in cash grain contracts as practiced in Kansas City and Omaha. He found the grain buyers favorably disposed towards the method and suggested general use of the same by local shipping houses as protection on open trades with this rather distant territory for Minneapolis.

William Gregory of the Gregory, Jenkinson Co., suggested the advisability of closer co-operation between the shippers' association and other groups in the grain trade.

A BIT OF WHEAT HISTORY.

History records the fact that between 1550 and 1560, when prices of many things were supposed to be regulated by law in England, there were some violent fluctuations in the price of wheat. One year the price before harvest was 45s per quarter, or about \$1.35 per bushel. The historian says that "immediately after harvest" the price dropped to 5s 4d per quarter, or about 16c per bushel. There were no grain exchanges in those days, no trading in future deliveries, no speculators, no official crop reports, no daily papers, telegraphs and radios to disseminate information about the market. Likewise there were no such influences to stabilize it, for that is one effect of our modern marketing system of which these are essential parts.—The National Stockman & Farmer.

NORTH DAKOTA GRAIN GRADING ACT INVALID.

The North Dakota Grain Grading Act was declared invalid and unconstitutional May 4 by the U. S. Supreme court.

It was the second North Dakota statute of a similar nature to be invalidated by the highest court. After an act passed in 1919 had been held to be in conflict with federal law the voters of the state in 1922 adopted the present statute which the state contended

was free from the objectionable features
of its predecessor.

The Farmers' Grain Co. of Emblem
led the attack on the 1922 law as a re-
straint upon interstate commerce.

Justice Vandevanter in delivering the
decision recently said the right to buy
grain in interstate commerce was not
a state given right but is a common
right such that no state could fetter
with conditions or control. For that
reason the decision of the lower court,
invalidating the act, was affirmed.

Justice Brandis dissented but did not
present a formal dissenting opinion.

**A PERMANENT COTTON MAR-
KET.**

Chicago is to be a permanent cot-
ton market.

The pioneering period of five months,
which ended May 1, has proved the pro-
ject to be a commercial success, accord-
ing to President Frank L. Carey of the
Chicago Board of Trade.

"Steady growth of the cotton futures
market since its creation Dec. 1," said
President Carey, "has been ample proof
of its importance in the world of com-
merce. All the obstacles of a new mar-
ket have been met and surmounted.
And today there is every assurance that
Chicago is to be a permanent cotton
market."

"Future contracts provide for deliv-
ery of cotton at Houston and Galves-
ton, the largest exporting point in the
world. Delivery on these contracts in
each of the active trading months has
been of good volume. The fact has
been clearly established during the five
months that Chicago futures are readily
convertible into the physical cotton."

"Volume of trading has shown a slow
but steady increase. From the South-
west, which has supported the market
from the start and which was instru-
mental in its creation, there is an in-
creasing amount of hedging business.
Incidentally, no single development in
recent years has so closely allied the
Southwest and the Chicago district."

"When the new market was estab-
lished there was some apprehension
that business might be diverted to this
market to the disadvantage of the older
exchanges at New York and New Or-
leans. Such fears were unfounded. Just
as New York felt no ill effects from
the establishment of the market at New
Orleans, these older markets have lost
no business as a result of the Chicago
market's operation. But on the con-

trary the older markets probably have
benefited by the competition. It is a
curious fact that new markets increase
the amount of business for all markets,
for they develop new interest in a com-
modity. They also tend to stabilize
prices. Happily the new market has
had the support and assistance of the
older markets.

"It has been clearly demonstrated
that the cotton trade, particularly of
the Southwest, needed another futures
market where the business in spot cot-
ton for export and domestic consump-
tion could be hedged by the purchase
and sale of contracts adequately pro-
tected by a deliverable reserve stock.
This need has been fulfilled."

"It is the confident belief that the
plan of trading at Chicago with deliv-
ery at Houston and Galveston will de-
velop into one of the major influences
in the marketing of the American cot-
ton crop."

J. W. Garrow, president of the Texas
Cotton Association, declared that the
Chicago cotton market has seemingly
answered in a rather unexpected way
the question of southern deliveries, the
advisability of which we have discussed
for many years and upon which the
members of the Texas Cotton Associa-
tion have for as many years differed.

"It would seem that the establish-
ment of future trading in Chicago
should be viewed with utmost satisfac-
tion. We are in nowise deprived of
any of the uses and benefits of the
New York and New Orleans contracts.
But we have the added privilege of
hedging operations in a market, the lo-
cation of whose contracts is identical
with the points of concentration of the
bulk of our cotton and in the path of
the direct movement of all western cot-
ton to foreign markets."

"It has been functioning long enough
for it to have become recognized as an
established and dependable addition to
the marketing machinery of our great
product."

NEW MEMBERS.

Secretary Smiley of the Kansas Grain
Dealers' Association's ambition is to
have every elevator company in the
state become affiliated with the associa-
tion and he is ever working to that
end. Since Jan. 1, he has secured 46
new members, recently the following
joining the association: Chetopa Mill

DAIRY FEED SLOW.

BEDFORD, O.—No demand for dairy feed. Cows all gone. Large demand for poultry feeds. Mill feed fair.—*The Bedford Mfg. Co.*

COTTON SEED MEAL.

KANSAS CITY, May 9.—Firm holding on the part of mills, rather than a good feeding demand, induced Kansas City dealers to advance the price of cotton seed meal and cake 50c a ton this week. The market here was quoted at \$42.30 per ton f. o. b. for carlots. Oklahoma mills asked \$36.50@37 and the Arkansas price was \$38@39. Texas made no effort to sell northward, but prices in that state were nominally the same as in Oklahoma. Handlers of the product say there is likely to be a quiet market until July or August.

Only occasional sales of linseed meal were reported. The price quoted here was \$45.30 per ton, or 50c less than a week ago. Minneapolis mills offered moderately at \$41.

Hog feeders in Kansas and Missouri were fair buyers of tankage at \$50 a ton for carlots. The ton price was \$55. These quotations were the same as a week ago. Meat scrap was well taken by manufacturers of poultry feeds. Its price was unchanged. Carlots sold at \$55, while ton lots brought \$60 when sold to poultry feeders.

NEW YORK OATS MARKET.

Oats.—Prices advanced partly in sympathy with the rise of other grains, but mainly because of a large export business in American oats having been accomplished during the week. At the moment there seems every likelihood that this demand will continue. The interior movement is small and shipments from Northwestern markets via the lakes were in large volume. As both exporters and the domestic trade have purchased liberally of this class of goods, premiums again scored a further advance. The effect of recent large purchases from abroad and an improved domestic demand generally will not result in an immediate shrinkage of stocks, but this may be looked for as foreign deliveries are taken. Local dealers continue to give preference to the Northwestern oats on account of their lower value as compared with all rail shipments.—*L. W. Forbell & Co.*

MINNEAPOLIS LINSEED MARKET.

MINNEAPOLIS, MINN., May 9.—While we have not heard of any large transactions in linseed oil, there has been quite a marked improvement in the inquiry and in oil sales during the past two or three days of this week, indicating that consumers' stocks in many cases are about exhausted and supplies not generally apparent for June forward.

The advance in Canadian values, which has no doubt followed an urgent demand for seed from crushers because it was about the only seed that would enable them to make oil without loss, has been very sharp, and at the moment probably Argentine seed for New

York harbor would be about as cheap as the Canadian.

There is a little better demand for the Argentine seed from Europe, caused mainly by a better European consumptive demand for the by-product. Quotations we have on oil from Holland would indicate a cost duty paid in New York harbor several cents per gallon higher than we are quoting domestic oil.

On May 1 Minneapolis May flax was \$2.69½, Duluth \$2.68¼, Argentine c. i. f. New York \$2.82¼. On May 9 Minneapolis \$2.78, Duluth \$2.77, Argentine c. i. f. New York \$2.92¼. Receipts first eight days of May were: Minneapolis 78 cars, Duluth 20 cars.—*Archer-Daniels-Midland Co.*

OIL MEAL MARKET.

The oil market has also shown very definite signs of life. Prices jumped quite rapidly and demand has been heavy. Buyers are excited and don't know just what to anticipate this spring and summer.

Flax stocks seem to be decreasing rapidly due to heavy shipments of Canadian seed to the eastern coastal mills. It is very doubtful whether any volume of Argentine seed will come into this country this year, as it usually takes thirty days for a shipment to reach New York harbor after it leaves the Argentine.

Our own new crop seed which normally starts to mature around the end of August will be available before much Argentine seed could get up here. However, in the meantime it looks as if another shortage of flaxseed will be felt.—*Bertley Bulletin, Chicago, May 9.*

FEED MARKETS.

MILWAUKEE.

Milwaukee, May 9.—Demand for prompt shipment wheat feeds greatly exceeded the offerings in the Milwaukee market last week and prices advanced \$2@3 for bran and \$2.50@4 for middlings. Increased interest was also shown in bookings for June and July delivery offerings on this basis being \$3@4 off list. Rye feed advanced \$3@3.50 per ton to a price which was largely nominal as there has been no rye feed offered at Milwaukee for at least ten days. Current quotations, per ton, now are: Winter bran, \$29@30; spring bran, \$29@30; standard middlings, \$32@32.50; flour middlings, \$35@36; red dog, \$42@43; rye feed, \$29.50@30; linseed oil meal, \$43@45; cottonseed meal, \$40.50@45; hominy feed, \$38.50@39.50; oat feed, \$7@7.50; gluten feed, nominal, \$32.80, all in 100-lb. sacks, car lots, f. o. b. Milwaukee.

PHILADELPHIA.

Philadelphia, May 9.—There is a good inquiry for feedstuffs and with light offerings the market ruled firm with an upward tendency. Quotations represent car lots in 100-lb. sacks, at cost per ton: Soft winter bran, \$36@37; winter middlings, \$33@34; spring bran, \$35@36; standard wheat middlings, \$35@36; flour middlings, \$39.50@43; red dog, \$47@48; rye middlings, \$33@34; reground oats feed, \$13@14; fine yellow hominy, \$44@45; fine white hominy, \$44.50@45.50; low grade flour, \$49@51; cottonseed meal, 36% protein, \$43.75@44; cottonseed meal, 41% protein, \$46.25@46.50.

BALTIMORE.

Baltimore, May 9.—The demand is fair in a jobbing way for sacked bran and middlings, and the spot wheat feed situation is firm. Hominy feed and gluten feed in lighter offering and difficult to quote accurately. Alfalfa meal holds its own in price. Dried beet pulp is selling very sparingly owing to the steady improvement in pasturage. Quotations follow: Spring wheat bran, per ton, 100-lb. sacks, \$32@33; western middlings, per ton, 100-lb. sacks, \$34@34.50; hominy feed, per ton, \$42@43; gluten feed, per ton, \$40; alfalfa meal, per ton, \$31@32; dried beet pulp, per ton, \$37@37.50.

MEMPHIS.

Memphis, May 9.—Millfeed continues slow sale and buyers are looking for bargains, which are very few, as offerings are light and mills are firm in their ideas of value. Wheat bran is quotable at \$30 to as high as \$31, while gray shorts range from \$35.50 to \$37. Alfalfa meal continues slow and No. 1 is quotable at \$27 to \$27.50, with very limited sales. Mills are offering sparingly of cottonseed meal and with demand about as it has been prices are slightly higher. For 41 per cent quotations are about \$38.25, while 43 per cent is quotable at \$40.25 to \$40.50.

NEW YORK.

New York, May 9.—The inactivity in milling centers has resulted in further curtailment in the production of mill feed, and as the demand is fair, prices have displayed a very firm undertone and sharp

MANUFACTURERS OF

RAW, BOILED and REFINED LINSEED OIL

Mills—MINNEAPOLIS, CHICAGO, TOLEDO, BUFFALO, NEW YORK

Agents in all large cities of the United States

Advances have been recorded during the week. Buying is of a conservative character. There is evidently no great amount of feed being held by distributors and consumers in the East. City bran is quoted around \$34, middlings 35 and red dog \$43, while western bran is at \$35.75, middlings \$37.50 and red dog \$49 per ton.

MINNEAPOLIS.
Minneapolis, May 9.—The Minneapolis market came in for a rather hectic week and prices are from \$2 to \$3 per ton higher than last Saturday. The mills are producing very little feed and with no apparent chance of any immediate increase in the demand for flour and mills being forced to bid for track offerings in order to fill their current and back contracts, the one of the market is very strong. It really does not appear that the actual consumptive demand has begun to come in as yet but there has been scattered buying by small mixed feed dealers. There is no question but that the latter class of people permitted their stocks to get down to the very lowest point possible and when Buffalo was not able to take care of them they were forced to go back to the old stand for their needs. Jobbers and mills advanced their prices almost daily and local warehouses having the actual feed on tap were able to get some rather fancy prices for what stuff was actually needed. For instance, there was one car of pure bran which brought \$23 f. o. b. Minneapolis during the past week.

General asking prices today were as follows: Standard bran, \$27; pure, \$27.50; shorts, \$29@29.25; flour middlings, \$33.50@44; red dog, \$40@41; oil meal, \$42.50@43.50. Weekly shipments total 10,112 tons vs. 0,895 last week and 12,478 tons a year ago. Season shipments were as follows: Since Jan. 1 this year, 212,888 tons and last year, 22,056; since Sept. 1 this year, 459,501 tons and last year, 532,960.

DULUTH.
Duluth, May 9.—Advances extending all the way from \$1 to \$4, the top in red dog came during the last week. Millers were short in feeds as a result of light business in flour. Closing prices per ton follow: Bran, \$27; shorts, \$29; Boston mixed, \$29; red dog, \$43; flour middlings, \$33; ground oats, \$28.75; No. 1 ground feed, \$36.75; No. 2 ground feed, \$34.75; No. 3 ground feed, \$32.75; cracked corn, \$40.50; coarse cornmeal, \$40.

CINCINNATI.
Cincinnati, May 9.—Some irregularity was shown in mill feeds during the week with prices fairly steady and standard middlings higher and soft and hard lower. The market as a whole, however, was easy in one with offerings fairly liberal and demand only moderate. Production was reported as somewhat smaller but daily offerings were fully ample for the current needs. Quotations represent 100-lb. sacks: Soft winter wheat bran, \$31@31.50; hard winter wheat bran, \$30.50@31; spring wheat bran, \$30@30.50; standard middlings, \$33.50@34; soft wheat middlings, \$36.50@37; gray hard middlings, \$36.50@37; mixed feed, \$33.50@34; No. 1 alfalfa meal, \$29; hominy feed, \$39.50@40.

BOSTON.
Boston, May 9.—Prompt shipment, per ton: Spring bran, \$36.50@37; middlings, \$36.50@42; mixed feed, \$37@44; red dog, \$48.50; hominy feed, \$44.50; stock feed, \$44; oat hulls, re-ground, \$13; cottonseed meal, \$45@50.25; linseed meal, \$47.50. Oatmeal—Per 90-lb. sack, rolled, \$3; cut and ground, \$3.30. Oats—All rail, fancy, 40 lbs., 62@63c; fancy, 38 lbs., 60@61c; regular, 38 lbs., 59@60c; regular, 35 lbs., 58@59c; regular, 34 lbs., 57@58c.

FEEDSTUFFS SITUATION.
There has been a good demand for millfeeds particularly for immediate and prompt. Flour production has been sub-normal. Grain prices have been high. Consequently, all of this has played a large factor in advancing millfeeds and holding them very firm with tendencies to advance subject to the wheat advances. Most buyers' interest is for immediate prompt May and very little beyond this time of shipment. There is some sellers' interest for June, July, August.

MINNEAPOLIS.—Bran, \$27 to \$27.50; standard middlings, \$29 to \$29.50; flour

When You Need Dried Buttermilk

WRITE, PHONE OR WIRE

S. T. EDWARDS & CO.

110 South Dearborn Street CHICAGO, ILL.

middlings, \$33.50 to \$34; red dog, \$41 to \$42.

CHICAGO.—Bran, \$29.60 to 30.10; standard middlings, \$31.60 to \$32.10; flour middlings, \$36.10 to \$36.60; red dog, \$43.60 to \$44.60.

KANSAS CITY.—Bran, \$26.50; gray shorts, \$33.

ST. LOUIS.—Bran, \$28.90; gray shorts, \$35.40.

ALFALFA MEAL.—Good demand for immediate prompt 30 and 60 day shipment. Mills have curtailed production on account of the end of the milling season and Colorado farmers becoming too busy in the fields to take their valuable time to haul hay. Nominally quoted second hand bag basis, choice, \$30; No. 1, \$27; No. 2, \$22. Fine ground grades \$3 to \$4 a ton premium.

REGROUND OAT FEED.—Nominally quoted \$7 to \$8; unground, \$9 to \$10. Very little demand; at the same time there is very little production which is the usual situation from year to year at this time.

LINSEED OIL MEAL.—There has been some strong advances during the past week due to additional demand for export, though the demand domestically is unchanged with slightly less interest. Nominally quoted \$43 Minneapolis; \$44 to \$45 Chicago, with \$2 per ton less in bulk where available.

HOMINY FEED.—A fair demand with higher corn markets, hominy has advanced. Nominally quoted white, \$42.50; yellow, \$41.50. In bulk, where available, \$1.50 to \$2 per ton less.

DRIED BUTTERMILK.—Demand is very strong and but few cars are available. Prices today are as follows: Creamery in carlots 6½¢ per pound and 7½¢ for ton lots.

COTTONSEED MEAL.—The market is firm and demand very fair. Today's quotation for 43 per cent protein, Chicago basis, is \$45.

PACKERS' PRODUCTS.—There is a fair demand for packers' products and prices are quite firm. Today's quotations are

Fairmont's Pure Flake Buttermilk

Superior Quality
Non-Lumping
Prompt Shipment
Six Big Plants

The Fairmont Creamery Co.

General Offices, OMAHA, NEBR.

as follows: Meat scraps in carlots f. o. b. Chicago, \$55 per ton; 60 per cent protein digester tankage, \$50, with raw bone meal unchanged at \$50.

GLUTEN FEED.—In bulk \$30 a ton, sacked \$32.80. Gluten meal of 40 per cent protein \$42.80 in sacks and \$40 in bulk.

CHARCOAL.—Seasonable demand at a price basis f. o. b. Chicago; Milwaukee carlots, \$33@38 per ton, depending upon size of charcoal. Less than carlots, \$35 @50 per ton, standard units of 50-lb. burlap bags (for the finest grades, paper lined) in 13-ton minimum cars.

BURLAP BAGS.

There has been little change in the burlap situation during the past month, this partly due to the general slowing up in demand for all commodities which many attribute directly to the beginning in the slump of grain prices, this followed shortly thereafter in the decline in the stock market.

Fundamentally, the position of jute in Calcutta is very strong, the stocks on hand being insufficient many believe to take care of the mills' requirements until the new crop commences to make its appearance and while the demand for burlap cloth and bags from this country has materially slackened such, however, does not seem to affect the Calcutta market for apparently they are doing quite a large volume of business with other countries.

Many of the best posted authorities on jute are firm in their belief jute and burlap are going to rule at high levels for many months to come, therefore, we do not look to see burlap prices lower than those now prevailing.

Shipments to the United States during March are apt to be far below the normal quantity, and if this proves true burlap prices for June and July are apt to be higher than we have now.—"Bagology," published by Chase Bag Co., New York.

BROOM CORN MARKETS.

Sales the past week have been comparatively light and below the general average. With this condition existing, however, warehouses are showing no concern to the situation as they consider that all tendencies point to a continued steady market with no change of any consequence one way or the other in sight, until crop developments have progressed to such a degree where it will be possible to reach a conclusion as to what can be expected on the new crop.

As new corn will not be available before the late summer and early fall, the demand is expected to absorb a fair part of the sale corn available and also the storage stock held for factories, consequently, it is not believed that the carry-over will be as large as was indicated it would be several months ago.

Warehouses are showing the same degree of willingness to make replacements at market values as has been shown heretofore, as corn has been taken from growers and primary warehouses. This factor of taking corn steadily is considered as denoting confidence both in the present and the future. Corn with any merit is held firmly, no indications shown to force sales by making sharp price concessions, as has been the case in other years previous to the advent of a new crop.

Dwarf is held from around \$75 to \$100 with \$110, \$120 and \$130 asked for the better end and occasional cars of poorer grades around \$65 and \$70. Western Standard is priced in line with dwarf.

Lindsay Standard is offered from around \$85 to \$135 with picked cars held up to \$150. Odd cars of sticky, spikey Lindsay are offered under the general range.—*Broom Corn Review.*

Paris bread prices have been reduced 10 centimes per kilo during the past fortnight, according to information from David S. Green, assistant trade commissioner for the department of agriculture.

Alfalfa Department

ALFALFA MEAL MARKET.

KANSAS CITY, May 9.—With most of the inquiry northward and eastward, and the southeast buying but little, the demand for alfalfa meal this week was not large. One reason for dullness was the convention of feed manufacturers in New Orleans. It is expected that trade will broaden before the end of the month. Colorado and Wyoming mills held their product firmly. As the St. Louis market, was lower, prices in Kansas City were quoted unchanged to 50c down, with carlots as follows, per ton f. o. b.: Choice, \$25@26; No. 1, \$23.50; No. 2, \$18@19; No. 3 or brown, \$17.50.

Demand for grain and molasses feeds was slack all around, with trade chiefly in horse, mule and poultry products. Horse and mule feeds went up 50c@1.50 per ton on account of higher corn, and scratch poultry feeds sold \$1@2.50 higher. There was a slight reduction in alfalfa-molasses feeds. No other changes were reported. Manufacturers say dried buttermilk, one of the ingredients of mash poultry feeds, costs \$120 a ton. Feeds were quoted in carlots per ton as follows: Dairy feeds, \$36@46; cattle feeds, \$39@44; hog feeds, \$45@51; pig meal, \$68; horse and mule feeds, \$32.50@42.50; alfalfa-molasses feeds, \$26@32; scratch poultry feeds, \$47.50@54; mash poultry feeds, \$49@75.

AGRICULTURAL GYPSUM.

By Dr. W. E. Taylor.

Recent experiments have demonstrated the fact that gypsum (calcium sulphate), commonly known as land plaster, possesses a high fertilizing value, and in addition if properly used will prevent fertility from going to waste. It is also a splendid disinfectant in foot-and-mouth disease and poultry diseases, and is said to be a cure for tuberculosis.

Gypsum is an untreated ground natural rock fertilizer, consisting mainly of hydrated calcium sulphate, or rather calcium and sulphur. Calcium is a very important soil element, and when it does not exist in sufficient quantities, crops of all kinds are not able properly to absorb and use the other food elements. It also has the effect of lightening clay soils, making them friable and of good physical condition.

Sulphur, an element in gypsum in the form of sulphate, is necessary to all plants, but its greatest value is in the production of legumes, especially alfalfa, clover, beans, vetch, peanuts and peas. It also enters extensively into the growth of onions, garlic and like plants.

Sulphate sulphur (part of gypsum) makes a wonderful increase in the growth of legumes by increasing the supply of organic nitrogen in root nodules, which is changed through the action of bacteria into nitrates, often increasing the yield of alfalfa from 100 to 300 per cent.

The remarkable effect of gypsum in increasing the yield of legumes and many other crops is in part due to the fact that it decomposes the silicates in the earth and renders soluble the potash bound up or dormant in those silicates. This action of gypsum is of great benefit to crops, especially those that are heavy users of potash.

Gypsum is also provided for lawns if applied early in the spring or mixed with lawn seed when it is sown.

How TO APPLY GYPSUM.—Gypsum may be sown on the land before the seed is planted, or at the same time, using a fertilizer attachment to the drill, or broadcast sower. It can be applied with a lime-sower with splendid results to growing alfalfa, clover and bluegrass early in the spring. The amount to apply ranges from 200 to 500 pounds per acre.

GYPSUM SAVES NITROGEN.—It is esti-

mated that each year more than \$800,000,000 worth of nitrogen—the most valuable and important of all plant food elements—is lost through the evaporation of ammonia from urine and solid excrements from livestock. Gypsum applied to stable floors, gutters back of cattle, or to manure as it is placed in concrete pits, will stop the waste of nitrogen and also prevent that disagreeable odor of ammonia in cow and horse barns. The preservation of nitrogen is brought about through the property gypsum has of recombining ammonium-carbonate, which is very volatile, into a firmly fixed salt of ammonia (ammonium sulphate). In addition to saving nitrogen, which is worth 30 cents a pound, it improves the sanitary and living conditions of the livestock, also those in charge, and prevents the odors from being absorbed into the milk. The amount to use ranges from three to five pounds an animal each day, or about 100 pounds for each ton of manure.

If soil is deficient in phosphorus, as most of our soils in this section are, it is a splendid plan to mix and apply rock phosphate with gypsum. Any doubting farmer will be convinced of its efficiency if he will make one trial. I would suggest that a trial be made on a one- or two-rod strip, through your alfalfa field. However, gypsum will not take the place of lime to sweeten sour soil.

GROWING SUNFLOWER SEED IN ILLINOIS.

Sunflower growing looks good to many farmers in Moultrie and Dewitt counties, Illinois, who have grown this crop for the last three years at a very good profit. Many Douglas farmers are studying the new crop, and farms are working to get it started.

The report was circulated that in Douglas and Piatt counties farm bureaus warned their members not to plant sunflowers.

Advisers deny this and say they believe if the crop is not overdone it will make fair money, but it can be easily overdone. The safest way is to contract the crop, and then there is no way to lose in case of a surplus. In Moultrie county about nine out of ten growers do this. As a result a seed company has started up in Sullivan.

The company announces they are contracting with farmers for sunflower seeds at \$3.20 per cwt., and furnish the seed for planting, which is equivalent to \$3.45 per cwt. They expect to take in at least 3,000 acres. Contracts have already been made for 2,000 acres.

The company states that the season is better for the crop than last, and even in the trying times of last year the yield ran from 1,000 to 1,900 pounds to the acre.

The time for planting is very favorable, as they do not have to be put in until after the corn. The cultivation is kept up very easily in comparison with corn, requiring only one good plowing. They are threshed in a corn sheller.

CHICAGO GRAIN STOCKS.

Wheat stocks in all positions in Chicago increased 23,000 bus. last week, and barley 5,000 bus. Corn decreased 731,000 bus., oats 1,309,000 bus., and rye 760,000 bus. Details follow, last three ciphers omitted, except in the totals:

	Public.	Private.	Total.	Last yr.
Wheat	1,001	2,375	3,376,000	12,760,000
Corn	4,239	6,544	10,783,000	3,813,000
Oats	3,263	8,364	11,627,000	2,738,000
Rye	1,909	109	2,018,000	1,931,000
Barley	259	259,000	164,000

The government of Czechoslovakia reports winter crop prospects satisfactory and spring sowings well advanced, with weather favorable. Imports of bread grains and flour have decreased.

GOOD DEALERS PROPOSITION.

Barley

CHICAGO BARLEY PRICES.

Following is the daily range of quotations for spot malting barley quotations at Chicago:

May 4.....	\$0.85@0.90	May 7.....	\$0.85@0.90
May 5.....	.85@ .90	May 8.....	.85@ .90
May 6.....	.85@ .90	May 9.....	.85@ .91

Receipts of barley at Chicago for week ending May 9, 1925, were 123,000 bus., compared with 173,000 bus. same week 1924; shipments, respectively, 30,000 bus. and 53,000 bus.

RECEIPTS OF BARLEY.

Carload receipts of barley last week at different points named with comparisons, follow:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 4.....	45	7	6	21	31
May 5.....	26	8	17	60	12
May 6.....	13	9	15	12	24
May 7.....	15	13	3	25	12
May 8.....	25	11	11	38	24
May 9.....	29	6	8	21	9
Total	153	54	60	177	112

BARLEY MARKETS.

MILWAUKEE.—Barley was less effected by bullish crop reports than any other cash grain in the Milwaukee market and prices continued steady. Advances in quotations during the week amounted to 1@2c per bushel. Malting grades continued in good demand but offerings were mostly of poorer grades which were slower. Receipts in the period were light, only 112 cars being reported as compared with 131 cars in the previous week and 147 cars in the same week of the previous year. Choice to fancy, 48 to 50 lb. test, quotable at 94@96c; fair to good, 44 to 47 lb. test, 82@94c; light weight, 40 to 43 lb. test, 82@91c; feed, 70@82c. Iowa quoted 80@95c, as to quality; Wisconsin, 80@96c; Minnesota, 80@95c; Dakota, 80@95c; feed and rejected, 70@84c.

MINNEAPOLIS.—Barley was slow early in the week, followed by a slightly better tone in mid-week and then a reversal of form as the week ended. The choice malting quality was in fair demand but offerings of this kind were limited and were in no way a drag on the market. Medium stuff easy the bulk of the time. The only bright spot was export inquiry coming in via Duluth. Stocks here are slightly lower at 1,174,752 bushels vs. 1,403,771 last week and 166,688 a year ago. Range of sales today ran from 72@85c.

KANSAS CITY.—Five cars of barley were marketed here this week. Demand proved moderate, except on recessions in prices. The market closed 2@4c per bushel lower than a week ago, with No. 3 at 88@90c and No. 4 at 83@88c. Shipments reduced the local stocks 1,000 bus. to 5,000. A year ago the holdings were 55,000 bus. A large acreage has been sown in the southwest and the crop seems to have made a good start.

DULUTH.—Business was light in the barley market during the last week. Receipts were only 24 cars, and part of them were applied on sales. Dealers were in the market for small lots at times, and that led to a light firming up in prices. Boat space was reported to have been taken to ship out part of the 375,000 bu. of domestic and bonded barley held in the elevators. Closing prices per bu. are 1c up at from 72 to 86c.

FT. WORTH, TEX.—Barley is in good demand and very difficult to obtain and prices have shown a stiff advance and in as much as prospects for the coming crop are very slow and it is believed that there will be a good demand for some time. Today, May 9, barley is selling here as follows, delivered Group One: No. 3 barley, \$1.01; No. 4 barley, \$1.00; 40-lb. barley, 98c.

CHICAGO.—Unchanged. Good demand and stocks decreasing rapidly. Exports, 25,000 bus.; for the week, 865,000 bus., against 115,000 bus. last year. Local

shippers ordered out 3 cars from private houses and 1,737 bus. from store. Visible decreased 681,000 bus.; last year increased 208,000 bus.; total, 2,166,000 bus.; last year, 1,044,000 bus. Local stocks increased 5,000 bus.; total, 259,000 bus.; last year, 164,000 bus. Good barley sales made to Denmark, Rotterdam and Antwerp. Locally malting quotably 85@91c, with extra quality higher; feeding and mixing, 80@85c; screenings, 45@75c. Local inspection, 19 cars. Shipping sales, 3,000 bus.

RYE MARKETS

CHICAGO RYE FUTURES.

Following is the range of future prices for rye for the week ending May 9:

May.	May.	July.	Sept.
4 1.14 1/2 @ 1.24	1.10 1/4 @ 1.18	1.02 @ 1.09	
5 1.20 1/2 @ 1.23	1.13 @ 1.15 1/2	1.03 1/2 @ 1.06 1/2	
6 1.20 @ 1.26 1/2	1.13 1/2 @ 1.18 1/2	1.04 @ 1.09 3/4	
7 1.22 @ 1.27 1/2	1.15 @ 1.19	1.07 1/4 @ 1.10	
8 1.24 1/4 @ 1.28 3/4	1.16 1/2 @ 1.19 1/2	1.08 3/4 @ 1.10 3/4	
9 1.24 @ 1.26 3/4	1.13 3/4 @ 1.16 3/4	1.06 1/2 @ 1.09	

Receipts of rye at Chicago for the week of May 9, 1925, were 84,000 bus. vs. 32,000 bus. same week of 1924; shipments were 977,000 bus. vs. 4,000 bus. same week of 1924.

RYE SPOT QUOTATIONS.

Closing outside prices for rye of No. 2 quality cash for the week ending May 9, were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 4.....	4.51.13	\$1.16 1/4	\$1.18 1/4	\$.....	\$1.17
May 5.....	5.1.11 1/4	1.14 1/4	1.21 3/4	1.18	1.22
May 6.....	6.1.16 3/4	1.18	1.24 3/4	1.23	1.25
May 7.....	7.1.14 3/4	1.16 1/4	1.23	1.21 3/4	1.24
May 8.....	8.1.17 1/4	1.19 1/4	1.27 1/4	1.23 3/4	1.26
May 9.....	9.1.12 1/4	1.16 3/4	1.23	1.18 3/4	1.24

RECEIPTS OF RYE.

Carload receipts of rye at the principal primary markets in the Central West for the week ending May 9 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 4.....	6	124	11	4	3
May 5.....	5	84	30	20	1
May 6.....	2	47	21	4	1
May 7.....	1	38	6	4	..
May 8.....	10	75	8	12	2
May 9.....	2	25	4	5	3
Total	26	393	80	49	10

RYE MARKETS.

MILWAUKEE.—Although the May government crop report showed the condition with respect to rye better than for wheat, rye quotations advanced more sharply than did its companion bread grain. There was a good shipping demand throughout the period and prices closed 12@13c higher for the week. Offerings were mostly offgrade with high moisture content. Trading in futures was lively. Receipts were 10 cars as compared with 5 in the proceeding week and 4 in the same week of 1924. Market closed at \$1.20@1.22 for No. 2, inside for Wisconsin, ranging at 2 to 4c under May price.

DULUTH.—Substantial advances were set in the rye market here during the last week. Urgent buying came at times from interests who were claimed to be anxious to pick up grain to cover delivery contracts. A feature on the market was the booking of considerable boat room to ship rye down to Chicago to make deliveries on the May contract. Certain interests down there were said to be scouring the country for rye and an interesting development was the movement of many cars of it down from Minneapolis to load out for Chicago. Closing prices per bu. are 6 3/4c up at \$1.16 1/4 after heavy sold up to \$1.19 3/4.

MINNEAPOLIS.—Strength in rye at Duluth helped things materially here and with the exception of one day, the past week witnessed a good demand for this cereal. Stocks here are getting down to the vanishing point almost, being only slightly more than a half million bushels today, the top being 640,505 bushels vs. 843,462 last week and 7,290,370 a year ago. Mills were after the choice milling quality and paid right up for what they could use. Today's sales show No. 1 bringing 4@5c over the July and No. 2, 3@4 1/2c over.

CHICAGO.—Closed 2 1/4@5 1/4c lower for futures and steady on carlots. Trade

was comparatively light and the market rather quiet. Offerings were liberal and the selling influenced by the weakness in wheat. Demand mainly local. Seaboard reported export inquiry slow and nothing worked. Local sales to go to store 100,000 bus. Deliveries on May contracts 131,000 bus. Visible supply decreased 626,000 bus. to 11,500,000 bus.; year ago, 19,717,000 bus. Local stocks decreased 760,000 bus. to 2,018,000 bus. Exports for the past week 1,867,000 bus.; last year, 414,000 bus. Seaboard clearances 15,000 bus. Carlots were in fair demand at 1c under May for No. 2. Offerings light. Local inspection, — cars. No. 2 sold at \$1.21@1.23 1/4.

NEW YORK.—Business in rye was less active, and total transactions amounted to about one million bushels in all positions.

Beans and Potatoes

NORMAL BEAN ACREAGE.

HOLLY, MICH.—About 10 per cent of crop in farmers' hands. Look for normal acreage. Small stocks in elevators.—Holly Grain & Produce Co.

FEW BEANS IN FARMERS' HANDS.

WEIDMAN, MICH.—No beans being delivered and very few back in farmers' hands. Believe the crop left in Michigan is in strong hands and that it is small.—Holmes Milling Co.

BEAN PRICES LOW.

LAWRENCEVILLE, ILL.—In regard to the bean situation with us, will say we are not in a position to give you any information, except we have a pretty fair stock on hand and price floating around among the wholesale dealers is very low in comparison to the cost.—Horner Elevator & Mill Co., Inc., W. C. McMichael.

BEAN PRICE SITUATION.

ST. LOUIS.—The bean market in general this season shows prices at vast extremes. California grown beans of practically all kinds are scarce, therefore extremely high. The same condition exists in New Mexico and Colorado on Pinto beans, while Michigan white beans, the most used variety of beans in this territory are extremely low, therefore they have enjoyed an exceptional amount of business. Price having declined up there fully \$1 per cwt. during the past month, leads one to believe that they should probably have reached bottom for the near future. In fact, if there is an active demand may react slightly, but general business conditions do not warrant a real healthy boom so far as we can judge.

BEANS AND POTATOES.

Quotations follow for bids of good quality condition beans and potatoes sacked, per cwt., unless otherwise specified, as of week of May 9:

Beans—Chicago — Supplies light, demand good and prices firm. Spot navy beans, Mich., fancy, \$6.25; red kidney, fair stock, \$10; large, dark, extra quality, \$10.50.

St. Louis — Quote choice hand picked Michigan white beans at \$6.10 and prime machine picked at \$5.85 per 100 lbs. Scotch peas, 7 1/4c; green split peas, 9c, and yellow, 7c per lb. California lima beans at \$15.50 per 100 lbs.

Boston — Car lots, per 100 lbs.: New York and Mich. choice hand picked pea beans, \$6.20@6.40; fair to good, \$6@6.10; California small white, \$8.35@8.50; yellow eye, extra, \$6.20@6.40; fair to good, \$6; red kidneys, choice, \$10.50; fair to good, \$9@9.25; California limas, \$14.50@15; native green peas, \$7@7.50; Canada, \$5.25@5.50; split, \$5.50@5.75; jobbing prices, 25 to 50 cents above car lots.

San Francisco — Whites, small, 8 1/2c; do, large, 7c; pinks, 9c; limas, 15c; cranberry, 8 1/4c; kidney, 12c; Mexican gar-

vanzas, 11 1/2c; lentils, large, 9c; do, small, 8c; black eye, 11c; Mexican reds, \$8.85 per cwt.; speckled bayos, 8 1/2c; bayos, 8c. Peas (per lb.)—Split peas, yellow, 7 1/2c; green peas, 8 1/2c.

New York — Market continued to rule very quiet and generally easy. Pea beans a bit stronger, with most business at \$6.25. Red and white kidneys slow sale and somewhat nominal. California limas barely sustained at \$15. Black eye peas steady at the moment at \$10.75 mostly. Domestic—Marrow, \$9.50@9.75; pea, \$6.25; red kidney, \$10; white kidney, \$8.50; lima, Cal., \$15. Imported—Marrow, \$8.50@8.75; white kidney, \$7.75@8. Lima, mad.—1924-25, \$12.25@12.50; 1923-24, \$11.50@11.75; 1922-23, \$9@9.50. Lima, Europe—Large, \$11.50; medium, \$11; small, \$10.25. Lentils—Chile, \$6.75@7; Russia, giant, \$7.50@7.75; avg., \$6@6.25. Peas, domestic—Black eye, \$10.75; yellow split, \$6.25@6.50; green split, \$7.25@7.50. Imported—Green; Japan, \$6.25@6.50; Holland, \$5.25@5.50; yellow split, \$5.50@6; green split, \$7.50@7.75. Chick, Mex.—Imperial, \$11.75; monster, \$11.50; large, \$9.50; small, \$7@7.50.

Potatoes—

Chicago—Market steady. The trade was not quite so active as the past few days and only a fair demand was noted. Buyers were more inclined to hold off until next week and most of the sales made were to fill urgent orders. Better grade offerings were slightly favored and fancy qualities commanding firm prices. Receipts were 42 cars and cars on track 84. Bulk, per 100 lbs., Wis., dustys, \$1.15@1.25; ordinary and poor, \$1@1.10; round white, sacks, Wisconsin, \$1.10@1.25; ordinary and poor, 90c @1.05; Ohios, Red Rivers, \$1@1.25. New Potatoes—Demand increasing; barrels firmer; sacked offerings steady; arrivals 29 cars and 83 cars held over on track. Barrels, Florida, Spaulding Rose, \$6@6.25; No. 2, \$4.75@5; sacks, Texas Triumphs, 100 lbs., \$3.25@3.50; Louisiana, \$3.10@3.35; Alabama, \$3.50@3.75. Sweet Potatoes—Arrivals moderate; light demand noted. Hampers, Tenn., Nancy Halls, \$2.75@3; Illinois, \$3; Jerseys, eastern, kiln dried, ordinary, \$2.50.

New York—Florida potatoes worked out well at the firmer prices ruling; old sack potatoes slightly firmer; basket sweets sold as quoted. New Potatoes, Fla., bbl.—No. 1, \$5@6.25; No. 2, \$2.25 @3.25. Bermuda, bbl.—No. 1, \$7.50@8; No. 2, \$4@4.50. Old Potatoes, Me., bulk—180 lbs., \$1.75@2; carlots, cwt., \$1.10@1.15; 150 lb. sk., \$1.60@1.85. State, bulk—180 lb. sk., \$1.50@1.75; 150 lb. sk., \$1.25@1.40. L. I., bulk—180 lbs., \$3@3.25; 150 lb. sk., \$2.25@2.75; Jy., bsk., 50@65c. Sweet Potatoes—Jy., bsk., \$1.50@3.65; Del. and Md., bsk., \$1.75@2.50.

VISIBLE GRAIN SUPPLY.

The following table gives the stocks of grain in bushels in public and private warehouses at the principal ports and in transit by water on the dates named, with comparisons as compiled by the secretary of the Chicago Board of Trade for the week ending May 9 (000 omitted):

	Wheat	Corn	Oats	Rye	Barley
Baltimore	4,004	111	187	1,129	48

BUCKWHEAT MARKETS.

MILWAUKEE.—Current buckwheat quotations (nominal) per 100 lbs. at Milwaukee are: Silver hull, \$2.10@2.15; Japanese, \$2.20@2.25.

ST. LOUIS.—Quote nominally at \$2.05 per 100 lbs.

BUFFALO.—Mixed, per 100 lbs., \$2.15; silver hull, do., \$2.00.

CHICAGO.—Fancy mixed and silver hulled buckwheat, \$2.00; Jap, \$2.25; dirty seed quotably less.

Hay Department

KANSAS CITY HAY NOTES.

T. J. Tanner, Correspondent.

C. D. Carlisle of the Carlisle Commission Co. returned this week from Dallas, Tex., where he attended the annual meeting of the directory of the Automobile Underwriters of America. He said he feared an overproduction of cotton in Texas, Louisiana and Mississippi because so much of the grain area abandoned on account of drouth was likely to go to cotton.

Reports received by J. M. Hail & Co. this week from the Pecos Valley, New Mexico, said the cutting of new alfalfa hay had begun, with unfavorable results, due to recent unsatisfactory weather. Letters said the hay was being shipped to Texas and that farmers had received \$17 a ton for the first few cars.

Jewell Mayes and A. E. Logan, who co-operate in compiling the Missouri crop report, estimate the condition of tame hay on May 1 at 91 per cent of normal. The wild hay condition is rated at 92 per cent. These figures compare with 84 and 80, respectively, a year ago. Pastures are reported as good, with recent rains helping the growth of all grasses.

J. A. Brubaker says the Kansas City hay market has lost much of its prestige through discrimination in freight rates and that the only way to restore the greatness of the market is to correct the abuse. He argues that the place to find anything is where it was lost. "If the competitors of Kansas City would attend to their own business we would soon have our affairs straightened out," said Mr. Brubaker one day this week. "Instead of doing that, however, some of them are trying to cripple what little resources we have left."

C. M. Funk predicts a sharp reduction in the alfalfa crop of the West and Southwest this year, owing to smaller acreage in Kansas and winter killing of a large part of the Nebraska crop. He also says there will be a cut of 50 per cent in the wild hay harvest unless prices of prairie advance sharply between now and July.

Weather in the Southwest since the last week in April has been mostly wet and cool, with a resultant checking of the growth of hay and grasses. Local dealers say there is not much probability of a movement of new alfalfa from Kansas before May 20 or 25, though a few scattered cars may drop in before that time. Warm, sunny weather is needed to make possible the curing of

hay in event that harvest begins the next 10 days. Some frosted fields around Salina, Kan., were harvested by farmers this week, but this hay is not expected to be marketable.

The proposition launched at the recent banquet of the Kansas City Hay Dealers' Association, to establish a public storage house for distressed hay in glut periods, is still under discussion, but no move has been made to bring the project into concrete form. Most dealers admit the need of such a warehouse, but some say there would be great difficulty in allotting space so as to satisfy big and little dealers.

The Kansas State Board of Agriculture makes the May 1 condition of tame hay in Kansas 93 per cent of normal, as against 91 a year ago; wild hay, 94, as compared with 90. It says 12 per cent of last year's hay crop remained on the farms at the end of April against 9 per cent a year ago. The report adds: "Alfalfa made a strong early growth and first cuttings are already being taken in the Southeast, with prospects of harvest being general over the state in 10 days to two weeks. Frosts at the close of April nipped alfalfa in many sections, but not so severely that warmer weather will not bring recuperation." The greater loss of acreage in Southeastern Kansas than elsewhere in the state is attributed by Prof. S. C. Salmon of the Kansas Agricultural College to the distribution last fall of a carload of African grown seed. Acreage thus sown was not able to withstand the rigors of the winter, he says.

HAY MARKET REVIEW.

The hay market was quiet during the week ending May 9, although increased receipts slowed up trading at a few cities, according to the Weekly Hay Review of the United States Department of Agriculture. The demand continued light with consumers purchasing for immediate needs only and the moderate receipts were fully equal to current requirements. Medium grades moved more readily at Boston than the top grades at the prevailing quotations, but top grades were scarce and wanted at other markets while the off grades continued to move with difficulty at wide discounts.

Prices declined about 50c—\$1.00 per ton at New York, but the increase in market was firm on reduced offerings. Quotations at Chicago were about \$1 lower, but timothy held steady at St. Louis and was firm at Minneapolis and St. Paul.

Alfalfa ruled steady to firm. The Omaha market was quiet with dealers shading prices, but quotations were advanced at Kansas City. The Los An-

North & Company
 Receivers—Shippers
Hay, Grain, Millfeed, Alfalfa Meal
 Live Stock Exchange Kansas City, Mo.

geles market was practically unchanged and trading continued dull at San Francisco.

Prairie was slightly firmer. There was very little call for feeding prairie at Chicago, but the market at Minneapolis and St. Paul was firm on light receipts with dry weather in that territory affecting the meadows and pastures. Heavy receipts burdened the Omaha market, but quotations at Kansas City were advanced to \$10.50 for No. 1 prairie.

Stocks on farms May 1 were 2,844,000 tons larger than in 1924, totaling 15,679,000 tons against 12,835,000 last year. With the exception of the 1921 figure of 18,771,000 tons this is the largest on record. Considering the record crop last year, the rather open winter, and the decrease in the number of hay consuming animals on farms, these stocks are not excessive but apparently the low price of hay favored liberal feeding and increased the amount wasted.

Meadows were in slightly better condition on May 1 this year than in 1924, being estimated at 87.8 per cent of normal compared with 86.4 per cent last year and 89.6 per cent the average condition for the past ten years on May 1. Pastures were in materially better condition on May 1 this year than last and were slightly better than the average for the past ten years.

HAY MARKETS.

NEW YORK.

May 7.—The New York Hay Exchange A.S.H. has issued the following weekly report, with latest quotations:

	Hay.	Straw.
Receipts for week, tons.....	1,613	40
Receipts, last week, tons....	608	28
Receipts from Sept. 1, tons.42,001	939	

Rail receipts, although not heavy, show an increase, and with the arrival of a river barge at Manhattan, offerings on the whole have been sufficient for all requirements.

Demand has been rather limited, buyers being inclined to defer purchases in anticipation of more liberal offerings and values have been barely maintained.

Better qualities have been in very light supply and move off freely, but the lower grades are meeting with less active demand.

At Brooklyn the Bushwick receipts were in excess of requirements and values there have ruled barely steady. Brooklyn E. D. terminal arrivals were moderate with the demand likewise and prices there have held about on a par with values elsewhere. Straw, weak and inactive.

New invoices reported light. Federal grade quotations for large bales are as follows: Timothy—No. 1, \$26; No. 2, \$23@24; No. 3, \$20@21. Light Clover Mixed—No. 1, \$23@24; No. 2, \$20@21; No. 3, \$17@18. Medium Clover Mixed—No. 1, \$20@21; No. 2, \$15@16. Light Grass Mixed—No. 1, \$23@24; No. 2, \$20@21; No. 3, \$17@18. Heavy Grass Mixed—No. 1, \$15@16. Rye Straw—No. 1, \$15@16.

CHICAGO.

May 11.—There were lighter offerings of hay and a fair demand at former prices. Receipts were 17 cars timothy and clover, 1 car alfalfa, 1 car southwest prairie, 1 car Nebraska, 1 car rice straw. Prices follow: Timothy—No. 1, \$19@21; No. 2, \$15@17; No. 3, \$10@14. Timothy and clover, light mixed—No. 1, \$17@19; No. 2, \$14@16; No. 3, \$10@13. Timothy and clover, medium mixed—No. 1, \$14@16; No. 2, \$12@14; No. 3, \$10@12. Timothy and clover, heavy mixed—No. 1, \$13@15; No. 2, \$11@12; No. 3, \$10@11. Timothy and grass, light mixed—No. 1, \$15@17; No. 2, \$12@14; No. 3, \$10@12. Timothy and grass, heavy mixed—No. 1, \$14@15; No. 2, \$11@12; No. 3, \$10@11. Clover—No. 1, \$12@13; No. 2, \$9@11; No. 3, \$8@9. Mixed grass—No. 1, \$12@14; No. 2, \$10@12; No. 3, \$9@10. Sample grade, \$7@9; alfalfa, No. 2 to choice, \$10@20; marsh hay, feeding and pkg., \$10@12; W. and S. W. prairie, Nos. 1 and 2, \$12@15. Straw—Rye, \$10@11; oat and wheat, \$8@10.

MILWAUKEE.

May 9.—Movement in the Milwaukee hay market continued on the same basis as during the past few months. Both offerings and call were practically nil. Closing quotations on Saturday, May 9, were: No. 1 timothy, \$14@15; No. 2 timothy, \$12@13; No. 1 mixed, \$13@15.50; No. 2 clover mixed, \$11@12; sample hay, \$6@8; marsh feeding, \$10; packing, \$9; rye straw, \$9@10; oat straw, \$9@10.

PHILADELPHIA.

May 9.—Baled hay and straw: The market for hay is quiet and the limited arrivals

are ample for requirements. Prices are unchanged. Straw is in small supply and the market steady but there is little trading. Hay (federal grades): Timothy—No. 1, nominal; No. 2, \$18@19; No. 3, \$16@17; sample, \$10@15. Light clover mixed—No. 1, \$17@18; No. 2, \$15@16; No. 3, \$12@14. Medium clover mixed—No. 1, \$15@16; No. 2, \$13@14. Heavy clover mixed—No. 1, \$14@15. Light grass mixed—No. 1, \$17@17.50. Straw—Straight rye, \$15@15.50; wheat, \$15@15.50; oat, \$14@14.50.

BALTIMORE.

May 9.—On the better grades of timothy and choice light clover mixed hay the market is steady with a fair inquiry for choice hay, but for the free supply of medium and low grade stuff no interest is shown even at relatively low prices.

Straw of all sorts remains steady as last quoted. Demand fair in a jobbing way for wheat and oat blocks. Quotations follow: hay, per ton: Timothy—No. 2, \$18.50@19; No. 3, \$15.50@17. Light clover mixed—No. 1, \$17.50@18. Clover mixed—No. 1, \$17; No. 2, \$15@16. Straw—No. 1 straight rye, \$18.50@19; No. 1 wheat, \$15@15.50; No. 1 oat, \$15.50@16.50.

OMAHA.

May 8.—Prairie hay receipts good. Demand fair on better grades. Prices some lower account heavy receipts first part of week. Alfalfa hay receipts good. Demand steady for top and lower grades if sound, but out of condition and grassy hay hard to move, also medium in-between grades slow to bring satisfactory prices. Prices some lower. Prices below are for carload lots: Upland prairie—No. 1, \$10.50@11; No. 2, \$8@10; No. 3, \$6.50@8. Midland prairie—No. 1, \$10@10.50; No. 2, \$8@9; No. 3, \$5.50@7. Lowland prairie—No. 1, \$6.50@7.50; No. 2, \$5@6. Alfalfa—Choice, \$17.50; No. 1, \$15@16; standard, \$12@14; No. 2, \$9@11; No. 3, \$7@8. Straw—Oat, \$7@8; wheat, \$6@7.

TOLEDO.

May 11.—Hay is dull with very slight improvement in the demand. A few racing stables are providing occasional orders but the total is small and dealers look for another season of low prices and slow trade with the government report showing a large potential crop. Prices are unchanged for the week again with receipts and shipments very small. No. 1 timothy, \$14; No. 2 timothy, \$12; No. 1 light clover mixed, \$13.50; No. 1 heavy clover mixed, \$12.50; No. 1 red clover, \$11; No. 1 first cutting alfalfa, \$15; No. 1 second cutting alfalfa, \$20; sound dry wheat straw, \$8.50; sound dry oat straw, \$8 f. o. b. Toledo.

MEMPHIS.

May 9.—Hay continues very quiet as feeders are taking only their immediate requirements. Receipts have been light as dealers do not want to have much on hand just as new hay will begin to come in, although this territory has had so little rain that prospects are very poor. Good quality hay is in fair request and steady but low grades have been disposed to drag and are easy. Quote: Timothy—No. 1, \$21@21.50; standard, \$20@20.50; No. 2, \$18@19. Alfalfa—No. 1, \$27@27.50; standard, \$24@24.50; No. 2, \$20@20.50.

KANSAS CITY.

May 9.—In volume of offerings the hay market was again meagerly supplied this week. Rains made trading difficult. The shadow of the new crop hung over the market, but price changes were upward. Total receipts were 186 cars, as compared with 187 a week ago and 332 a year ago. Alfalfa arrivals dropped 33 cars, with only 107 on sale. Owing to the scarcity there were insufficient offerings to meet the limited demand. Dairymen and shippers paid unchanged prices for the two upper grades. Advances of \$1 to \$2 a ton were scored on the grades from No. 1 downward. New alfalfa may appear on the market any day if the rains cease and permit curing, but no considerable movement is expected before the latter part of this month.

There was an increase of 23 cars in the receipts of prairie hay, making the arrivals 55 cars. Trade was fairly active for local account and shipment. In the latter part of the week prices went up 50c to \$1.50 a ton, except on packing.

Combined offerings of timothy, clover-mixed and clover were 24 cars, or 9 more than a week ago. The hay sold in a scattered way at unchanged prices.

Straw made a poor showing, as one car came in and it sold at the top level of the previous week. The market was firm.

Carlots of hay and straw are quoted as follows per ton f. o. b. Kansas City:

Alfalfa—Select dairy, \$23.50@26.50; choice, \$21@23; No. 1, \$19.50@20.50; standard, \$16@19; No. 2, \$12.50@15.50; No. 3, \$9@12.

Prairie—No. 1, \$10.50@11; No. 2, \$8.50@10; No. 3, \$5.50@8; packing, \$4@5.

Timothy—No. 1, \$14.50@15; standard, \$13@14; No. 2, \$11.50@12.50; No. 3, \$9@11.

Clover mixed—Light, \$14@15; No. 1, \$12.50@13.50; No. 2, \$9@12.

Clover—No. 1, \$9.50@12; No. 2, \$7@9.

Straw—Wheat, \$8@8.50.

DULUTH.

May 9.—Demand for hay has been down almost to a summer basis lately. The call was practically confined to the best grades, the low grades being almost unsalable. Closing prices per ton are unchanged as follows: Timothy—No. 1, \$16; No. 2, \$15. Mixed timothy—No. 1, \$15; No. 2, \$10. Prairie—No. 1, \$16; No. 2, \$13; No. 3, \$11. Midland—No. 1, \$10; No. 2, \$8. Straw—Rye, \$9; oat, \$8.

CINCINNATI.

May 11.—While there was a slight firmness of tone to the hay market during the week, and prices for high grade timothy, light mixed and clover 50c to \$1 higher,

he strength was apparently due more to the temporary falling off in the receipts than to any activity in demand. The inference on the part of buyers, who continued to complain of a lack of shipping orders, together with the fact that there is still a heavy surplus available on farms made the business one of uncertainty with the country movement from now on the governing influence. The nearness of new crop hay and the dullness of southern industrial conditions and consequent lessened demand, however, favored a depressed market, particularly for the medium and common hay. Alfalfa was easier and lower with little offering, and the limited demand more of a grinding than feeding character.

Timothy—No. 1, \$17.50@18.50; No. 2, \$16.50@17.50; No. 3, \$12.50@14; threshed, \$8.50@9.50; no grade, \$8@10. Clover-mixed—No. 1 heavy, \$13.50@15.50; No. 1 light, \$16@17; No. 2, \$15@16; No. 2, \$12@13.50; no grade, \$10@11. Clover—No. 1, \$15.50@16.50; No. 1 light, \$11@13; no grade, \$8@9. Alfalfa—No. 1 second cutting, \$18@19; No. 2, \$15@16.50; No. 1 first cutting, \$14@15; No. 2 first cutting, \$10@12. Sound sample grassy hay, \$9@10. Straw—Wheat, \$9.50@10.50; oat, \$9@10. Rye, \$13@14.

PORTLAND, ORE.

May 7.—Buying prices f. o. b. Portland: Alfalfa, \$20@21 ton; valley timothy, \$20@21; eastern Oregon timothy, \$23@24; clover, \$16.50@17; oats, \$19@20; oats and vetch hay, \$19.50@20.50; straw, \$8@8.50.

BOSTON.

May 9.—No. 1 timothy, \$25.50@26; No. 2 timothy, \$22@24; No. 3 timothy, \$17@19; eastern, \$16@23; clover mixed, \$21@24. Straw—Rye, \$21@22; oat, \$13@15.

ST. LOUIS, MO.

May 9.—Market about steady and general conditions remain the same; enough demand for good hay to absorb the offerings, but off grades dull. Receipts, 8 cars, consisting of 4 timothy and 4 clover mixed. Timothy—1 car sample grade at \$11, 1 car and part car do at \$12, 2 cars and part car No. 2 at \$10, 1 car do at \$17, 1 car standard at \$19, 1 car and part car do at \$20, 1 car No. 1 at \$21. Clover mixed—2 cars No. 2 at \$15.

CHICAGO HAY NOTES.

The demand for hay has fallen off somewhat, buyers apparently holding off, expecting a big run of hay. Two or three more days of light receipts will quickly change the attitude of the buyers.—Albert Miller & Co.

Arrivals are light, but demand only moderately urgent and mostly for the better grades of tame hay, while the poorer grades are neglected. Prairie hay is quiet but soft packing in demand with the straw market unchanged.—Valters Brothers.

Country loading is almost nil, so that receipts here next week will be extremely light and market should stiffen some. We are looking for packing prairie and marsh but alfalfa and straw markets are dull.—Bridge & Leonard.

LONDON GRAIN SITUATION

Look for Speculation Activity This Month—Wheat Yields to Be Less.

By Jack Brooks.

LONDON, May 5.—Opinion in the wheat and flour trade here is that the month of May likely will see considerable speculative activity, this belief being based chiefly on the crop reports of certain wheat producing countries now arriving. The persistent rumors of a lower wheat yield from India and the possibility of a reduced estimate for United States wheat are helping to strengthen the idea of a hectic May. Importers here understand that the U. S. A. crop will pan out around 11 bushels to the acre of winter wheat and Indian cables tell of a crop there that will be two bushels less per acre, as compared with last season, and applicable to all areas, natural and irrigated. The market for English wheat is depressed and London is now making \$3.10 for milling wheat from the farms here. At Reading the farmers are selling at as low as \$2.78 rather than hold during a feeble market that shows no sign of improvement. Imported wheat, happily, is not influenced by these sacrificial prices. Argentina is making up to \$3.48, and about the same for Australian. Canadian is worth around \$3.70. American is ranging between \$3.20 and \$3.48. Considerable Indian old crop is due here in June via Karachi. It is reported to be some

weeviled, and prices cover a fairly wide range. A good average may be put down at \$14.70 per 480 pounds for May shipment. The stocks at 15 ports here now average 6,000,000 hundredweights. About 5,500,000 quarters are on passage to Europe (Continental) and some 2,500,000 quarters are on the way to Britain. These figures show a substantial reduction on the quantities en route this time last year.

Flour prices are tending upwards still. Good Australian is now \$6.48 per bag of 140 pounds, which is 24 cents better than the first 10 days of April. Town Household and All English also are improving again in price. Although the millers have slightly enhanced their quotations for spot flour, trade has not been checked at all either in English or fine foreign. Offers from Australia to ship good flour at a price equaling \$11.84 per bag of 280 pounds are being taken here, this price being around 10 cents cheaper than two weeks ago. London sales of maize the first quarter of the year have totaled nearly 2,000,000 hundredweights which is a good 500,000 hundredweights more than the first quarter of 1924. Exporting countries have not been shipping here in their usual quantities and stocks are not large at present. There is practically no change in spot prices for maize and maize meal on last week's "quoted and bought" figures. The news that the Argentine maize crop is definitely put down now at under 94,000,000 hundredweights off 9,160,000 acres is considered disappointing when compared with last year's results. Judged by the standard of preceding years, however, it is an improvement.

FIRST NEW HAY AT KANSAS CITY.

KANSAS CITY, Mo., May 12.—(Special Telegram.)—The Kansas Hay Company sold the season's first car of new alfalfa hay today for \$26.50. Shipment was from Heiser, Barton County, Kansas. The hay showed good quality for first cutting. One year ago the first car brought \$25.00.—T. J. Tanner.

CANADIAN VISIBLE.

Canadian visible supply of wheat decreased 4,244,000 bus. and oats 2,850,000 bus. last week. These statistics represent terminal stocks only:

	May 9, 1925.	May 2, 1925.	May 10, 1924.
Wheat	36,110,000	34,431,000	27,479,000
Oats	14,733,000	15,244,000	9,188,000
Rye	2,419,000	2,469,000	1,724,000
Barley	4,219,000	4,759,000	2,871,000

ACREAGE OF WORLD CEREAL CROPS.

The U. S. Department of Agriculture Bureau of Agricultural Economics presents the following figures showing world's acreage of wheat and rye, in thousands of acres (000 omitted) and forecast of production:

GRAIN FROM NEW ORLEANS.

Clearances of grain from New Orleans in April, as reported by the grain inspection department of the Board of

PRAIRIE STATES HAY & GRAIN CO.

RECEIVERS AND SHIPPERS
HAY, GRAIN AND SEED
NORTH PLATTE, NEBR.

American Bale Ties

To conform with the rules of the National Hay Association, hay must be well baled. The use of American Bale Ties accomplishes this. A broken wire on a bale of hay condemns the hay. Broken bales cost more than Bale Ties.

OTHER USES

For baling Excelsior, Shavings, Rags, and Paper. For bundling Barrel Heading and Staves.

No other form of wire has to stand more strain and abuse. Bale Tie Wire must be made in the highest perfection possible. American Bale Ties meet every requirement for which they are intended.

Complete descriptive catalog sent free for the asking.

American Steel & Wire Company
Chicago New York

Trade were: Wheat, 2,884,424 bushels, against 249,098 in the same month last year; corn, 338,464 bushels, against 416,939 bushels in April, 1924; oats, 97,450 bushels, against 19,575 bushels in April, 1924.

CANADIAN GRAIN IN U. S.

The following table exhibits the quantities of bonded grain in the United States reported last week compared with previous week and one year ago:

	May 9, 1925.	May 2, 1925.	May 10, 1924.
Wheat	5,717,000	7,680,000	11,767,000
Oats	1,487,000	2,009,000	1,688,000
Rye	152,000	124,000
Barley	2,260,000	2,096,000	193,000

Provisions, Etc.

RECEIPTS, TWENTY MARKETS.

Combined receipts of cattle, hogs and sheep at the seven leading Western markets and thirteen other points for the week, with comparisons:

	Cattle.	Hogs.	Sheep.	All kinds.
Past wk.	232,000	544,000	290,000	1,066,000
Prev. wk.	225,000	657,000	267,000	1,149,000
1924	253,000	810,000	235,000	1,298,000
1923	213,000	764,000	227,000	1,204,000
1922	226,000	628,000	214,000	1,068,000

Combined receipts at the twenty markets for 1925 to date, with comparisons, as compiled by the *Drovers Journal*:

	Cattle.	Hogs.	Sheep.	All kinds.
1925..	4,344,000	14,210,000	4,962,000	23,516,000
1924..	4,303,000	17,074,000	4,659,000	26,036,000
1923..	4,328,000	16,193,000	4,874,000	25,395,000
1922..	4,104,000	12,177,000	4,529,000	20,810,000
1921..	3,960,000	13,188,000	5,388,000	22,536,000

CHICAGO PROVISION REVIEW.

CHICAGO, May 11.—A better tone developed in the provision trade with an advance of 1c per lb. in lard the past week and a higher range in values of other products. Liquidation by longs recently ran its course and a covering by shorts found the selling pressure light. An advance of more than \$1.00 in hog values was also a factor in creating a better feeling. Closing trades, while not at the best of the week, were at net gains on lard of 42½ to 57½c, while short ribs were up \$1.02½ to \$1.10 and bellies \$1.20 to \$1.25. The recession from the highest prices of the week was due to profit taking by recent buyers.

In the cash trade there was a fair business, more lard being shipped out than the previous week or last year. The movement of meats however, showed a small reduction from that of a year ago. There continues to be a good output of lard and it is meeting

a moderate domestic and export demand. In meats the selling pressure most of the week was limited and values responded to fair buying. Prices for the week follow:

	Close	May 9, 1925.	May 2, 1925.	May 10, 1924.
Lard—				
Apr. rng.	\$16.12½	\$14.57½

MOVEMENT OF PROVISIONS.

Following were receipts and shipments of provisions at Chicago for week ending May 9, 1925, and since Oct. 25, 1924, compared with the corresponding time in 1924:

	Received—	For week.	Since Oct. 25, 1924.	Same time 1924.
Cut meats,				
Lbs.	4,801,000	176,803,000	103,169,000	
Lard, lbs.	5,245,000	206,025,000	137,914,000	
Shipped—				
Cut meats,				
Lbs.	15,606,000	441,508,000	492,128,000	
Lard, lbs.	9,852,000	243,032,000	331,677,000	

Agricultural conditions in British South Africa continue favorable; reports of damage to crops from rains appear to have been exaggerated, according to a cable from Johannesburg.

LIVESTOCK PRICES AT LEADING MARKETS.

HAND-CONTROL POWERS-CONTROL

34 Years of specialization in temperature control has given us a wealth of knowledge and experience which is at your service without cost or obligation. Let our engineers help you on your problems of temperature control; we may be able to save you much trouble and expense. The Powers Regulator Co., 2774 Greenview Ave., Chicago. Offices: New York—Boston—Toronto and 30 others. See your telephone directory. (3058)

WANTED and FOR SALE

MARKET PLACE, CLASSIFIED

for Buyers and Sellers of Properties and Equipment in Grain, Seeds, Hay, Feed, Flour, Millfeed, Beans, Produce, etc.

25c Per Printed Line Each Insertion

SITUATIONS WANTED.

POSITION WANTED by competent, practical man as manager of farmers' elevator, 20 years' experience, understand side lines, stock buying, bookkeeping. Best of reference. Write ROY TAYLOR, Coloma, Wis.

ELEVATORS FOR SALE.

TWO CENTRAL NEBRASKA ELEVATORS, in good condition; well equipped; good grain territory. Priced right. Address ELEVATOR, BOX 41, care Price Current-Grain Reporter, 319 So. La Salle St., Chicago.

FOR SALE—A 100-bbl. mill and grain elevator in the heart of hard wheat territory. Low price. Write The BUSHTON STATE BANK, Bushton, Kansas, for particulars.

FOR SALE—Terminal elevator and Kansas Line. Terms. Bargain. ALLIN GRAIN CO., Coffeyville, Kans.

A 36,000 BU. elevator for sale in a good grain territory. No competition, good warehouse, electrically equipped, truck scales, air dump. Land goes with buildings. Fine lake town. A bargain if taken soon. Address C. M. STEWARD, SEC., Lake View, Iowa.

THE GRAIN DEALERS' PETITION.

O Rat! I have never seen a rat so beautiful as thou! Wilt thou permit me to thank thee for having honored the millet of my granary?

O Rat, of admirable embonpoint, I have put in this granary a little inscription which asks thee to spare my grain. I see that I have placed it too high. Thou could'st not read it and the fault is mine.

O Rat, of admirable embonpoint, I am not rich! I have three small children, and I will not fail to tell them how kind thou art to appreciate my millet, but my neighbor has six children who are older than mine. If thou would'st go and live in his granary, he would speak to them at once of the honor thou hast done to his millet, and then eight people, counting his wife, would sing thy praises, while at my house we are only five.—Kong-Tsie-Tsan. Translated from the Chinese by Tous-saint and Joerissen.

WESTERN STOCKS.

The following table exhibits the aggregate stocks of hog products at Chicago, Milwaukee, Kansas City, St. Louis, East St. Louis, Omaha and St. Joseph on May 1, 1925, compared with one month and one year previous:

ENGINES FOR SALE.

DIESEL OIL ENGINES

For Elevators and Flour Mills.

All Sizes.

ST. MARY'S OIL ENGINE COMPANY, St. Charles, Mo.

FOR SALE—15 H. P. Gaso Engine, used less than six months. Elevator changed to electric. CHARLES E. GILMAN ELEVATOR, Fisher, Ill.

MACHINERY BARGAINS.

WE OFFER you a select list of elevator and seed equipment, in new and used machinery. Write for our bargain prices. STANDARD MILL SUPPLY CO., 501 Waldheim Bldg., Kansas City, Mo.

SECOND-HAND MACHINERY.

POWELL MILLING CO., De Pere, Wisconsin, has been dismantled. Will sell all machinery at your own price. Write MILLER SCRAP IRON CO., Green Bay, Wisconsin.

SOME EXCELLENT OFFERINGS.

In new, shop worn, and slightly used equipment for flour, feed, and cereal mills can be had by inquiry to

W. R. LEATHERS, 9 S. Clinton St., Chicago, Illinois.

MONTANA AGRICULTURE.

Our correspondent in Great Falls advises that from present outlook the new crop of winter wheat in that district will be only about 25 per cent of normal. As yet we have not received a report as to how much of the acreage will be replanted to spring wheat.

On April 23rd there was a heavy snow storm, general throughout the state and in some places the fall reached twenty inches, this blanket of moisture bringing great elation to the farming community, as in some sections of the agricultural belt moisture was greatly needed. The snow storm was not accompanied by any great fall in temperature.—Lauzier, Wolcott & Co., Butte, Mont., April 24.

on account of its presence runs from three to five cents per bushel. Experiments by the University of Minnesota show that this disease of wheat can be controlled by mixing dry copper carbonate dust in the seed grain. The new method is said to be just as effective as the formaldehyde method, with the added advantage that no water is required and the germinating power of the seed is not injured, and that seed can be treated quickly and easily at any time without danger of freezing.

FARM LOANS.

Total loans in March by federal land banks and joint stock land banks were \$31,000,000. The federal land banks took

4,140 mortgages, amounting to \$14,000,000. Joint stock land banks made 2,259 loans, aggregating \$17,000,000.

Total loans made since the establishment of the system are 351,882 for \$1,081,000,000 by the federal land banks, and 69,269 loans for \$532,000,000 by the joint stock land banks.

CASH PRICES FOR GRAIN.

BUSINESS AND TRADE CONDITIONS

THE National government is continuing its definite policy of economy, quite to the discomfiture of Washington shop keepers but meeting the very general approval of the people at large.

Business interests are coming into their own, as a very natural outgrowth of the President's plans. It is officially intimated that commercial and industrial enterprises are to be given a period of peace, undisturbed by the heckling tactics of Governmental intrusion. This comes at a most opportune time because there is no questioning the fact that in some sections, a rather serious situation confronts business. The entire commercial fabric of the country will be benefited by a period of at least several months during which no new legislation will be proposed or enacted. There is also the definite promise that federal taxes will be reduced and conservatism and stabilization are the President's mottoes for the near future and probably during the life of his administration.

Crop Influences Important

As a great agricultural country, our success or otherwise is to a considerable degree influenced by the crop production of our Central and Western states. This is especially true this year because we can hardly expect an appreciable increase in the exports of manufactured goods or in the volume of domestic business.

As a matter of fact, it is believed in reliable circles that the high level in exports for March will not be maintained. In fact, there is a substantial lessening in the demand for some of our products from foreign customers. It is but natural, therefore, to observe carefully laid plans on the part of manufacturers to bolster up their sales in rural districts at home, for it is assumed that the extremely careful purchases of farmers in recent years has built up a potential demand. The present outlook is moderately encouraging as we contemplate the funds available on the farm for the purchase of the output of our factories. The likelihood of a short Winter wheat crop; the better outlook in Spring wheat and in cotton and no unfavorable details in consequence in corn and oats are premises on the production side of the farm ledger which, when taken into account with the demand side of his books including as it does export grain and cotton, suggests the conclusion that we shall see profitable farm marketing during the Summer and Fall.

Yearly Comparisons

The status of business for the past three years shows a rather interesting and uniform cycle. Economists understand the cyclic law, although they are often unable to satisfactorily forecast the particular month or so of each year in which business reaches the peak or sinks to the depths of trade for that particular year. It seems to work out, however, that bullish ideas can predominate for only a limited time or that pessimistic predominance endures only for a similar brief period.

This has been the experience for three years past; in 1923, when the country was possibly over-optimistic, the Federal Reserve Bank and Herbert Hoover's commercial policy checked any ill-timed boom which might have developed. In 1924, a political year, we also experienced the sharp decline of French currency and the consequent debacle of European markets. In 1925, we have had four months of unusually cheap money and consequent heavy pur-

chases of securities. It is only natural that more recently these strong markets have shown a decided weakness.

Basic conditions in 1925 are fundamentally stronger than last year and any business depression of the Summer is expected, by those who are well posted, to be less severe than in 1924.

Record Freight Traffic Indicated

The Car Service Division of the American Railway Association has just issued a survey of freight traffic during 1925 which is most promising. So far, 1923 has shown the largest car loadings in the his-

WHEAT OUTLOOK AND GOVERNMENTAL ADVICE

COOL weather over much of this country's wheat and corn belt during the past ten days with frequent frosts and occasional freezes in some sections, has held back farm work as well as plant growth. Some corn, especially in low ground, will doubtless have to be replanted.

Our reports, however, do not thus far show any serious damage to winter wheat, the crop of which has, of course, not yet been made.

Present indications, however, point to such a close adjustment between supply and demand both for the 1924 and 1925 crops that prices for the next fifteen months will prove attractive to the farmers. In view of this situation we are wondering just how the Bureau of Agricultural Economics of the Department of Agriculture will attempt to justify the advice given to farmers in February, to reduce their Spring wheat acreage.

tory of the country but for 1925, we are ahead of 1923 by 682,450 cars for the same period. As compared with 1924, this year shows an increase of 1,976,350 cars.

Due to the very general satisfactory freight situation, it has not been necessary for business to anticipate possible congestion and hence to stock up. Therefore, there should have been no exceptional heavy movement entering into the present high record of car loadings. It seems fair to anticipate the same normal Summer basis during the next several months at least and the association forecasts particularly heavy loadings for Fall business. The upkeep of the railroads contemplates for Class one carriers additional capital improvements of \$750,000,000. For recent years such Class one railroads have spent on capital account \$874,743,000 in 1924; \$1,059,149,000 in 1923 and \$429,273,000 in 1922.

Railroads claim and it is very generally admitted that they are now operated with the greatest efficiency and economy in the history of the country.

European Politics

Politically speaking, it is indeed difficult to follow the rapid changes in the affairs of European governments. The Herriot French cabinet has fallen; the German people have elected in Von Hindenburg one

of the leading exponents of the old Monarchical school, and apparently a wise selection. The Geneva disarmament conference has apparently failed and negotiations for the guarantee of peace must start over again.

It has long been foreseen that no readjustment of European affairs was possible without the economic revival of Germany. We can hardly blame the French government and people for their objection to the free and easy reinstatement of Germany as a great power, but this situation, which will surely come, must be faced. There has been established a bond of moral unity among the allied governments which is a far better assurance to France against German inroads than the effort of France to hang the sword of militarism over Germany.

It is proving difficult to establish these moral bonds in the form of definite treaties or guarantees but time will work them out and meanwhile business interests of the United States and foreign countries are proceeding satisfactorily in the main.

Political Agitation Short Lived

The way of the Bolshevik and "Red" is now particularly thorny in the United States. Money has been easy and jobs for those who care to work reasonably plentiful. There is always a certain percentage of organized as well as non-union labor shifting from one job to another; so it is not unfavorable that the statistics shows a certain percentage of the total population out of work at all times.

We have observed however an increasing supply of flivvers standing in front of construction jobs awaiting the closing whistle. On the farms, the past year was particularly fruitful and there is very little justifiable unrest among the working people.

In this land of opportunity, there should at no time be a fertile hot-bed for the spouting of street corner Socialism, and particularly this year, the people have little time for the misleading anarchistic principles of such ilk.

STOP GAMBLING

A HEADLINE in one of the metropolitan papers, a few days ago, read, "Stop Gambling or I Will Close the Pit—Jardine," which leads us to inquire as to what is meant by the word "gambling." Our new dictionary defines it as "to stake money or any other thing of value upon an uncertain event."

Accepting the definition as proper, gives us much food for thought, for it makes everything we do, from the cradle to the grave, a gamble.

Upon some of the things, we stake a few sordid dollars, but upon others our reputations, our characters and even our lives pay the forfeit if we lose.

We sometimes hear it said that it is wicked to gamble—if we lose—and we wonder if that is not the attitude of the most of us, especially if the loss comes through a misjudging of the grain market.

ADOPT A PROGRAM

OUT in Iowa, last week, there gathered a group of representatives of various farm organizations, and after due deliberation there was adopted a legislative program which, it was announced, would be satisfactory to all of the farmers, and which would mean their financial salvation.

We do not know just how this small group under

the advisory direction of Senator Brookhart and Congressman Dickinson secured authority to thus positively speak for this country's 7,000,000 farmers, but we assume no one was admitted and permitted to speak and to vote who did not possess the necessary credentials.

Of course Senator Brookhart represents the farmers of Iowa; the last election clearly indicated that, and presumably Congressman Dickinson is also a representative of that same group. But a definite statement showing just who were at the meeting, whom they represented, and by what authority, would aid a lot in determining just how truly representative the gathering was and it might help some if we were told just how many of them were farmers and how many politicians and paid reformers.

COST OF PRODUCTION, PLUS

ONE of the proposals advocated at the meeting of "farmer doctors" in Des Moines last week was the formation of a farm corporation, financed by the government but operated by representatives of the various farm organizations, its purpose being to take care of all surplus farm products, "permitting only such quantities being placed upon the market as could be sold at prices covering cost of production, plus a reasonable profit."

As has been repeatedly pointed out, there are 7,000,000 farmers and if they really do get together on a legislative program, Congress will doubtless enact it into law, even though it is as preposterous as the proposition outlined above, unless of course there is that active opposition which will prove to a majority of the members of Congress that the proposals are unfair and unsound, and therefore not wanted by a majority of the people.

Effective opposition however, to "governmental petting party programs," can only come through thoroughly united effort.

THE AUTOMOBILE TRUCK

THE advent and growth of the automobile in this country has affected the grain and hay trades to a greater extent than many would have thought. Great consuming markets of the East were large buyers of oats and hay for trucking in days gone by was practically all done by teams and the horses had to be fed. As the auto truck has gradually driven the teaming business out of business, the demand has lessened for these commodities. This was to be expected and many of the trade have adjusted their business to meet this condition. During the period of the rapid extension of electric traction lines in competition with the steam roads, much new and available territory was opened and many elevators were built along traction lines. The steam roads also had many stub lines going into territory where the freight and passenger revenue was hardly sufficient to warrant the investment. With the advent of the automobile, and bus lines leading everywhere, both the traction and the steam roads have found many lines unprofitable and have been forced to abandon their operation. Of course, elevators on such lines which are left high and dry without facilities for moving carload shipments must go out of business or find other means of getting the grain to market. In this way, the automobile has again affected the grain trade.

Times are ever changing and the live, wideawake business man will always find some way to overcome such obstacles.

MAKE GOOD FEED

EACH state seems to have its own feed laws designed to protect the citizens of the state. Before a feed manufacturer may sell a new brand of stock feed, he must make application for a license and before it is granted, inspectors procure samples of the feed and give it a careful analysis. Recently

a manufacturer endeavored to secure a license in Ohio. Samples of the feed were procured and an analysis showed the feed to contain a variety of weed seeds and that no attempt has been made to prevent their germination under right conditions. Therefore, the application for license was not only refused but shipments on the way to the state were turned back. This phase of the state feed law is a protection to the reputable feed manufacturers of the country who are continually striving for quality product and helps to put out of business those who wish to manufacture a line of inferior feeds, buy all the old off-grade stuff they can get, and then undersell their competitors with an inferior product.

CASH OR CREDIT

A LARGE number of country elevator operators carry side lines and one of the problems that confronts them is that of the extension of credit to purchasers and the collection of outstanding accounts. It is well known that any business conducted on a strictly cash basis can sell its product at lower costs. The extension of credit means a certain percentage of loss in bad accounts and the extra expense used in collecting outstanding accounts every month and bookkeeping, adding also to the cost. One dealer who does a successful business in side lines has adopted a system of cash and credit. On every hundred pounds of feed stuffs purchased at cash, buyer saves ten cents per hundredweight, on five hundredweight fifteen cents per hundredweight, and on ton lots, twenty cents per hundredweight. This enables him to give his cash customers every advantage and those who demand credit must pay the extra premium for the additional service rendered. If other dealers have experiences along this line, we would be glad to have the result of their experience for the benefit of other grain dealers.

IS IT A TRUST?

THERE are several suits pending against co-operative marketing associations and such associations also have brought suits against individual elevator owners and the outcome is being awaited with interest. These associations in the conduct of their business certainly make it very hard for others to do business and its operations are in restraint of trade. When the constitutionality of this law has been tested, the matter will be settled. Such associations certainly tend to ruin the business of citizens who are actively engaged in a legitimate business and they should be permanently restrained from operating.

SELLING SILOS

IT will not be long before many farmers will begin making definite plans for the building of silos and some of them are unquestionably studying the problem right now.

Silos as a side line for country elevators appeals to us as logical, but no one kind is the best in every particular and after having secured the agency for one of the several good makes, the next thing to do, of course, is to get thoroughly posted on its points of superiority as well as on the value of the silo on the farm, and then to go vigorously after the business.

PRESERVES BREAD INDEFINITELY

ANNOUNCEMENT has just been made of the discovery, by a Swiss baker, of a method whereby fresh bread preserves its freshness for two years.

If true (and it carries the stamp of approval of the Department of the Interior of the Canton of Vaud), the discovery is one which will prove an im-

WEEKLY STATISTICAL SUMMARY.

The following tabulation is a summary of figures from various statistical exhibits appearing weekly in detail in "The Price Current-Grain Reporter," these figures representing the past week, the preceding week and corresponding time last year, here assembled for ready reference:

	May 16, 1925.	May 9, 1925.	May 17, 1924.

portant factor in the consumption of food grains, and in the cost of living.

The Swiss military authorities have already arranged to substitute this new bread, called "Mattipan," in their army ration, the cost being 4.4 cents, compared with a cost of about 7 cents for the present army biscuit.

ANOTHER IMPOSITION

KANSAS farmers are justly aroused over the value being placed on farm wheat for taxation purposes. The Kansas State Tax Commission has set a valuation of wheat at \$1.70 on wheat on the farm less one cent for each mile it must be hauled to the market and costs incidental to placing it on the market. This places another burden and hardship on the farmers of that state and it would seem just and fair to assess wheat for taxation at a much lower level.

The increased postal rates on certain classes of mail are particularly interesting to firms sending out daily or semi-weekly market cards. If the subject matter on the card does not require larger space than the standard Government postcard, same will prove least expensive at the present one-cent rate. Larger cards which must be plain, not showing the corner cut of the sender cost one and one-half cents postage, but are sent third class. The present card so popularly used in many colors and with considerable advertising matter thereon has been increased from one cent to two cents.

THREE DOLLARS a year in the United States and Mexico; \$4.00 a year for Canada, \$5.00 United Kingdom, the Continent of Europe, Australia, and other countries in the Universal Postal Union. Less than a year at the same rate. Single copy 15 cents.

LETTERS from our readers are solicited on subjects of interest to those engaged in the grain and allied trades, news items, reports on crops, grain movement, new firms, contemplated improvements and cars leaving in transit.

THE ADVERTISING value of The Price Current-Grain Reporter as a medium for reaching the buying power of the grain, feed, seed, bean and hay industries is unquestioned. The character of advertisements in its columns testifies to the favorable opinion of and value received by our advertisers. If you would be classed with progressives, place your announcements in the trade's only weekly, which is always first to get the live, up-to-date news to its readers.

CHICAGO, MAY 20, 1925.

GRAIN TRADE REVIEW

A TIGHTENING in the domestic cash wheat situation has been reflected in an advance in the May delivery here to the best prices since late in March, exporters coming into the market for liberal quantities of Duluth and Minneapolis spring wheat and the bulk of the ordinary quality grain there has been disposed of during the past week, either for shipment to Montreal, eastern ports or to Chicago. The wheat coming here, it is expected, will be delivered on May contracts. The rapidity with which the May congested during the past few days caused considerable comment in many quarters and extremely rapid and erratic price changes are to be expected the balance of the month. With practically no hard winter wheat pressing for sale anywhere, and with practically no hard winter in store here, it was absolutely necessary that cash wheat be secured in some position for delivery purposes and the bulk of the wheat now held in public elevators here is from the Northwest, and large receipts are anticipated the balance of the month, as the grain which was bought for all rail shipment from Minneapolis is coming forward rapidly now and is being unloaded. This switching of wheat from the Northwest to Chicago, combined with the liberal sales made in the East to exporters, is expected to result in a rapid reduction in the visible supply from now on, especially as the country movement is not large. A good part of the Duluth arrivals for some days have been of grain from Minneapolis passing through to Eastern mills. Duluth wheat has become practically the cheapest of all kinds in the international markets and it is not surprising that a liberal business developed, especially as stocks on ocean passage are decreasing and world's shipments remain well below the average weekly requirements of importing countries. Taken as a whole continental wheat stocks are small, and it would be no surprise if Europe started to take new crop winters on a somewhat larger scale in the near future, although it is understood that few of the American handlers are anxious to do much business at the present time, due to the uncertain crop outlook in the Southwest where indications are for a yield much smaller than last year.

May Deliveries.

The advance in the May delivery, to a large extent, is a reflection of the close adjustment of supplies to demand the world over and has been aggravated by the holding tendency shown by farmers in Argentina and by the withholding of some of the Canadian surplus from the market. While the outlook for the new European crop is much better than last year one estimate suggesting a yield of 1,600,000,000 bus., or nearly 200,000,000 bus. in excess of last year, Russia excluded, this does not suggest that the import needs for the 1925-26 season will show a corresponding decrease, and the trade continues to figure on importers' needs of 650,000,000 bus. or over. Whether this quantity can be secured depends largely on the Canadian crop, and also the yield in Argentina and Australia, which will harvest in December and January. It is much too early to tell what the three countries will have, but the American crop is sufficiently advanced to show that unless the unexpected happens in the Northwest, the United States will not have much over 100,000,000 bus. for export, if that much. Private weather forecasts are for a dry June in Kansas with hot weather, and recent returns have suggested that the crop has not made the progress expected in view of the rains. The lack of subsoil moisture comes to the fore with considerable frequency, and is a factor that must be closely watched. There has been some change in sentiment of late regarding the trend of values, and in some quarters the belief prevails that higher prices are likely to be witnessed before the new winter wheat crop is harvested. Seeding is making rapid progress in the Canadian Northwest on a somewhat larger acreage, but a period of warm weather would be beneficial both sides of the international line in order to hurry along the growth.

Coarse Grains.

The corn market has shown a lack of aggressive buying during the past few days and bulges have not been maintained. The failure of a good cash demand to develop, with the May persistently maintaining a good discount under the July, has been a factor in creating bearish sentiment and has largely offset the effect of the persistent decrease in the visible supply and the small receipts from the interior. The last week in May usually sees a larger movement to terminal markets as farmers have practically completed corn planting by that time. Broomhall's Argentine agent now estimates the exportable surplus from that country at 120,000,000 bus. or 20,000,000 bus. less than the recent Government figures and 80,000,000 less than last year. There is doubt as to the quantity that will be exported, however, as much grain is of poor quality, and recent weather has been unfavorable, heavy rains falling in many sections. Warmer weather is needed to force the rapid germination of newly planted corn in many sections of the Central West. Weather has also been against the growth of the new oats crop. A moderate export business has been put through and the domestic trade has also improved, but there is still a very large stock at terminal markets to be disposed of before the new crop moves.

GRAIN MARKET SUMMARY.

Receipts of wheat, corn and oats at primary markets the past week, with comparisons, follow:

	May 16, 1925.	May 9, 1925.	May 17, 1925.
Wheat	3,246,000	3,175,000	3,564,000
Corn	1,706,000	2,001,000	3,007,000
Oats	2,358,000	2,177,000	2,898,000

Combined primary receipts of wheat, corn and oats for the past week and for the season to date with comparisons, as shown by THE PRICE CURRENT-GRAIN REPORTER:

	1924-25.	1923-24.
Past week	7,310,000	9,469,000
Preceding week	7,353,000	11,803,000
Since July 1	950,938,000	912,730,000

May wheat developed considerable congestion the past week and prices moved up sharply, the best figures on

the present upturn being made and practically all maintained on Saturday, with the finish at a net gain of 8½¢. Deferred deliveries were influenced to a great extent by the action of the May and gained 1½¢@2½¢. Rains fell over part of the belt on Saturday but had little lasting effect on the market, predictions of frost helping to make a strong rally and a firm close. Rains were still needed in the Northwest at the close of the week.

Strength in wheat had some influence on the corn market and to a great extent offset the selling by local professionals, who were impressed with the fact that the May delivery continues at a liberal discount under the July, despite the limited arrivals from the country. Planting is nearing completion in some sections, and work would progress rapidly elsewhere with warmer weather. Closing trades, while well below the best figures of the week, showed net gains of 1½¢@2½¢ with May leading.

Oats held within narrow limits, averaging slightly higher and closing with net gains of ¾¢@1¢. Weather was somewhat too cool for the best development of the crop, but the large visible supply tends to prevent aggressive buying. The May showed a tendency to gain slightly on the deferred deliveries, although the basis in the sample market was slightly easier, with intimations of larger receipts from the interior. Outside interest in rye has fallen off and only a moderate export demand was in evidence, the close being 3¢ lower on the May and ¾¢ to 1¼¢ on the deferred futures. Range of prices the past week follows:

	High.	Low.	May 16, 1925.	May 9, 1925.	May 17, 1925.
Wheat—					
May	\$1.71½	\$1.56½	\$1.70½	\$1.62½	\$1.04½
July	1.53½	1.46½	1.53½	1.50½	1.06½

CANADIAN GRAIN IN U. S.

The following table exhibits the quantities of bonded grain in the United States reported last week compared with previous week and one year ago:

	May 16, 1925.	May 9, 1925.	May 17, 1924.
Wheat	6,019,000	5,717,000	12,816,000
Oats	1,314,000	1,487,000	1,913,000
Rye	160,000	152,000
Barley	1,187,000	2,260,000	101,000

GRAIN PRICE INVESTIGATION

Secretary Jardine Makes Preliminary Report—No Proof of Violation of Grain Futures Act Found—President Carey Makes Reply.

A preliminary announcement of the investigation by Secretary of Agriculture Jardine, under authority of the Grain Futures Act to ascertain the cause of the wide fluctuations in the price of wheat during the past few months, was made by the U. S. Department of Agriculture May 13. It was made following a conference between Secretary Jardine, Dr. J. W. T. Duvel, acting in charge of the Grain Futures Administration and directly in charge of the investigation, and other officials of the department, and is as follows:

"This investigation, launched several weeks ago, was for the purpose of finding an explanation or a cause for the unprecedented fluctuation in the future grain quotations recorded throughout the period of trading beginning Jan. 2, at which time May deliveries closed at \$1.76½ until April 3, when May deliveries closed at \$1.36½. The recorded high quotations meanwhile were noted on Jan. 28, when the market reached the high of \$2.05½ and closed at \$2.05. The daily fluctuations were wide, several days showing 10c or more, the greatest range being noted on March 13 and March 30, when the range was respectively 13¼c and 13½c.

"Under the Grain Futures Act the Secretary of Agriculture is authorized to designate contract markets on which future trading may be done. According to the definition contained in the Act, these must be markets where the volume of trading in cash grain is sufficient to reflect accurately the value of the grain. They also must have facilities for proper inspection of grain. Before designation as a contract market the Board of Trade must obligate itself to promulgate and enforce rules which contemplate, among other things, the prevention of manipulation of prices or the cornering of grain by dealers or operators upon such boards.

"The Act makes it unlawful for any person not the owner or grower of grain to enter into a future contract through agencies other than those under the control of contract markets. Transactions carried on under conditions other than those authorized by the Act are subject to a penalty of a fine, upon conviction, of not more than \$10,000 or imprisonment for not more than one year, or both. The same penalty is provided for the conviction of any person who "knowingly or carelessly" delivers for transmission through the mails or in interstate commerce by telegraph, telephone, wireless or other means reports which are false or misleading or knowingly inaccurate concerning crop or market information or conditions that affect or tend to affect the price of grain.

"The law furthermore requires that members of a contract market, or the governing board thereof, shall provide for making and filing of such reports of their trading operations as the Secretary of Agriculture, by rules and regulations, may require. The regulations which have been promulgated by the Department of Agriculture necessitate the reporting promptly to Federal enforcement officials any attempted manipulation of prices or corners of any grain by dealers or operators upon any board.

"The present investigation has consisted thus far of making a thorough examination of the records which members of the Chicago Board of Trade and other contract markets are required to keep under the terms of the law and the regulations of the Secretary of Agriculture. In addition to the statistics and documentary evidence obtained in this manner officials of the Department of Agriculture in co-operation with specially designated representatives of the Department of Justice, have made a search through the files of telegraph and telephone companies for documentary evidence showing or tending to

show concerted action or understanding on the part of principal operators or speculators to bring about a manipulation in the market.

"While this investigation is yet under way and, according to the information placed before Secretary Jardine, cannot be concluded within the immediate future, it was stated by officials of the Department of Agriculture that although there were indications that evidence did exist which would show an attempted or actual manipulation of the market, proof necessary for the conviction of those who might be charged with a violation of the Act had not thus far been obtained.

"In any event the results clearly show that the wide fluctuations were due primarily to the heavy trading of a limited number of professional speculators; likewise, that their operations were facilitated to a considerable degree by the large participation on the part of

reflect the prices incident to supply and demand. Secretary Jardine feels that this can be done by appropriate action on the part of the Board of Trade in the promulgation of rules calculated to prevent overspeculative trading. The suggestion was advanced by the Secretary that a rule limiting the spread in daily quotations would have this effect.

"The Secretary likewise clearly indicated that in the event of the failure on the part of the Exchanges designated as contract markets to take some effective measures he would be obliged, as a matter of public interest, to suggest additional legislation giving to the Department authority to meet the situation effectively."

PREPARE A FARMER LEGISLATIVE PROGRAM.

Representatives of farm organizations from ten Middle Western states met in Des Moines on May 12 and formulated a legislative program which, the promoters say, will be suitable to all the various agricultural organizations.

The meeting was called by President Milo Reno of the Iowa Farmers' Union and included 150 delegates from farm bureau federations, grange societies and agricultural co-operative societies of the Middle West.

Declaring that the object of the conference was to co-ordinate the efforts of the farm bodies toward a single legislative program agreeable to all, Reno asserted that "farm legislation has come to be nothing because the various groups in farm life have been unable to agree on a definite purpose."

"These groups must co-ordinate their efforts," he said, "after the manner of the commercial interests if they hope to see a progressive program adopted. We must all expect to give up something, but in the end we will have a program that will breathe life into the vexatious farm question that exists today."

President Charles S. Barrett of the National Farmers' Educational and Co-operative Union, who presided at the conference, in a preliminary statement declared the farmers should insist upon getting for their "commodities a price which will pay them the cost of production and in addition a fair return for the capital and labor invested in their enterprise."

"We have made adequate provision for transportation," the statement said, "and the railroads today operate with the moral certainty of reasonable returns. Big business is able to care for itself through mutual understanding, through the protection thrown around it by our government and through a score of other contrivances not available to the farmers."

"Business can so arrange its affairs," he said, "as to predict with tolerable accuracy over long periods what results are going to accrue to it, but 'Uncle Rueben' is at the mercy of every untoward element—the weather, the markets, the financiers and the carriers."

Barrett said he did not believe there was any disposition among the farmers to take anything to which they were not clearly entitled, adding "that they only want that which is conceded to industry in all proper lines, a reasonable return on their investments."

Need of equalization of conditions with those of industry was stressed by the leaders, who agreed that such a balance could be obtained through the following program:

1—Organization and co-ordination of farmers to regulate and control marketing of their products, insuring cost of production plus a profit.

2—Support of co-operative marketing, with farmers in control of the marketing machinery, including terminal facilities.

3—Creation of an export corporation by congress to be managed by a board of farmers nominated by the recognized farm organizations and to insure the farmer cost of production plus a profit of not less than five per cent.

A permanent committee, whose duty it is to put the program into action, is

CLIFFORD C. BELZ.

ONE of the younger generation of the progressive grain dealers of the state of Iowa is Clifford C. Belz of Conrad, Ia., who is actively engaged in buying and merchandising grain. At the annual meeting of the Western Grain Dealers' Ass'n held in Des Moines in April, he was honored with the presidency of the association. We are glad to present to our readers, the above cut of Mr. Belz.

the public after material advance in prices had occurred the last half of January.

"While Secretary Jardine is determined to utilize the results of this investigation for the purpose of instituting whatever prosecutions may be justified under the law, he is concerned more particularly in the development of some method by which a repetition of such erratic and destructive price changes may be obviated.

"With that purpose in mind he discussed on May 11 with representatives of the Chicago Board of Trade, including the president, Frank L. Carey, the desirability of that organization, if it is to continue to enjoy the benefits to be derived from its designation as a contract market, of promulgating rules that will facilitate the operation and maintenance of Federal supervision, prevent the development and dissemination of rumors in the nature of false, misleading and inaccurate reports and statements, prevent actual or attempted manipulation or cornering of the markets, and discourage any tendency toward extensive overspeculation. In brief, it is the Secretary's purpose to undertake by the exercise of such authority as is conferred upon him by the terms of the Grain Futures Act to bring about a condition where the quotations in future trading will more accurately

headed by William Hirts of the Missouri Farmers' Association, and includes representatives of the following organizations:

Farmers' Educational and Co-operative Union of America, National Corn Growers' Ass'n, American Council of Agriculture, Farmers' Equity Union, National Producers' Alliance, Farmers' National Union of America, Equity Co-operative Exchange, Iowa, Nebraska, Kansas and Minnesota Farm Bureau federations, Kansas, Iowa, South Dakota, Nebraska, Illinois and Minnesota farm unions, Iowa State Grange, Chicago Milk Producers' Ass'n, Ottumwa Dairy Marketing Ass'n, South Dakota Producers' Ass'n, Iowa Co-operative Creamery Ass'n, Farmers' Elevator Ass'n of Iowa.

GRAIN EXCHANGES CAN SOLVE OWN PROBLEMS.

Frank L. Carey, president of the Chicago Board of Trade, stated that immediate steps would be taken to bring to the attention of the members of the exchange suggestions contained in Secretary Jardine's preliminary report yesterday on price fluctuations in grain.

"When there has been opportunity to digest the full report," Mr. Carey said, "the exchange will at once set about to meet the constructive suggestions which it may contain. This will be in line with the policy followed by the exchange since the enactment of the grain futures act.

"The desire of the exchange to solve its own problems has been clearly shown over a period covering half a century. By the constant revision of its rules the exchange has met the ever-changing conditions of world commerce. Long ago it made impossible the old abuses that developed into what were known as corners. For many years there have been no situations of that character, for the exchange itself promulgated rules that prevented them.

"In the past six months there developed a situation that was wholly new to the exchange. Never before had the exchange been called upon to meet such wide price fluctuations in peace times.

"America had a bountiful wheat crop. All other countries, with the possible exception of Australia, suffered shortages. A buying power that was world-wide was thrust upon the exchange, and this buying continued unabated for many weeks and to a limited extent is still present. Under the stress of such unprecedented circumstances the exchange functioned remarkably well. If abuses crept in they were strikingly few, when viewed from the great volume of business transacted. Nevertheless it is the genuine desire of the exchange to correct any abuse that may be found just as it has done in the past. But in view of the fact that the situation which developed is unprecedented, it is deemed judicious to avoid hasty action that might be of a disturbing character, and to deal with the question in a broad, thorough manner.

"During our recent conference with Secretary Jardine it became quite evident that he is desirous of lending full co-operation to the grain exchanges of the country. I am confident, too, of his desire to co-operate with business generally in a constructive way. The view of Secretary Jardine will be brought to the attention of the directors, who for several weeks have been studying the general problem of price fluctuations."

CALIFORNIA BEANS ADVANCE.

Orders have been far in excess of the allotment which was authorized for the initial offering of the California Lima Bean Growers' Assn., according to advices from the Coast. The association is accepting business on a pro rata basis, and at quotations of \$12.90 steamer for searides and \$12.70 for choice.

If you are looking for paying results in business, have the confidence to advertise.

GOVERNMENTAL PRICE FORECASTS.

The forecasting of the May price of spring wheat Chicago several months in advance is declared to be possible by a method of estimating devised by the Division of Statistical and Historical Research of the Bureau of Agricultural Economics, Department of Agriculture.

A recent study covering the period 1896-1914 showed the average error in estimating the May price was only 2.2c, omitting an error of 29.4c in 1898, the year of the Leiter corner, it is declared.

When applied to the years since the war, after conditions in the wheat market had become fairly stable, the statisticians state, the method was found to give results comparable with those of the pre-war years. Several factors known to have influence upon the price of wheat in May were used in the estimating formula.

The average price of spring wheat at Chicago was used in this study because it was the most reliable price available for a long series of years, it was declared.

The price of spring wheat at Minneapolis may be substituted with no decrease in accuracy when there are too few sales at Chicago to establish a market, provided the same market is used for all three monthly prices. It is held probable that the prices of other classes of wheat at either market might likewise be used.

"The criticism may be made that spring wheat is not the logical class to use in this study, since it is not always on an export basis," bureau economists declared. "To this it may be replied that the method is not used to predict the actual price level for wheat, from production and other factors, but to predict the change from an existing September price.

"The method assumes, however, that the price of this wheat runs parallel with the price of export wheat from September to May. In case a shift should occur in the margin between the two classes of wheat during that period, some adjustment would need to be made in the estimated price.

"In making a May forecast the price level index must be estimated in advance, though this offers no practical difficulty since the changes in the price level under normal conditions are rather gradual."

NEW KANSAS DIRECTORY OUT.

The 1925 directory of the Kansas Grain Dealers' Association which has just been published, under the direction of the secretary, E. J. Smiley, maintains the same high standard set by previous issues.

It contains, among other things, a list of the regular grain dealers of the state, indicating by an asterisk those that are association members, lists showing the members in other states, a list showing the location and capacity of the Kansas flour mills, and the constitution and by-laws of the organization with its trade and arbitration rules.

Copies of the directory may be procured from Mr. Smiley's office at Topeka at \$2.00 each.

INSURANCE ON CHICAGO GRAIN FIRE.

The fact that the insured loss on grain and buildings in the fire in the Chicago & St. Louis elevator at Chicago last Thursday falls on the Underwriters' Grain Association makes it certain that the loss will be widely divided among insurance companies. The Grain Association operates on the pool plan, each member assuming a certain percentage of the liability on every risk written. The number of members is large and the percentage each assumes is small.

It was stated last week at the office of one of the members that the association has an excess loss cover, under which the reinsuring company assumes liability for \$800,000 of loss after the

association has paid the first \$800,000. Thus it does not appear probable that even the companies having the largest participations in the pool will be called upon to pay more than \$40,000 to \$50,000, and some companies with small participations may lose only \$2,000 or \$3,000.

While this loss, coming at a time while losses are heavy, is very unwelcome, it can be accepted the more complacently because the Underwriters' Grain Association has had a generally good experience and has made money for its members. As it virtually controls the supply of insurance on grain it has been able to enforce good housekeeping in elevators and the losses it has sustained have been relatively few. It is considered one of the most striking advantages of handling certain classes of business on the pool plan because a pool can exert more pressure on an owner to safeguard his risk against fire than individual companies can.

USING WASTE PRODUCTS OF CORN.

Learning to use the waste products of the great corn crop is one of the problems on which the chemists of the department of agriculture have been engaged for the past few years. They have made remarkable progress and the numerous and varied ways in which the cobs, stalks, and leaves, and other parts of the corn plant can be used in a commercial and profitable way, are interesting and astounding. The list contains 148 commodities, including such items as axle grease and face powder, shoe heels and their cushions, cigarette holders and gun powder, incense and punk, phonograph records and shaving soap, shoe horns and varnish. The list ranges from absorbents for nitroglycerine in the manufacture of dynamite to glucose, a kind of sugar. Adhesive materials belonging to the same group of chemicals as starch, dextrine and sugars are extracted from the cobs under pressure in super-heated water. Pentosan adhesives can be used for pasting fiber boxes and cheap paper bags. More than 60 patents on the production of furfural from corn cobs and its utilization have been issued in the United States and other countries during the last five years.

PRESIDENT WATCHING PROPOSED BRITISH FOOD LAW.

The proposed British food law, which would give that government control of England's food supply, is being watched with interest by President Coolidge, it was said at the White House. The President has asked the various government departments to study the probable effect of such a law upon this country's foreign trade.

Mr. Coolidge regards it as an interesting situation that the British government is trying to bring about a reduction in the price of food supplies at the same time that the United States Government is bending its energies toward placing the business of farming on a paying basis.

SECRETARY TO INSPECT WORK IN WEST.

In order that he may become familiar with the work of his department in the field, Secretary of Agriculture Jardine will leave Washington on May 27 for a six-weeks' inspection trip through the West. Four-fifths of the 20,000 workers in the department are at stations scattered throughout the country outside of Washington, a fact which led the secretary to decide on this early visit. At a later time he expects to go to the Southwest and through the East and South.

The trip of Secretary Jardine will take him to California, with stops in Kansas, Utah and Idaho on his way West, and in Washington, Oregon, Montana, North Dakota, Minnesota, Nebraska and Iowa on the return. As the tour is primarily for field inspection, the secretary is accepting but a limited number of speaking engagements.

He is scheduled to speak before a transportation conference at Chicago on May 28. At this conference, problems will be discussed by those interested in the general subject of transportation, including officials of railroads and motor truck and bus manufacturers. The secretary also will visit the Chicago Stock Yards where he will confer with live stock men.

On June 6 he will give the commencement address at his Alma Mater, the Agricultural College of Utah, and has accepted an invitation to talk to Utah farmers at Logan on June 8. During the next three days he will tour the Targhee National Forest where the Forest Service of the department is carrying on a variety of activities.

Plans are being made for him to open officially the Wendover Road on June 13. This road leads through Salt Lake City to the Utah-Nevada line, crossing over the Great Salt Desert. It is built for a considerable portion of the distance over solid beds of salt and completes a section of the trans-continental route. It is one of the most unusual pieces of road construction in the United States, and officials from the three nearby states will take part in the ceremonies.

Secretary Jardine will spend more than a week in California, giving a part of his time to inspecting forestry work and the scene of the serious foot-and-mouth disease outbreak of last year. He has accepted an invitation to speak before the National Electric Light Association at San Francisco on June 18, on the relation of electricity to agriculture. Among other things in California to receive his attention will be the cooperative marketing of farm products which has been developed to a high degree in that state.

After a three or four-day stay in Washington and Oregon, the secretary will make several stops in Montana. These will include a visit to the old Keogh Military Reservation near Miles City which has been transferred by an act of Congress to the Department of Agriculture for use as an experiment station for the study of range live stock problems. It contains 55,000 acres of grazing land and 2,000 acres of irri-

gated land and is the first station of its kind in the United States.

At Mandan, N. Dak., he will address a farmers' meeting on July 3 or 4, and will make short stops at Minneapolis, St. Paul, and Omaha. He will study live stock conditions at the latter city. The last speaking engagement in the itinerary of the secretary will be at Ames, Ia. An invitation has been accepted, but the date is uncertain, probably about July 10 or 12.

GRAIN MARKETING CO. HEARING SET.

Decision to hold an exhaustive hearing May 27 into whether it has jurisdiction over the Grain Marketing corporation has been announced by the Illinois Commerce Commission.

The Grain Marketing corporation sought to have a decision on jurisdiction postponed thirty days. W. C. Graves of counsel for the corporation promised the corporation either would apply for the commission to pass upon its contracts or know that its subsidiary companies would not be organized by the expiration of that period.

The Illinois Agricultural association, through its attorney, Donald Kirkpatrick, asserted that the Grain Marketing corporation at present should come under jurisdiction of the Illinois commerce commission because it holds leases for seven Illinois public warehouses, with a capacity of 10,000,000 bushels, two-thirds of the Illinois public warehouse space, and is paying a rental of 8 per cent of the valuations of the properties. Mr. Kirkpatrick said the Grain Marketing corporation was advertising control of those elevators in its campaign to sell approximately \$16,000,000 of stock.

DUST EXPLOSIONS.

The National Fire Protection Association in convention at the Congress Hotel May 15th approved the resolutions for the prevention of the explosion of dust in terminal grain elevators as reported out of the committee. In the 1924 report on Page 342 and following pages dust explosion hazards and the regulations thereon are fully covered. The present change as indicated in italics is covered by the following three sections:

27. The coils in dryers shall be so constructed or *installed* as to prevent any accumulation of dust on same.

28. *Where air is exhausted from dryer or cooler to a containing room, fans and motors shall be segregated from the balance of the equipment by means of partitions. These partitions may be constructed of light material.*

31. *Where air is exhausted from a dryer or cooler, or both to a containing room, the floor of this room shall be of gratings.*

WATER DAMAGES HOT TILE.

The accompanying cut shows the result of an exposing fire on tile storage tanks. On Apr. 16 the mill of the Eminence Milling Co., Eminence, Ky., was totally destroyed by fire. The tile tanks shown in the cut were 40 feet from the mill building, which would seem to have been a sufficient distance away to escape damage. Possibly they would have, or at least the damage would have been very small had not the firemen put a hose stream on them. The tanks were, of course, extremely hot but they showed no signs of spalling off or crumbling till the hose stream hit them. The combination of cold water and hot tile did the business, and you see the result. The fact that the water was used means a bad damage when otherwise it would have been small. Water directed on hot tile or concrete will always spall it off and damage it materially.

The moral to the tale is that if you have either tile or reinforced concrete tanks and are ever so unfortunate as to have them exposed by a fire, you will save yourself money and trouble if you keep the fire hose off them.

American Feed Manufacturers, New Orleans

Speculation in Long Time Sales Deplored; Limited to 60 Days in Southern Business with No Guarantee Against Market Decline; President E. W. Elmore Re-elected; Other Important Business.

THE report of a convention in New Orleans, the great crescent city, and the originating point of true Southern hospitality, would not get off properly without giving credit where it is due, to the group of individuals and concerns contributing to its success. It is, therefore, no detraction to the real accomplishments of the convention, and they were many, to express the trade's appreciation to the general chairman, B. T. Manard, and banquet chairman, Arthur F. Ashner, with their associates and the ladies' committee for the good work done. The New Orleans hosts of the convention were the following firms:

George B. Matthews & Sons; Consolidated Mills, Inc.; Fulton Bag & Cotton Mills; Mente & Co.; Fenner & Beane; American Molasses Co.; Gulf Crushing Co., Inc.; Milam Morgan Co.; J. T. Gibbons, Inc.; Bemis Bro. Bag Co.; Hardin Bag Co.; Myles Salt Co.; Penick & Ford, Ltd., Inc.

OPENING SESSION, THURSDAY, MAY 7.

The genial Hon. Harry D. Wilson, commissioner of agriculture, Baton Rouge, La., in his address of welcome to the delegates reviewed the advantages of the state, as indicative of the growing importance of the mixed feed and allied trades throughout the South, and inviting further constructive business co-operation with Northern industrial interests.

President E. W. Elmore responded, assuring the commissioner that it was fitting to hold the seventeenth annual feed manufacturers' convention in New Orleans.

President Elmore's Address.

You will please permit me to briefly bring to your attention a few thoughts uppermost in my mind of what we can and should do as members of our Association.

Few of us realize the amount of time and energy freely given by our various Committees in dealing with problems of our Association that should receive, when requested, more detailed information from our members. We must learn that our Trade Association is the magnet which draws together the competitors for free discussion of questions affecting the welfare of our activities. We must learn not to expect more from our Association than we are willing to give to it. We must learn that the payment of dues does not release us from further obligations to our Association or to ourselves. We should take active interest in enabling our Committees to give us the information and assistance we desire.

The Department of Commerce says that only 10% of American manufacturers know their costs. Let us hope it is better with us, but we all know ours are far from perfection. We must not think that by giving constructive information in our various Departments to Committees we are going to help some competitor build up his business to our disadvantage. This is not so—think hard—who are our hardest competitors? Not the ones who know their game, but it is the ones who do not know their game, or think they know it.

We all have times of trade depression, due to various causes, sometimes we know the reason but more often we do not. If we knew through our Trade Association the conditions in the country where we are active that the depression were general in our line of trade, we would not wisely complain to our Sales Department and instruct them to cut prices when the tonnage was not normal. Its salesman usually wants a cut price to bolster up his own sales. It is easier to be an "order-taker" than an "order-getter." The competitor who does not know his game gives the cut, works hard for little or no advantage, and at times of depression adds little or nothing to his tonnage. What we want is intelligent competition instead of ignorant competition. Please do not think that I am applying that hard word "ignorant" personally. We are all aware that there is much in our business that is hard to handle.

Our brainiest men, scientists, doctors, lawyers, etc., etc., learned that they may be especially intelligent in their profession. The doctor does not practice as a lawyer, nor does the lawyer try to practice as a doctor, but some business man, if he has been an ambitious salesman, a good accountant, a banker, or capitalist, may undertake to manufacture feeds, many times believing he knows business because he has been successful in one branch of it. He may be successful for a time manufacturing feeds, but he will sooner or later run into snags. He has not had years of

special instruction in all departments of manufacturing and merchandising feed and therefore is not intelligent competition but (to use the word in a trade sense) is ignorant or untrained competition.

We are all far too apt to depend upon speculation for our success, long or short the market in grain or feeds, credits, long unprotected contracts and guaranteed prices. We should always be close buyers and know in detail that which is best in accounting, financing, manufacturing and merchandising.

Speculation cannot be eliminated entirely, for we must keep our mills and warehouses stocked sufficiently to supply

E. W. ELMORE,
Oneonta, N. Y.
President, American Feed Manufacturers' Ass'n.

our trade promptly at all times, but let us not feature speculation, rather let us feature knowing our costs. What is the cause of most financial failures of feed manufacturers? I will venture it is nearly 100% too much speculation and not enough knowledge of costs.

If you will permit me, I would like to confess that our firm has had much experience as one of the ignorant competitors, even though I have been actively associated in the grain and feed business nearly forty years. We are still struggling hard to become free from that class and I am pleading for future assistance from our Association.

It was not so many years ago one of our strongest, as we supposed, competitors of our firm chanced to meet me in the hotel where I was registered. We had dinner together—a good beginning, as it usually is. During the conversation I complained that we were not satisfied with the progress we were making and he asked me if it would offend me if he told me where we were wrong; he thought he knew, and it developed he did. He began by telling in detail what he was doing and then compared it with what we were doing and finally urged me to accompany him to his office to inspect his books. He would gladly answer any questions I wanted to ask, using his books and records for detailed information. We did not leave his office until two o'clock in the morning. (This was before the Volstead act—personal liberty was ours, but we were teetotalers—that night.) I was convinced of many of our errors. We immediately changed many of our methods and our improvement was rapid. Of course, none of us are ever completely satisfied. He later told me it was one of the most profitable evenings he had ever spent. Why? Because he had eliminated a lot of ignorant competition and so we were both more successful.

It is in no way necessary to violate any of the provisions or amendments of the Sherman Act to work co-operatively as we should. Let us think, be frank, and our Association will grow stronger—with us.

Address by Chairman of Executive Committee, W. E. Suits.

The activities of your Executive Committee are so thoroughly reflected in the reports of your secretary and traffic manager that it would be an unnecessary repetition for me to go into the details of the work done by the Committee during the past year. I do, however, wish to keep you informed of the kind and character of service which the Association, through its officers, is rendering to its members.

Our secretary meets with the Executive Committee, receives and executes its in-

structions and handles routine business. He is in constant touch with the chairman of the Committee. The present chairman, like his predecessors, gives to this work freely and ungrudgingly of time and business experience.

Our secretary for twenty years has been associated with feed control and association work, and I doubt if we could secure a better informed man in the class of work he has to do. He is personally acquainted with most, if not all, of the feed control officials in the states east of the Rocky Mountains and has assisted many of them to understand the practical features of feed manufacturing and marketing, thereby better enabling them to coordinate their regulations with business necessities, giving practical effectiveness to the laws demanding honesty of purpose and declaration which are equally a protection to both the buyer and seller.

This mutual helpfulness and confidence has proceeded to the point that numerous control officials have invited Mr. Brown to consult and co-operate with them in matters under their jurisdiction.

Where changes in control officials occur, Mr. Brown with his well qualified good standing and wealth of knowledge, is able to enlighten the new officials regarding the long road of experiences we have traveled during the past twenty years, lined with experiments, restrictions, fallacies and successes, out of which was evolved the present standard of practices, regulations and procedures.

This harmony of ideals and co-operation of effort is especially valuable when some ill-informed legislator decides to introduce a bill that embodies ideas which experience has shown are impractical, unjust and unenforceable.

Our traffic manager, R. M. Field, is recognized throughout the country as one of the leading industrial traffic authorities and as such receives attentive audiences from the highest railroad officials and state and interstate commerce commissions.

His committee of fifteen of the leading traffic men in commercial life meets monthly and discusses the traffic problems of our industry, works with Mr. Field in their solution, giving him their united assistance in warding off dangerous railroad rulings and securing correction and improvement in the treatment of our industry by the transportation agencies. Here is one of the most powerful and influential industrial traffic committees in America, working for you and every other feed manufacturer in the country. The good effects of their efforts in the past have saved our industry millions of dollars and their continued concentrated influence will save us many more millions in years to come. The smallest manufacturer in the country is receiving the benefit of a trained technical staff of traffic experts borne at the expense of the larger companies. If for no other reason every feed manufacturer, large or small, in this country should join in the support of our association, because it is the fact that Mr. Field and his committee represent a great industry—not an individual manufacturer—that makes their influence so powerful.

About this time last year it began to rain freely and throughout the northern part of the country from the Missouri to the Hudson River it rained plentifully right through until snow began, not too heavily, but just about every time it was needed to keep the pastures and the fields in growing condition. The summer was moderately cool and not only did the pastures remain luxuriant during most of the period, but the hay and small grains had more time to develop before they ripened, with the result of very heavy crops throughout the northern belt. Consequently, there were more than usually bountiful supplies of local feeding stuffs as well as an extraordinary saving of those grain crops due to the protracted good pasture season. Naturally this had a tremendous effect in reducing the requirements of manufactured dairy feeds during the fall and the winter.

The effect on the feed manufacturing interests was further accentuated by the trend of the markets. The corn crop was seriously injured by early frosts; the speculative spirit became rampant in both grains and stocks; grain values and feed based on grains were boomed to war-time prices at a time when animal and dairy products did not correspondingly advance. Therefore the feeders could not feed at a profit. They restricted their feed purchases, which was readily possible with their heavy local supplies of grains, hay and silage.

Natural unmixed by-products did not follow the grains; wheat feeds, gluten feed, cottonseed, linseed, etc., remained relatively very low.

At one time in the late winter I found the market value of feeding grains and standard feeds in 56-lb. bushels showed the following comparison, Chicago rate:

No. 3 yellow corn, \$1.27; No. 2 white oats, 94c; standard bran, 63c; standard midds, 68c; gluten feed, 87c; hominy feed, 81c; linseed meal, \$1.12; cottonseed meal (43% protein), \$1.12.

One of the branch managers of the company with which I am associated wrote me during the period that the balanced rations were not selling freely because of the low price of bran and high protein concentrates. I replied that he would have to look deeper into the proposition than that. Why were bran and high protein concentrates so low? The answer was, simply a lack of feeding demand because of the poor returns for dairy products, the disinclination to feed heavily and the lack of necessity for the usual amount of feeds due to home grown supplies.

Another factor which has had a consid-

erable bearing on the Eastern demand for Western feeds is that a very large increase has been made in the flour milling capacity and output of Buffalo. The disposition of by-product feeds is naturally made in the states east of Buffalo.

Coupled with this, there was a reduction on March 22, 1924, in the duty on imported wheat feeds. The ad valorem rate was 15%, or about \$3 per ton, and since the date mentioned has been 7½%, or about \$1.50 per ton. During the year 1923, 201,000 tons of wheat feeds were imported, and in 1924 there was an increase of about 33,500 tons. The dumping of these large quantities of Canadian and Buffalo wheat feeds into the Eastern states caused a dislocation of prices ranging at from \$1 to \$3 per ton below the Minneapolis prices delivered to the same Eastern points. At one time recently Buffalo was shipping feed west as far as Toledo.

I would like to interrupt this line of thought long enough to say that the dairy situation is changing besides still suffering from the aftermath of the war. A wonderful work is being done by the National Dairy Council and others in promoting the consumption of milk and other dairy products. The East diverted a very large part of its production into fluid milk. The increase in the production of butter, cheese and condensed milk is being largely taken care of in the West, where the farmers can normally produce milk more economically due to their larger farms, with better soil and more plentiful grain crops. The number of dairy cows in the East is not greatly changed, but better breeding has resulted in larger yields per unit. A temporarily good return for fluid milk in the East enlarged their milk shed, which was readily possible with the improved methods for bringing milk safely over long distances, hence in spite of the increased consumption the East is suffering from a surplus.

Dairymen are generally hard up, which does not conduce to a good demand for mixed feeds. It is hoped that the fact the eastern dairies have been more self-supporting during the past year or more will enable them to get out of debt and become more able to pay for feeds as their necessity arises.

As to horse and mule feed business, my investigations show that there has been a large expansion in capacity. Customers and towns that bought hundreds of cars of balanced ration for horses a relatively few years ago have put in mixing plants and have become competitors instead of customers. This localizing of feed manufacturing is probably in some measure due to freight rates being higher than they were in those earlier days. But I think the depression is also largely due to the relatively low price of oats previously mentioned.

For my own information I made a comparison between the cost at the present and ten years ago of a prominent horse

L. F. BROWN,
Chicago, Ill.
Secretary, American Feed Manufacturers' Ass'n.

feed and its ingredients, Chicago rate basis, as follows:

	Oct. 18, 1915	Apr. 28, 1925
No. 2 White oats, bulk.....	\$23.50	\$26.25
No. 3 Yellow corn, bulk.....	24.10	38.50
No. 1 Alfalfa meal, bulk.....	16.50	24.00
B. S. molasses	17.00	26.50
A prominent horse feed, 100s.	24.00	36.50

Freight rate, alfalfa—Lamar, Colo., to Chicago... 5.50 7.80
You will observe that while the finished product is \$10 higher, the difference in the price of oats is very moderate, \$2.75 per ton.

In those earlier days, with relatively low prices for molasses, corn and alfalfa, and lower freight rates, a manufacturer of an alfalfa molasses grain feed could produce a more valuable feed than oats for very little more than the price of oats. Naturally, I still feel that a horse or mule feeder in the cities or in the country districts outside of the oats surplus sections can better feed the balanced ration; but

the city business has largely disappeared due to the substitution of the taxicabs and motor trucks.

I wonder if you realize the gradual change which is coming over our business due to the almost perfect railroad service which has developed within the last two or three years? It was only a short time ago when it was necessary for all of us and our customers to carry heavy stocks or to make purchases in advance of our immediate needs because with the car shortages, worn out engines, imperfect trackage, etc., great uncertainty existed as to when we could receive our purchases or deliver our products. Today it is possible for any of us to ship a carload of feed immediately after it is ordered, or practically on the date the buyer requests and it moves toward destination a couple hundred miles daily. The same conditions are true of our purchases.

The general hard-up condition of the feed dealers causes them to take advantage of these improved conditions and carry small stocks, ordering frequently. This is for the general good of the industry. It permits smaller investments and less risk. Yet we find a great many manufacturers clinging to the old idea of trying to book up the trade with all the goods it can use over a long period of months. It was brought out forcibly in the flour millers' national convention that this rank speculation is detrimental to the business. It has a tendency to induce trade to over-buy. A bright, ambitious salesman creates a spirit of great optimism in the dealer and he thinks he can sell more than the facts justify. Fifteen or fifty feed manufacturers start out with the idea of selling a lot of feed in the briefest possible space of time, and incidentally they simultaneously protect their sales and prospective business by corresponding purchases of ingredients. They boom the prices of these ingredients under the simple law of demand and supply, and then they all sell and buy more at the top of the market, which eventually declines with lessened shipping demand.

This calls for repricing the contracts. Many refuse to sell feeds with price guaranteed against decline, but find that their dealers are unable to move their stocks bought at the higher prices, or to take out the unshipped goods on the contract. Their dealer is in competition with another who is getting his supplies at the reduced market; hence, regardless of original intentions, they must do a certain amount of repricing or temporarily go out of business.

The basis of all this trouble is speculation. Anything that I can say at this time will not change the situation, but I am bringing out these points because I think we should all seriously consider whether or not we cannot in some way at least reduce the speculative long term sales to a much less volume than the present.

The oatmeal millers have already done this and have discovered that the policy of selling only early requirements has materially flattened out the peaks and depressions in their volume. Losses from spoiled goods are reduced to nothing. Annual sales are not reduced. Mill help is more steadily employed and a better class of labor is retained with a greatly reduced labor turnover. All this means lessened cost of production with better profits and more uniform returns. A very strong sentiment among the flour millers favors sales contracts limited to sixty days' delivery. The discussion on this matter seemed to me the dominant note in the recent convention of the Millers' National Federation and in the end the convention adopted a rule recommending that practice.

Already some of the largest feed manufacturers have recognized that the only way they can make any money out of this business is by reducing the speculative element to the lowest possible point.

If we should lose some tonnage by lim-

iting sales to what customers can accept inside of sixty days the amount lost would be less than the tonnage repriced after declines and that is surely unprofitable business which we can well do without.

In the foregoing remarks it is not my idea to issue a note of pessimism, but I think it is due to ourselves that we candidly face and discuss facts and let the world know what they are. Certain mill machinery houses and mill construction interests are misleading large and small capitalists into believing that the feed manufacturing business is a golden road to fortune with the result that more mills are being added to an already overcrowded industry. The business is based on sound principles, but the margin of profit must be small, the tonnage is erratic and the net earnings of a year cannot stand any net speculative losses.

The mixed feed business during the past year has not been generally satisfactory. I might say that this is true of other branches of the milling industry also. A couple of weeks ago I attended the annual meeting of the wheat flour millers' National Federation at Chicago, where there was a general expression of disappointment in the conditions surrounding that business. It seems that the flour capacity of this country is at least twice the consumption and output. I am also informed that the table corn meal capacity is at least four times the consumption and with the steadily increasing mixed feed milling capacity it is my belief that it will take years for the consuming demand to catch up with the milling capacity. Besides being faced with an over-capacity we have had to meet a series of natural conditions which temporarily at least have adversely affected our industry.

It is not many years since a billion bushels of oats were considered "a whale" of a crop, but that has been increased until one and one-half billions bushels of oats do not create any very great surprise. In those earlier days the oats were largely consumed by horses and mules and the cities took a tremendous amount of them. During the period of this increase in production of oats there has been a visible reduction in the number of horses in the cities, and even the country towns. The driving horse has been almost entirely eliminated and the motor truck has largely displaced the trucking teams. This leads to the inquiry of what becomes of the billion and a half bushels of oats in this country with the exportation an extremely small factor. Obviously they are fed to other animals, largely to cattle and to hogs, being ground into condition suitable for these animals by small grinding plants in the feed stores and on the farms.

The customary practice of publishing for complete distribution to its members, the annual reports of Secretary L. F. Brown and of Traffic Manager R. M. Field, obtained. Therefore, the work of the year, recited therein is not published in the PRICE CURRENT-GRAIN REPORTER.

It was regrettable that Treasurer W. R. Anderson could not be present at the convention. In reading his report, Secretary Brown indicated a satisfactory status of the association's finances.

Association of Feed Control Officials' Address.

DR. G. L. BIDWELL.

Gentlemen:

Your Association and the Association of Feed Control Officials have had cordial relations for many years; our aims are the same; we are working that the American feeder may have purer, better and more economical feeds.

If for some reason all feed laws were abolished, your Association would be among the first to demand their enactment, for they are essential to the proper conduct of your business. This friendliness for the feed law has not always existed. Some of the earlier laws were doubtless imperfect. In fact, some of the later ones do not escape that indictment. They were opposed because they were new, because they might be oppressive, etc., etc. They met all the opposition accorded to new, forward looking movements. But among their early friends were found manufacturers and today every manufacturer of quality feeds upholds them. He knows the conditions that would follow their repeal. For years one of a group of six states had no feed law. This one therefore became the dumping ground for all the rejected feed from the other five. The market for good feeds was destroyed, all by-product and prepared feeds came under suspicion, and the coming of the era of intelligent feeding was greatly delayed.

It is not necessary to go into detail concerning the history of these laws. The story of the laws protecting the food of plants, animals and men are too well known. My talk today will be confined to the Federal food and drugs act.

The Federal food and drugs act passed June 30, 1906, was not designed as a feed law. If it had been so designed it would have been much different in form and contents. That it was intended by its authors to embrace feeds in its provisions, however, is evident from the language in Section 6, where it says: "The term 'food' as used herein, shall include all articles used for food, drink, confectionery, or condiment by man or other animals, whether simple, mixed or compound."

This law, a corrective measure and not a punitive one, is administered by the Bureau of Chemistry of the U. S. Department of Agriculture. The headquarters of the Bureau are in Washington. In addition to the staff laboratories there, there are seventeen branch laboratories and stations scattered over the whole country. For administrative reasons these are divided into three districts that, roughly speaking, represent the Atlantic Coast, the Mississippi Valley and the Rocky Mountain-Pacific Coast regions. These districts are in charge of District Chiefs stationed respectively at New York, Chicago and San Francisco. At each branch laboratory are stationed chemists and inspectors. Most of the preliminary and detail work is done in these laboratories and the chiefs of districts have considerable discretionary power. However, every case that may result in seizure action or prosecution is referred to Washington with all the facts for full and careful study before final disposition.

In the olden days an inspector was told to collect a certain number of samples in a given state. These were analyzed and cases brought where serious discrepancies were found. As the manufacturers became more and more acquainted with the requirements of the Act this method became antiquated since the Bureau was wasting too much time collecting and examining good samples. The system was changed so that now unless the inspectors have reason to suspect a product they collect only such samples as they are instructed to take. These instructions are based on information gathered from many sources, such as state officials, complaints from feeders and from the trade, and from study of conditions. There are several types of adulterations that appear from year to year according to changing economic conditions. Complaints are considered very carefully, and when action seems necessary such cases differ in no way from other cases as the Bureau of Chemistry can only consider samples taken by its own inspectors. Many of the states have special legislation for enforcing feeding stuff laws. In the aggregate the states have a

greater number of men engaged in sampling and analyzing feeds than the Federal Government. They are in close contact with the trade and by virtue of this contact their attention is called to violations of the law that might otherwise escape unnoticed. Quite naturally they appeal to the Bureau to take corrective measures when the manufacturer resides outside of their jurisdiction.

The sample once collected is examined at a branch laboratory. Samples requiring the attention of specialists are sent to them at other branch laboratories or at Washington. The reports and recommendations are all gathered at the branch laboratory and are sent with recommendations to the District Headquarters. There they are studied by an expert and forwarded to Washington with further recommendations. At Washington the facts submitted are considered again with due regard to Departmental policy, legal requirements and the sufficiency of evidence both as regards quantity and kind.

Only after this intensive study by several men, each a specialist in his line, is the case recommended for prosecution or such other corrective measures as are deemed necessary under the circumstances. In the event legal action is deemed advisable the papers are then sent to the Department's solicitor. The solicitor examines the papers and if the case is found to be complete and in proper form he transmits it to the proper United States attorney.

From this point the control of the case passes from the Bureau of Chemistry to the Department of Justice.

There are two distinct methods of treatment of violations under the Act. Under Section 2 a case can be brought by the Secretary of Agriculture in the Federal Court of the District wherein the offense was committed. This is a so-called criminal prosecution directed against the person responsible for the violation of the law.

Under Section 5 similar action may be brought by any "health or food or drug officer or agent of any state, territory or the District of Columbia." This section of the law is seldom taken advantage of since the Secretary of Agriculture, under his general powers, appoints certain state food, feed and drug officers as co-operative officials of the Department of Agriculture. They collect samples, analyze them, secure evidence and submit their findings to the District Headquarters or to Washington, where they are handled just as are those instituted by the regular force of the Bureau.

Often it is desirable to prevent adulterated or misbranded goods from being sold to the public, so action under Section 10 of the Act is instituted. The lawyer calls such an action a "proceeding in rem." The United States attorney upon information supplied by the Department of Agriculture informs the court of the District in which the goods happen to be of the facts. The court then issues a libel which is in effect a warrant of arrest of the adulterated or misbranded goods. The U. S. marshal takes possession of them and holds them until the case is adjudicated.

Any person who can show an interest in the goods can appear as respondent. If the court sustains the position of the Bureau the goods are declared forfeited to the United States. The law provides, however, that if the violation can be corrected by relabeling or sorting, reconditioning or by other such means the goods may be released to the claimant at the discretion of the court after the claimant has admitted the allegation of the libel, submitted to a decree of condemnation and forfeiture, paid the costs of the proceedings and produced a good and sufficient bond conditioning that the goods be relabeled or worked and brought in compliance with the law. At the completion of this reconditioning one of the inspec-

SEVENTEENTH ANNUAL CONVENTION American Feed Manufacturers Association NEW ORLEANS, NOV 7-9, 1924

tors of the Bureau of Chemistry usually re-examines the product and if the conditions of the bond have been met the Bureau recommends to the U. S. attorney that the goods and the bond be released to the claimant. Sale of such goods, however, must not be sold in violation of the Federal food and drugs act or the laws of any state, territory, district or insular possession.

You will see, therefore, that the owner of the goods has no legal right to regain possession of such condemned goods except in the discretion of the court. The goods are usually returned under the conditions mentioned unless there are very good reasons against such action.

The large bulk of manufactured feeds are correctly labeled, but we are continually finding some that are misbranded usually through inadvertence or accident. There are a few that come to our attention where the violation of the law appears to be the result of inability to tell the truth or a disregard of the advisability of so doing.

This small minority reacts unfavorably on the whole body of feed manufacturers and in the administration of the law any activity of any food, feed or drug industry to "clean its own house" is always welcomed.

J. J. Donohue, general claims attorney for the L. & N. R. R. Company spoke on the subject, "Are the Railroads Entitled to a Legislative Holiday?" He emphasized the vital importance of the transportation systems of the country; the wide distribution of stock holdings and hence the mutual interest of the public and the railroads in their profitable maintenance and operation.

Prof. Harry R. Lewis, manager of the

National Poultry Council, Davisville, R. I., with which the American Feed Manufacturers' Association is allied, told of its objective and accomplishments. The prosperity and development of the poultry industry is contingent upon intelligent service, standardization, breeding, transportation and similar factors. Manufacturers of feeds, incubators, and in fact a union of the poultry interests, the country over has assured the success of this important movement.

In referring particularly to the poultry plague which has been so disastrous recently, Prof. Lewis said through the accidental and negligent handling of imported virus, the trouble started, but that the plague was now stamped out. The resulting losses, however, served to emphasize the need of orderly consistent sanitation. The baby chick business had been considerably curtailed, but such business was now substantially restored to its ordinary volume. This spring's sales of baby chicks were above normal and the gradual falling off during early May was about the customary amount. In Ohio and a few other states, business was still suffering.

Dr. Markovitz of Penick & Ford spoke on "hot feeds." He told of the efforts of the molasses trade to assist feed manufacturers in determining why feeds sometimes heated and how this could

be prevented. In his judgment, it is not practical to heat molasses in mixing higher than 180 degrees although a higher temperature would tend to avoid heating in feeds. It would, however, make likely a reduction in the value of the molasses used.

The average moisture contained in black strap molasses is 25 per cent and if possible, feed manufacturers should market their finished product not higher than 12 per cent moisture. It is realized that this presents certain difficulties in horse feed, sheep feed and mixtures where 20 per cent or more molasses is used.

E. J. Glenn of Fenner & Beane, the large new Orleans brokerage house, spoke on hedging and the proper use of the future markets. From the financial side, such protection always finds the approval of your banker. As indicative of the safeguards it offers the trade, he referred to an earlier decline in the cotton market from 40c to 10c per pound and the fact that there were no failures of importance because all of this cash cotton had been hedged. Being appreciative of the difference in comparing grain and cotton hedges and similar protection for feed manufacturers, Mr. Glenn suggested the possible advantage of "mutual margins" on feed sales for future delivery. He explained that this

procedure would protect alike the seller and the buyer.

Friday's Session May 8.

Editor David Thibault of "Modern Farming," New Orleans, addressed the convention on the subject "Educational Obligations of the Feed Manufacturer." It was a clever, witty presentation of the matter, stressing certain intimate details of the business as viewed from the angle of the Southern farmer, feeder and dealer.

A. F. Seay, vice-president of the Ralston Purina Co., addressed the convention, speaking on the subject, "Ethics in Advertising."

Since many of us started in business there has been a great change in customs and business ethics. There is going on in this country a tremendous movement among business men of the higher type to achieve an ideal which heretofore seemed impossible. To the business men of twenty years ago the matter of ideals usually gave way to what were then customs of trade.

Today associations of various trades are debating with considerable seriousness whether the lack of common honesty in business has not been a serious setback to the progress of their particular trade. The feed industry is trailing far behind many industries in recognizing this fact and in eliminating unfair and unwise practices. This is probably costing the feed industry millions of dollars a year. The very fact that we are far behind some other trade groups does, however, enable us to profit by the experiences of others and to quickly put into effect plans that should largely remedy the situation.

I honestly believe there would be less home mixing today had we been more truthful in our advertising and sales work.

Should we study 100 concerns in the given industry we would find that a few are intentionally dishonest. A large group makes a conscientious effort to be absolutely honest. A much larger group is generally honest though many of its practices are open to question. This is sometimes excused on the basis that others do it and that competition forces them to wink at certain practices.

Let me say right here, you must have some individuality in your own business if you ever hope to build tonnage that you can depend upon. You are sure to get into trouble following the unethical practice of others.

In the trade groups where real progress has been made in rectifying this situation, it has been found that in a majority of cases unfair and unwise trade customs may be eliminated by setting up a standard of practice to which every member subscribes. There must also be an effective and workable plan for enforcing this standard, which fortunately is now available. Such a code of ethics is like everyone in a boat agreeing that no one shall rock the boat, and then, by inside pressure or outside assistance, effectively handling any who insist on rocking the boat.

We adopted a code of business ethics for this Association last year. How many of you have read them over or thought of them since that time? I know of certain manufacturers who are not following them.

In our own business I refuse to handle general complaints. If anybody has a complaint to make I want it backed up with specific evidence so that I may put my finger on the trouble and rectify it. As stated, I am going to refer to specific cases, without mentioning the name of the manufacturer, to clearly illustrate what I mean. A recent study of the advertising material of the feed industry as a whole shows pretty clearly why the general public hasn't great faith in the claims made by feed manufacturers and why a certain prominent editor when recently confronted with data concerning feed tests merely said, "preposterous," and refused to further investigate the matter. This is a very serious situation and it may be rectified only by every member of this Association heartily entering into a campaign to eliminate dishonesty, misstatements, exaggerations and matter intended to deceive. Little do we realize the enormous annual cost of trying to build business when our practices are in so many cases questionable or downright dishonest.

How many of you honestly believe what you say in your advertising? It will pay some of you to get a new slant on the material you put in print.

In considering the following examples please put yourselves in the mental attitude of a paper editor, an agricultural expert or a well posted feeder who has a good working knowledge of feeds and animal nutrition. I have before me a letter put out by one of our members. It is generally recognized that the dairy feed put out by this concern doesn't rank well in the opinion of experienced dairymen. There are, however, good points about the ration which may honestly be developed. To quote from their letter:

"For more than twenty years we have manufactured a scientifically mixed feed for dairy cows—and we have tried out Blank Feed against all other rations. Results show that we have what is absolutely the best feed possible for milk cows."

Anyone realizes that they have not tried out their feed against all other dairy rations and that the results have not proved that this particular feed is absolutely the best feed possible for milk cows.

I have another circular showing that one of the largest dairy herds in the country

ALFALFA MEAL

—the best green feed

At the Albert Angell, Jr., Poultry Experimental Station near Chicago, where various formulae and ingredients are constantly being tried out to determine their feeding value, additional information has recently been obtained in the tests in feeding of alfalfa meal as a substitute for fresh, succulent greens.

However, Albert Angell, Jr., has for some years used and advised the use of

**USE OUR
TRIPLE XXX
FINE GROUND
ALFALFA MEAL
WITH MASH FEEDS**

the best grade of finely ground alfalfa meal when blended with mash feeds as a substitute for such green feeds as sprouted oats, fresh lawn clippings, cabbage and similar green food. Five generations of several breeds of fowls have been used in the experiment covering a period of a number of years, during which time no other vegetable protein of any description other than alfalfa was given or consumed by the birds.

Mr. Angell's contention has been that alfalfa is not only a substitute for fresh green food, but that by its use in the dry mash the birds always obtain the necessary amount of vegetable protein, whereas the poultry keeper more or less

**ALFALFA MEAL IN
POULTRY FEED
INSURES HIGH FERTIL-
ITY AND HATCHABIL-
ITY OF EGGS.**

neglects to feed vegetables because of it being inconvenient, and at times extremely difficult to obtain, the average back lot poultry keeper otherwise employed not having the time to sprout oats, and the expense of buying vegetables during the fall and winter especially is prohibitive.—The Price Current-Grain Reporter.

**THE DENVER ALFALFA
MILLING & PRODUCTS CO.**

LAMAR, COLO.

U. S. A.

ST. LOUIS, MO.

is fed on a certain ration. A well-known professor, prominent in agricultural college circles, recently went to this farm and found that the particular feed has not been used for at least six years.

I have a circular put out by another concern that makes the claim that their ration will give: "Increased milk production with richer and creamier milk—the kind of milk that get's the preference at the creamery, etc."

Years ago it was proved that the butter-fat content of the milk of a cow is fixed and cannot be permanently altered by the use of any particular ration. It may vary slightly during periods of lactation or because of an upset physical condition, but the claim of making creamier milk is, to quote the editor "preposterous."

I have a book, showing pictures of certain very famous dairy cows. Beside each cow is a picture of a bag of a certain brand of feed. The accompanying text talks about the records and the great milk production properties of the particular feed. The facts are that few, if any, of the cows pictured made their records on or have ever eaten the particular feed. It is purely advertising material prepared with an intention to deceive.

I have a circular put out by one concern in which whole sentences and in places whole paragraphs are lifted bodily from the circular matter issued by another concern. It is difficult to understand the ethics of the individual who prepared that matter.

In my opinion this is very bad form. Write about your products in your own way. Do not copy from some other manufacturer.

Sometime ago a man came to our office and stated that he had been working for another feed concern and he wished to get for us testimonials concerning "any famous cow in the United States." We asked him how this could be possible when many of the herds were not fed on our ration. He simply smiled and said, "That will be easy, just leave it to me." When further questioned he stated that he would carry a pocket full of our feed and if we insisted shove it in the nose of the cow. He told us to pay him his price and he would get the testimonials.

I have a circular which refers to tests concerning molasses which were made years ago and which have since been proved to be erroneous, which facts are generally recognized by any who are well posted concerning animal nutrition. This matter, however, is presented as up-to-date facts.

I quote the following:

"Blank Feed has never contained even the smallest particle of oathsulls, ground corn cobs or stalks, fine cut hay or straw, ground cottonseed hulls, weed seed, molasses, grass, clover or alfalfa roughages. Nothing you would not want in a high grade dairy feed."

When you buy a feed that contains some Filler, it may be cheaper than Blank Feed. But it can't produce the milk."

Such advertising is both destructive and contains misstatements. The classing of certain ingredients of recognized great value with ground corn cobs, corn stalks and fine cut straw, followed by the statement that this "Filler" cannot produce milk is the type of advertising that tears down the industry rather than builds it up. I could go on indefinitely, but I know from those few instances that you appreciate that the feed industry is suffering from trade practices that have been eliminated from many other industries.

These same general evils exist in the selling end. I want to pause here long enough to refer to some of them.

a. Long time contracts without carrying charge being added;

b. Guaranteeing prices against decline: If you buy raw material to cover it costs money to carry same. Do you know what it costs you? If you do not buy raw material to cover your sales you are speculating. Why not go on the Board of Trade? Why invest money in a business and worry with salesmen and all the other grief that comes in the feed business?

c. Accepting bids from one to five dollars under your list price. If your list price is right, why should you accept offers? Many do this.

One manufacturer told me the only money he made was on his purchases. You are not on a sound basis if you do not figure a profit on the daily market price of the ingredients you use. We have found it takes most of the profit you make on your purchase to pay losses on purchases, then where is your profit if you do not have it in your overhead?

If you do not have any losses on your purchases, why worry with the feed business?

d. Cutting prices to force additional tonnage:

An analysis will show you are better off financially if you will cut your expenses to meet the tonnage you can get at a profit.

e. Changing formulas and using cheaper products so as to make a lower price:

I have been very much surprised to observe this is being done this past year. In doing this you destroy the confidence in mixed feeds in your own products. You can never hope to build a permanent business on this basis.

f. Accepting statements of sales representatives as to what other manufacturers are doing:

Many manufacturers change their selling plans because salesmen tell them that such and such is being done. It may not be true to all.

If you will always be sure to have your sales representative submit definite evidence on practices of other manufacturers that they report, you will save money.

The Powerful Influence of Window Signs

Transfer Window Signs have every advantage—prominent position, large audience, long life, beautiful, permanent colors, easy application, no upkeep and low cost. They identify the stores that sell your product and influence the buyer right at the point of purchase. There is no other form of advertising that possesses all these advantages.

MEYERCORD DECALCOMANIA TRANSFER WINDOW SIGNS

Faithfully reproduce any trade-mark, design, or lettering in any size, or shape, in brilliant, non-fading oil paint colors and gold. Open patterns or with backgrounds.

They are quickly applied by anyone, and once up, remain permanently for a long time. Our staff of artists will create new designs for you, or assist in carrying out your own ideas. Send for samples, sketches and prices—there is no obligation.

g. Some manufacturers are starting to sell on credit in order to force business. I am glad to know they are in a position to do so. I know we are not.

h. Now, gentlemen, I have said what I believe is for the good of the industry. If you want to continue as you have, it is satisfactory as far as my company is concerned. We grow a little every year and make satisfactory returns on our investment. I have every reason to believe we will continue to do so.

I would leave this question for you to answer: Are you making satisfactory profits on your investment? If not, why?

Now getting back to the question of advertising. Profiting by the experience of others I suggest the adoption of another code of ethics or standard of practice and that sufficient copies be made, so that a copy may be placed on the desk of everyone who prepares advertising material, writes letters or in any way connected with printed matter and to all salesmen. This first and most important step will go a long way with concerns that appreciate the importance to the industry of building public confidence in the industry as a whole.

I want, however, to quote from the Department of Commerce book. "So far it has happened that the most vulnerable point in association code of ethics has been inherent lack of means of enforcement." I have a great deal of confidence in the integrity and farsightedness of the men in the feed industry. While I recognize the seriousness of the situation, I believe that most of the evils may and will be quickly righted when the matter is brought clearly to the attention of those in authority.

Every concern must first clean house. I believe that any complaints should then be made either direct to the concern in question or to the Executive Committee of the Association, which might then take the matter up with the individual company and if satisfactory action is not taken should turn the matter over to the National Vigilance Committee of the Associated Advertising Clubs of the World.

One of our firm's executives, who has been active in the truth in advertising move in St. Louis, recently stopped at the National Vigilance Committee office in New York. It may interest some of you to realize that they all ready have a lot of facts about dishonesty in the feed industry and that they are bringing to the attention of certain of our members matter that should be rectified.

I do feel, however, that we are big enough and sufficiently farsighted to clean our own houses, and that by true co-operation we can quickly eliminate those practices that are tearing down and are rocking the boat for all of us. I wish to present, as a suggestion, and not as a model, the following standard of practice:

Standard of Practice for Feed Manufacturers.

1. No dishonest statements shall be used.
2. No statements or illustrations shall be used with an idea to deceive the public.
3. Testimonial letters must be dated and should be free from any statements that might mislead the public as to the true facts.
4. Derogatory and "knocking" advertising matter which tends to tear down the industry or shake public confidence in the products of any feed manufacturers should not be used.
5. Exaggerations and statements that cannot be substantiated by facts should be avoided.
6. References to tests and data that is generally recognized to be out of date should be avoided.
7. Copying or plagiarizing the advertising material or illustrations of other manufacturers should be avoided.

Otto Weiss, the grand-daddy of the alfalfa milling industry, read an interesting paper illustrative of the early missionary efforts in placing alfalfa meal before the trade, ending with its present approved standard in practically all balanced rations.

Mr. Weiss' address was in part as follows:

About thirty days ago I received a letter asking my opinion of how much alfalfa a mixed feed should contain to be called "Alfalfa Horse and Mule Feed." I answered from 25% to 30%, but I did not have time to explain more fully or go into detail about it, but will try to do so now.

In 1890 I commenced to experiment mixing my own poultry feed and finally got the best results from a mash feed in which I used about 10% cut clover. My poultry was always in the best of condition and won over 500 premiums at the poultry shows in Kansas and Oklahoma.

Poultry mash sold as low as \$4 a ton, and it cost me \$4 per hundred to ship cut clover from New York for my poultry mash. This gave me the idea to grind or cut alfalfa and mix my poultry mash feed by machinery. However, it took me four years before I found anyone that was willing to undertake to put in the machinery I wanted. Finally when I had my little plant completed in August, 1904, I found that I could not sell enough poultry feed to operate steadily.

Then I commenced experimenting feeding my own horses with a mixture consisting of 35% alfalfa meal, 50% corn and oats, 10% wheat bran and 5% linseed oil meal, adding a small amount of salt.

In 1906 we started to introduce our alfalfa feed in the south.

In 1907 we introduced our feeds in prac-

tically all the large cities in the East and in 1908 established an office in New York City.

Having no competition and low freight rates, we made a fair margin, but spent all our profits placing our feeds on the market.

The horse we started to feed our feed first lived to be 32 years old and died only two years ago. We bought a four year old pony on April 26, 1907, weighing 470 pounds and August 26, four months later, it weighed 735 pounds, a remarkable gain of nearly 2½ pounds per day.

In 1908 we bought a four year old team weighing a little less than 3,000 pounds, for which we paid \$300, and two years later when we sold them to go to Chicago they weighed 4,150 pounds and sold for \$1,000; we ourselves got \$750 for them. It was one of the largest teams ever shipped out of Kansas.

In the winter of 1909 we fattened 100 head of four year old steers; they gained nearly 400 pounds, weighing close to 1,500 pounds, and the Cudahy Packing Co., who bought them, stated it was the fattest bunch of steers they ever killed in Wichita.

In 1918 we tried to get the Kansas State Agricultural College on an experiment feeding of 100 steers at the stock yards in Wichita to use our feed on part of them. When they refused we bought 100 steers out of the same herd, the second pick

two weeks later and fattened them with our alfalfa stock feed. At the Stock Show in March the Agricultural College picked their best 60 steers, having lost three during the winter, and put them on exhibition. We exhibited the entire 100 head, not having lost any, and took first and third premiums, also sweepstakes for best carload of any age exhibited. The Agricultural College took only one, the second premium.

All of these years, remember, we used from 25% to 30% alfalfa meal in our mixed feeds. Today we have feeds on the market containing as little as 2% alfalfa meal and very few as much as 15%.

I might illustrate conditions by telling we have today 500 different strings tied to the wonderful plant of alfalfa, all pulling away from it in different directions, and if alfalfa was not so well rooted it would have been pulled out long ago.

The 500 different manufacturers all make different feeds, with an invested capital of 50 million dollars, should get together and manufacture a feed that is so good, as Mr. Willet of Augusta, Ga., said in 1907, that no grain would be fed by itself.

I am positive through my years of experience and observations that the following amounts of alfalfa meal should be used in mixed feeds to bring best results: Poultry from 7% to 10%; hogs from 10 to 12%; work horses and mules from 20 to 25%; milk cows from 25 to 30%; fattening cat-

tle from 25 to 30%; young horses and calves from 35 to 40%; fattening sheep from 50 to 60%.

The necessity of proper costs, sales margins and similar practical trade problems were discussed on the convention floor and during the lunch conference of sales managers and buyers. Geo. S. Keith of Nashville and O. E. M. Keller of Chicago, were chairmen of the lunch conferences.

The old time subject of future sales was discussed to a fitting conclusion through the adoption of measures limiting feed sales in the South to sixty days and without a guarantee against market decline. This is unquestionably the most important recent step forward in the annals of the association.

In discussing ethics and business practices further, circulars were distributed covering the bulletin of the Millers' National Federation on such subjects, with the recommendation that the feed mixers conduct their business likewise.

Resolutions were adopted in apprecia-

tion of the attendance of the various speakers; of the excellence of the entertainment provided by New Orleans, and the service furnished by the Roosevelt hotel.

Election of Officers and Directors.

President E. W. Elmore of the Elmore Milling Co., Oneonta, N. Y., was given definite proof of his successful administration through his re-election. Other officers were: J. B. Edgar, first vice president; B. T. Manard, second vice president; Earl S. Savage, third vice president; L. F. Brown, secretary; W. B. Anderson, treasurer; R. M. Field, traffic manager.

The executive committee for the ensuing year remains the same with one change, D. W. McMillan of Ft. Wayne, Ind., substituted for J. B. Edgar, due to Mr. Edgar's election as first vice-president. W. E. Suits of the Quaker Oats Co., continues the position he has so capably filled as chairman of the executive committee, of which the other members are: H. A. Abbott, The Albert Dickinson Co., Chicago; G. A. Chapman, Riverdale Products Co., Chicago; M. M. Nowak, Nowak Milling Corp., Hammond, Ind.; A. F. Seay, Ralston Purina Co., St. Louis, Mo.

O. E. M. Keller of the J. J. Badenoche Co., Chicago, was elected chairman of the board of directors, the full list including the following: Elmer J. Eshelman, Lancaster, Pa.; Charles A. Krause, Milwaukee, Wis.; F. J. Ludwig, Boston, Mass.; John C. Reid, Cedar Rapids, Ia.; S. J. Thompson, Cincinnati; W. R. Smith-Vaniz, Memphis, Tenn.; T. E. Snyder, Chicago; Otto Weiss, Wichita, Kans.; E. Wilkinson, Birmingham, Ala.; Chas. P. Woolverton, St. Joseph, Mo.; J. M. Wilson, Meridian, Miss.; Geo. S. Keith, Nashville; Chas. Staff, Detroit; and J. L. Marshall, Jr., of Louisville.

Entertainment and Banquet.

The French market; the world famous restaurants and the many historic features of New Orleans kept the convention delegates busy most of the night. All details for the comfort and entertainment of the guests were provided. Immediately adjoining the convention hall, private wire grain markets were furnished by the Fulton Bag & Cotton Mills. Penick & Ford toured the visitors through their molasses plant, an interesting exhibit of the manner in which "Brer Rabbit" products are put up and black strap molasses handled.

A boat ride in the Susquehanna or the Mighty Mississippi, "Father of Waters," and through the canal to Lake Ponchartrain was delightful.

The banquet and frolic at "La Louisiane" brought out the best of New Orleans talent. The dinner in French went mighty well in straight American, assisted by liquid refreshments furnished by the New Orleans plant of Anheuser Busch.

REYNIER VAN EVERA,
Kansas City, Mo.
Secretary, American Corn Millers' Federation.

The Letter Box

Montana Ahead of Last Year.

Sixty per cent of spring wheat sowing and planting had been completed on May 1, compared with 32 per cent a year ago. Rye condition was 80 against 72 a year ago. The rush of farm work is reflected in the ratio of labor supply to demand, which was 97.9 on May 1, compared with 105.8 a year ago.—*Lauzier, Wolcott & Co., Butte, Mont.*

Beg Your Pardon.

Price Current-Grain Reporter: In reading the proceedings of the Illinois Grain Dealers' meeting, I noticed that you have credited me as being with the Western Grain Dealers' Mutual Fire Insurance Company which, of course, you know is an error and I wish you would make correction as some of my friends might think I have switched jobs. The figures quoted on lightning losses were for our company alone, the total loss for twenty-two years being \$283,000 instead of \$259,000, as set forth in your report.—*V. E. Butler, Grain Dealers' National Mutual Fire Insurance Co., Indianapolis, Ind.*

Dry in Ohio.

Price Current-Grain Reporter: As a news item oats are doing fine, corn coming up slow on account of the dry weather. We look for a short hay crop on account of the dry weather. The soil has been in excellent condition altogether too dry, pasture short. The thing that we need is plenty of good rain and warm weather. The farmers are not selling corn or oats freely, hay being low in price with no demand, and the prospects are a short corn crop. The movement is very slow, quite a lot of two and three hay that will never leave the farmers' farms. It will be needed for feed if this present dry weather continues.—*H. G. Pollock, Middle Point, Ohio.*

Wheat Seeding Progressing.

Price Current-Grain Reporter: Just now the spring wheat seeding is progressing nicely, a few are through, others are held back in the valley by the ground being a little too wet to work good. Looks like around Glasgow, unless conditions change, the acreage will be about 5 per cent more than last year. Some are worrying about dryness in the fields. Quite a little of the farmers are disking and duck-footing crops in, but this is very unwise. This is being done more than last year and may be the cause of less crop at the end of the year, should we have any dry weather in July.—*Glasgow Flour Mill Co., Fred A. Ernst, Glasgow, Mont.*

Stocks Below Normal.

ITHACA, MICH.—The Michigan bean market at this date is quiet. Receipts from growers are very light and demand from the trade is just fair. Stocks here in the state are not heavy and below normal. And we understand supplies with the wholesalers and cannerys generally are very low. Growers will start planting the new crop within the next two weeks. Acreage we believe will be about the same as last year. It is well to bear in mind that there will be no new crop beans on the market for about five months yet. With a normal consumptive demand, it is our opinion that the old crop will be entirely cleaned up before the new crop comes on the market, and as the old crop becomes scarcer, higher prices will rule. We operate several elevators in the heart of the greatest producing section and therefore have beans in carlots to offer practically every day in the year.—*Ithaca Roller Mills, by A. J. Crawford, Sec'y, May 13.*

Dry Weather Hurts Crops.

Price Current-Grain Reporter: The weather has been exceedingly dry here, and crops have suffered very seriously

—a large per cent of the wheat having been lost and other spring crops (late crops) such as corn and beans have not yet been put in, and of course, it is too soon to tell what they will be.

It will be impossible to put in many of the late crops unless the drought is broken. We anticipate the bean acreage will be very large. The weather the last few days has been so dry that many of the spring crops could not be put in and some of those that were put in have been lost.

The beans require less moisture than any other crop, which will induce the farmers to put in more of them. The irrigated land cannot yield anything like a full crop, as the ground is too dry, and storage water is too scarce. The late crops on dry land still have a show in making a crop.

In making a canvass the other day with all the bean shippers: It seems that there are about 300 cars left. The shipments last month, which was the dullest month on record, were 106 cars.—*Ady & Crowe Mercantile Co., Denver, Colo.*

An Illinois Report.

Price Current-Grain Reporter: A careful survey of Central Illinois this week shows the drought more severe over the eastern half, with somewhat increased moisture in western part as is evidenced by showers of last evening which gave Decatur .12 inch moisture; Springfield .47 inch, while points west of the Illinois river received rather more than that.

The infestation of Hessian fly in the growing wheat on the other hand is more severe in western half than in eastern part. Fly damage to growing wheat is as yet a matter of speculation, it may or may not grow serious as per weather conditions. Wet weather of course would be most favorable to the growing plant.

The wheat damage which is now apparent, is from zero weather in March and subsequent dry weather. Most fields look uneven and patchy, many of the stools put out in April near the ground have turned brown, many of the plants are not well rooted, the soil opens in large cracks, caused by almost continuous high winds and lack of adequate moisture. The Illinois state and U. S. Government reports for Illinois as of May, show an 85 per cent condition, while from best information we can obtain this figure should now be around 75 per cent.

Our farmers seem to count on a dry season, and have made extraordinary efforts to provide a specially good seed bed for their corn. Owing to chilly night winds this month and lack of moisture seed corn germinates slowly here. We know of a field seeded April 23 that did not show above ground for two weeks. Some corn acreage remains yet to be planted.

Old clover fields look fine. Pastures and hay fields already show effects of dry weather. Just moderate offerings of corn at present prices. We note a some better demand in most directions. Our growing oats in many fields show a distinct damage from drought in the last ten days. Some fields evidence this

NOTICE! MILLS AND ELEVATORS

The U. S. Department of Agriculture recently recommended a new mixture for killing WEEVIL in grain, stating that the mixture was Non-Inflammable and Non-Explosive and could be used without injury to man—at the same time leaving NO ODOR or TASTE in the grain.

“TETRI-CIDE”

For your convenience we are placing on the market the above mixture ready for use, in 30 and 50 gallon Drums, at \$2.25 and \$1.95 per gallon respectively, F. O. B. shipping point. The drums are charged extra at \$6 each, but returnable for full credit within 90 days. Our name and trade-mark for this mixture is “TETRI-CIDE.”

For a General Non-Poisonous and Non-Explosive Insecticide for killing moths and spraying for insects generally in mills and warehouses, we recommend

55-gallon drums @ \$3.25 gallon
30-gallon drums @ \$3.50 gallon
10-gallon cans @ \$3.75 gallon
No extra charge for containers.

Terminal Markets

PHILADELPHIA.

Geo. A. Rudderow, Correspondent.

G. Harry Righter of Watertown, N. Y., has been elected to membership in the Commercial Exchange.

Exports of grain for the week ending May 15 were: Wheat, 697,372 bus.; corn, 42,857 bus.; oats, 424,303 bus.; rye, 192,857 bus.; barley, 24,966 bus.

The Pottsville Milling & Produce Co., an organization recently chartered under the laws of the state of Delaware with a capital of \$100,000, has commenced business.

Receipts of flour and grain for the week ending May 16 were: Flour, 37,956 bbls.; wheat, 673,034 bus.; corn, 6,301 bus.; oats, 359,441 bus.; rye, 111,024 bus.; barley, 29,130 bus. and 300 tons of feed.

The Canadian Operative Wheat Producers, Ltd., of the Produce Exchange, New York City and recommended by Daniel J. Murphy and D. H. White, have also been elected to membership in the Exchange.

The following out of town visitors were registered at the Commercial Exchange during the week: Samuel H. Beck, Townsend, Del.; W. Case, Trenton, N. J.; A. Schuergle, Elmer, N. J.; F. J. Jackson, Media, Pa.; Max Feinstein, Bridgeton, N. J.; C. J. Miller, Calcium, Pa.; Thomas H. Rhodes, Pittsburgh, Pa.; W. S. Harris, New York City; H. F. Schell, Lancaster, Pa.; E. A. Waterman, Milton, Pa.

Flour receipts for the past week were 37,956 bbls. The market is dull but prices are firmly held. We quote per 196 lbs. packed in 140-lb. jute sacks: Soft winter straight, western, \$8.75@9.25; soft winter straight, nearby, \$8.50@9; hard winter straight, \$8.65@9.10; hard winter, short patent, \$9.10@9.60; spring first clear, \$7.75@8.50; spring patent, \$8.75@9.25; spring short patent, \$9.50@10; fancy spring and city mills patent family brands, \$10.10@10.75.

BALTIMORE.

Robert C. Neu, Correspondent.

Exports of rye from the port of Baltimore during the first four months of the calendar year totaled 7,765,000 bus., compared with 615,000 bus. exported in the corresponding period of 1924.

At the regular monthly meeting of the board of directors of the Baltimore Chamber of Commerce, held May 11, Geo. C. Eldridge and G. R. Roys were elected to membership in this organization.

Charles England and Ferdinand A. Meyer will represent the Baltimore Chamber of Commerce at the forthcoming annual meeting in Washington of the Chamber of Commerce of the United States of America, May 19 to 21.

Out-of-town visitors on the floor of the Baltimore Chamber of Commerce last week included Paul Leonhard of Flinkenberg & Leonhard, grain and flour merchants of Helsingfors, Finland; J. E. Bailey, of Georgia; Frank Hammer, of Alta Vista, Va.

Charles P. Blackburn, head of the grain receiving and exporting firm of C. P. Blackburn & Co. of this city, who has been on tour through the Panama Canal and up the Pacific Coast during the past six weeks, is expected to return to Baltimore on May 28.

Arrived in port here last week was the British steamer "Savannah," which will inaugurate the Furness-Withy Co.'s Baltimore to Glasgow service, the first foreign service in competition with American lines since the war. The Consolidated Navigation Co. is operating the U. S. Shipping Board service.

The following committee has been elected to present to the board of directors of the Baltimore Chamber of Commerce at its regular meeting in June names of various members to serve on the different grade committees for the coming year, viz.: A. W. Mears, chairman, ex-officio; Eugene Blackford, Edward Netre, E. H. Beer, and John J. Snyder.

A life size oil painting of Colonel John C. Legg, founder of the flour, grain and hay commission firm of John C. Legg & Co., 210 Chamber of Commerce building, this city, has been on exhibition recently

in the window of one of Baltimore's leading art stores and has been very favorably commented upon by those intimately acquainted with the Colonel. Although past three score and ten, Colonel Legg is a regular daily attendant on 'Change and takes the same keen interest in the various departments of his firm as characterized him in his younger days.

MEMPHIS.

George Williamson, Correspondent.

Receipts of corn for the week were 73 cars while oats came to the extent of 158.

J. S. Flautt of the Majestic Milling Co., Aurora, Mo., was a visitor during the week.

R. C. Davis, Charleston, Mo., and A. L. Buxton of Covington, Ky., were Monday visitors.

D. E. Peters of the Peters Milling Co., Omaha, was a visitor at the offices of B. H. Williamson & Co.

Lee Lockwood of Des Moines, Iowa, was registered at the Merchants Exchange Saturday by Walter Browne.

"Bill" Nye of the Denver Alfalfa Milling Co., St. Louis, stopped off en route home from New Orleans and mixed with his host of friends in the local trade.

M. E. Carter of M. E. Carter & Co., commission merchants and dealers in fruits and vegetables, ex-president of the Merchants Exchange, died Friday night at the age of 72.

General rains fell over this entire territory last week-end, although some few districts did not get enough and are still complaining. There still is a shortage of moisture since Jan. 1 of over 12 inches.

Mark F. Wade, one of the vice-presidents of John Wade & Sons, millers and dealers in grain and feed, died this week at the age of 50. He had been in bad health for several years. He is survived by three brothers and a sister.

Other visitors early in the week included Victor A. Cain of the Leavenworth (Kan.) Milling Co.; H. L. Robinson of the Robinson Milling Co., Salina, Kan.; Walter J. Miller, Jr., manager of the Lamar (Mo.) Milling Co.; C. P. Woolverton, president of the Grain Belt Mills, St. Joseph, Mo.

Business continues to move along routine lines with demand for oats holding up well. Track 3 white has been steady for several days at 51¢@51½¢. Feeders still show a decided preference for this grain, due to its relative cheapness. Corn is steady but demand does not appear any better. Cash 3 white is quotable at \$1.21, 3 mixed at \$1.14, and 3 yellow at \$1.22.

MILWAUKEE.

D. K. Steenberg, Correspondent.

Receipts last week were 133 cars barley, 20 corn, 141 oats, 16 wheat, 19 rye, 0 flax, 9 miscellaneous; total 338 cars, against 262 the week before, 230 a year ago and 284 in 1923.

Shipments last week were 169,300 bus. oats, 64,482 corn, 29,940 barley, 38,195 wheat, 11,770 rye; total, 313,687 bus., against 835,675 the preceding week and 773,301 a year ago.

Walter Mann of the Minneapolis Milling Co., traveling in the Wisconsin territory, is reported to be ill at a Milwaukee hospital. His condition, however, is not regarded as serious and he will probably be back at his duties after a week or ten days.

Irregular price movements prevailed in the Milwaukee cash grain market last week. Wheat closed 9¢@11¢ higher for the week; rye, 5¢ lower; corn, 4¢@5¢ higher; oats, ½¢@1¢ lower; and barley, unchanged. The movement was small and the demand good.

Milling production at Milwaukee last week amounted to 7,200 bbls. of wheat flour as compared with 7,000 bbls. the previous week and 3,800 bbls. in the corresponding week of 1924. Receipts of flour at Milwaukee last week were 66,440 bbls., the same as in the corresponding week of 1924, and shipments were 24,170 bbls. last week as compared with 15,690 bbls. in the corresponding week of 1924.

Wisconsin crops, which had the benefit of early planting, have been set back to a normal status by dry, cool, frosty weather, according to the weekly crop report of the Milwaukee office of the United States weather bureau. "Oats, barley and spring wheat are up in most sections," the report says. They are growing slowly and need rain. Rye and winter wheat are making slow growth but are in good condition. Corn planting has begun but most farmers are waiting for warmer weather. Meadows and pastures are short."

The volume of trading in grain futures at the Milwaukee Chamber of Commerce tapered off for April as compared with March. Rye was an exception, the monthly government report shows. During March 191,000 bus. of rye were traded in but in April this increased to 210,000 bus. In April 1,366,000 bus. of wheat were traded in as compared with 2,543,000 bus. in March. Corn showed a similar decline with 1,897,000 bus. in April against 2,308,000 bus. in March. Oats held up fairly well with 1,391,000 bus. in April compared with 1,629,000 bus. for the previous month.

Recent Milwaukee visitors included Walter Pikert of Winona, Minn.; August Kroenke of Grafton, Wis.; David Rosenheimer of Kewaskum, Wis.; George Enders and Joseph Straub of Lomira, Wis.; James W. Schafer of Menomonee Falls, Wis.; George Moody, president of the Weyawega (Wis.) Milling Co.; John P. Prather and M. S. Johnson of Chicago; A. Post of Horicon, Wis.; M. G. Allen of Cleveland, O.; D. W. McKercher of Wisconsin Rapids, Wis.; E. L. Kabot, general manager of the Menomonee (Wis.) Milling Co.; F. T. Collins of Ludington, Mich.; R. E. Smith of Minneapolis, Minn.; R. E. York of Portage, Wis.; F. H. Wolfman and A. C. Peters of Sharon, Wis.; D. T. P. Nielson of St. Louis, Mo.; A. H. Goppelt of Waupun, Wis.; Charles Vickerman of Winnebago, Wis.; John J. Buchanan of Phillips, Wis.; J. G. Herbert of Buffalo, Wis., and N. S. Mitchell of Minneapolis, Minn.

OMAHA.

Leigh Leslie, Correspondent.

Edward P. Peck, vice-president and manager of the Omaha Elevator Co., left his home here Sunday night for Washington to attend a meeting of the United States Chamber of Commerce.

A letter from Plattsmouth, Neb., says: "As showing how little grain is moving at this season of the farming year, the elevator at Murdock, Neb., which has received as high as 50,000 bushels of grain in a single month, handled during April less than 300 bushels of wheat and corn combined."

Captain H. H. Kramm of Woodlynne, N. J., writes the Omaha Grain Exchange: "We picked up your splendid radio program 600 miles at sea southeast of the Florida coast. It came in as clear as a bell and loud enough to be heard all over decks of the ship. Send me your program and I'll try to pick you up on the other side."

Farmers of Nebraska, acting through the Nebraska Farmers' Grain & Livestock Ass'n, last Tuesday filed a formal protest against the Grain Marketing Co. of Chicago being given the right to sell stock in this state. The protest was filed by J. W. Shorthill, secretary of the state association, who asks Governor McMullen to set aside the stock selling permit recently granted the Grain Marketing Co. and to order a public hearing "for the purpose of giving the farmers of the state a chance to show that the Grain Marketing Co. is not a farmers' organization, and is not co-operative." The request for an order setting aside the stock selling permit until a public hearing can be had also asks that testimony be taken "to determine whether or not leaseholds and good-will may be properly included in the value of the properties which the Grain Marketing Co. proposes to sell to the farmers." It is further requested that the governor arrange the hearing so that "if they may be so included, then whether the appraisal value and leaseholds, good-will, and physical properties are proper values or whether they are unduly high."

According to the May report of the Bureau of Crop and Livestock Estimates, U. S. Department of Agriculture, on crop conditions in Nebraska, 21% of the winter wheat acreage has been abandoned, most of the abandoned acreage being in the south and east counties. Farm work is farther advanced than usual, and spring crops are in excellent condition. Only 3%

The Rocky Mountain Grain Co.

DENVER, COLO.

A. RAVAUD

GRAIN AND FLOUR AGENT

Established 1894

Offices: 1 Rue des Italiens, PARIS
Cable Address: "ARAVAU" Paris
Branch Offices: Nantes Bordeaux Marseilles

of the winter wheat acreage was abandoned last year. The abandonment in 1923 was 25%. "The abandonment this year," the report says, "leaves for harvest 2,649,000 acres as compared with 2,794,000 acres harvested last year." Spring grains have done well. They are much earlier than usual and present prospects above the average. The acreage of spring grains is larger in sections having heavy loss of winter wheat. Oats were planted in abandoned winter wheat fields and in central Nebraska considerable barley was substituted for wheat. The condition of rye is 92%. This indicates a crop of 2,065,000 bushels. Soil conditions have been quite favorable in the leading rye sections since planting last fall, and the prospect is good. Last year's crop was 1,914,000 bushels.

NEW YORK.

J. M. Nugent, Correspondent.

There was a scattered trade in oats for export, mostly Canadian sorts. The total business for the week was estimated around one million bushels.

During the past week the following visited the floor of the New York Produce Exchange: C. W. Williamson of Buffalo, R. E. L. Marshall of Baltimore, N. E. Carpenter of Kansas City, H. B. Smith of London, T. G. Roddich of Liverpool, F. K. Morrow of Toronto and H. Wiener of Rotterdam.

The export business in wheat during the week was fairly good with total sales estimated around five million bushels. Most of this business consisted of Duluth spring wheats but there was also a fair portion of American hard winters, some scattered sales of Manitobas and a little durum. Spain and Greece were identified as fair buyers and there was also some business with the United Kingdom and a scattered trade with the continent.

Flour Situation.

Unusually small trading featured operations in the flour market during the past week although a steady tone prevailed. There were advices from Minneapolis of a little better inquiry but this was probably for quick shipment.

Locally, consumers are not interested in the market at any price.

Dullness also featured the export market and even clearances from day to day are exceptionally small.

Spring patents were quoted at \$8.65@9; soft winter straights, \$8.50@9, and hard winter straights, \$8.50@9 per 196 lbs.

TOLEDO.

S. M. Bender, Correspondent.

Charles Keilholtz of Southworth & Co. is spending this week at Wish Lake near Hamilton, Ind., with some friends.

Fred Lewis of F. S. Lewis & Co., Chicago, was in Toledo last week calling on his friends among the grain dealers here.

Arndt-Weinkauff Co. of Hamlet, Ind., are operating the elevator at LaCrosse, Ind., formerly owned and operated by Chatterton & Sons of Lansing, Mich.

Toledo grain inspections last week were 32 cars of wheat, 28 cars of corn, 38 cars of oats, 4 cars of rye, and barley, none. Total, 102 cars.

Chatterton & Sons of Lansing, Mich., have bought and are now operating the elevators at Hartzburg and Oakwood, O., formerly owned by T. P. MacDonald.

Flour production of Toledo mills for last week was 30,000 bbls., equal to 62 per cent of capacity. The week before it was 25,900 bbls. and a year ago last week was 34,300 bbls.

Wallace Applegate, secretary of the Mennel Milling Co., is in Columbus this week to attend the fiftieth wedding anniversary of his wife's mother and a reunion of the Milmine family.

All grain dealers are invited to attend the Ohio Grain Dealers meeting to be held at Toledo, O., on June 23 and 24. An excellent program is being arranged and entertainment will be of local talent.

A miller at Ottawa, O., said this week: "It is dry here again and wheat and oats are going back. Heavy frosts since last Friday, and some of the best wheat fields are turning yellow as a result of the dry and cold weather."

Ohio millers report some wheat looking better and some showing little if any improvement. Farmers are about done planting corn. Weather is good for oats. Very little wheat moving. Looks like another tough wheat year for millers and wheat farmers.

The soft wheat demand is slightly better than it was last week and millers finding the flour trade more active. Receipts have increased in all grains and are meeting with good bids from buyers. Mill feeds continue strong with prices firm and offerings very light.

The Ackerman Co., of Lima, O., is the new name of the firm heretofore known as the Hyman-Ackerman. The officers of the new company are: B. Ackerman, president, and J. F. Ackerman, secretary and treasurer. Mr. Hyman has retired from the business.

Lecount, after a trip through southern Ohio, wired: "Some good wheat in this locality but the general situation is bad. Wheat is generally thin and ragged. Most fields only half a stand. Oats looking good, soil well soaked, weather cool and favorable for small grains with a large acreage of both corn and oats planted."

Ben Hofner, local representative of Lamson Bros. & Co., Chicago grain firm, was taken entirely by surprise when fellow members of the exchange presented him with a china luncheon set for his twentieth wedding anniversary which was last Saturday. Jesse Hurlbut, president of the exchange, made the presentation speech and worded it so cleverly that Ben didn't know what it was all about. About all he could say was in the form of music on his ever-present banjo.

The lowest wheat prospects in thirteen years face the wheat farmers of Ohio with 30 per cent of the acreage destroyed through winter killing and drought, according to state statistician C. J. West of the Federal Crop Reporting Bureau. In at least three-fourths of the wheat fields of the state the stand is thin and uneven and the season is so far advanced that it is doubtful whether a plentiful supply of rain would materially improve the prospects. Rye is in fair condition and the oats fields are in fine condition except where there has not been enough moisture.

OKLAHOMA CITY.

W. F. Kerr, Correspondent.

L. A. Patterson, secretary-treasurer of the Benton Grain Co., Kansas City, was a recent visitor here.

C. N. Gray, general agent of the Gulf Coast Lines, called on Oklahoma City grain dealers recently.

Frank Winters of the Winters Grain Co. left recently on a vacation to be spent in Chicago, Minneapolis and northern Michigan.

A feed and whole-wheat flour mill has been established at Ardmore by John Bush who has been a miller for a number of years.

The elevators at Hydro, Okla., of the El Reno Mill & Elevator Co. and M. C. McCafferty were completely destroyed by fire one night recently.

J. E. Crossley, Okemah, the Farmers Grain Co., Pond Creek, and the Staley Milling Co., Kansas City, were among recent applicants for permits to sell milled feeds in Oklahoma.

Nebraska wheat is spotted with the best of the grain in western countries, said I. C. Hardin of Omaha, treasurer of the Trans-Mississippi Grain Co., who was a recent Oklahoma City visitor.

F. A. Hague, assistant sales manager of the Southwest Wheat Growers Association at Enid, estimates the Texas wheat yield this year at 6,000,000 to 8,000,000 bus., or about 50 per cent of an average crop. He says that practically all old wheat in Texas has been sold.

Ernest V. Mashburn, who recently retired from the Shawnee Milling Co. at Shawnee, has arrived with Mrs. Mashburn in Oklahoma City and arrangements are being made to open the Oklahoma City office of the new Mashburn-Mullin Grain Co., of which Mr. Mashburn is to be general manager.

Officers and directors of the Oklahoma City Grain Exchange were all re-elected at the annual meeting May 11. They are Fritz Straughn, president; J. J. Stinnett, vice-president; R. C. Shelton, secretary; and George C. Grogan, W. F. McManus, J. J. Stinnett, Jesse Vandenburg, Frank Winters and W. E. Stowers, directors.

That Kansas probably will not produce over 35,000,000 bus. of wheat is the opinion of J. C. Burke of St. Louis representing the Langenberg Bros. Grain Co., who was here recently after completing a tour of the Kansas grain belt. He found conditions in Oklahoma wheat fields in the northern part of the state encouraging.

If operators of grain elevators of over 25,000 bus. capacity in Oklahoma desire to make them public elevators, it is essential that they secure permits and make bonds under the state warehouse act, says C. H. Linzee, state grain inspector, in a note of warning to those who may have been of the opinion that securing a permit was optional.

Entomologist E. C. Stiles of the A. & M. College has begun directing the work of poisoning grasshoppers in southern Okla-

CHICAGO

homa. Business men of several counties are assisting. It is believed that far greater damage than was done by these pests last year is in prospect for this year if decisive action is not taken. Damage last year to corn, cotton, wheat and oats is believed to have amounted to several million dollars.

The E. O. Billingslea Grain & Cotton Co., a corporation, has established a general office in the Grain Exchange building in Oklahoma City in charge of E. O. Billingslea who is president and general manager. J. A. Burt, vice-president, is to have charge of the company's Frederick office. The company will operate four country elevators. V. A. Billingslea is secretary-treasurer. The Billingsleas moved here from Frederick.

The State Board of Agriculture estimates this year's wheat yield at 30,000,000 bus., compared with 54,000,000 bus. last year and a ten-year average of 41,000,000 bus. Abandonment is estimated at 9 per cent of the acreage planted, which would make a yield of about 9 bus. per acre. The growing condition early in May was placed at 64 per cent, compared with 90 per cent on that date last year and a ten-year average for the date of 84.4.

Grain Inspector Linzee reports that during the coming grain season a laboratory of the state medical university in Oklahoma City will be used for testing grain and that chemistry students of the A. & M. College will be employed in the laboratory during the summer. Growers will be charged 25 cents each for testing samples and grain dealers \$1 each. The legislature authorized the laboratory tests but made no appropriation to carry on the work.

J. A. Whitehurst, president of the State Board of Agriculture, has asked the president of the Oklahoma Wheat Growers Association to repudiate the efforts of C. L. Lockwood of Enid to intervene in the Interstate Commerce Commission case wherein Oklahoma is seeking a reduction in grain freight rates to Texas. Lockwood is traffic manager of the Southwest Wheat Growers Association. The corporation commission and grain dealers have sought to get the rate reduced and the case is pending before the I. C. C.

DULUTH.

S. J. Schulte, Correspondent.

Thomas Gibson, veteran operator on this market, has returned from an extended vacation trip to Lower California via the northern route through British Columbia and the Canadian Rockies.

Millers on this market have been repining the fact lately that they are bare of feedstuffs and are, therefore, unable to take advantage of the substantial bulges that have come about in their quotations.

Grain handlers at Duluth and Superior are planning to set their houses in order early for another big fall marketing season. Should the Northwest come through with bumper spring wheat and durum crops, it is being taken for granted that operators here will find themselves working in more tranquil waters next fall than has been the case at any time since the war.

Members of the Duluth Board of Trade are counting upon a better than average late spring and early summer movement of grain from the country to this market during the next few weeks. Private reports have shown that interior houses are carrying substantial supplies of wheat and other grains and their holders are preparing to move them to the markets now that spring seeding has been practically completed.

Provided a monkey wrench is not thrown into the machinery through cold weather conditions, heavy productions of wheat and coarse grains over the Northwest are being banked upon by commission house and elevator interests here. Reports received by them from correspondents over the Northwest have agreed that substantial increases have come about in spring wheat and durum seedings. Provided nothing happens, it is figured that this market should experience a busy period next fall.

With the rush under May delivery contracts over, grain men experienced a dull period as regards the movement from the elevators during the last week. A good tonnage of spring wheat and durum is scheduled to go out during the coming week. Space for loading those grains for Buffalo delivery has been chartered at 2 cents a bushel. Stocks of rye in the elevator here were reduced 1,104,000 bushels during the week to 2,603,000 bushels. Stocks of spring wheat and durum were cut down around 1,070,000 bushels to 9,894,000 bushels.

Holders of oats on this market are feeling more confident at present than in several months back. The impression is gaining ground that oats at the present level of prices are a cheap food product and it is known that some of the largest elevator holders of them have turned down what appeared to be favorable offers for them recently, taking the position that they are making their storage charges and that they might as well hold out for a fair

profit. Oats stocks in the elevators here now aggregate 8,450,000 bushels, a reduction of 747,000 bushels during the last week.

LOS ANGELES, CALIF.

C. G. White, Correspondent.

M. Lalley of the Visalia Milling Co., Visalia, Calif., was a visitor on the floor of the Exchange last week.

Charles Glenn of Sperry Flour Co., who has been very ill for the past week, was operated upon this week for appendicitis at the French hospital.

Three new applications for membership in the Los Angeles Grain Exchange have been posted on the bulletin board of the Exchange. They are J. B. Hill, Morgan Sales Agency, and M. W. Muller.

The grain market at this terminal during the past week has been very firm with an upward trend. The demand seems to have increased for nearly all grains, with the arrivals about normal and very little grain left on track at the close of the week.

M. W. Muller, grain dealer of Fresno, Calif., has applied for membership in the Los Angeles Grain Exchange and has opened an office in this city at 600 I. W. Hellman building. W. R. Beatty, formerly a grain broker of this city, will be in charge of Mr. Muller's Los Angeles office.

No. 2 yellow corn, board terms, not spot, is offered at \$2.52 with a bid of \$2.50. No. 3 yellow corn, 5-day shipment, is offered at \$2.47 with a bid of \$2.44; No. 1 Imperial milo for 10-day shipment selling at \$2.42½ per cwt.; No. 3 bulk white kafir for prompt shipment is being offered at \$2.25 with a bid of \$2.20. Spot barley is offered at \$1.90 with a bid of \$1.82½, while December barley in 100-ton lots is offered at \$1.65 with a bid of \$1.60.

NEW ORLEANS.

M. L. Davis, Correspondent.

Stocks in elevator as of today: Wheat, 1,337,000 bushels; oats, 60,000 bushels; corn, 57,000 bushels; rye, 2,000 bushels. Cars on track: Wheat, 3; corn, 1.

Standard blackstrap molasses is firm and unchanged at 13c per gallon, f. o. b. tank cars New Orleans; medium is quoted at 13½ per gallon, f. o. b. tank cars, and light blackstrap at 14c per gallon.

The annual convention of the Interstate Cotton Seed Crushers' Association was held at the Roosevelt hotel on Wednesday, Thursday and Friday of this week. Among the speakers at the convention were Rudolph Hecht, president of the Hibernia Bank & Trust Co.; R. F. Crow, Houston, president of the Association; N. R. Whitney, professor of economics at the University of Cincinnati, and E. T. George, chairman of the general arrangement committee. Among the subjects discussed were "Facilities at the Port of New Orleans for the Handling of Cotton seed Products"; "Recommendations that the by-laws of the Association be changed so as to bring in all units of the industry, including the manufacturers of by-products, seed crushers, cotton oil and machine men." Mr. Crow recommended the establishment of a bureau of markets to study the manufacturer's problems and advised that more attention should be paid to the feed end of the industry in order that the required amount of protein would be contained in cattle feeds. A program of advertising in order to counteract competition by dairying and feed interests was decided upon and a general manager will be employed who will be charged with the advertising and business direction of the Association. Dues for oil crushers were raised to 3c per ton on cottonseed crushed. Refiners will be assessed \$50 a year and \$5 per 100 barrels of daily capacity.

ST. JOSEPH, MO.

N. K. Thomas, Correspondent.

Geo. A. Aylsworth, a member of the St. Joseph Grain Exchange, has been named to represent the association at the meeting of the United States Chamber of Commerce May 20.

Jerry C. Moats, local manager for Jackson Bros. & Co., was elected to membership in the Chicago Board of Trade Monday, May 11. Mr. Moats will continue to live in St. Joseph and will be the correspondent for Jackson Bros. & Co. here.

Message from Falls City, Neb., stated the chinch bug menace is glaring the farmer in the eye at least two weeks ahead of the usual schedule this year; the

best appears not only earlier this year but is here in greater numbers. There are some fields north of town that are showing bad effects of the workings of this bug.

Visitors on the St. Joseph Grain Exchange during the week ending May 16 included: A. Fleming, Platte City, Mo.; J. L. Collins, Platte City, Mo.; E. Prager and Ray Asbury, White Cloud, Kans.; W. T. Crews, Craig, Mo.; W. T. Waidley, Elk Creek, Neb.; R. A. Bywaters, Camden Point, Mo.; R. G. Welpert, Easton, Mo.; I. C. Roelofson, Barnard, Mo.; F. M. Denny, Savannah, Mo.; A. O'Connor, Atchison, Kan.; O. C. Blair, Topeka, Kan.

R. Ballard of Oxford, Neb., was in St. Joseph, May 11, and stated he did not believe he ever saw wheat looking better than it is right now around Oxford and further west to the Colorado line. Wheat came through the winter in fine shape after being well protected by a good blanket of snow during the extreme cold weather. The soil is well saturated with moisture. Bright, warm weather is needed to enable the farmers to get their corn in the ground.

CAIRO.

In southern Illinois it is believed that early corn planting will show an increased acreage ranging from 10 to 25 per cent.

Three barge lines are now operating from this port, the Western Kentucky Coal

Co., the Goltra Service and the Mississippi Warrior System.

Grain Inspector M. C. Culp of Cairo, Ill., in referring to the proposed oats grades, believes any change made should include feed grades such as mill oats and sample oats. The Cairo market has been handling a considerable volume of sample grade oats of good quality which are bleached and sold throughout the south.

CINCINNATI.

George Mosbacher, Correspondent.

E. B. Terrill, manager of the Early & Daniel Co., left Friday with a party of Covington, Ky., friends for Louisville to witness the Kentucky Derby at Churchill Downs.

G. A. Collier, marketing specialist of the Washington office of the Bureau of Agricultural Economics, hay, feed and seed division, who is making his semi-annual western trip for the department, visited the local trade last Monday.

The oats market sympathized with the action of wheat and corn to a certain extent during the past week and was firmer and higher. The demand was good for the top grades but very dull for No. 4's and sample. No. 2 mixed sold at a discount of 4c under No. 2 white.

A. C. Gale of the A. C. Gale Grain Co. informed his friends in the trade of the

marriage of his son, Bert Gale, to Miss Clara Walton of New York City at Jacksonville the past week. He was formerly associated with his father in the grain business here but for several years has been representing a leading automobile tire company at Jacksonville.

Stocks of grain in Cincinnati elevators for the past week and previous week were as follows:

	May 15, 1925	May 8, 1925
Wheat, bus.....	114,787	119,118
Corn, bus.....	191,369	210,747
Oats, bus.....	83,454	91,027
Rye, bus.....	3,476	3,476

The pronounced scarcity of corn and very small daily receipts was a strengthening influence on the market but the urgent demand for top yellow grades from millers and feeders, and improved inquiries for white also helped to advance prices from 2@3c over a week ago. Mixed sold slowly as also ear corn. No. 2 and No. 3 yellow easily brought a premium over white and mixed.

Cash premiums for wheat showed a higher basis, and for wheat gains of 3@4c were recorded for top grades over a week ago. The milling demand for the high protein wheat of little damage was urgent, but any kind below No. 2 was extremely dull and more widely discounted. No. 3 garlicky sold at a discount of 9@11c; No. 4, 12@15c; No. 5, 18@20c. The grading and concessions in price were due more to damage than to moisture or weight.

MINNEAPOLIS.

H. A. Paul, Correspondent.

H. F. Salyards of Ely, Salyards Co. of Duluth was a Minneapolis visitor Thursday.

C. S. Deaver of the Peavey Company has returned from a world tour began last December.

Frank McNally of the Banner Grain Co. spent a few days at New Richmond, Wis., this week.

H. R. Shepherdson of the Quinn-Shepherdson Co. is back after a tour of the Mediterranean.

Bud Converse of the Occident Elevator Co., located at Duluth, spent the bulk of the week here.

B. B. Sheffield made a trip of inspection through his farm properties in Montana last week, returning Sunday night.

C. T. Stevenson was called to New York City to meet the body of his sister, Mrs. Miller, who died recently in Paris, France.

C. G. Wehmann, associated with his father in the H. Wehmann Co., millfeeds, announces his retirement from that business about July 1st. Carl will enter the bond selling game in Chicago.

Among the visitors on 'Change last week were the following: P. R. Corcoran, G. C. Barnum, Jr., D. T. Helm and A. L. Graham of Duluth; W. W. McKean and George Heflinger of Winnipeg; J. B. Thomson of Baltimore and C. Kurth of Milwaukee, Wis.

J. R. Morris of the International Milling Co. recently returned from a trip through the Canadian northwest and had as his guests on the exchange floor on Saturday two representatives of the Japanese importing firm, Mitsui & Co., the Messrs. Otomato and Hanahari.

Minneapolis Cash Markets.

Wheat.—The outstanding feature of the local cash wheat market during the past week has been the steady drain on the existing visible supply. Hardly a day passed but there was at least a quarter of a million bushels taken, either for export or for shipment to Chicago. Early in the week there was quite a sizeable lot worked for export via Montreal. Duluth was also reporting fair amounts worked to the same port. As we draw closer to the end of May, it begins to seem all the more that Chicago short interests are looking with very covetous eyes on our stocks of wheat here and grain which has lain here since last fall, with neither local mills nor outside trade at all interested in it, is beginning to assume a very desirable character. Receipts from the country are very light, being only about one-third of the amount of shipments. Local stocks showed the first good sized decrease for some time past this week. The weekly decrease totaled close to a million and one-half bushels, stocks being 9,169,681 bushels vs. 10,621,362 last week and 11,213,117 a year ago.

Rains during the past week have delayed seeding operations in the spring wheat country. Temperatures yesterday and today were exceptionally low; one or two Dakota points reporting as low as 17 degrees. Of course, this does not damage the growing seed any, but it does delay sprouting.

The tone of the cash wheat market has been very strong through the week ending today. With shipping interests bidding for the wheat on track here and Duluth hoisting the bids for diversion point stuff, there was nothing much for the mills to do but to fall right in line and pay more for the quality wheat which they needed. Flour business showed some improvement; as a matter of fact, new business during the week was about the best in the past thirty days.

Based on today's range of sales, No. 1 hard spring sold at 5@45c over the July; No. 1 dark northern, 3@44c over No. 1; northern, 3@42c over.

While the demand for spring wheat kept up very well, the same could not be said for the durum. Today there was a marked falling off in the demand, especially for the fancy quality. No. 1 amber was quoted at 5@25c over Duluth May; No. 1 durum,

5c under @ 23c over; No. 1 mixed, 3c under @ 23c over.

Receipts of winter wheat very light and prices were entirely of a nominal character.

Corn.—The weather is much too cold for corn growth in this country and already there is some talk about a repetition of last year's failure, as the spring weather starts in practically identical with that of the 1924 season.

Receipts in this market are very light, but early in the week there was scarcely any demand even for the limited offerings and the market was just steady until mid-week, when there was a slight improvement in inquiry from shipping interests. Local stocks are slowly but surely approaching that point when there will be none on hand. Today's figures showed 410,786 bushels vs. 536,053 last week and 804,303 a year ago.

Today No. 3 yellow was quoted at Chicago May price to 3c under; No. 4, 5@10c under. For the mixed corn, No. 3 would bring 6@7c under Chicago May and the No. 4, 9@12c under.

Oats.—There were liberal shipping sales of oats out of this market during the past seven days, but even at that local stocks showed a decrease of less than one million bushels for the week. Today the total was 14,978,571 bushels vs. 15,842,571 last week and 2,090,437 a year ago. The advance in millfeeds undoubtedly has had something to do with the improvement in the demand for oats and with no immediate indication of a drop in mill offal prices, it may be reasonable to expect a continuation of the demand for these oats. The total is still an imposing one compared to last year, but it must also be remembered that this is not the first year that we have had heavy oats stocks, and still they disappeared some place.

The first four days of the week there was a very good demand for everything except that with heavy wild oats mixture, but the last two days there was a let up in the demand, a slight falling off in premiums. Elevator offerings were liberal at the close of the week, helping to glut the market. Today No. 3 whites brought 1/2@1 1/4c over the July and No. 4 whites, 1/2@2c less.

KANSAS CITY.

T. J. Tanner, Correspondent.

L. L. Wilson of the Kansas Wheat Growers' Association was elected to membership in the Kansas City Board of Trade Tuesday.

W. M. Sloan of B. C. Christopher & Co. spent the week in western Nebraska and Colorado. He sent some very favorable reports on the wheat crop.

Since the first of the month 587,000 bus of corn and 150,000 bus. of oats have been delivered on Kansas City May contracts. Only 20,000 bus. of wheat were tendered.

Large delegations of Kansas City Board of Trade members will attend the conventions of the Oklahoma and Kansas Grain Dealers' Associations in Oklahoma City and Wichita, respectively, during the coming week.

With Joseph P. Russell as manager, J. S. Bache & Co., stock, grain and cotton brokers, opened their new office in the Dwight building last Monday. C. D. Crotchett, former manager, has joined the force of Strandberg, McGreevy & Co.

Visitors at the Board of Trade this week included J. C. Husted, R. F. Burnham and T. N. Perrin, Chicago, Ill.; V. Smiley, Omaha, Nebr.; W. C. Maxwell, St. Louis, Mo.; J. W. Randolph, Toledo, O.; F. A. Doty, El Paso, Tex.; P. Reusser, Hutchinson, Kans., and N. W. Leslie, Winnipeg, Man.

John Fennelly, vice president of the Hall-Baker Grain Co., who was at eastern health resorts and in Bermuda for several months, has returned to Kansas City. He visited friends at the Board of Trade Thursday. Mr. Fennelly has not fully recovered his health. He will not try to resume his duties for some time.

C. W. Fisher of St. Louis, an attaché of the Federal Department of Justice, was in Kansas City this week to check the books of local grain firms in connection with the investigation of manipulation charges arising from the wild wheat markets of the last three months in Chicago and elsewhere. Mr. Fisher was introduced by W. F. Logan, supervisor of future trading in Kansas City.

Notwithstanding the smaller wheat crop in Kansas this year, employment bureau officials estimate that 40,000 outside men will be needed at harvest time. Much of the labor will be used in caring for oats, barley and other crops. It was said that 53,000 extra men were brought in last year. Harvesters are filtering into southern Kansas already. That region expects plenty of help. Boys in colleges throughout the United States are offering their services as harvest hands. Railroad men are doing everything possible to facilitate the movement of grain after it is harvested. Indications point to plenty of grain cars to move the Kansas wheat crop.

Cash Grain Markets.

Wheat.—Receipts for the week, 313 cars, against 247 a week ago and 412 a year ago. Increased offerings were especially notable on Monday and prices of hard and dark declined early in the week, following futures, but there was a good recovery later, when the speculative situation improved. The arrivals included some wheat from Omaha and the rest from country elevators. Local millers had only a hand-to-mouth trade in flour, but they were fair

Barley	4,200	19,600
	37,250	231,950

ST. LOUIS.

W. T. Brookings was a recent business visitor in Kansas City.

A. T. Bales visited the Kansas City Board of Trade last week.

Charles Dreyer of the Dreyer Comm. Co. is looking after business in the south.

It is reported that Fred Deibel, recently connected with the Black and White Milling Co., is now with the Pauley Feed Co.

W. F. Walters, formerly with Dreyer Commission Co., and now in business at Des Moines, Ia., was a recent visitor among St. Louis friends.

Powell & O'Rourke Grain Co. of St. Louis are building an addition to their present elevator which will consist of 16 concrete tanks of 300,000 bushels' capacity.

At a meeting of the executive committee of the Missouri Grain Dealers' Association, which was held immediately after the close of the annual meeting, D. L. Boyer was reappointed secretary.

Charles Rippin, secretary and traffic manager of the Merchants' Exchange, accompanied the Chamber of Commerce "Good Will" delegation on its tour of Missouri during the past week.

Marshall Hall Grain Co. has bought the Koehler Flour Mills property and business. The mill had recently added a new elevator, the operation of which will be a particular advantage to the large grain company.

The government barge line and the Goltz barge line, according to the Merchants' Exchange, have handled about 12,000,000 bus. of grain to New Orleans from St. Louis and Cairo during the last wheat crop. The report shows that they have made a substantial net profit over all operating expenses since August, with the exception of one month, when there was a slight loss.

Among the St. Louis grain men who looked in on the meeting of the Illinois grain dealers at Peoria were H. A. Van Rump of the Van Rump Grain Co., T. C. Taylor and E. C. Seele of Seele Bros. Grain Co., Frank Bubb and P. C. Knowlton of Martin & Knowlton Grain Co., W. E. Hotchkiss of the Marshall-Hall Grain Co., S. A. Whitehead of the Nansen Commission Co., and A. H. Beardsley of Picker & Beardsley Commission Co.

is sown and early fields looking well. Hard frosts at night have checked growth and there are complaints of poor germination from many districts in Saskatchewan. Some districts along the southern border are complaining of dry condition, but generally there appears to be no lack of moisture. Eleven degrees of frost were recorded in many parts of all three prairie provinces on Saturday. Any oats or barley above ground must have been damaged badly at that temperature. The weather is still decidedly cool.

There has been excellent demand for oats in both the cash and future markets and all grades have been wanted except No. 1 feed, which has been going to the clearing house. These oats have been for export. A steady market at these figures seems probable as there are plenty of oats in store and from reports received here it would appear that U. S. oat crop prospects are better than average. Top grade oats commanded a premium of 6c over the May on Saturday.

The wheat pool is considered to be still a large holder of wheat in Canada, most of it low grade. The last few days what demand for cash wheat has been in existence has been for the lower and off grades and spreads have narrowed. What little wheat is yet in farmers' hands to market is mostly pool wheat. Daily receipts are dwindling rapidly as the premium on May over July has encouraged the elevator

buyers of protein samples. Other qualities went to elevator interests. At the close prices were 3@5c higher than on the previous Saturday, with No. 1 at \$1.62@1.78, No. 2 at \$1.62@1.78, No. 3 at \$1.60@1.77 and No. 4 at \$1.58@1.76. Elevator men continued to load out wheat on domestic and export contracts, though new business was light. Soft wheat offerings, while not heavy, showed some gain, but the demand was very poor. Prices broke with hard wheat, but failed to make a full recovery. Closing quotations were unchanged to 3c lower, as follows: No. 1 red, \$1.67@1.72; No. 2, \$1.67@1.72; No. 3, \$1.64@1.70; No. 4, \$1.60@1.66. Stocks of wheat decreased 421,000 bus. for the week to 2,524,000, as compared with 7,631,000 last year. The Southwest had another wet and cold week, which brought severe storms to Oklahoma and Missouri points, injuring crops and causing other damage. There was an increase in complaints as to Hessian fly infestation in Kansas and many estimates on yields per acre were low. There are few grain dealers who believe Kansas will exceed the Government estimate of 96,000,000 bus. Crop prospects in Nebraska were improved by rains late in the week.

Corn.—Receipts, 177 cars, against 190 a week ago and 234 a year ago. Influenced more or less by the action of wheat, the market was irregular, ending in one of its strong periods. Yellow and mixed sold best, with feeders the principal buyers. At the close white was unchanged to 2c higher, mixed and yellow 1½@2c up. Final prices were: No. 2 white, \$1.10½@1.11½; No. 3, \$1.08½@1.11½; No. 2 mixed, \$1.07½@1.08½; No. 3, \$1.05½@1.07; No. 2 yellow, \$1.12@1.13; No. 3, \$1.10@1.11½. Shipments from store were chiefly to fill previous contracts. They amounted to 268,000 bus., leaving stocks of 4,054,000, as against 1,441,000 a year ago. Though the weather was too cool for the time of year, reports from the country indicated that planting had made good progress. A heavily increased acreage is assured.

Oats.—Receipts, 23 cars, against 33 a week ago and 55 a year ago. Few of the arrivals were on sale, as most cars were applied on contracts. There was a good local and shipping demand. White oats gained 1½@2c and red closed 1c higher, as follows: No. 2 white, 51c; No. 3, 49@50c; No. 2 red, 49c; No. 3, 48c. Withdrawals from store reduced the local stock 178,000 bus. to 571,000, against 165,000 last year. Southwestern crop advices were favorable.

Kafir and Milo.—Receipts, 60 cars, against 62 a week ago and 56 a year ago. During most of the week trade was slow, with storage people the main buyers. Prices declined with other grains, but there was a stronger tendency later, when corn and oats went up. Kafir closed 1@4c per cwt. higher, with No. 2 white at \$1.74, No. 3 at \$1.73 and No. 4 at \$1.70@1.71. The net gain in milo was 1@3c, with final prices as follows: No. 2, \$2.04@2.05; No. 3, \$2.03@2.04; No. 4, \$2.01@2.03. Stocks showed a reduction of 1,000 bus. to 268,000, against 475,000 a year ago.

PEORIA.

L. L. Eckard, Correspondent.

Cattle and calves were steady, with best selling at \$9.50 down. Receipts were light.

William S. Miles of P. B. & C. C. Miles of Peoria, Ill., was elected president of the school board of Peoria on May 4, succeeding W. B. Reed.

W. W. Dewey of W. W. Dewey & Sons of Peoria, Ill., is expected home the last part of May from a winter's sojourn in San Diego, Calif.

Oats receipts were 7 cars for Saturday, with the market quoted ½c lower. There was only a fair demand, with No. 3 white selling at 44½c and No. 4 white, 43½c.

H. M. Barlow, local manager of the James E. Bennett & Co., and R. S. Turner, member of the Turner-Hudnut Grain Co., drove to St. Louis Saturday and will spend a few days visiting the market.

J. J. Badenoch Grain Co., Chicago, has opened a branch office in the Board of Trade building, Peoria, Ill. Frank Dalton is manager, formerly connected for several years with Geo. W. Cole Grain Co.

General rain throughout this district was very beneficial to the wheat and oats, which were badly in need of moisture, and making slow headway, due to the cold, unseasonable weather. Planting of corn is completed in most places and soil reported in good condition.

Hogs at the local yards had a sharp upturn Saturday after being decidedly weak the most of the week. Prices closed 40@50c higher, with \$11.90 paid for the best. The advance was on all grades, with only one carload offered for sale. Heavy butcher hogs sold at \$11.90. Receipts were light, with only 500 head. Light hogs, \$11@11.90; medium, \$11.75@11.90; heavies, \$11.75@11.90; packers, \$10.25@10.65.

Cash corn at Peoria was in good demand Saturday, with 33 cars. The market was steady with a good demand and prices quoted 1@1½c higher. No. 1 yellow, \$1.14; No. 2 yellow, \$1.13½@1.14; No. 3 yellow, \$1.12@1.12½; No. 2 mixed, \$1.13½; sample, \$1.03. There were some indications last week of a freer movement of corn and country offerings to arrive, while not large, were considerably heavier than previous week.

business visitor in the city a few days ago.

Paul Rothwell has returned from an extended vacation in Bermuda.

Among recent Boston visitors were Harold Anderson, vice president, National Milling Co., Toledo; Barnet Farroll of Chicago and Oscar Matthews of Indianapolis.

Frank J. Ludwig has returned from Washington, where he went to attend the hearing of the petition of the Canada-Atlantic Transit Co., before the Interstate Commerce Commission.

Plans are under way for a revision of the by-laws of the Grain & Flour Exchange so as to permit associate memberships. This step has been deemed necessary now that the limit of 200 has been reached in the active membership.

Steps were taken on May 8 to organize a shippers' regional board for the New England district similar to other such organizations which have been formed in 11 other sections of the country. The meetings were under the auspices of the car service division of the American Railway Association. The plan of the association as stated is to secure a greater measure of co-operation between shippers and railroads, so that greater economies of time and money in shipping and especially of expedition may be secured. Following a preliminary statement of the objective of the association by Warren C. Kendall, of the car service division, William F. Garcelon, of the Arkwright Club, was elected chairman and a nominating committee was elected to name permanent committees through which the regular work of the association will be done.

PORTLAND, ORE.

B. F. Brewer of Walla Walla was a recent visitor in Portland.

Maurice Senders of Albany, Ore., was a recent visitor with the Merchants' Exchange.

H. E. Sanford of the Sanford Grain Co. has been passing around the cigars, the occasion being the arrival at his home on May 8 of a big baby boy.

Contrary to last year's statistics, Columbia river ports shipped more flour than ports of Puget Sound during April this year. Figures just released showed that the Columbia river shipped 122,918 barrels

during the month, compared with 90,179 barrels from Puget Sound.

The annual ball given at the Multnomah Hotel by the Oregon flour milling industry, according to A. V. Hemming, secretary of the Oregon Cereal and Feed Association, was a great success from every standpoint.

There has recently been some demand coming from St. Louis for wheat from this section of the country, fancy soft winters being wanted, also a little demand coming from California.

About 60 warehouses in the Pacific northwest district are operating under the United States warehouse act, according to C. I. Dutcher, in charge of the Pacific coast department for the administration of this work. There are about 250 warehouses all told in this district.

Two of the three resolutions placed before the United States Chamber of Commerce by the western division for discussion at the national meeting in Washington, D. C., May 19 to 22, had their inception in the Portland Chamber of Commerce. Oregon ideas relative to methods by which chambers of commerce may assist in agricultural development will be to the fore at the national meeting and the Portland chamber has done as much as any in the United States to aid the farmer in building up sound co-operative movements.

Terminal receipts in cars were reported by the Merchants' Exchange as follows:

Novadel, the bleaching agent, visited in
Kansas City.

The Chase Bag Co., which recently ac-
quired the plant of the Buffalo Bag Co.,
has awarded a contract for a \$150,000 ad-
dition to the plant.

John J. Gerard of Hecker-Jones-Jewell
Milling Co., and C. H. Cochran of the
Washburn-Crosby Co., this city, were in
New York on business the early part of
the month.

The Thompson Milling Co. of Lockport
has completed arrangements with the Ni-
agara County National Bank of Lockport
for the issuance of \$250,000 first mortgage
7 per cent 20-year gold bonds.

L. F. Brown, Secretary, American Feed
Manufacturers' Ass'n, attended the New
York State Feed Manufacturers' annual
convention May 19th. He is also making
the rounds of the Eastern trade.

The annual meeting of the New York
State Feed Manufacturers' Association was
held in the Hotel Buffalo in this city on
Tuesday of this week. Cost of manufac-
turing various feed was discussed, as was
also a good many of the things that were
talked about and acted upon at the New
Orleans meeting.

CHICAGO.

Raymond Olesen, a member of the
Board, was married last week.

W. J. McGraw has been elected to mem-
bership in the Board of Trade.

It is understood that plans are being
discussed looking to the restoration of bids
and offers on the Board of Trade.

B. N. Lathrop has resigned as general
representative in Illinois and Indiana for
the St. Paul Milling Co., effective June 1.

Among recent Kansas City visitors were
N. H. Hosteler, L. S. Chapman, L. N. Per-
rin, J. C. Husted and R. F. Burnham of
this city.

Geo. T. Woolley, secretary of the West-
ern Star Mill Co., Salina, Kans., was in
the city last week, having been called here
by the illness of a relative.

Elmer J. Eshelmann, Lancaster, Pa., and
R. P. Walden, Corn Products Refining Co.,
New York City, were guests of Max No-
wak on the Chicago floor Tuesday. Both

men returned home on the Broadway
Limited, having attended the American
Feed Manufacturers convention in New
Orleans.

The Board of Trade summary and the
closing Chicago and New York Stock Ex-
change quotations are now broadcast every
evening between 6 and 6:30, Chicago day-
light saving time, by WGN, The Chicago
Tribune station, on the Drake hotel. The
time has been changed from 5 o'clock, due
to the daylight-saving schedule.

Among the Chicago grain men who at-
tended the Peoria convention were A. R.
Funks of Bartlett Frazier & Co., C. H.
Dodd of the J. W. Badenoch Co., H. J.
Rogers and Wm. Tucker of Lamson Bros.
& Co., E. T. Haney and M. E. Minor of
the Grain Marketing Co., F. G. Winters of
the Quaker Oats Co., and Gordon Hannah
of Pope & Eckhardt Co.

The following memberships on the Board
of Trade have been transferred: Raymond
C. Baldwin, John L. Nairn, Thomas E.
Cavanagh, Moses Eisemann, Estate Henry
C. Avery, W. A. Dunphy, Estate Martin L.
Jenks and F. P. Gallagher. Timothy B.
Brosnan, William E. Richmond, John A.
Eckert, Ludwin Eisemann, E. Stradella,
Gerald P. Taylor, Clarence T. Nears and
Julius Rosenfeld have been admitted to
membership on the Board.

Trade Opinion.

Increasing strength in the underlying
conditions has given the wheat market an
upward correction again. Stocks of old
wheat are decreasing rapidly and the pro-
nounced strength in May wheat continues
to be the main supporting factor for the
bullish sentiment. In fact, indications
point to an extremely small carryover, and
with pessimistic crop prospects in the
United States a sound basis is given to
further bullish activity. Export business
has not developed a revival of consequence
as yet, but we believe that foreigners will
soon have to enter our market, contracting
the new wheat on a larger scale, as the
Canadian wheat with a premium of around
25c over Chicago is likely to be put out of
the export trade to some extent.—Charles
Sincere & Co.

The final outcome of the wheat crop is
never exactly the same as forecast on
[Concluded on page 35.]

Total	138	73	41	98	126

BARLEY MARKETS.

CHICAGO.—Steady. Trade light. Exports 51,000 bu. and for the week 1,207,000 bu., compared with 177,000 bu. last year. Visible increased 383,000 bu.; last year decreased 132,000 bu.; totals, 2,549,000 bu.; last year, 912,000 bu. Local stocks decreased 21,000 bu.; total, 238,000 bu.; last year, 135,000 bu. Malting quotably 85@91c for the kind now coming to hand; feeding and mixing, 78@89c; screenings, 45@75c. Local inspection, 6 cars. Shipping sales were 5,000 bu.

MILWAUKEE.—Barley trade was active in the Milwaukee market last week with malting in especially good demand. Receipts were light and prices closed unchanged for the period. Offerings were mostly offgrade but were readily absorbed by shipping interests. Receipts were 133 cars as compared with 112 cars the previous week and 86 in the same week of 1924. Choice to fancy, 48 to 50-lb. test, quotable at 94@95c; fair to good, 44 to 47 lb. test, 86@93c; light weight, 40 to 43-lb. test, 82@90c; feed, 70@82c. Iowa quoted 80@95c, as to quality; Wisconsin, 80@95c; Minnesota, 80@95c; Dakota, 80@94c; feed and rejected, 70@84c.

MINNEAPOLIS.—Good barley was wanted right through the week and there was a steady advance in the bids for the kind that was needed. Maltsters were after the mellow malting quality and barley of fair to good type was in excellent request. The range of prices as the week drew to a close was 72@85c. Local stocks showed very little change from the previous week-end, being 1,139,381 bushels vs. 1,174,752 a week ago and 177,011 a year ago.

DULUTH.—The increased movement of 86 cars was only partly reflected in cash trade during the last week, a proportion of the cars being applied on sales. Closing prices are unchanged at from 72 to 86c. Buyers were in the market for barley steadily to cover their orders.

KANSAS CITY.—Four cars of barley were received this week, and all arrived in one day. There was little demand and the decline of the previous week continued. Prices fell 1@3c per bushel. No. 3 closed at 85@88c and No. 4 at 82@85c. Poultry feed interests were the principal buyers. Stocks increased 2,000 bus. to 7,000, against 62,000 least year.

RYE MARKETS

RYE SPOT QUOTATIONS.

Closing outside prices for rye of No. 2 quality cash for the week ending May 16 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 11...\$1.10 1/2	\$1.13 3/4	\$1.23 3/4	\$1.15 3/4	\$1.22 3/4	
May 12...1.12 3/4	1.15 3/4	1.18 3/4	1.17 3/4	1.18	
May 13...1.10 1/4	1.13 3/4	1.17 3/4	1.15 3/4	1.18	
May 14...1.13 3/4	1.14 3/4	1.20 3/4	1.16 3/4	1.18	
May 15...1.12 3/4	1.14 3/4	1.20 3/4	1.17 3/4	1.20	
May 16...1.14 3/4	1.14 3/4	1.21	1.18 3/4	1.19	

CHICAGO RYE FUTURES.

Following is the range of future prices for rye for the week ending May 16:

May	May	July	Sept.
11 1.17 1/4 @ 1.25 1/2	1.11 1/4 @ 1.16 1/2	1.04 1/2 @ 1.09	
12 1.17 3/4 @ 1.22	1.10 @ 1.14	1.03 1/4 @ 1.07	
13 1.18 @ 1.22	1.10 1/4 @ 1.13 3/4	1.03 3/4 @ 1.06 1/4	
14 1.18 1/2 @ 1.21	1.11 @ 1.13	1.04 1/2 @ 1.05 3/4	
15 1.19 @ 1.22 3/4	1.11 1/2 @ 1.13 1/2	1.04 @ 1.06	
16 1.19 3/4 @ 1.21	1.11 1/2 @ 1.13	1.03 1/2 @ 1.05	

Receipts of rye at Chicago for the week of May 16, 1925, were 796,000 bus. vs. 22,000 bus. same week of 1924; shipments were 439,000 bus. vs. 4,000 bus. same week of 1924.

RECEIPTS OF RYE.

Carload receipts of rye at the principal primary markets in the Central West for the week ending May 16 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 11.....	9	40	2	17	8
May 12.....	4	30	12	8	..
May 13.....	2	19	10	5	3
May 14.....	2	12	3	8	6
May 15.....	7	30	10	4	..
May 16.....	4	24	22	3	2
Total	28	155	79	45	19

RYE MARKETS.

CHICAGO.—Closed irregular—1c higher to 1/2c lower for futures and no sales of car lots reported. Trade was only fair and the market rather quiet. Quite a little pressure developed in the deferred futures late in the day, influenced by the weakness in wheat. Buying was light and mostly local. Visible supply decreased 844,000 bu. for the week and total is 10,656,000 bu.; last year, 19,788,000 bu. Local stocks increased 854,000 bu. to 2,872,000 bu. Exports for the past week, 1,058,000 bu.; year ago, 987,000 bu. Deliveries on May contracts 344,000 bu. Local sales to go to store, 125,000 bu. Car lots were in fair demand at May price for No. 2. Offerings light. Local inspection 60 cars and were largely applied on contracts. Seaboard clearances, 55,000 bu.

MILWAUKEE.—The Milwaukee rye market was comparatively steady last week and the range of price fluctuations was narrow but quotations closed 5c lower for the period. Receipts were larger than usual but were insufficient to meet the demand and trading in futures increased. Offerings were mostly offgrade with high moisture content and discounts were liberal. Receipts were 19 cars as compared with 10 cars in the previous week and 5 in the corresponding week of 1924. The market closed at \$1.17@1.19 for No. 2, inside for Wisconsin, ranging at 2 to 4c under May price, depending on billing.

NEW YORK.—The foreign demand for rye has been disappointing, and the cash rye premiums f. o. b. Atlantic and Montreal are offered below replacement prices. Business for export has been only small and scattered and in all positions did not amount to 3/4 million bushels.

PHILADELPHIA.—Rye flour, \$7.40@7.75 per bbl. in sacks, as to quality.

MINNEAPOLIS.—Shippers were making bids to elevator interests for their rye and there was a fair quantity worked during the past week. Receipts from the country are very light and the current demand managed to absorb whatever was put on the tables for sale. The mills were after the choice stuff, as usual. Minneapolis stocks are very light at only 479,057 bu. vs. 640,505 last week and 7,182,599 last year. Based on today's range of sales, No. 1 rye was quoted at 3 1/2@4c over July and No. 2 at 2@3 1/2c over.

DULUTH.—The course of the rye market was less erratic than it had been recently during the last week. Though the tendency was easier with less urgent eastern and export buying for the time being attributed dealers' needs having been covered for the present, another burst of buying from those quarters is looked for in the near future. Holders of stocks on this market are feeling more confident by reason of supplies in the East having been cleaned up. Closing prices of spot rye are 2c off at \$1.14 3/4.

Beans and Potatoes

BEANS AND POTATOES.

Quotations follow for bids of good quality condition beans and potatoes sacked, per cwt., unless otherwise specified, as of week of May 16:

Beans—

Chicago—Supplies scarce and demand good; prices firm. Per 100 lbs.—Spot navy beans, Mich., fancy, \$6.25; red kidney, fair stock, \$10; large, dark, extra quality, \$10.50.
St. Louis—Quote choice hand-picked Michigan white beans at \$6.10 and prime machine-picked at \$5.85 per 100 lbs. Scotch peas 7 1/4c, green split peas 9c and yellow 7c per lb. California lima beans at \$15.50 per 100 lbs.
Buffalo—Continued slow movement in all varieties the past week and values have showed little change; general tone being easy. Mediums, 1924, 100 lbs., \$6.75@7.00; peas, do., \$6.50@6.75; white kidney, do., \$8@9; marrows, do., \$10@10.50; red kidneys, \$9@10.

Boston—Car lots, per 100 lbs., N. Y. and Mich.: Choice hand-picked beans, \$6.20@6.40; fair to good, \$6@6.10; California small white, \$8.35@8.50; yellow eye, extra, \$6.20@6.40; fair to good, \$6; red kidneys, choice, \$10.50; fair to good, \$9@9.25; California limas, \$14.50@15; native green peas, \$7@7.50; Canada, \$5.25@5.50; split, \$5.50@5.75; jobbing prices, 25 to 50 cents above car lots.
San Francisco—Whites, small, 8 1/2c; do. large, 7c; pinks, 9c; limas, 15c; cranberry, 8c; kidney, 12c; Mexican garavanzas, 11 1/2c; lentils, large, 9c; do. small, 8c; speckled bayos, 8 1/2c; bayos, 8 1/4c. Peas (per lb.)—Split peas, yellow, 7 1/4c; green peas, 1/2c.

New York—Continued inactive market on most varieties and general feeling ruled easy. Most varieties showed no change. Domestic, 100 lbs.—Marrow, \$9.50@9.75; pea, \$6.25; red, kidney, \$10; white kidney, \$8.25@8.50; regular, \$15; baby, \$13.35@13.75. Imported, 100 lbs.—Marrow, \$8.50@8.75; white kidney, \$7.50@7.75; lima, Mad., 1924-25, \$12.25@12.50; 1923-24, \$11.00@11.50; 1922-23, \$9@9.50; lima, Europe, large, \$11.25; medium, \$11.00; small, \$10. Lentils—Chile, \$6.75@7.00; Russia, giant, \$7.25@7.50; avg., \$6.25@6.50. Peas—Domestic, 100 lbs.—Black eye, \$10.75; yel. split, \$6@6.25; gr. split, \$7.25@7.50. Imported, 100 lbs.—Green, Japan, \$6.50@6.75; Belgium, \$5.25@5.50; Holland, \$5@5.25; yel. split, \$5.50@6.00; gr. split, \$7.50@7.75; chick, Mex., imperial, \$11.75; monster, \$11.50; large, \$9.50; small, \$7@7.50.

Potatoes—

Chicago—Market firm and prices unchanged. The demand was fairly good, but the trade proved light owing to the arrivals being delayed and too late for many of the buyers. The few offerings were readily sold and the better grades were mostly inquired for. Receipts were 34 cars and 97 cars on track. New potatoes—Market quiet but steady. Demand was slow, but rather expected for a week-end. Weather unfavorable and buyers inclined to wait until next week. Receipts were 18 cars and 87 cars on track. Sales reported today were: Per 100 lbs., sacks, Alabama triumphs, 1 car at \$3.50, 1 car fancy at \$3.60; Louisiana, 1 car poor at \$3.15. Barrels, Florida, Spaulding rose, \$6.65@6.85; No. 2, \$5.25@5.50; sacks, Louisiana triumphs, 100 lbs., \$3.15@3.50; Alabama, \$3.50@3.75; ungraded and poor, \$3@3.25; No. 2, \$1.75. Sweet potatoes—Arrivals light; fair demand noted. Hampers, Tenn., Nancy Halls, \$3.15.

New York—Florida potatoes firm and higher; Bermuda cleaned up; old sacks worked out fairly; Jersey basket sweets sold as quoted. Artichokes in light supply and more or less nominal. New potatoes—Fla., bbl., No. 1, \$5.50@7.50; No. 2, \$2.50@4; sacks, No. 1, \$6; No. 2, \$2.50; Old potatoes—Me., bulk, 180 lbs., \$2.50@3.00; car lots, cwt., \$1.40@1.50; 150-lb. sk., \$2@2.40; state, bulk, 180-lb. sk., \$2.25@2.50; 150-lb. sk., \$1.85@2.15; L. I., bulk, 180 lbs., \$3.50@4; 150-lb. sk., \$2.50@3.40. Sweet potatoes—Jy., bskt., 75c@3.50; Del. and Md., bskt., \$1@2.25. Yams—Del., bskt., \$2.

A NEW SOY BEAN.

A soy bean, Dunfield, is being offered to Iowa farmers for the first time this year.

The Iowa agricultural experiment association of Ames has all the seed possible to obtain, which is very limited, and are proposing to send it to growers in the state who are interested in giving them a trial with the home grown soy beans. They will be supplied in two-pound lots as long as the supply lasts, post paid, together with inoculation material for a fee of 50 cents.

The Dunfield soy bean is a later variety than the Manchu. It is especial-

ly promising as a seed producing bean and as a bean for hogging down when the Manchu is too early.

BEAN BUSINESS QUIET.

MT. PLEASANT, MICH.—There is very little doing in the bean business. Deliveries at \$5 were very light. What beans are owned by the growers are in unusually strong hands and are holding for more money. We think the acreage will be about normal.—Isabella County Farmers' Grain Co., Will Francis.

BUCKWHEAT MARKETS.

MILWAUKEE.—The Milwaukee buckwheat market continued fairly quiet last week and all prices were unchanged. Current quotations, per 100 lbs., are: Silver hull, \$2.10@2.15; Japanese, \$2.20@2.25.

BUFFALO.—Mixed, per 100 lbs., \$2.25; silver hull, do., \$2.17.

CHICAGO.—Fancy mixed and silver hulled, \$2.00; Jap, \$2.25; dirty seed quotably less.

"WATCH YOUR STEP."

Exports last week from North America were almost two million—making over fourteen million in six weeks. Visible supply in the United States is now twelve and one-half million—about five million at the seaboard or in transit thereto—presumably for export. New grain will probably not be available for eleven weeks yet. Short sales of rye outstanding apparently largely exceed actual stocks of rye available for delivery, thus placing longs in a position to dictate. The price course during the next two weeks will determine whether this power is exercised to the limits possible, or whether the secretary of agriculture's statement, just issued, influences a more prudent course.—Frank H. Blodgett, Inc., Janesville, Wis.

AGRICULTURE HAS GOOD OUTLOOK.

This is the first spring in five years with any evidence of general stimulus in agriculture, declares the Department of Agriculture in its monthly agricultural situation report released April 3.

There are no big agricultural surpluses left, save cattle, the report says and, judging from the lessened movement of farmers to cities, an increased number of farmers apparently feel it financially safe to stay on the farms this spring and put in their usual crops.

A note of warning, however, is sounded by the department against too great expansion in production. Reports show that farmers plan to increase the acreage of the principal feed crops by nearly 7,000,000 acres above that grown for harvest last year, while the outlook is for smaller numbers of livestock to consume the crop.

"It seems doubtful," the department says, "if the general expansion of production contemplated by farmers would be to their best interests. Increased returns for the crops of 1924 were due largely to reduced supplies, either in this country or abroad, rather than to any increase in demand. The outlook indicates that any marked expansion in most lines would tend to lower prices and result in less satisfactory returns to farmers."

All crop prices except cotton showed a decline during March. Livestock prices advanced, hogs taking the lead with a 20 per cent increase. All the key products with the exception of cotton, potatoes and butter are materially higher in price than last year. The rapid advance in grain prices through the winter is said to have left certain livestock products in relatively weak position as to purchasing power, particularly dairy and poultry products.

The purchasing power of 30 farm products combined, in exchange for non-agricultural products, is placed at 88 for February, as compared with 81 in February a year ago, the five-year period 1909-1914 representing 100.

Provisions, Etc.

RECEIPTS, TWENTY MARKETS.

Combined receipts of cattle, hogs and sheep at the seven leading western markets and thirteen other points for the week with comparisons:

	Cattle.	Hogs.	Sheep.	All kinds.
Past wk.	244,000	601,000	280,000	1,125,000
Prev. wk.	234,000	538,000	292,000	1,064,000
1924	257,000	719,000	209,000	1,185,000
1923	257,000	798,000	231,000	1,286,000
1922	223,000	625,000	213,000	1,061,000

Combined receipts at the twenty markets for 1925 to date, with comparisons, as compiled by the *Drovers' Journal*:

	Cattle.	Hogs.	Sheep.	All kinds.
1925	4,589,000	14,805,000	5,244,000	24,638,000
1924	4,560,000	17,793,000	4,868,000	27,221,000
1923	4,585,000	16,991,000	5,105,000	26,681,000
1922	4,327,000	12,802,000	4,742,000	21,871,000

CHICAGO PROVISION REVIEW.

CHICAGO, May 18.—Provision prices sympathized with a break of over 85c in hogs, after an advance of \$1.85 within a week. Lower prices for products abroad at times were also a factor in creating selling and made buyers timid. Prices covered a good range on provision futures and at the close lard was 17c to 20c higher; short ribs 10c lower to 5c higher; bellies 15c higher to 10c lower, as compared with the previous week.

Lard stocks in Chicago on May 15, were 74,520,000 lbs., a decrease of 7,523,000 lbs., from May 1, and were 23,799,000 lbs. more than last year. The government's report on lard in cold storage on May 1, indicated supplies of more than 150,000,000 lbs., a big increase over last year and also above the average. The cash demand for lard and meats was moderate and with larger supplies of hogs the manufacture of product was somewhat increased. Shipments of meats and lard from Chicago for the week

were larger than the previous week and last year. Export clearances from the seaboard were also of fair volume. Prices for the week follow:

		Close—			
		May 16,	May 9,	May 17,	1924.

News of the Country Grain Trade

ARKANSAS.

Marmaduke, Ark.—The Cary Milling Co. has been incorporated with a capital of \$10,000.

DeWitt, Ark.—On July 16, the trial of O. H. Rhodes, former manager of the Arkansas Rice Growers' Coop. Ass'n, will be held, concerning the theft of rice valued at \$100,000.

Lonoke, Ark.—The Lonoke Rice Elevator, together with 6,000 bushels of seed rice, was destroyed by fire, entailing a loss estimated at \$100,000. The big five story elevator was also destroyed.

Walnut Ridge, Ark.—Fire of undetermined origin destroyed the building occupied by the W. R. Bench Co., feed and coal dealers. The loss on both the building and stocks of feed partially was covered by insurance.

CALIFORNIA.

Brawley, Calif.—The Imperial Grain Growers is the new name for the Imperial County Farm Bureau Grain Exchange.

Los Angeles, Calif.—An office has been established here by the Morgan Sales Agency of San Francisco, who will deal in grain, hay and feed.

CANADA.

Edmonton, Alta.—The Banner Grain Co. has incorporated with capital of \$1,000,000.

Moose Jaw, Sask.—The International Milling Co. of Minneapolis have made a provision for an increase of 500,000 bus. in its storage here.

Owen Sound, Ont.—Progress is being made in the construction of the 1,000,000 bu. grain elevator, which will make this an important port.

Halifax, N. S.—The government is now erecting a massive harbor elevator with a proposed capacity of 1,000,000. It will be in operation by fall.

Midland, Ont.—The Midland Elevator is making an addition which will have a capacity of one and a half million bushels and increase the elevator's capacity to 5,000,000 bushels.

COLORADO.

Denver, Colo.—A factory here is planned by the Whole Grain Wheat Co., which has plants at Momence, Ill., and Ontario, Can.

Colorado Springs, Colo.—The Old Fashion Mill Co., Inc., of Portland, Ore., plans to erect a plant here if satisfactory arrangements can be made, for the purpose of manufacturing cereals and whole wheat flour.

Denver, Colo.—The Denio-Barr Mfg. Co. was incorporated here with a capital of \$1,250,000 for the purpose of conducting a general milling and grain business. Incorporators: John L. Barr, Robert P. Quest, I. W. Denio, Ralph Denio, G. S. Barr, W. D. Kistler and Ralph D. Mayer.

ILLINOIS.

Odell, Ill.—A Fairbanks 25 h.p. motor has been installed by the Odell Grain & Coal Co.

Ivesdale, Ill.—Effective May 1, C. E. Camp of Bement sold his interest in the Cook Grain Co.

Sibley, Ill.—The Sibley Grain Co., managed by E. T. Johnson, is installing a truck dump.

Rockford, Ill.—The Chicago Grain Products Co. has decreased capital stock from \$500,000 to \$50,000.

Chatsworth, Ill.—The Rogers Grain Co. elevator has been purchased by R. B. Stoddard of Minonk, from the Illinois Central R. R. Mr. Stoddard will operate the elevator and James Kerrin is to remain as manager.

Springfield, Ill.—In the September term of circuit court, the Murphy-Grier Grain Co. will be required to make an answer to a bill for the appointment of a receiver signed by a group of milling and elevator companies. An accounting by the officers of the company is also asked.

Elgin, Ill.—On a voluntary petition, the Bartlett Feed and Lumber Co. was declared bankrupt. The petition lists liabilities at \$35,000 and assets of \$21,000. Among the larger creditors are the Bartlett State Bank, \$9,200; the J. M. Attley Lumber Co., \$6,600; Charles Gromer of Elgin, \$500; Louis Wilkening of Ontarioville, \$400; Muntz & Lea Co., \$112. H. W. Fenz is president of the company which was incorporated in 1910.

Decatur, Ill.—A. E. Staley, president and general manager of the A. E. Staley Mfg. Co., has announced plans for the erection of a grain storage and merchandising business in connection with the other business of his company, to take place about July 1. A new grain department has been added to the general office force with J. C. Hight of Hight & Cline as manager and W. H. Barnes of the Decatur Terminal Elevator Co. as grain sales manager.

INDIANA

Madison, Ind.—Taylor & Hitz has discontinued business.

Petersburg, Ind.—Hoggart & Hopkins will build a new warehouse.

Emison, Ind.—The F. J. Townsley Elevator Co. has sold its elevator business to the Emison Grain Co.

Jacksonville, Ind.—A grain and produce warehouse here is being contemplated by the Clark County Farmers' Federation.

Hedrick, Ind.—A new elevator will shortly be erected by the Seegar Betts Elevator Co. to replace the one lost through fire, which is being dismantled.

Kitchel, Ind.—The Kitchel Grain Co. is installing an improved disc clutch in place of the old style arm and finger clutch, and is replacing its old line shaft with a new one.

IOWA

Abbott, Ia.—The Farmers Co-operative Elevator Co. has been dissolved.

Jefferson, Ia.—Fred W. Milligan, well known lumber and grain dealer, died recently.

Milo, Ia.—The Milo Milling Co. mill was totally destroyed by fire, of unknown origin.

Sioux City, Ia.—H. E. Sprague has opened an office for the Beach-Wickham Grain Co. of Chicago.

Toledo, Ia.—The Mesquaque Milling Co. succeeds to the business of the Farmers' Elevator Co.

Grundy Center, Ia.—S. F. Price has been re-elected as manager of the Farmers' Co-operative Elevator.

Ft. Dodge, Ia.—Howard A. Mulholland will have charge of an office opened by Messrs. Mulholland and Thorson, grain dealers.

Rolfe, Ia.—Effective June 1st, Geo. Arnold, manager of the Farmers Co-op. Ass'n, of Sheldon, will have charge of the Carlton Bros. Elevator Co.

Kansas City Board of Trade.
KANSAS CITY, MO.

Oskaloosa, Ia.—The Oskaloosa Sadlery Company building owned by Max Shrago has been purchased by James Wake, who will open his mill and feed business there.

Des Moines, Ia.—The Iowa Packing Co. has been sold to Swift & Co. for \$405,000, covering the plant and equipment with a extra payment approximating \$100,000 for inventory stock.

Irvington, Ia.—At a meeting held by the shareholders of the Farmers' Co-operative Association, it was decided to rebuild the elevator which was destroyed recently. It is probable that an elevator of 25,000 bushel capacity of fire-proof construction will be erected. All of the salvaged grain has been disposed of.

KANSAS

Salina, Kans.—The Robinson-Wyatt Grain Co. had a small fire May 11th.

Edna, Kans.—W. L. Conneway will install a Boos Air Blast Car Loader.

Paxico, Kans.—A Boss Air Blast Car Loader will be installed by J. H. Dougan and Sons.

Alden, Kans.—W. E. Davis, manager of the Kansas Elevator at Kinsley, has purchased an elevator here.

Mulvane, Kans.—A. A. Hatfield has purchased the feed, poultry and produce business of Rhodes & Son.

Chanute, Kans.—The Smith Feed & Service Station has been purchased by C. L. Hosack, who now has possession.

Wichita, Kans.—L. P. Claussen has been appointed inspector in charge of the Kansas Grain inspection offices here.

Abilene, Kans.—The Abilene Flour Mills has let a contract for additional concrete storage tanks to hold 70,000 bushels.

Enterprice, Kans.—A group meeting of the three milling centers was held here recently at the Salina Country club.

Hutchinson, Kans.—The Standard Grain Company has been incorporated by the state charter board with capital stock of \$10,000.

Anthony, Kans.—A. E. Deere of Waldron succeeds J. D. Grove who has resigned as manager of the Farmers' Co-operative Elevator Co.

Altamont, Kans.—D. R. White has established the Altamont Exchange Mill on his farm, and is installing a new chicken feed machine.

Abilene, Kans.—A new warehouse, 60 x 32 feet, will be erected by the Mid West Mills, doubling its present capacity in warehouse facilities.

Kingman, Kans.—J. T. Braly of Cleveland and V. M. Ravenscroft have leased the business of the Farmers' Elevator &

Mercantile Co. They have formed a partnership and took over the business May 15.

Eudora, Kans.—Warren Mettlen of Brownell, Kans., has taken charge of the Farmers' Union Elevator, following the resignation of J. S. Johnson.

Louisburg, Kans.—Virtually a block of the business district was destroyed by fire originating in a 2-story frame feedhouse, causing a loss estimated at \$50,000.

Coffeyville, Kans.—The work of rebuilding the interior of the Wildgrub elevator, now owned by the Edna Grain Co., is progressing and will soon be in readiness for the new engine, belting and new machinery.

Topeka, Kans.—Frank Geoffrey has resigned as manager of the Topeka office of the B. C. Christopher Grain Co. and has been succeeded by Jack Corrigan, who has been with the company for the past nine years.

KENTUCKY

Lancaster, Ky.—The firm of A. H. Bastian & Co. has discontinued business on account of the death of A. H. Bastian, senior member.

Paris, Ky.—The grain elevator of R. F. Collier Co. has been destroyed by fire of unknown origin, causing damage estimated at \$50,000.

LOUISIANA

New Orleans, La.—Eugene V. Anseman, for many years connected with J. T. Gibbons, Inc., grain dealers, died here recently.

Jennings, La.—Fire, believed to be of incendiary origin, destroyed the Hoover & Milliken rice warehouse causing a loss of \$50,000.

Cedar Grove, La.—The Marshall Mill & Elevator Co. are erecting an elevator consisting of 8 tanks 20 x 70 feet, with a capacity of 200,000 bushels; also 11 square mixing bins with 50,000 bushels capacity. The elevator is equipped with a Howe Track Scale and is of fire-proof concrete construction.

MARYLAND

Baltimore, Md.—J. S. Rawlings, member of the Baltimore Chamber of Commerce, died recently.

Baltimore, Md.—George C. Eldridge has applied for membership in the Chamber of Commerce.

MICHIGAN

Royal Oak, Mich.—Fire damaged the Calmit Brothers Feed Store.

Saginaw, Mich.—A. D. Eddy, aged 63, president of the Saginaw Milling Co., died.

Traverse (P. O. St. Peter), Minn.—On June 1st, Selmer Johnson will take charge of the Traverse Elevator Co.

Greene Isle, Minn.—Dan Egan, manager of the Equity Elevator, fell from a freight, which resulted in his death.

Belgrade, Minn.—A. G. Hansen has been appointed as manager and grain buyer for the Merchants and Farmers Grain Co. to fill vacancy caused by resignation of Mr. Butkofski.

St. Paul, Minn.—The Capital Flour Mills has been incorporated with capital stock of \$12,000. Highest amount of liability \$25,000. Incorporators: M. W. Waldorf, Paul N. Myers of St. Paul, and C. P. Walton of Minneapolis.

Wilmar, Minn.—The Willmar Farmers' Co-op. Elevator Co. has amended its by-laws so that the board of directors consists of five instead of seven members. Directors: E. A. Swanson, T. O. Dengerud, P. N. Olson, H. D. Frye and P. O. Nelson. H. D. Frye was elected president and P. N. Olson secretary.

Heckman, Minn.—An overheated bearing in machinery caused a fire which destroyed the Atlas Elevator and residence of H. F. Zachus, manager. Fourteen thousand bushels of oats and a considerable amount of flax were in the elevator. The loss on the buildings is estimated at \$10,000 which was insured.

MISSOURI

Liberal, Mo.—A flour room, 24 x 24 feet, has been added to the Lipscomb Grain & Seed Co.

Bonnets Mills, Mo.—A new cleaner and new elevator cups will be installed by the Producers Exchange.

Sullivan, Mo.—It is proposed to raise a sum of \$8,000 for the purpose of building a mill here, and to join Wm. Kramer, who has a mill.

Mexico, Mo.—At a meeting of the stockholders of the Producers Grain Co. J. G. Crawford was elected president and Roos Ewing secretary-treasurer, both of Molino.

Buffalo, Mo.—The Buffalo Wholesale Flour & Feed Co. has opened here. Proprietors: Luther Williams and R. R. Rogers, of Springfield.

Corning, Mo.—The Farmers' Elevator is being remodeled and more storage room is being added, also a new driveway, truck dump, sheller and motors installed, which, with other improvements, will cost \$3,000 or more.

MONTANA

McCabe, Mont.—A Kewanee air dump will be installed by the Occident Elevator Co.

Froid, Mont.—The Farmers' Elevator Co. will make repairs and install an air dump.

Froid, Mont.—An air dump will be added to the equipment of the International Elevator Co.

McCabe, Mont.—The Farmers' Elevator Co. plan the installation of a new 10 ton scale and air dump, in addition to making repairs on their elevator.

Whitetail, Mont.—Larson Brothers Elevator Co. has purchased the elevator of G. Odegard which they have extensively improved and have opened for business.

Great Falls, Mont.—The Marvel Milling Co. is the name of the new general milling and feed business here. A plant is expected to be constructed soon and machinery installed.

Conrad, Mont.—Strong-Scott dumps are being installed by the Greely Elevator Co., the Farmers' Equity Co-op. Union Elevator, the Rocky Mountain Elevator Co. and the Montana Central Elevator Co.

NEBRASKA

Hooper, Neb.—The Latta Grain Co. has closed its elevator until Fall.

Palmer, Neb.—Dinsdale Bros. has grounded its building for lightning protection.

Red Cloud, Neb.—Plans and specifications have been completed by the Farmers' Co-op. Ass'n for the erection of a new 15,000 bushel elevator costing \$7,000, as soon as the old one is dismantled.

NORTH CAROLINA

Ronda, N. C.—The Williams Grist Mill Co. has incorporated with authorized capital stock of \$100,000 of which \$10,000 is subscribed. Incorporators: T. W. Church of Ronda, W. H. Church of Dennis, Ga., and Clem Wrenn of North Wilkesboro.

NORTH DAKOTA

Prosper, N. D.—The Equity elevator here will be rebuilt.

Bismark, N. D.—The Grain Marketing Co. of Chicago is planning to do business in North Dakota.

Venlo, N. Dak.—A. E. Carter has resigned his position as manager of the Venlo Grain Co. to take effect June 1st. The company will close its elevator for the summer months but have secured a manager for the Fall.

Sanborn, N. D.—The Sanborn Grain Co. are planning on installing a new ten ton Fairbanks Scale and an Air Lift Truck Dump.

Eckelson, N. D.—The Farmers' Elevator Co., managed by W. E. Ryan, will install a new ten ton Fairbanks Scale and Air Truck Dump.

Brocket, N. Dak.—A. J. Anderson, Independent, is installing a Strong-Scott truck dump and ten-ton Fairbanks scale in his elevator, as well as other extensive repairs.

Oriska, N. D.—C. F. Schoen, owner of the Schoen Elevator, is installing a new ten ton Fairbanks Scale and a new Magic Truck Dump; also making other improvements and repairs.

Dickinson, N. Dak.—Fire, believed to have originated from a defective electric light wire, totally destroyed the McGillivray 50,000 bushel grain elevator, containing more than 30,000 bushels of wheat and large quantities of other grain, little of which was salvaged. The loss, estimated at \$50,000, is partially covered by insurance.

OHIO

Milford Center, Ohio.—The Ohio Grain Co. has installed a truck scale.

Pemberville, Ohio.—Hobart-Bohus Co. are planning to exchange their belt-driven grinder and kerosene engine of 30 h.p. for electric driven.

Hartsburg, Ohio.—The elevators here and at Oakwood formerly owned by T. B. McDonald of La Porte, Ind., have been taken over by Chatterton & Son.

Greenville, Ohio.—A petition has been filed by the Greenville Farmers Exchange Co. for permission to dissolve the corporation. Their notes and book accounts amount to \$12,116.89. E. W. Loy has been appointed receiver.

Green Springs, Ohio.—Oatman & Monfort, seed dealers, will erect another seed warehouse, 30 x 100 feet, with elevator. Latest seed drying machinery will be installed and increased storage capacity will be 100,000 bushels.

OKLAHOMA

Lawton, Okla.—The Lawton Co-op. Elevator Co. will install a Boss Air Blast Car Loader.

Oklahoma City, Okla.—E. O. Billingslea Grain & Cotton Co. are enlarging their business and have just opened an office here but will continue their Frederick office.

Pawhuska, Okla.—W. T. Leahy has purchased the interest of Paul Harris in the Harris Grain Co. Business will be conducted under the same name, with W. T. Leahy and Thomas B. Leahy as owners.

Blackwell, Okla.—The Deer Creek Elevator was slightly damaged by fire which started in the top of the cob bin.

Foss, Okla.—Lightning slightly damaged the Fred Graves warehouse.

PENNSYLVANIA

Lawn, Penn.—B. S. Stauffer & Co. will install a Boss Air Blast Car Loader, direct motor driven.

SOUTH DAKOTA

Burke, S. D.—The Frescoln elevator has been purchased by George Torrence.

Wessington Springs, S. D.—The North Farmers' Elevator has been purchased by J. G. Winter and his cousin, Gustave J. Winter.

Monroe, S. D.—The Fleischman Malt Company elevator was destroyed by fire of undetermined origin, causing a loss of about \$8,000, including 7,000 bushels of oats and half a car of corn.

TENNESSEE

Lawrenceburg, Tenn.—A new mill is being planned for this place by Abrams Bros.

Memphis, Tenn.—The alfalfa bin of the John Wade & Son plant was damaged by fire to the extent of \$1,000.

Nashville, Tenn.—The Liberty Mills will be resold following an additional bid of \$5,000 by J. R. Hale & Son, to the one recently made of \$130,000 by another corporation for the property, which was offered for sale at auction.

TEXAS

Lockhart, Tex.—Blanks and Sparks will open a grain, feed and coal business here.

Groom, Tex.—The Farmers Grain & Implement Co. has chartered with \$40,000 capital by Nick Britten, J. A. Bergin and John Britten.

Austin, Tex.—The Grasso Seed Co. has bought the feed store formerly known as the Economy Feed Store. They have also taken over the sale of Wonder Feeds in San Antonio and surrounding territory.

Cameron, Tex.—All coal stocks and interests of the R. L. Batte Grain & Fuel Co., of which R. L. Batte, Jr., is manager, has been purchased by the Jeter Lumber Co. Mr. Batte will continue his grain and feed business.

Plainview, Tex.—On May 8th, the \$20,000 grain elevator belonging to A. G. Cox was destroyed by fire. There was no grain in the elevator at the time. Several box cars on the track were also destroyed. Loss partially covered by insurance. It is expected that the elevator will be rebuilt.

WASHINGTON

Yakima, Wash.—The three departments of grain, hay and horticulture have been combined under one head and John I. Greiner has been appointed state supervisor.

WISCONSIN

Hixton, Wis.—Lightning destroyed the Farmers Grain & Mfg. Co. elevator.

Brillion, Wis.—Henry Carstens has sold half of his interests in the Brillion Mill & Elevator Co., which he owns, to his brother, Louis Carstens.

Oshkosh, Wis.—The Lee-Precour Co. has incorporated with capital of \$10,000. Incorporators: H. W. Lee and Wm. Precour. They will deal in flour, feed, fuel, fruits, groceries and merchandise generally, wholesale and retail.

BUSINESS NEWS.

The Weller Mfg. Co., of 1820 North Kostner avenue, Chicago, say that one of their power shovels which was installed by Bradley Bros. of Paducah, Ky., operated by one man, does the work of four men with scoops and in one-half the time, a two thousand bushel car of oats being unloaded in one hour.

The Cadillac Portable Electric Blower, sold and guaranteed by the Clements Mfg. Co. of 601 Fulton street, Chicago, which is operated by plugging in at the nearest electric light socket blows the dust out of motors and other important equipment with a powerful blast of clean, dry air. All of our elevator friends know the danger of fire arising from dust accumulations, and will readily appreciate the value of this portable device, especially in keeping dust away from bearings and unenclosed motors where accumulations might cause explosions and fires.

The Richardson Scale Co., with offices in Chicago, Wichita, Minneapolis, Omaha and Pasadena are at this time again emphasizing their All-Automatic Self-Adjusting grain shipping scale. All kinds of grain may be fed through it, and as it is choke proof and the feed gate cannot come open while the hopper door is discharging grain, and vice versa, there is no chance for grain to go through the scale without being weighed and recorded.

TOLEDO SEED PRICES.

The following table shows the range of prices for seed on the Toledo market for cash and the futures of clover, alsike and timothy for the week ending May 16:

	Range for wk.		Close	Close
	High.	Low.	May 16.	May 15.
Clover—				
Cash	\$16.00	\$15.50	\$15.50	\$16.00
Oct.	13.50	13.35	13.35	13.50
Dec.	13.35	13.25	13.25	13.35
Alsike—				
Aug.	12.50	12.50	12.50	12.50
Timothy—				
Cash	3.05	3.00	3.05	3.00
Sept.	3.50	3.50	3.50	3.50

MILWAUKEE SEEDS.

Movement of timothy seed and clover seed at Milwaukee as reported for THE PRICE CURRENT-GRAIN REPORTER by H. A. Plumb, secretary of the Chamber of Commerce, for week ending May 16, 1925:

	Receipts, lbs.		Shipments, lbs.	
	Tim.	Clov.	Tim.	Clov.
1925.....	60,000	3,405	813	8,060
1924.....	19,830	122,215	237,937	244,743

WEEKLY LINSEED REVIEW.

NEW YORK, May 18. — *United Kingdom:* The linseed situation in the United Kingdom has been affected during the past week by the fluctuations in Argentine foreign exchange. There has been a fair trade in linseed, but mostly in Indian sorts. Floating supplies are increasing.

Linseed oil continues to meet with a good home demand.

Edible cotton oil is in good demand.

India: Shipments of linseed during the past week amounted to 868,000 bushels, compared with 464,000 bushels the week previous.

Argentina: Weather has been cold with intermittent rains. Clearances of linseed last week were small, being less than ¼ million bushels, compared with more than one million bushels the week previous. Port stocks, however, continue to gradually enlarge and now aggregate 4,800,000 bushels as against 4,400,000 bushels the previous week and 2,800,000 bushels at this time last year. The markets for seed have displayed an easier tone with the foreign demand less active.

Field and Grass Seeds

ST. LOUIS SEED MARKET.

Quote timothy nominally at \$5.50 to \$6.00 (low-grade, weedy and dark at \$2.00 to \$4.50); German millet at \$4.00 to \$4.25; common millet at \$3.00 to \$3.10; hog millet at \$2.05 bulk basis; Sudan grass at \$3.65 to \$3.85.

Stock peas—quote whippoorwill at \$3.50 to \$3.75, new era and mixed at \$2.75 to \$3.00 per bu.

Sorghum cane seed—quote at \$1.50 per 100 lbs.

Sunflower seed—quote at \$3.25 to \$3.50 per 100 lbs.

TOLEDO SEED MARKET.

TOLEDO, O., May 18.—Clover seed showed a slight loss in price last week. The trade is very light with the season about over and buyers preparing to carry the stocks they have on hand. The future trend is largely a matter of weather conditions from now until the hay crop is cut and after that more favorable weather will be needed to give the seed crop a good start. October and December clover are active with some investment buying around present levels. Foreigners are acting favorably to the present prices for these months and there may be some business brought out for their account. Crop reports are mostly of an optimistic nature, although rain and warmer weather would be welcomed in many clover sections. Stocks of clover are light and should have but little influence on the future price trend. If another short crop should be harvested this year there is little doubt but what clover will reach the levels of last season and perhaps higher. French dealers write they hope to have a large crop of clover this year and that the quality will be suitable for export. Their stocks are practically exhausted in first and second hands.

Alsike and timothy remain unchanged with very little activity in either. They will remain inactive most likely but might respond to strength in clover if this seed slows steam from damage reports later.

KANSAS CITY SEED MARKET.

KANSAS CITY, May 16.—Dealers this week reported fair sales of forage seeds, with demand mostly from Texas and other southern states in which the spring drouth reduced the chances for corn and oats. States further north are not buying freely, though they may do so if weather continues to prove unfavorable to standard crops. There is more trade in cane seed than in any other kind. Millet, except Siberian, is scarce, but the demand is not large. A fair distribution of Sudan is reported. Local houses are arranging for the blue grass harvest. Grass is short, owing to recent cool weather, but it should come out favorably. Grass is well headed. Growing fields of clover, timothy and alfalfa present a fair appearance, though alfalfa is not uniformly free from winter-killing and spring frost effects.

Seeds now quoted are selling as follows, per cwt., sacked, in carlots:

Cane—Orange, \$1.75@1.90; red top, \$1.75@1.80; black and red amber, \$1.75@1.80.

Millet—German, \$4@4.50; common, \$3@3.50; Siberian, \$2.25@2.75; hog, \$2.25@2.50.

Sudan—Fair to good, \$4@5.

Cow Peas—Per bushel, \$4.50@5; soy beans, \$2.15@3.25.

CHICAGO SEED COMPANY TO MOVE.

The Leonard Seed Co., located at Kinzie and Orleans streets, Chicago, for the last thirty-six years, have entered into a long-term lease for the entire block fronting on West 35th street between

Shields and Stewart avenues. The property comprises three, two and one-story improvements containing 63,000 square feet of floor area, served by a private switch track connecting with the Pittsburgh, Fort Wayne and Chicago division of the Pennsylvania railroad. The Leonard Seed Co., after extensive improvements, will use this property for their general office, warehouse and factory.

SPRING SEED TRADE.

LAWRENCE, KANS.—As to information about this spring's seed trade:

Red Clover—Prices being extremely high our farmers here would not buy any seed and the retail trade here was almost nothing.

We handled quite a lot of home grown seed but we had to sell it to Eastern seed houses.

Alfalfa—We looked for an extra large trade on alfalfa but the trade was only about normal.

Kentucky Bluegrass—Prices have been so very high farmers would not buy and nearly all sales we made were for lawn purposes only.

Timothy—Trade in timothy was very poor, much below normal.

Sweet Clover—Prices were low. Trade better than normal. Farmers substituted sweet clover for red clover and alfalfa.

Sudan—Prices were very low. Sales about normal. We expect to have further trade on Sudan yet.

Rep Top and Orchard—Sales were below normal.

Soy Beans, Cowpeas, Seed Corn, Cane, Millet—Have not sold well so far as expected, but trade may improve as it is rather early in season for these varieties.

Garden Seeds—Trade in Garden seeds has been very good, much better than normal.

Crops—The outlook for crops in Kansas is fairly good except wheat, which dried out or froze out in some localities, but reports show that Kansas will grow from ninety to one hundred million bushels of wheat if nothing happens from now on.

Oats and Barley—Are looking fine. Corn that has been planted in some localities looks good; in some localities it was nipped by frost but probably will pull through all right, or will be replanted.

Very little millet, sudan and cane has been planted so far.—*Barteldes Seed Co.*

CHICAGO SEED MOVEMENT.

Following is a statement of receipts and shipments of grass seeds at Chicago for the week ending May 16, previous week, same week of 1924 and for the season to date, starting July 1 of the years indicated (amounts stated in pounds, 000 omitted):

	Timothy.		Clover.		Other.	
	Rcts.	Shpts.	Rcts.	Shpts.	Rcts.	Shpts.
Week ..	271	311	7	...	34	40
Prev. wk.	442	225	2	...	146	75
1924	108	...	48	1	282
1924-25.	36,400	26,905	10,626	5,410	16,602	15,988
1923-24.	31,218	21,096	10,752	8,109	23,943	14,556
1922-23.	31,410	30,731	10,770	8,730	23,298	6,733

Timothy—Market firming up a trifle, due to better demand and scarcity of offerings. Common country run about \$5.75@5.85 per 100 lbs., good seed \$6.00@6.15, high grades \$6.25@6.35, extra choice and fancy higher.

Alsike—Dull. Fair country lots \$15.50@17.00 per 100 lbs. Good seed \$17.50@19.00; choice, \$20.00@21.00.

Alfalfa Seed—Recleaned \$21.00@22.00 per 100 lbs.

Flax Seed—Up ¼c. No. 1 Northwestern closed at \$2.84¼@2.88¼ per bu. of 56 lbs.

Clover Seed—Dull. Country lots \$17.00@19.75 for 100 lbs., good \$20.50@21.50, choice \$22.00@23.00, fancy \$24.00@25.00 and Mammoth \$20.00@25.00, according to quality.

SEED CROP ABOVE AVERAGE.

CEDAR VALE, KANS.—Concerning the seed condition in this section:

The 1924 crop of all seeds here was above the average with the exception of alfalfa. This has resulted in a small trade with our local farmers, that is, in selling to them.

Our farmers have had seed corn, kaf-fir, sorghum and sweet clover to sell. The prices realized have been satisfac-tory with the exception of sorghum seed within the last three months. There is considerable sorghum seed left in the country, much of it now being fed to hogs.

We have a liberal supply of kaffir, darso, the various kinds of sorghum, and a little sweet clover seed left for ship-ment out and are not shipping any-thing in except a few cow peas or other late legumes.—The L. C. Adam Mercan-tile Co., per F. M. Hubbard.

GRAIN REGIONAL RAINFALL.

The following table gives the total average rainfall in inches, in each state in the grain regions beginning April 16 to May 18, inclusive, and the average fall in inches for each station in the state, as reported by the Weather Bu-reau for the week ending May 18:

	Sta-tions.	Total, season.	Total, previous week.	Total, week.
Kentucky	17	4.54	.53	1.37
Ohio	15	2.97	.59	.73
W. Virginia	1	5.08	.02	1.82
Michigan	7	2.12	.52	.16
Indiana	16	2.30	.25	.47
Illinois	19	2.72	.49	.31
Wisconsin	5	2.34	.47	.07

Kansas	25	2.85	.71	.71
Oklahoma	11	2.46	.04	.39

PLANS NEW FARM RELIEF LEGISLATION.

Representative Dickinson, republican of Iowa, has announced a plan to line up all of the various farming interests of the country in support of an agri-cultural relief program for enactment at the next session of congress.

Mr. Dickinson has drafted a bill em-bodiyng, in modified form, many of the principles contained in the McNary-Haugen measure.

The proposal would create a federal advisory council of 36 members to name a commission of six. The commission, under certain conditions, could either set up an agency of its own or deal through an existing agency in the handling of surplus products for export, the same as the McNary-Haugen bill, except that it does not embody a price-fixing program.

Under this plan, Mr. Dickinson says, the surplus for export would not be seg-regated from the supply for domestic consumption, and, therefore, the world price would determine the price for the entire crop.

An appropriation of \$500,000 would be authorized to defray the expenses of the commission for the first year.

Let Us Be Your Broker

HECKLE BROS., Memphis, Tenn.

Feedstuffs

Wholesale grocers in the South are large distributors of feed but a marked change is going on in the character of this business. The large city wholesale grocers claim they are losing business because it is going to small wholesale grocers in the little towns. Such interior handlers have been forced into carlot purchases of feeds.

One of the largest producers and distributors of feed sizes of charcoal is the Florida Wood Products Co., Jacksonville, Fla. Many of our readers know R. L. Diggs, manager of the Feed Charcoal Division of the company. He is well posted on the needs of our trade and is developing a nice trade among feed mixers as well as jobbers and dealers in feed charcoal.

Our readers who may not be entirely satisfied with their present formulas or require information on the important properties of charcoal in mixed feeds, will receive first information by writing Mr. Diggs at the above address.

Feed Stocks Light.

PHILADELPHIA, PA.—As we find the situation in our section, dealers' stocks are comparatively light, mills are not running strong, and consequently the supply of surplus feedstuffs is not heavy. There is a fair demand for nearby stuff, but this is not in great volume. The impression is general that prices are entirely too high, and no one wants to stock up at present markets as they recall the bitter experience they had in February and March when prices broke so sharply. We look for a hand to mouth demand from now until new crop.—*King Brothers & Co., per S. A. King, May 11.*

PRODUCTS OF CORN SAFEST FEEDS.

Grain concentrates—and enough of them—are necessary before more milk, more eggs, more beef, more pork, more mutton, more net returns can be expected from poultry, dairy cattle, beef cattle, hogs, sheep or calves, according to James M. Adam, in charge of the corn products department of Anheuser-Busch at St. Louis.

"You can't expect a high yield of either rich milk or meat from animals fed on pasturage alone," says Adam. Green pasturage, comprised mostly of water, contains mighty good milk-making material, for example, but not enough of it. And in order for a cow to keep up a high yield of milk on green pasturage alone, she must draw on her reserve supply of protein to do it. This depletes the amount of protein and other minerals which are necessary for the animal's continued health.

"Knowing this, some dairymen attempt to make up the protein deficiency by supplementing their green pasturage with whole corn. Whole corn contains a high percentage of cystine, one of the three necessary elements of protein, but is low in lysine, an equally important element. Corn gluten feed, on the contrary, is properly balanced in regard to both cystine and lysine, because it is a concentrated product. As a matter of fact, it takes about five tons of whole corn to produce one ton of Anheuser-

Busch corn gluten feed. As we do not make gluten meal, Anheuser-Busch corn gluten feed runs very high in protein content, which, of course, means a richer feed.

"In fact, the guaranteed minimum protein content of Anheuser-Busch corn gluten feed is 23 per cent. Its minimum carbohydrate content is 50 per cent. Its guaranteed maximum fibre content is 8.5 per cent, and fat content 2 per cent. Steam-dried, it has a very good color and pleasant odor, which makes it more palatable to poultry and stock. This is a very important point for poultry and stock men to remember for the feed must be palatable before it will be eaten in sufficient quantities to produce the expected amount of milk meat or eggs."

MINNEAPOLIS LINSEED MARKET.

Receipts of flaxseed continue very light and the demand is good, especially for the plump seed. Arrive offering were heavy early in the week but showed a marked falling off during the last few days. There was quite a little seed in here which came direct from storage in Duluth, being taken by a local crusher. Stocks total only 315,33 bus. vs. 339,340 last week and 88,926 year ago. Today No. 1 seed was quoted at 1c under at 3c over July for both the track and the to arrive.

OIL MEAL MARKET.

The oil meal market is also very strong due primarily to an unusual heavy export demand. After the advance of late last week there were good sales of oil meal in this part of the country but the last few days has seen reduced inquiry.

However, most of the mills in this country are now running on Canadian seed and with the drawback on this flax seed, meal can be shipped from Chicago, Toledo, and Minneapolis for export.

The nominal export market today is \$43.50 to \$44.00 New York, which is equivalent to \$44.00 and \$44.50 Chicago. Therefore, our price of \$43.50 Chicago is usually cheap.—*Bertley Bulletin, Chicago, May 16.*

VAN DUSEN HARRINGTON WEEKLY CROP REPORT.

The group of Northwestern states comprising Minnesota, North Dakota, South Dakota and Montana, has received no moisture of consequence during the past week. Apparently no grain is suffering, but some deterioration might occur unless there are rains within the next ten days.

Cold weather has continued with temperatures as low as sixteen degrees in northern points. Some of the fields of small grain have taken on a brownish color due, probably, to heavy frosts at freezing. We believe, however, that no real damage has been done to the crops.

The seeding of barley and oats has not yet been completed in the North. Some fields of early barley show the effects of cold weather.

Corn planting is progressing slowly only a small amount having been accomplished to this time.

Some of our reports from North Dakota advise the rye crop is not doing especially well, and apparently has been somewhat affected by the continuous cold. In Minnesota and South Dakota as well as a few districts in North Dakota, the rye is better. We believe the crop generally will be spotted.

With good rains within a short time and warm, growing weather, we believe the prospects for the small grain crop of the Northwest are exceedingly promising.—*The Van Dusen Harrington Crop Report by W. G. Hudson, May 13.*

FEED MARKETS.
MILWAUKEE.
Milwaukee, May 16.—The feed market was firm and strong at Milwaukee last week. Request for prompt shipment wheat feeds continued in excess of demand and prices made slight advance. Offerings for June shipment were larger and bran prices on this basis were \$2.50 under prompt quotations and middlings \$1 lower. Linseed meal is quoted higher, but consumptive demand has lagged at the advance. Current quotations, per ton, are: Winter bran, \$29.50@30.50; spring bran, \$29@30; standard middlings, \$31.50@32.50; flour middlings, \$35@36; red dog, \$42@43; rye feed, \$29.50@30; linseed oil meal, \$43.50@45; cottonseed meal, \$41.50@46; hominy feed, \$39.50@40.50; oat feed, \$38@39.50; gluten feed, nominal, \$32.80; all in 100-lb. sacks, carlots, f. o. b. Milwaukee.
NEW YORK.
New York, May 16.—The feed market was featured by decidedly firm prices, especially for Western grades, and the week closed with the schedule at the high of the movement.
With flour mills not grinding to any extent, offerings of feed have decreased sharply. One or two of the large Western mills are not offering even for June shipment. In the meanwhile, however, the demand is not particularly heavy.
City bran is quoted at \$36, middlings \$38 and red dog \$49, while Western bran rules for prompt shipment at \$35.75, middlings \$37.50 and red dog \$49@51 per ton.
MEMPHIS.
Memphis, May 16.—Firmness prevailed in most lines of feed all the week and demand improved slightly following general rains where they were badly needed. Buying continues hand to mouth. Millfeed offerings at full prices, immediate shipment, with buyers taking little. Mixed rars still supplying much of the trade. Heat bran quotable at \$32@32.50, while gray shorts at \$37.75@38.50. Alfalfa meal one grade quotable at \$27@27.50. Cottonseed meal shade firmer, as demand fairly good and mills not offering much. Quote 1 per cent at \$38.50 and 43 at \$40.50.
PHILADELPHIA.
Philadelphia, May 16.—Feedstuffs are scarce and in good demand, prices closing strong and higher. Quotations represent carlots in 100-lb. sacks at cost per ton: soft winter bran, \$38@39; winter middlings, \$38@44; spring bran, \$36@37; standard wheat middlings, \$38@39; flour middlings, 4.15@4.25; red dog, \$49@50; rye middlings, 36@38; reground oats feed, 12.50@26; fine yellow hominy, \$44@45; fine white hominy, 44.50@45; low grade flour, \$50@56; cottonseed meal, 36% protein, \$47@48; cottonseed meal, 41% protein, \$50@51.
BALTIMORE.
Baltimore, May 16.—There has been a further advance during the past week in wheat feeds and for sacked bran and middlings there is a fair demand. Hominy feed is not freely offered on spot and is in air demand. Gluten feed unchanged. Alfalfa meal holds its own under moderate pot stocks. Dried beet pulp slow sale. Quotations follow: Spring wheat bran, per ton, 100-lb. sacks, \$33.50@34; Western middlings, per ton, 100-lb. sacks, \$35@35.50; hominy feed, per ton, \$42@43; gluten feed, per ton, \$39@40; dried beet pulp, per ton, \$37@37.50; alfalfa meal, \$32@33 per ton.
MINNEAPOLIS.
Minneapolis, May 16.—The week closing today showed a further continuation in the demand for feed. The mills are still far behind in their deliveries and anyone having track feed for sale had no difficulty in moving it and what is more, at a far more attractive price than he paid for it. The eastern mills, whose competition virtually had off this market for several months, are apparently not in a position to cut prices the way that they were doing and fixers and others who have to have the feed are being forced to look to Minneapolis for their needs.
There does not seem to be any very heavy demand for futures at these levels as it does not look reasonable to be going into the summer season with bran at \$27.50 and shorts at \$30 and the outside trade seems content to pick up their needs in immediate and prompt feed and are willing to let the future take care of itself.
Based on today's asking price, standard bran is bringing \$27.50; pure bran, \$28; shorts, \$30; red dog, \$41@42; flour middlings, \$34; oil meal, \$42.50@43.
Weekly shipments of feed totaled 10,326 tons, vs. 10,112 tons last week and 12,135 year ago. Season shipments, since Sept. 31, this year, were 468,327 tons and 543,095 last year; since January 1st, this year, 23,214 tons and 271,924 last year.

low, \$40.50. In bulk where available, \$1.50 to \$2 a ton less. Mills east of Chicago are obliged to offer discounts in order to move their hominy from \$1.50 to \$2 a ton less than what can be obtained in the markets of Chicago and vicinity and west of those points.

LINSEED OIL MEAL.—Occasional interest for export holds linseed quite firm with threatening tendencies to advance should any volume of business develop for export. Nominally quoted Minneapolis \$42.50; Chicago, \$43.50; \$2 per ton less for bulk where available.

DRIED BUTTERMILK.—Demand is very strong and practically no cars are available. No quotations at this time are therefore being made.

COTTONSEED MEAL.—The market is slow and demand light. Today's quotation for 43 per cent protein, Chicago basis, is \$45.50.

PACKERS' PRODUCTS.—There is a good demand for packers' products and prices are quite firm. Today's quotations are as follows: Meat scraps in carlots f. o. b. Chicago, \$55 per ton; 60 per cent protein digester tankage, \$50, with raw bone meal unchanged at \$50.

GLUTEN FEED.—In bulk \$30 a ton, sacked \$32.80. Gluten meal of 40 per cent protein \$42.80 in sacks and \$40 in bulk.

CHARCOAL.—Seasonable demand at a price basis f. o. b. Chicago; Milwaukee carlots, \$33@38 per ton, depending upon size of charcoal. Less than carlots, \$35 @50 per ton, standard units of 50-lb. burlap bags (for the finest grades, paper lined) in 13-ton minimum cars.

DULUTH FLAXSEED.
DULUTH, MINN., May 16.—A dull and uninteresting market prevailed in flaxseed during the last week. Final prices were however moderately up. Spot and May flax closed 4¼ cents up and July and September from 2¾ to 3 cents up. The September future failed to quite keep step with the old crop futures, attributable to expectations of a heavier crop next fall in line with the increased acreage seeded to the crop this spring.

While crushers were persistently in the market for supplies, they were unable to pick up any quantity in view of the light movement. A proportion of the cars received were bulkheads indicating that stocks were cleaned up in the districts where they were loaded. Receipts during the six days aggregated only 32,804 bushels and with shipments of 141,258 bushels stocks of 238,000 bushels remained in the elevators. Of the shipments, 133,000 bushels were accounted for in the loading out of

FEEDSTUFF SITUATION.

Market on mill feeds continue very strong with good demand, especially for immediate quick May and advancing prices. Any special promise of shipment commands a premium. Buyers are reluctant to buy mill feeds for shipment beyond May in spite of the attractive discounts offered.

MINNEAPOLIS.—Bran, \$23 to \$28.50; standard middlings, \$30.50 to \$31; flour middlings, \$34; red dog, \$41.50 to \$42.

CHICAGO.—Bran, \$30.60 to \$31.10; standard middlings, \$33.10 to \$33.60; flour middlings, \$36.60; red dog, \$44.10 to \$44.60.

KANSAS CITY.—Bran, \$27; gray shorts, \$33.

ST. LOUIS.—Bran, \$29.40; gray shorts, \$35.40.

ALFALFA MEAL.

Demand is equal to the supply for quick prompt 30-day shipment. Mills are coming to the end of the season and are finishing the grind. Most stock available now is for shipment from warehouse and any keen demand that might develop would easily eliminate available stocks at present prices. Nominally quoted, choice, \$30; No. 1, \$28; No. 2, \$23.50. Fine ground grades, \$3 to \$4 a ton premium.

REGROUND OAT FEED.—Nominally quoted \$6 to \$7; unground, \$8 to \$9. Very little demand. Production small, which is the reason for holding the market fairly steady at present prices with little chance of change.

HOMINY FEED.—Demand equal to supply. Nominally quoted white, \$41; yel-

The National Grange announces that it has filed with the Interstate Commerce Commission "a specific demand for a general revision downward of agricultural freight rates" in the Hoch-Smith rate revision investigation. Revisions of freight rates since the beginning of the world war have been discriminatory and harmful to agriculture and are leading to undue increases in the cost of foodstuffs and raw materials in centers of population, the Grange declared.

"Many spokesmen for the railroads," the brief concludes, "recognized the force and justice of the demand for lower rates on agricultural products by their statements and arguments made but a few months ago when the question of reduction of the surcharge on Pullman rates was up in Congress. They said in substance: 'We will not be able to grant you the reduced freight rates to which you are now entitled if this revenue from the Pullman surcharge is cut off.' Agriculture is now asking that their part of the implied bargain be kept."

New Complaints.

The Iowa Popcorn Co. of Schaller, Ia., have filed a complaint with the Interstate Commerce Commission, alleging

that the C. & N. W. et al. overcharged them on a car of shelled popcorn to New Orleans.

The Indianapolis Board of Trade has filed a complaint with the I. C. C. alleging that the C. C. C. & St. L., et al., violated the first four sections of the Act to Regulate Commerce on grain from Tab, Ind., to Indianapolis, and re-consigned to Louisville.

The Carlton-Moore Co., Philadelphia, has filed a complaint with the I. C. C. alleging that the Atlantic Coast Line et al., violated sections 1 and 15 of the act, in connection with a shipment of one carload of beans from Charleston, S. C., to Philadelphia.

Can Not Draw Salary.

Thomas F. Woodlock, who was given a recess appointment as Interstate Commerce Commissioner after his nomination had failed of confirmation by the Senate, cannot receive compensation as commissioner, Comptroller General McCarr has ruled, "unless and until he

shall hereafter be confirmed by the Senate."

The appointment of Mr. Woodlock, the comptroller general's ruling said, "falls squarely within the terms of the prohibitory statute" applying to compensation in the case of recess appointments.

Asks Speed in Rate Inquiry.

The National Industrial Traffic League has submitted a petition to the Interstate Commerce Commission asking it to speedily dispose of the agricultural freight rate investigation ordered in the Hoch-Smith resolution adopted by Congress. The petition adds that industries in each particular section of the country are in doubt as to future rates, and that this uncertainty has a deterring effect upon industrial development. The petition adds further:

"If the resolution be construed by the commission as tantamount to an instruction from Congress to prescribe lower rates on agricultural products, solely because of a serious depression in agriculture at the time the resolution was considered by Congress, we believe it would injure the present and future business of the country; would seriously impair our splendid transportation machine; would unwarrantedly result in undue prejudice to products of other industries, and might inflict losses upon the farmer greatly outweighing any possible gains from direct reductions in freight rates on agricultural products."

COURT DECISIONS.

Cause of action for breach of contract to hold proceeds of wheat purchased until settlement between seller and tenant held sufficiently stated. Plaintiff's pleadings, alleging breach of agreement by defendant to hold proceeds of wheat purchased by him until plaintiff and his tenant made settlement and instructed defendant as to disposition thereof, held to state cause of action against defendant.

Members of firm not relieved from liability for purchase price by seller's ignorance of fact that sale was to it. That seller of wheat to manager of grain company did not know at time that he was selling to company will not relieve members of firm from liability as partners for purchase price.

Each partner agent for other partners and partnership. Each partner is agent for other partners and partnership in partnership business.

Agreement between landlord and tenant held equitable assignment of wheat and proceeds to discharge tenant's indebtedness. Agreement between landlord and tenant appropriating wheat, grown on premises, for payment of tenant's debt to landlord, and authorizing latter to sell crop, with understanding that purchaser should retain proceeds until they made settlement and directed disposition thereof, held equitable assignment of wheat and proceeds by tenant to landlord.

Manager's agreement to hold proceeds of wheat purchased until settlement between seller and tenant held binding on partners. Agreement by manager of partnership to hold proceeds of wheat, purchased by him from landowner, until latter and his tenant had settlement and directed disposition thereof, held within scope of his authority and binding on partners.—Craig v. Dunlap. (Ct. of Civ. App., Texas. S. W. Rep. 267-1007.)

Shipper of live stock held not required under bill of lading to give notice to carrier of debilitated condition of cattle at destination, as condition precedent to recovery. Under a bill of lading requiring shipper of live stock to give notice to carrier before removal of live stock from its possession, of any visible or manifest injury to the live stock, shipper held not obliged to give such notice, where injury arose from shrinkage, loss of weight, and debilitated condition of the cattle produced by negligent delay and confinement, in view of

Amendment of March 4, 1915, to the Interstate Commerce Act.

Shipper suing for damages based on delay must show both delay and its negligent character. Shipper suing for damages to live stock based on delay must show both delay and its negligent character.

Measure of damages to live stock from negligent delay stated. The measure of damages to live stock from negligent delay in transporting is the difference between the fair market value of the cattle at destination and time of arrival, in the condition in which they did arrive, and their value had they arrived in good condition.

Manner of showing damages resulting to shipper of live stock because of carrier's negligent delay stated. The proper way to show damages to live stock for carrier's negligent delay is first to qualify the witnesses to testify to the fair market value of the cattle on arriving at destination, in the condition in which they arrived, and their value had they arrived in good condition, then let such witnesses give their estimate of the depreciation in value of the cattle on arrival at destination.

Instruction as to carrier's duty to transport cattle in usual and customary manner and route held not justified by evidence. Where shipping contract provided that carrier was not bound to transport cattle by any particular train or for a particular market or otherwise than with reasonable dispatch, but should have right in case of physical necessity to forward them by any carrier or route between shipping point and destination, instruction that it was duty of carrier to transport cattle in usual and customary manner and route held not warranted by evidence.

Instruction on damages relative to death of cattle held broader than evidence. Where, in shipper's action for damages to cattle, three of which died, evidence showed that death of one of them was not attributable to the fault of defendant, instruction authorizing recovery for death of three cattle was broader than the evidence.—Sandker v. Wabash Ry. (Kans. City Ct. App. S. W. Rep. 267-957.)

CANADIAN VISIBLE.

Canadian visible supply of wheat decreased 1,091,000 bus. and oats increased 3,014,000 bus. last week. These statistics represent terminal stocks only:

	May 16, 1925.	May 9, 1925.	May 17, 1924.
Wheat	35,019,000	36,110,000	24,069,000
Oats	11,719,000	14,733,000	7,925,000
Barley	4,092,000	4,219,000	2,903,000
Rye	2,328,000	2,419,000	1,739,000

VISIBLE GRAIN SUPPLY.

The following table gives the stocks of grain in bushels in public and private warehouses at the principal ports and in transit by water on the dates named, with comparisons as compiled by the secretary of the Chicago Board of Trade for the week ending May 16 (000 omitted):

Alfalfa Department

ALFALFA MEAL MARKET.

KANSAS CITY, May 16.—Advances of 50c to \$1.50 a ton were reported on alfalfa meal this week, with manufacturers justifying their action by alleging increasing orders for May and June delivery and scarcity of old hay receipts. Though the first new hay has been marketed it is not expected that any of the 1924 crop can be ground within a month or six weeks. Carlots of meal are quoted as follows: Choice, \$26.50@27.50; No. 1, \$24@25; No. 2, \$19@20; No. 3, \$18@19.

In the grain and molasses feed trade the orders were limited to horse, mule and poultry feeds, with dairymen poor buyers on account of grass and hog feeders indifferent. Horse and mule feed buying was in the South, where cotton conditions have improved. Prices of horse and mule feeds went up 50c to \$1 a ton. Scratch poultry feeds also old \$1 higher and wash poultry feeds of the best quality went up \$1. Dairy feeds were unchanged to \$1 lower and others were unchanged. The market was quoted as follows on carlots: Dairy feeds, \$35@46; cattle feeds, \$39@44; hog feeds, \$45@51; pig meal, \$68; horse and mule feeds, \$33@43.50; alfalfa-molasses feeds, \$26@32; scratch poultry feeds, \$48.50@55; mash poultry feeds, \$49@76.

No Alfalfa Near Malden.

Price Current-Grain Reporter: No alfalfa within 40 miles of Malden. Local timothy and clover. New crop short. Old crop carryover larger than usual and sales slow.—*Southeast Missouri Grain Co., K. Kevil, Mgr., Malden, Mo.*

MINNESOTA FARM LOAN FUNDS.

Minnesota farmers now have \$70,000,000 in state credits to back them up.

Governor Theodore Christianson last week signed a bill passed by the legislature authorizing the rural credits bureau to issue \$30,000,000 more in bonds to loan the proceeds to farmers. Two years ago \$40,000,000 was authorized and \$35,000,000 was issued and sold. There remains \$5,000,000 of the old authorization to be issued and \$30,000,000 of the new authorization.

In signing the bill, Governor Christianson said he was satisfied to do so, not only because the state government reorganization bill passed by the legislature last Saturday gives him control over the rural credit bond issues so that he may keep them to a minimum. The bonds will be issued only in sufficient quantities to meet emergencies, he said.

COTTONSEED MEAL.

KANSAS CITY, May 16.—Expecting no revival before July or August, cottonseed meal dealers this week reported continued quietness in the trade as far as Kansas, Missouri and other northern states are concerned. There was an easier feeling also among the producers, due in part to improved new crop prospects. Oklahoma mills asked about 50c a ton less for carlots, holding 43 percent at \$36.50. Texas quotations were about the same as those of Oklahoma. Arkansas asked \$38. As an indication at Texas feeders are using the product of that state, a Kansas City handler received cold pressed cake held in Oklahoma at Texas at a price equal to \$37.20 if delivered in Kansas City. The Kansas

City price of meal was \$41.80, or 50c lower than a week ago.

Owing to the attitude of Minneapolis mills, the linseed meal market had a firm tone. Dealers here had to raise their prices \$1.10 per ton, to \$46.80 for fine ground and \$47.80 for pea size. Demand from feeders remained slack and the rise was expected to further restrict it. Minneapolis asked \$42.50 for fine ground meal and \$1 more for pea size.

Only a fair trade was reported in tankage. Prices were unchanged. Carlots sold at \$50 a ton and ton lots at \$55. Meat scrap was in fair request at former quotations, \$55 and \$60.

THE SALT MARKET.

Due to unusual conditions, prices on agricultural salt of all grades are now low. If the trade is wise, they will stock up reasonably in anticipation of a probable advance in salt shortly.

In connection with carload salt purchases, the Interstate Commerce Commission has just ruled that effective May 23rd, minimum car weights shall be 45,000 pounds. Prior to this dating, minimum carloads have been 30,000 pounds.

FEEDING TANKAGE.

Working with growing shoats the past summer and fall, Professor Loeffel of Nebraska found that where shoats had access to alfalfa and received only corn, that the cost of producing 100 pounds of pork was \$8.94, whereas when tankage was fed with the corn and alfalfa, the cost was \$7.62 per 100 pounds of gain. Furthermore the corn-tankage pigs weighed 210 at the close of the test, while the corn-alfalfa pigs weighed 142 pounds. Similar results were obtained where sudan grass was used as the forage. Where corn alone was fed, the cost per 100 pounds gain was \$8.41, whereas with the corn-tankage-sudan grass pigs, the cost was \$7.14 per 100 pounds gain. In this test \$75 profit was made on each ton of tankage fed when full fed in self-feeders. Tests carried on at the Iowa station also bear out the statement that full feeding of tankage on any kind of pasture is advisable for growing shoats. In the Nebraska tests, corn was figured at 90 cents and tankage at \$65 per ton. With corn at \$1.25 to \$1.50, tankage would show even a greater saving. Of course tankage might go to such a figure where it would be advisable to limit the amount, but at prevailing prices such is not the case.

Other feeds like ground oats, ground barley, shorts and hominy feed will no doubt be used very extensively this summer, and the corn can be made to go much further by adding to it ground oats, barley or shorts. If hominy feed is fed it should be fed along with barley or oats.

BROOM CORN MARKETS.

The trend of the market shows no material change as compared to the situation existing previously. While the movement has been lighter as compared to April, yet no change of any consequence can be noted in regard to the position shown by warehouses having corn. The attitude of holders appears to be to wait out the new crop situation as field information now points to a reduced plant. No marked change from the present condition is expected to manifest itself until data on the acreage is obtained and the growing season advanced to the stage where it can be determined what can be expected this year as regards tonnage.

Prices range from \$75 to \$100 on bulk of dwarf with dwarf available around \$70 and also held above \$100 for the better end, selected cars being held up to \$130. Western standard is held in line with dwarf. Lindsay standard is held from around \$80 to \$135 with se-

NEW YORK OATS MARKET.

Oats receipts, 490,000 bushels bonded; 910,000 bushels domestic. There was very little change in values during the entire week, the market making but small response to the fluctuations of other grains. Export business in domestic oats continued in good volume though slowing up the latter part of the week. There is no indication of a larger movement in the immediate future, so that domestic consumption and export clearances should further reduce the visible supply and moderately increase premiums. The recent large shipments from Northwestern markets will find their distribution through eastern domestic channels and export outlets, while local dealers also will replenish stocks through this source. It is unlikely that western all rail oats will be used by consumers to any great extent under existing conditions, though they are being sold to exporters and will doubtless continue. We quote 36 to 38-lb. Northwestern 3 white oats, lake and rail, at 9 over Chicago July; track, New York domestic, or 54 cents at the close of the market today. All rail No. 2 white oats are quoted at 55½ to 56c; No. 3 whites, 53½ to 54½c; No. 4 whites, 52 to 53c; 36 to 38-lb. sulphured clips, 54 to 56c, and 38 to 40-lb. sulphured clips, 56 to 62c, elevator domestic, according to quality.—*L. W. Forbell & Co.*

AMERICAN GRAIN EXPORTS.

The Department of Commerce reported the following exports of grain from the principal ports of the United States to foreign countries during the week ending May 9, 1925 (000 omitted):

Articles and countries.	Week ending May 9, 1925.	May 2, 1925.	July 1, 1924, to May 9, 1925.
Barley	447	218	19,052
Corn	1,960	77	8,824
Oats	517	442	6,667
Rye	2,378	4,083	14,796
Wheat—

ALFALFA HAY

ALFALFA MEAL

A. B. CAPLE, Toledo, O.

Hay Department

MINNESOTA STRAW GRADING REQUESTED.

The Minnesota state railroad and warehouse commission recently took under advisement the grading of flax straw. About 15 flax straw balers, shippers, and buyers appeared before the commission, and asked that the straw be inspected and grades fixed.

MEMORIAL TO FRANK A. COLES

The memorial committee of the National Hay Association, in a very fitting way, calls attention to the passing of Frank A. Coles of Middletown, Conn., a member of the association who died on April 7. Mr. Coles, who was vice-president and general manager of the Coles Co., was also a vice-president of three banks and an active and enthusiastic church and Sunday school worker.

POWER FROM STRAW.

A practicable method has been discovered by the Bureau of Chemistry by which a ton of sun dried wheat straw will yield 10,000 ft. of illuminating gas, 10 gallons of tar and 625 lbs. of carbon residue, which is excellent fuel. The gas is said to burn successfully in a mantle lamp, producing a blue flame that is restful to the eyes. It is also said to supply an efficient fuel for internal combustion engines. Experts of the Bureau of Chemistry have designed a special retort for the process. The gas bubbles up through water and then through fine-meshed screens and a layer of coke and charcoal. Thus purified, it passes to a storage chamber. Litters, and crippled pigs may also result.

The total value of the exports of food stuffs from the United States during 1924, according to the Department of Commerce, was \$978,583,000 against \$851,555,000 in 1923.

HAY MARKET REVIEW.

The hay market ruled practically unchanged during the week ending May 15 but the offerings were fully equal to current needs and the undertone was slightly easier according to the weekly hay market review of the United States Department of Agriculture. Southern takings continued light with dullness in the coal trade while drought in some sections of the southwest cut down the purchases of cotton planters. Buyers generally were purchasing from hand to mouth.

Pastures and forage were doing well in most sections but rain was badly needed in the Upper Mississippi Valley and in parts of Arizona and New Mexico. Cold weather was hindering forage growth in Minneapolis territory. The alfalfa harvest was well under way in the southwest. The first car of new alfalfa arrived at Kansas City and cutting had extended into Nebraska. New crop alfalfa was soon to be marketed in San Francisco but indications were that the first cutting would be of poor quality.

Timothy held steady. The Boston market was practically unchanged but prices declined at New York with increased arrivals. The undertone was firmer at Pittsburgh but prices advanced at Cincinnati on account of sharply reduced offerings. Quotations were unchanged at Chicago with small arrivals and St. Louis held steady.

Alfalfa averaged slightly easier. The Omaha market was quiet with light offerings equal to trade requirements. Good quality hay was wanted at Kansas City with the mills buying sparingly and shipping trade very light. Quotations were unchanged at Los Angeles but were slightly lower at San Francisco.

Prairie ruled steady. Only a few cars were received at Chicago and quotations were unchanged at St. Louis. The market was firm at Minneapolis and St. Paul with the cold, dry weather retarding pasture growth and the light receipts were readily absorbed at Omaha. Good quality prairie was wanted at Kansas City but low grades were slow sale while quotations were practically unchanged.

KANSAS CITY HAY NOTES.

T. J. Tanner, Correspondent.
Stuart Brubaker is spending a vacation at his former home in Springfield, Ohio.

V. K. Spellman, secretary of the Kansas City Hay Dealers' Association, says local dealers are not trying to sell hay except as they have it in hand, owing

North & Company

Receivers—Shippers

Hay, Grain, Millfeed, Alfalfa Meal
Live Stock Exchange Kansas City, Mo.

to light receipts. If any firm has contracted new hay for later delivery, such transactions are being kept quiet. This would be in alfalfa, of course.

A Kansas City firm received a letter this week from Greensburg, S. C., complaining as to the poor quality of Eastern timothy hay received during the last three months. It is believed here that unfavorable freight rates are all that prevents Kansas City from participating in the Southeastern hay trade on a competitive basis.

Renick Dunlap, assistant secretary of agriculture, spent Thursday with G. F. Kellogg, manager of the Kansas City office of the Hay, Feed and Seed Division of the department. Mr. Dunlap was given a luncheon at the rooms of the Kansas City, Kan., Chamber of Commerce.

According to rumors in circulation among Kansas City hay men, the Western Trunk Line committee has decided to turn down the request of Colorado milling interests for a modification of the milling-in-transit privilege on alfalfa hay from Colorado eastward. No official report has been made.

J. D. Cole of the Kansas Hay Co., Kansas City, had the honor of selling the first car of new alfalfa hay on the local market this year. The car was shipped from Heizer, a dry spot in central Kansas, arriving last Monday, May 11. It graded No. 1 and was in good condition, with fine quality generally. Mr. Cole sold the hay to Cash, Griggs & Kinell at \$26.50 a ton. The buyers placed the car on an Eastern order. Last year the first new-crop car of alfalfa arrived from Oklahoma on May 10. Though another car of alfalfa is said to be en route from western Kansas, no big movement of new hay is expected inside of two or three weeks. Additional rains this week were against harvesting and baling.

KANSAS CITY.

May 16.—Not because of scarcity in the country, but due to wet weather and the application of producers' time to spring work, the receipts of hay suffered a further reduction this week. Though prairie offerings were larger, the losses in other kinds brought the total arrivals down to 161 cars, or 25 less than a week ago. A year ago the receipts were 288 cars.

Only 64 cars of alfalfa were offered, this movement being 43 less than a week ago. A car of new crop hay from central Kansas arrived Monday, showing excellent quality and selling at the top price of the week. Most of the receipts graded standard or below. There was a good demand for medium to fancy hay. Other kinds showed no special activity. Handlers could have booked more orders if assured of hay to fill them within the next few days. Generally unchanged prices were quoted.

Prairie arrivals made a total of 81 cars, or 26 more than a week ago. There was a brisk trade until Saturday, with prices unchanged. Dullness and weakness marked the closing day.

Sixteen cars comprised the receipts of timothy, clover mixed and clover. The total was 8 less than a week ago. Nearly all of the offerings consisted of timothy. A limited demand absorbed everything on sale and there were no notable price changes.

A single car of straw arrived, but it had been bought ahead. More could have been sold if available, but there was no increase in prices bid.

Cariots of hay and straw are quoted as follows per ton f. o. b. Kansas City:

Alfalfa—Select dairy, \$23.50@26.50; choice, \$21@23; No. 1, \$19.50@20.50; standard, \$16@19; No. 2, \$12.50@15.50; No. 3, \$9@12.

Prairie—No. 1, \$10.50@11; No. 2, \$8.50@10; No. 3, \$5.50@8; packing, \$4@5.

Timothy—No. 1, \$14.50@15; standard, \$13@14; No. 2, \$11.50@12.50; No. 3, \$9@11.

Clover mixed—Light, \$14@15; No. 1, \$12.50@13.50; No. 2, \$9@12.

Clover—No. 1, \$9.50@12; No. 2, \$7@9.

Straw—Wheat, \$8@8.50.

PHILADELPHIA.

May 16.—Baled hay and straw: The market for hay is very quiet, with small supplies which, however, are ample for all requirements. Straw is steady under small receipts but demand is limited. We quote hay, Federal grades: Timothy—No. 1, nominal; No. 2, \$18@19; No. 3, \$16@17; sample, \$10@15. Light clover mixed—No. 1, \$17@18; No. 2, \$15@16; No. 3, \$12@14. Medium clover mixed—No. 1, \$15@16; No.

2, \$13@14. Heavy clover mixed—No. 1, \$14@15. Light grass mixed—No. 1, \$17@17.50. Straw—Straight rye, \$15@15.50; wheat, \$15@15.50; oat, \$14@14.50.

CINCINNATI.

May 18.—While recent disappointing returns to shippers of hay have effectively shut off the receipts, creating a decidedly stronger tone, and a 50c advance for timothy and mixed, the quotation on most days was merely nominal owing to the very limited offerings of top grades. Actual sales showed little variation in values, but offers to buy in the country were generally on a higher basis warranting a nominally better price. The demand was good, with shipping interests short of supplies to fill orders, but this and the local demand was confined entirely to top grades. There was some evidence of holding off by buyers at the close of the week due to an expected increase in receipts which was indicated by advices to the trade. Timothy and light mixed are in best demand, but heavy mixed and clover will also sell better owing to the week's scarcity. No. 1 timothy, \$18.50@19; No. 2, \$17@18; No. 3, \$13@15; threshed, \$8.50@10; no grade, \$8@10; No. 1 heavy clover mixed, \$14.50@15.50; No. 1 light clover mixed, \$16.50@17.50; No. 1 clover mixed, \$15@16; No. 2, \$12@14.50; no grade, \$10@11; No. 1 clover, \$15.50@16.50; No. 2, \$12@14; no grade, \$8@9; No. 1 second cutting alfalfa, \$18@19; No. 2, \$15@16.50; No. 1 first cutting alfalfa, \$16@17; No. 2, \$12@14; sound sample grassy hay, \$9@10; wheat straw, \$9.50@10.50; oats straw, \$9@10; rye straw, \$13@14.

TOLEDO.

May 18.—The hay market is still dull, with prices unchanged. Receipts and shipments are practically nil. A heavy supply of hay is still in farmers' hands, according to the state federal crop bureau. The recent rains have been very beneficial to the new hay crop. The amount of old hay on farms is estimated at 17 per cent of last year's crop and this compares with 11 per cent last year. This carry-over is in part due to the large crop, but the slow market demand has had much to do with the inability of farmers to move the crop.

Prices last week were as follows: No. 1 timothy, \$14; No. 2 timothy, \$12; No. 1 light clover mixed, \$13.50; No. 1 heavy clover mixed, \$12.50; No. 1 red clover, \$11; No. 1 first cutting alfalfa, \$15; No. 1 second cutting alfalfa, \$20; sound dry wheat straw, \$8.50; sound dry oats straw, \$8; f. o. b. Toledo.

MEMPHIS.

May 16.—Receipts of hay for the week were 37 cars, but there is no scarcity. Good grades not any too plentiful, but trade continues to buy in small lots. Rains helped pastures some, but not affecting hay demand any yet. Quote: Timothy, one, \$21.50@22; standard, \$20.50@21; two, \$19.50@20. Alfalfa, one, \$27.50@28; standard, \$24.50@25; two, \$21@21.50.

MILWAUKEE.

May 16.—Prices for hay continued unchanged at Milwaukee last week. Demand was stagnant and the market status nominal. Current quotations, per ton, are: No. 1 timothy, \$14@15; No. 2 timothy, \$12@13; No. 1 mixed, \$13@15.50; No. 2 clover mixed, \$11@12; sample hay, \$6@8; marsh feeding, \$10; packing, \$9; rye straw, \$9@10; oat straw, \$9@10.

BOSTON.

May 16.—No. 1 timothy, \$25.50@26; No. 2 timothy, \$22@24; No. 3 timothy, \$17@19; eastern, \$16@25; clover mixed, \$21@24. Straw—Rye straw, \$21@22; oat straw, \$13@15.

BALTIMORE.

May 16.—There is a steady tone to the market on the higher grades of timothy and choice light clover mixed hay, of which descriptions there is no over-supply on spot, while inquiry is fair at quotations. Medium and low grade hay in full supply and the movement of the poorer grades is very sluggish. Straw of all kinds in moderate offering and steady, with a fair jobbing demand for No. 1 wheat and oat blocks. Not much inquiry for No. 1 straight rye straw. Quotations follow:

No. 2 timothy, \$18.50@19; No. 3, \$15.50@17; No. 1 light clover mixed, \$17.50@18; No. 1 clover mixed, \$17; No. 2, \$15@16. Straw—No. 1 straight rye, \$18.50@19; No. 1 wheat, \$15@15.50; No. 1 oat, \$15.50@16.

LOS ANGELES.

The hay arrivals for the week amounted to 277 cars. No. 1 alfalfa selling at \$21@22; No. 2 \$2 less; No. 1 barley hay, \$19; No. 1 oat hay, \$21.

PORTLAND, ORE.

May 14.—Buying prices f. o. b. Portland: Alfalfa, \$20@21 ton; valley timothy, \$20@21; eastern Oregon timothy, \$23@24; clover, \$16.50@17; oats, \$19@20; oats and vetch hay, \$19.50@20.50; straw, \$8@8.50.

DULUTH.

May 16.—Almost midsummer conditions have prevailed in the hay market recently. Demand was limited and receipts were curtailed through instructions issued by dealers to shippers to hold back their cars. Closing prices are unchanged, as follows: Timothy—No. 1, \$16@17; No. 2, \$15; mixed timothy, No. 1, \$15; No. 2, \$10. Prairie—No. 1, \$16@17; No. 2, \$13; No. 3, \$11. Midland—No. 1, \$10; No. 2, \$8. Rye straw, \$9; oats straw, \$8.50.

NEW YORK.

May 14.—The New York Hay Exchange, Ass'n has issued the following weekly report, with latest quotations:

	Hay.	Straw.
Receipts for week	1,132	13
Receipts last week	1,613	40
Receipts from Sept. 1	43,133	952

The different terminal markets present an entirely different condition. At Manhattan rail and river receipts

have been moderate, large bales, at all times in light supply, moving off readily at full quotations. Small bales are in more liberal supply at 33rd street. Sales have lagged and show some decline over the week. Medium and lower grades have moved comparatively well, but at this writing there is a greater quantity of good quality small bales than the trade can readily absorb.

At Brooklyn the situation is entirely different. Receipts at the Brooklyn Eastern District Terminal have been moderate, but with an excessively heavy supply of hay at Bushwick Station and limited demand the situation throughout Brooklyn has weakened and the inside range of quotations as shown below is more applicable to that point.

Rye straw in light supply and light demand.

New invoices on the whole range from light to moderate.

Federal grade quotations for large bales are as follows:

Timothy—No. 1, \$25; No. 2, \$22@24; No. 3, \$18@21. Light clover mixed—No. 1, \$22@24; No. 2, \$19@21; No. 3, \$17@18. Medium clover mixed—No. 1, \$19@21; No. 2, \$15@16. Light grass mixed—No. 1, \$22@24; No. 2, \$19@21; No. 3, \$17@18. Heavy grass mixed—No. 1, \$14@15. Rye straw—No. 1, \$15@16.

CHICAGO.

May 18.—In light supply and the demand good. Market firm. No. 1 timothy was quotable at \$19@21—outside for choice; No. 2, \$15@17; No. 3, \$10@13. Timothy and clover—Light mixed, No. 1, \$17@19; No. 2, \$14@16; heavy mixed—No. 1, \$13@15; No. 2, \$11@12. Timothy and grass—Light mixed, No. 1, \$15@17; No. 2, \$12@14; heavy mixed, No. 1, \$14@15; No. 2, \$11@12. Clover—No. 1, \$12@13; No. 2, \$9@11. Mixed grass—No. 1, \$12@14; No. 2, \$10@11. Oklahoma, Kansas, Nebraska and South Dakota prairie hay, \$12@15. Marsh hay—feeding, \$10@12. Marsh hay, packing, \$10@12. Rye straw quotable at \$10@11; oat straw at \$8@10; wheat straw at \$8@10.

ST. LOUIS, MO.

May 18.—Steady to strong on good and choice hay, but no material change for the better in the under grades. Sales:

Timothy—1 car No. 3 at \$13, 2 cars and part car do at \$14, 2 cars do at \$15, 1 car do at \$15.50, 1 car No. 2 at \$16, 1 car do at \$18, 1 car standard at \$19, 2 cars do at \$20, 3 cars No. 1 at \$21, 3 cars do at \$22. Clover, mixed—1 car no grade at \$9, 1 car and part car No. 2 at \$14, 140 bales do (one levee) at \$14.

Alfalfa—Part car common at \$10.

CHICAGO HAY NOTES.

Arrivals light and all offerings cleaned up. Corn planting is now general and predictions are for a continued tight run of hay for the next ten days and a better feeling for all grades of tame hay. Feeding prairie is dull, while packing hay is in demand. The supply of straw is liberal and the market easy.—Walters Brothers.

Light arrivals bound to advance prices. Good hay, especially in demand but straw not much in demand.—Albert Miller & Co.

Receipts of timothy hay are light and loadings almost nil. Market shows improvement and even common hay is about cleaned up. We are looking for prairie and marsh packing, but alfalfa and straw are dull.—Bridge & Leonard.

ORGANIZE HAY ASSOCIATION.

The hay dealers and shippers of Maricopa County, Arizona, have organized a hay association with headquarters at Phoenix. One of the purposes of the organization will be to put the new U. S. alfalfa grades into effect, through an inspection service, the members having agreed that the fees are to be regulated by the expense to which the association is put.

MEXICAN WHEAT GROWERS ASK PROTECTION.

Wheat growers in the state of Jalisco have petitioned the government to increase the present import duty on wheat in order that they may find a better market within the country for their production, according to H. Bentley MacKenzie, assistant trade commissioner at Mexico City. Growers claim that wheat from Canada will probably be shipped to Mexico in large quantities in view of the fact that a high tariff on wheat exists in the United States, and that as a result the Mexican wheat growers will suffer greatly from this competition.

TERMINAL MARKETS.

[Concluded from page 23]

May 1. The government has made official forecasts 13 years, in seven of which the final out-turn was larger than the May 1 forecast, and in six years smaller than the May 1 forecast. Only once in the 13 years has the final out-turn exceeded the May 1 forecast by more than 55 million and only three times by more than 40 million. On the other hand, only twice in the 13 years has it fallen more than 20 million under the May 1 forecast. This gives a range of from 425 to 485 million within which the harvest may be expected based upon precedent.—Clement Curtis & Co.

It is very difficult for anyone who ordinarily entertains positive convictions to have to repeat each day that we can see nothing upon which to take a decided stand until world crops have progressed much further. But thinking as we do, that the price trend is bound to be determined by world crop out-turn and believing that present prices are just about a correct reflection of known conditions, we cannot do anything but adhere to the above view.—Cross, Ray, Eberhardt & Harris.

The Government estimate of a winter wheat crop of 445 million bushels fell flat as an immediate market factor, for the reason that there had been over-inflation, caused by an Eastern newspaper estimate of a crop of around 390 millions; however, it is commonly accepted that a yield of 445 million winter wheat is not large enough to create a comfortable situation. It places the burden entirely upon the spring wheat crop; it is altogether too early to have any definite knowledge as to yield of spring wheat, but it is pretty well known that there is a deficiency of sub-soil moisture which necessitates frequent rains during the entire period of growth. There was an enormous abandonment of winter wheat acreage, due to winter killing, which in turn was due to insufficient moisture last fall, thereby preventing proper root growth. The Department of Agriculture finds supplies in exporting countries as of May 1st at 210 millions; assuming an average export shipment for May and June, there will be left a world's carryover of 125 millions, which compares with 283 millions last year.—Thomson & McKinnon.

Sale of wheat from outside points to Chicago of 600,000 bus. were reported, causing late selling. The general news was rather favorable to holders, with foreign markets strong, a decrease on passage of 3,448,000, while our visible decreased 2,850,000 bus. The local shipping demand was moderate. Local stocks were reduced 26,000 bus. for the week. Clearances were moderate. Kansas reports indicate little change for the better recently, and LeCount's summary of conditions east of the Mississippi indicates an extremely spotted crop. Northwest crop news was favorable. Private foreign cables were more bullish, saying the demand was good with decreasing stocks a factor. The situation is two sided, and on the setbacks we advise purchases.—Logan & Bryan.

General rains having been reported over the west and central west, wheat prices opened lower, but there was good support on the break and later in the session, on reports of possible frost over part of the wheat belt, the market responded splendidly and closed at the high point of the day. Considering the light outside interest and favorable weather, the advance in today's market was worthy of notice. No export business was reported, but buying of May wheat continued and that future again showed unusual strength. Bullish statistics are expected and a heavy reduction in supplies on ocean passage is looked for, one statement showing a decrease of some 9,000,000 bus. We would use care in making purchases of wheat, but should the outside interest increase materially, higher prices may be looked for.—J. J. Badenoch Co.

Wheat after a weak and lower start on the decline in Liverpool and additional rains in the west and southwest, turned strong and advanced materially on reports of unseasonable temperatures and predictions of colder weather to follow. Demand from millers continues to be limited and the basis for cash as compared with regular May practically unchanged. Corn followed the trend in wheat and likewise felt the effect of beneficial rains early and later the promise of unfavorable weather from low temperatures. Sales for shipment were disappointing. The receipts show some increase and contain a larger percentage of high grade corn, for which there was a reduction of about 1c per bu. in premiums. Sales and offerings of "to arrive" lots were larger, indicating an increase in the movement in the near future.—Pope & Eckhardt Co.

Although the generous rains were repeated over the winter and spring territory, and some selling developed on this and the disappointing cables, the market encountered strong commission house buying, and gradually moved up. Northwest markets were strong all day on reports of excellent demand for their spring wheat, although export demand was again reported flat. Weather predictions for frost over the west and northwest caused moderate buying and some short covering. The trade is impressed with the belief that Monday's statistics will present a bullish array. There was a good deal of reinstating of long wheat on this account. The failure of our market to decline on these rains suggests that the tightness in cash wheat underlying the market at present is the potent influence governing prices.—Bartlett-Frazier Co.

HARRY W. ROBINSON

Deceased.

For many years active in the Cleveland hay and grain trade, and in association work, has just passed away.

COTTON NOTES

Cotton Standards Conference.

A conference of European cotton exchanges and associations and representatives of the United States department of agriculture is to be held at London, May 20, to consider proposed modifications in the agreements providing for the use of universal cotton standards in purchasing American cotton. A number of representatives of American cotton exchanges and associations will also attend the conference. W. G. Campbell, director of regulatory work, Dr. H. C. Taylor, chief of the bureau of agricultural economics and H. C. Slade, cotton specialist, will represent the department of agriculture at the London conference.

Not a Cotton Producer.

The Argentine republic, while a great grain grower, is not making much headway as a cotton producer. Last year the Argentinians made a special effort in cotton, planting 259,000 acres, against 155,000 in 1923, but the outcome was only 74,700 bales. During the previous year the yield was 68,800 bales. Drouth and leaf worm attacks caused some loss of acreage, and only 257,000 were harvested. Locusts or grasshoppers took a late toll.

Egyptian Acreage Increases.

An increase of nearly 13 per cent in the Egyptian cotton acreage for the 1924-25 crop has just been officially announced by the Ministry of Agriculture, the Department of Commerce is advised.

The area under cultivation for all types of Egyptian cotton this coming season is estimated locally at 1,787,843 feddans (1 feddan equals 1.038 acres), compared with 1,588,100 feddans for the season just closed.

Insuring Growing Cotton.

The Automobile Insurance Company, through Haas, Howell & Co. of Atlanta, will issue insurance covering growing cotton against damage by hail, windstorm, boll weevil and other hazards, according to the Montgomery, Ala., Advertiser. It will insure against damage from weevil only where the cotton fields are protected by Huff-Daland Dusters, Inc., which dusts fields by airplane. It is stated that insurance of from \$7 to \$20 an acre will be granted for a premium to be determined after inspection of the risk. It is thought that the rate will be from 60c to 80c an acre.

American Bale Ties

To conform with the rules of the National Hay Association, hay must be well baled. The use of American Bale Ties accomplishes this. A broken wire on a bale of hay condemns the hay. Broken bales cost more than Bale Ties.

OTHER USES

For baling Excelsior, Shavings, Rags, and Paper. For bundling Barrel Heading and Staves.

No other form of wire has to stand more strain and abuse. Bale Tie Wire must be made in the highest perfection possible. American Bale Ties meet every requirement for which they are intended.

VALUE OF TRADE ASSOCIATIONS.

In speaking before the recent convention of the Associated General Contractors of America, President Coolidge pointed out the possibility of service which a trade association may provide. His remarks follow: "If trade associations could be so conducted that the public might be assured of all their potential advantages and at the same time safeguard against the disadvantages incident to restricted competition and the exaction of too liberal profits, they would render a large service to the community and would be assured of a corresponding measure of confidence and support."

PRINCE RUPERT IS NEW CANADIAN GRAIN PORT.

Western Canada will have another modern grain port on the Pacific when the new terminal elevator at Prince Rupert has been constructed. Fill for the foundations has been constructed only a short distance from the government wharf and tenders have been called for the substructure. Preliminary estimates of the cost amount to \$1,500,000 and the elevator capacity proposed is 1,250,000 bus., which will afford a transshipping accommodation equal to that of Vancouver when it made its first and successful bid as a world grain port.

Among the subjects discussed and to be discussed at a number of grain dealers' conventions this year is one on the use of radio by country grain dealers.

BUSINESS AND TRADE CONDITIONS

AN entirely familiar situation is confronting many industries through the unwillingness of business interests therein to make commitments and their apparent tendency to assume a waiting attitude.

Taking the broad view of things, world conditions are decidedly improved, but from a narrow aspect it is no doubt entirely justifiable for certain industries to go along carefully.

The over-conservative type would be repaid thinking back a bit and recalling the dire predictions of business disaster last month, a year ago and probably at regular intervals for all time, forecasts that have not been realized. This is nothing new but unfortunately is quite probably the result of innuendo, cowardice, slander and such practices of either weak-kneed or mischievous competition.

It has been stated here and often proven to be a fact that the avoidance of boom times which were not warranted, was a good thing all around. Manufacturers, merchandisers, brokers or what-not who have but little conservatism of the right sort and become pessimistic without cause will be the only sufferers during times when courageous business men who appreciate the fundamental strength of this nation and its substantial commercial fabric are forging ahead.

Can any one imagine the proper exercise of good business judgment and foresight on the part of any one who is so obsessed by fear that he is afraid to sell goods today which he must make tomorrow or buy materials this week which will be required next week? Admittedly, it takes a certain amount of courage to undertake any business transaction and the Government need not be expected to subsidize any individual or group, and he who looks to the Government for such protection is indeed faint-hearted.

If business could only learn to take it a day at a time—cross bridges when they come and not before, we should find the results infinitely better and ample provision made for the protection of our business in the necessary plans which of course must be laid to take care of it; but this fussing around, seeking trouble where there is none, makes matters worse as all who will can surely see.

Students of market conditions know full well how unreliable prices have been, as based upon trade statistics. Market influences have largely been emotional, an unfortunate status of affairs which exaggerates actual conditions either favorably or unfavorably. Underlying facts have not been sufficiently influential and business gossip has been all too predominant lately. It is a gross mistake to expect the establishment of new records in business from week to week. Affairs in general are now rated good and the future promise seems to be stable.

The Financial Outlook.

American money continues easy with a slight hardening in London, where Sterling is back to its permanent par of \$4.86%, suggesting that liquid funds here are seeking higher returns there. Beyond this, however, there is a considerable pressure from British funds for investment in gilt edge American stocks and bonds, undoubtedly one of the factors contributing to our present high security markets.

As above stated, with certain industries suffering a set-back but with trade in general on a profitable

basis, railway and export shipments satisfactory and only the natural percentage of unemployment, constructive developments only are in sight. Students of the future trend of prices feel to a considerable extent that many commodities will settle downward, which from a financial standpoint is due to the rapid resumption of the gold basis in many countries.

World Court Approval.

Growing favor is being granted the world court idea. Its adoption in our judgment means much to the financial recovery of the world. France continues to search about for some means to finance the war debt to the United States. Her problems seem to return to the old ring-around-the-rosy game, it being pointed out that France can hardly pay America and England without collecting from Ger-

"BLOWING HOT AND BLOWING COLD"

WEATHER conditions such as have probably never before been experienced in this country, covered most of the surplus wheat and corn states during the past week, ranging all the way from a record high to a record low temperature for the dates, within a period of less than 48 hours.

That much damage was done by this freak of the weather is conceded by all, both wheat and corn as well as other grains suffering severely.

It is, of course, too early to form any conclusions as to just how great the damage really was, and while there is still ample time throughout most of the belt for re-seeding, that will add another burden to the farmer which he can ill afford to bear. An offsetting situation in corn is the new acreage from fallow hay lands.

The seriousness of the situation was quickly reflected in higher prices on all grains.

many. American Ambassador Herrick has been giving earnest attention to this matter, standing aloof from any plan which will collect French payments from Germany direct, and taking the position that it is not wise for the United States to collect our varied allied debts from Germany in a second handed manner.

The Treasury balance-sheet, as of May 16 shows these figures of such debts:

Belgium	\$ 480,503,983
Czechoslovakia	117,679,095
Esthonia	17,794,020
France	4,210,556,948
Greece	17,625,000
Italy	2,138,543,852
Latvia	6,352,139
Rumania	46,508,661
Jugoslavia	63,414,997

Grand total\$7,100,978,695

These calculations do not include Armenia, which owes \$14,959,479, but which has no Government

recognized by Washington, or Liberia, whose total indebtedness to the United States is less than \$35,000. Russia owes about \$200,000,000.

The Philadelphia Public Ledger in a recent issue calls for a debt show-down, reminding the old world that the time has come for action in the interest of the American taxpayers who raised the money through Liberty and Victory loans; sent it to Europe and for seven years, our Government has been paying the interest on it.

Henry Ford's Bank.

Wall Street was much concerned last week relative to the reported invasion of Henry Ford. It seems he has been casting about for proper entrance into the monied affairs of New York through the Guardian Trust Co. of Detroit, a new banking enterprise, backed by the Ford millions, just announced as the Guardian-Detroit Co. of New York City.

Wall Street has been just a little "offish" of Henry Ford for some time, watching him closely for possible recrimination, harking back to the early days when Ford was not quite so big as he is today, and because he may not then have been treated especially liberally as a borrower.

Indicative of the customary action of the Federal Government such as in the International Harvester case, the state of Mississippi has brought suit against the Ford Motor Co. for \$12,000,000 for alleged infringement of the Anti-Trust law. As with the Harvester company, it is becoming dangerous for large, successful corporations to grow through natural abilities until their very size attracts the attention and investigation of the Government.

There is a close parallel in the International and Ford cases, neither attempting a monopoly and, according to the views of most people, they should not be subject to the embarrassing and expensive defense against Governmental suspicion.

Distribution Costs.

The grain dealer; the feed manufacturer and the merchandiser of agricultural products of any class, knows full well the high costs of distribution. It is on the theory that such costs can be reduced through co-operative marketing that the latter idea was launched years ago and has sailed its precarious course ever since.

This subject was given a prominent position at the Houston, Texas, convention last week of the Associated Advertising Clubs of the world. The outgrowth of its discussion seemed to be that "we must build up more consumer pull and have less selling push." It was felt that there were too many jobbers, dealers, brokers and middlemen. The statement was freely offered that many of these cogs in the wheel were not efficient and did not perform a duty worthy of the payment received. In many lines of trade it is believed that there is not enough business to go around among the thousands of corporations or individuals making their livelihood therein.

It is certainly an interesting discussion to consider just how far competition is a benefit to trade, and at its conclusion one usually finds that the elimination of those with insufficient capital, brains, poor geographical location, etc., is the outcome. Modern merchandising seems to disprove the assertion that competition makes trade and to lend weight and success to those sales arguments which are bolstered up by quality, service, honesty and reasonable profits.

HEAR YE! HEAR YE!

WE believe the following from "Our Paper" should be passed along to the readers of PRICE CURRENT-GRAIN REPORTER:

"It has just come to our attention that a Fire Extinguisher Salesman, claiming to represent the 'National Underwriters Laboratories,' is calling on elevator owners in the Northwest and informing them that barrels and buckets are not now recognized by insurance companies, and that it will be necessary for them to put in extinguishers. A reduction in rate, he tells them, will then be granted. In many instances he has succeeded in loading up elevators with his extinguishers at a high price.

"Now let it be understood that we consider barrels and buckets the first line of defense for an elevator, and we require their installation. We recommend extinguishers for oil and gasoline fires, and where conditions warrant, we require that they be put in; but we do not consider them a substitute for barrels and buckets.

"We strongly suggest that none of our policyholders buy fire fighting equipment of any kind without consulting us. We know what is required, and we will not recommend anything else. Where we can make a saving in the purchase of equipment of any kind, we are only too glad to pass it on to our members. We are not interested in making a profit on anything of this kind; but we are interested in fire prevention, first, last, and all the time, and anything we can do to help the cause along we will do willingly.

"The Fire Prevention Movement, like every other good movement, carries a lot of fly-by-nights in its wake. Beware of them. Our men are well known to you, and the past record of your mutual companies is sufficient evidence that they will not mislead you. Don't listen to every Tom, Dick and Harry that comes along."

THE INSTALLMENT PLAN

BUYING on the installment plan is in many instances a fine thing, but like a good many other activities that are fundamentally fine, it may be easily carried too far.

By means of the plan, many a home and many a farm has been purchased and paid for that could not otherwise have been secured and the same thing is true as to tractors, threshing outfits, gasoline engines, etc.

Apparently, however, some of the automobile concerns are making it too easy for people to obtain cars in that way, and as a result collections in many other lines of trade are being checked, and business men, especially in retail lines, are in serious financial difficulties because of this condition.

It is said that literally thousands of automobiles have been thus sold to men on salaries of from twenty-five to fifty dollars a week, and that because these purchasers know their cars will be taken away from them if the installments are not promptly paid, these obligations are met even though the butcher, the grocer and the clothier are forced to wait for what is due them, and perhaps even to extend further credit.

The automobile is a wonderful source of happiness, as well as business need, and this is not written with a desire to deprive any one of a single one of the pleasures of life. Neither is it written in a spirit of criticism of the sales methods of certain of the automobile manufacturers.

The problem is an industrial one, however, of no mean proportions and while it may not directly effect very many of our readers just now it is sure, if not soon solved, to have a profound effect upon our entire credit system, and that is something in which not only every business man, but also every other citizen in the country is vitally interested. A proper balance is, therefore, to be devoutly hoped for, before the situation becomes nationally serious.

PROFIT FROM SIDELINES

IN the annual report of one of the larger co-operative associations showing business handled during 1924 as more than a million dollars, the statement is very frankly made that the association could never show much of a profit if the only money it could make would be what it could save in its marketing operations, its profit having come almost altogether from purchases it had made for the members.

There is, of course, no reason for country elevators depending on side lines for all of their profits, but they are continuously confronted by the competition of the co-operative associations and there is, therefore, all the more reason why a fair margin of profit should be made on everything that is handled as a side line as well as an outstanding reason for keeping grain handling costs at the lowest possible minimum, thus making it possible to handle grain on margins that are fairly comparable with costs to the farmers in even the best managed co-operative institutions.

Here are two ways by which the individual elevator men may very successfully combat much of the co-operative propaganda which is being put out.

TOO MANY OF US?

THE GROWING complexity of life, and especially of business life, brings forth the query as to whether there may not already be too many people in this country for its and their good.

It is indisputably true that there are too many men engaged in the mining of coal and the result is a periodical shutting down of many mines and the consequent business paralysis of mining centers.

It is also true that in practically every city and village in the entire country there are too many people engaged in most lines of retail trade, the result in this case being reduced volume of sales for each individual unit and a consequent high percentage of overhead, thus calling for higher margins of profit and a heavier burden on the consuming public.

Take the farmers, for example, and there are said to be more than seven millions of them, which means one to each 18 or 19 persons in the country, and if they and their families are deducted, the number upon which each farmer must depend for the sale of his surplus products, is reduced to perhaps 13 or 14.

If any other great group of business men were confronted by a similar situation, it would not take very much of a prophet to correctly foretell what would happen.

There are still a lot of economic problems for the United States to solve, and while some of them, like the one referred to, are tremendous and vital, we are optimistic enough to believe that they can and will be solved.

Their proper solution, however, depends first, on the right kind of leadership and, second, on a willingness to follow when the right kind of leadership is found, and we are confident the men who are engaged in the grain business are willing to do their full share when the call for service comes.

INDUSTRIAL WASTE

TWO HUNDRED industrial groups throughout the United States are now at work on definite programs of waste elimination, and in some of them, gigantic strides have been made and enormous savings effected.

In the grain business, as well as in any other single industry, the big savings will doubtless always come through concerted action, but there are unquestionably industrial wastes in every elevator in the land, that could be eliminated by a careful study of the various mechanical operations, by the men who are directly in charge of them.

Needless pulleys or line shafting, wasting valuable power; getting up steam (electric or gas engine) for a short run and repeating the same thing per-

WEEKLY STATISTICAL SUMMARY.

The following tabulation is a summary of figures from various statistical exhibits appearing weekly in detail in "The Price Current-Grain Reporter," these figures representing the past week, the preceding week and corresponding time last year, here assembled for ready reference:

	May 23, 1925.	May 16, 1925.	May 24, 1924.

haps on succeeding days instead of arranging in so far as may be possible, for full day runs; using machinery with dirty or insufficiently lubricated bearings; using obsolete or inefficient tools or equipment; failing to order cars in advance; these and a good many other things about an elevator or feed mill if permitted, mean waste, and waste costs money, thereby reducing profits.

In many industries, a "suggestion box" has not only proven profitable to both employers and employees (adopted suggestions being paid for on an equitable basis), but it has been conducive to a spirit of co-operation that has been truly amazing.

GOING UP IN SMOKE

FIRE losses in the United States and Canada, for March amounted to \$33,346,000 and for the first three months of the year, the total was \$107,028,900, representing an economic waste that is truly appalling.

Many of the fires were of course, deliberately set, but by far the larger proportion were due to unavoidable causes, while a lot of them were the result of carelessness.

Mills and elevators, and their contents, contributed a very substantial percentage to the figures cited above, and while we are sure that practically every last one of these fires was unavoidable, we are also sure that eternal vigilance would have meant not only a goodly reduction in their number, but also, an impressive reduction in the amount of the losses accruing therefrom.

THREE DOLLARS a year in the United States and Mexico; \$4.00 a year for Canada, \$5.00 United Kingdom, the Continent of Europe, Australia, and other countries in the Universal Postal Union. Less than a year at the same rate. Single copy 15 cents.

LETTERS from our readers are solicited on subjects of interest to those engaged in the grain and allied trades, news items, reports on crops, grain movement, new firms, contemplated improvements and cars leaving in transit.

THE ADVERTISING value of The Price Current-Grain Reporter as a medium for reaching the buying power of the grain, feed, seed, bean and hay industries is unquestioned. The character of advertisements in its columns testifies to the favorable opinion of and value received by our advertisers. If you would be classed with progressives, place your announcements in the trade's only weekly, which is always first to get the live, up-to-date news to its readers.

CHICAGO, MAY 27, 1925.

GRAIN TRADE REVIEW

CHANGE for the worse has come over both the winter and the spring wheat belts as the result of continued hot and dry weather and unless relief is secured immediately, the coming private and government reports may be startlingly bullish, especially as far as the winter wheat crop is concerned. To some extent this will be due to the thin stand in many sections, which fails to shield the ground and temperatures above 90 with high winds have rapidly absorbed the moisture in the southwest and led to a return of dry weather talk. Hessian fly has also become more active, and local damage is probable. With harvests only about three weeks away in Oklahoma, the crop there is in a position where it can be easily damaged, and at best a relatively small crop of winter wheat will be secured this season as compared with that harvested in 1924. On the North Pacific coast heavy rains have fallen and apprehension as to the outcome has been allayed, as the crop of winter wheat there matures early. Under normal condition the June 1 condition of spring wheat is about the highest of the year and there is usually a steady decline from then until harvest. Unless moisture is received, the initial government report may show considerably under a perfect condition. There is a lack of reserve moisture over a wide area in both the American and Canadian Northwest and it took but a relatively few days of hot weather to develop the fact that the crop is unable to withstand much adverse condition, especially following a period of freezing temperatures almost every night for several weeks. The effects of the repeated freezes are already apparent in some sections in killed stools, which promises to reduce the yield per acre unless excellent weather follows. In some quarters the belief prevails that a large crop of spring wheat is now almost out of the question regardless of the fact that the acreage is much in excess of that of last year.

Favorable Conditions Abroad.

To offset the unfavorable crop reports from North America, those from abroad taken as a whole are decidedly favorable, and have had considerable influence on the foreign demand for the cash grain. The latter has not been taken off late in a way that would indicate ap-

prehension regarding immediate supplies, and so far little or no business has been done in new crop winters for deferred shipment. However, this business will have to come sooner or later. Foreign authorities generally admit that there will be a close adjustment of supplies of old wheat to demand the world over, and the carryover promises to be materially smaller than that at the end of the 1924 season. Should Europe raise a large crop this season it would not follow that there would be a proportionate reduction in the demand from importers, as experience has shown that the rural consumption abroad increases when a large crop is raised, while the urban consumption is fairly constant.

Less than a week remains for the liquidation of May wheat contracts in the world's markets and regardless of the outcome in that delivery it would create little surprise if the market bulged or broke 5 to 10c in a day depending on whether buyers or sellers liquidate first. As was expected, the large purchases of cash wheat in the Northwest to go to Chicago for delivery purposes have tightened up the markets there to some extent, and so far this season very little hard winter has been delivered in any market. The market is now entering the weather and crop scare period and will be extremely sensitive to developments. Speculative trade, taken as a whole, is not large, and in consequence price changes are extremely rapid at times, but sentiment is somewhat more favorable to the buying side on the sharp dips which come as the result of profit taking or pressure. There will be no session of the grain exchange on Saturday, May 30, so that all contracts will have to be evened up in the May by Friday.

Coarse Grains.

Warmer weather was very favorable for the new corn crop, and planting is rapidly nearing completion in all sections of the belt. Rain now would be very beneficial in many sections to hasten germination and growth. Private reports indicate that there will be a liberal increase in the acreage this season, but the government will not make an estimate until July. The old crop situation is generally regarded as strong as far as supplies are concerned, and while consumption may have been cut down due to the price, it remains to be seen whether it has been curtailed in proportion to the reduction in the supply. This keeps many traders inclined to the buying side whenever values ease. The Eastern demand cannot be called active, but at the same time stocks at terminals are steadily decreasing and after the present after planting movement is over, the arrivals are expected to be limited. Export business has developed in oats and the shipments to Eastern ports from the West have been of considerable help in reducing the visible supply, but it is hardly probable that the visible can be reduced to small proportions by the end of the crop year. The outlook for the new crop is decidedly spotted.

GRAIN MARKET SUMMARY.

Receipts of wheat, corn and oats at primary markets the past week, with comparisons, follow:

	May 23, 1925.	May 16, 1925.	May 24, 1924.
Wheat	5,576,000	3,246,000	3,677,000
Corn	2,581,000	1,706,000	2,470,000
Oats	3,259,000	2,358,000	2,641,000

Combined primary receipts of wheat, corn and oats for the past week and for the season to date, with comparisons, as shown by THE PRICE CURRENT-GRAIN REPORTER:

	1924-25.	1923-24.	1922-23.
Past week	11,416,000	8,788,000	8,788,000
Preceding week	7,310,000	9,469,000	9,469,000
Since July 1	962,354,000	921,518,000	921,518,000

New crop wheat futures were in the upgrade the past week, with the best figures on the present movement made and maintained at the last, the finish being at net gains of 3½¢ with September leading. Interest in the May has fallen off materially and the bulk of the operations were in evening up. The finish was ¾¢ lower than the previous week. Remarkable weather conditions were responsible for a good part of the

week's bulge, a maximum range of around 65 points in practically 24 hours resulting in free buying, and from a condition that threatened to damage the spring wheat crop by extremely hot and dry weather one day the trade was confronted with snow and freezing weather the next. The market is regarded as largely a weather affair.

While local sentiment was bearish on corn, a good part of the week, there was no material outside pressure and the finish was at net gains of ¼¢ as compared with the previous week. The bulge brought out increased country offerings to arrive, and a larger movement to terminals is expected.

Oats held within narrow limits the past week with the May going to a discount of ¾¢ under the July at the last, despite the development of a fairly liberal export business and a moderate domestic call. The close was ¾¢ lower on May and ¾¢ higher on the deferred deliveries, with the September gaining rapidly on the July at the last. Rye was dull with scattered liquidation in the May and it lost 3½¢ for the week, while the deferred futures were 1¼¢ higher with September leading. Range of prices the past week follows:

	High.	Low.	May 23, 1925.	May 16, 1925.	May 24, 1924.
Wheat—					
May	\$1.74¼	\$1.63¼	\$1.69½	\$1.70¾	\$1.05½
July	1.56½	1.50½	1.56½	1.53½	1.08¼
Sept.	1.49½	1.41¼	1.49¼	1.44¼	1.09¼
Corn—					
May	1.14¼	1.11¼	1.14¼	1.13½	.78
July	1.16½	1.13½	1.16½	1.16½	.76½

WORLD'S WHEAT EXPORTS.

Exports of wheat last week compared with the previous week and a year ago, as reported by the Broomhall service and forwarded to this paper:

	May 23, 1925.	May 16, 1925.	May 24, 1924.
American	6,068,000	6,183,000	8,030,000
Argentine	859,000	270,000	4,214,000
Australian	3,032,000	2,640,000	1,272,000
Indian	80,000	112,000	40,000
Russian	40,000
Others	328,000

Total 10,039,000 9,205,000 13,924,000
Of the above total wheat from America there cleared in the form of flour 660,000.

The total export of wheat since Aug. 1, the commencement of the European crop year, compared for three years:

	1924-25.	1923-24.	1922-23.
American	369,620,000	370,800,000	375,406,000
Argentine	108,203,000	137,132,000	113,530,000
Australian	105,056,000	67,802,000	41,456,000
Indian	29,632,000	6,064,000	11,516,000
Russian	328,000	27,568,000
Others	2,736,000	15,708,000	6,347,000
Total	615,575,000	625,074,000	548,358,000
Season	753,195,000	662,698,000

WORLD'S CORN EXPORTS.

Exports of corn last week, compared with the previous week and a year ago, as reported by the Broomhall service and forwarded to this paper:

	May 23, 1925.	May 16, 1925.	May 24, 1924.
American	26,000	26,000	453,000
Argentine	2,468,000	2,324,000	5,548,000
African	100,000
Russian	400,000
Others	791,000	842,000	504,000

Total 3,285,000 3,192,000 6,605,000
Exports of corn since Nov. 1, 1924, compared with last year and year before:

	1924-25.	1923-24.	1922-23.
American	709,000	11,242,000	47,684,000
Argentine	53,092,000	41,580,000	65,808,000

Oklahoma Dealers Meet

The Twenty-eighth Annual Meeting Well Attended—Good Feeling Prevails—Interesting Addresses.

WARM weather ushered in the twenty-eighth annual meeting of the Oklahoma Grain Dealers. An interesting and instructive program was successfully carried out.

After the address of welcome by Ed Overholser, president of the Chamber of Commerce, E. S. Bouldin of Muskogee delivered his annual message to the dealers, which was as follows:

President's Address.

This is the 28th annual convention of the Oklahoma Grain Dealers' Ass'n. The power and influence of the Ass'n grows and is extended each year. Year by year dealers learn of the advantages of membership in their own state Ass'n. More and more they realize that it is the duty of each dealer to become an integral part of the ass'n and to support the ass'n with his best efforts. There are still some good reliable dealers who do not belong to the ass'n. However, I think there are fewer of this class each year.

Sometimes an active grain dealer asks what advantage it is to him to belong. Aside from every other consideration, it is worth all it costs you as an advertisement. When you become a member your name is placed in the list of those grain dealers who are responsible and fulfill their contracts. Any member who fails to fulfill his contracts is subject to expulsion from the ass'n.

In the next place your membership insures you that those with whom you trade will fulfill their contracts with you provided they are members of this ass'n or an affiliated ass'n. This of itself makes it well worth your while to hold membership in your state ass'n.

Hardly anything is more vital to you than to know that the contracts you have made for the sale or purchase of grain will be faithfully carried out by those parties with whom you trade.

In the next place should you have a dispute with a member of your own state ass'n, or an affiliated ass'n, you may know it will not be necessary for you to go through with an expensive law suit to have the matter adjusted.

The Arbitration Committees of these ass'ns are at your command. Before them you may present your claim against the party with whom you have a dispute. These Arbitration Committees are made up of competent men who render judgment in disputes in a most capable manner. They take action quicker than you could get a decision in court and it is handled for you at practically no expense.

In addition to these things, when you are a member you are supporting those who are fighting your battles. You have an able man as your Secretary who is on guard for you and protecting your interest every day in the year.

When radical legislation adverse to your interests is threatened, your Secretary and your Legislative Committee are on guard and doing everything possible to protect your interests.

And in this day when paternalism threatens to wipe out independent business men and turn business over to political appointees, it is highly important that we have someone on guard.

Probably you already know these facts; however, it is sometimes a good thing to be reminded of the facts we already know. You are already members of the Association and doing what you can to support it. I suggest that you do not stop at that. Talk to your friends and competitors who are not members of the Association and urge them to become members and let each do his part for the common good of all.

Pres. Bouldin appointed the following committees:

Resolutions Committee: Chairman, Jesse Vandenburg, Oklahoma City; M. E. Humphrey, Chickasha; W. E. Shepherd, Hobart; F. R. Milbourn, Fairland; Verne Goltry, Enid.

Nominating Committee: Chairman, M. C. McCafferty, Calumet; Jno. O'Brien, El Reno; W. M. Randels, Enid.

Secretary's Report.

Sec'y F. C. Prouty's report was in part as follows:

The sympathetic mood of the public is changing and the farmer has been given to understand that he must face the future upon his own initiative, that he can no longer place the entire blame for unsatisfactory conditions on others aside from himself, that he must weigh carefully the smooth, oily words of the agitator or politician who speaks and talks from selfish motives only, and who tells him he is being robbed by the grain dealer, miller, etc., and that all ills are curable by legislative enactment. This awakening may result into a realization that the best efficiency has been and is now knocking at their door, that the long established industries and business of this state only await the movement of another crop as a

further means of emphasizing their real spirit by reflecting to the producer the best marketable service possible.

There has been in recent years much legislation through act of Congress against the conduct and operations of the Chicago market in which it is claimed prices and market values of agricultural products are widely enhanced or unduly lowered, or otherwise greatly changed almost every day on very slight pretext, or for no apparent just cause or reason whatever, and we sometimes wonder if there are not really some just grounds for such complaints or criticism.

Regarding Price Fluctuations.

During the ten or fifteen years immediately prior to the great world war, it was not an uncommon practice for many grain dealers in many sections of the country to operate safely on a margin of three cents per bushel to cover operating expenses, hazards and profits. During these years fluctuations in market values were very slight, sometimes not varying over a cent or two in a week or month, and the advance or decline was usually steady and gradual, seldom ever fitful, violent or spasmodic. Price values in those years were lower, but more stable, consequently the

FRED R. MILBOURN.

Fairland, Okla.
Vice President-elect, Oklahoma Grain Dealers' Ass'n.

risks and hazards of the country grain buyer were minimized, and the farmer or producer received a close market value for his product.

But what of today? What has been your experience this last year? Shortly after the beginning of movement last summer crop experts and statisticians and price and crop bureaus had big world's shortage figured out, and as a consequence prices went higher and advanced steadily throughout the remainder of the season until March, wheat advancing over 75 cents at that time. It was a world crop shortage condition, there was not enough to go around, the starving people of Europe had to have the wheat, and many of the knowing ones predicted much higher advances before another crop is available. On March 2nd, May wheat was at \$2.02, on March 17th, two weeks later, it was at \$1.51, and on April 3rd, another two weeks later, it had gone to \$1.36½, making a total decline within a month of 66 cents per bushel. Yet the same bullish statistics, and the same world's impoverished conditions were more in evidence at time of this sudden decline than they have ever been during the big steady advance which was caused by them.

Now what is the explanation? In this instance, it cannot be that much used and often convincing answer, "Supply and Demand." It will not at this time fit. It would be self-contradictory. Then what is it? Is it speculation? We have been told that any legislation tending to restrict or eliminate the outside speculator is detrimental to the best interests and healthy condition of a stable market, and that the speculator is in fact, as the governor to an engine, the great necessary stabilizer that prevents wide and undue fluctuations which would necessarily often happen were it not for his presence to apply the brakes. But the experience of the past few months does not prove or sustain the correctness of such logic. Then where is the fault? Is it because of too much speculation, or not enough speculation? If speculation is at fault, then why should there not be some limitation or restriction in its operation? Is it practical and is there not some remedy against a repetition of such ab-

normal market fluctuations? Have we found out the real cause? Investigators are at work, but the real truth is not yet fully disclosed. Such extremely wide fluctuations in peace times and under normal conditions are unnatural and unwarranted and often are attended by serious losses, failures and disasters that affect the entire business public and bring woe and consternation to thousands of innocent victims and well meaning business enterprises. Some say we need and must have the future option market for hedging insurance against sales and purchases and can not get along without it. But how can the country grain dealer make proper use of such hedges under such abnormal conditions? How can he gauge his bidding price to his farmer friend at a proper market basis and at the same time protect himself against undue risk and loss in times of such freak markets? These are questions for your discussion and it is hoped you will receive some valued information and enlightenment.

A year ago we were just coming out of a period of unrest and unsatisfactory business conditions which left many wrecks in its pathway. Our dealers began to look ahead to more promising conditions which finally ripened into realities in the harvesting and marketing under most favorable conditions of one of the best crops Oklahoma ever produced. It was during this period that Oklahoma received through its close working connections with the Southwestern Regional Board the very best service we had ever received in the way of equipment for the movement of our crops. Prior to the organization of this Board the scarcity of equipment was a large portion of our troubles. During the past year we have experienced an improvement over the previous one, all brought about by advanced preparation and co-operation as between shipper and carrier and the Regional Board. Since this excellent service is due largely to the activity and co-operation of the Southwestern Regional Board, then let us give grateful credit to whom proper credit is due.

During the month of June following closely after our last annual meeting, we conducted a series of group meetings throughout the state and repeated these during the months of July and August. I am fully convinced that more of these gatherings should be held, that they should be continued throughout the crop year at intervals satisfactory to the interests they help to serve. We would not go amiss if we adopted a plan of holding a general mid-summer meeting at some centrally located point where we could all join together and discuss in a round table way matters pertaining to the conditions of this or that locality, as well as the state as a whole.

Who Is Who in Oklahoma.

In this progressive age we must face each other with the "inquiry" who are you, what do you do, and where did you come from? Every line of business is taking this precaution, yet notwithstanding that, no honest man need blush with fear nor be offended when the searchlight of the world is turned upon him. On the other hand, the firm or individual who is doing business in the dark, or under false colors, does not want the facts found out and usually does what he can to prevent the real facts becoming known.

This is the day when we should be awake to the luring colors and tempting bait. How readily do some bite at the hook when induced by expectancy of greater gain or profit, and then repent when too late. A high financial rating in the business world is not so valuable unless backed by loyalty to truth and honesty which is one of the greatest assets necessary in the successful business career of any individual regardless of his financial limitations. A man's reputation is the estimation others put upon him. It may be good, or it may be bad, and yet very far from the real truth as to his actual character. It is his character that counts for most. The lack of a good sound character in any individual bespeaks failure and forewarns disaster. It not only affects himself, but also brings sorrow to those who have put misplaced trust and confidence in him. So, coming back to where we started, let's find out WHO IS WHO IN OKLAHOMA through more strenuous organization and association whereby we may all become better acquainted with one another, and let us get together in a more efficient co-operation.

Claim Department.

It has come to our notice that the members of the Association have not been patronizing our Claim Department as freely as they might and that a considerable amount of traffic business has been surrendered to other traffic bureaus outside the state. Our Claim Department is well equipped and, we believe, well qualified to handle all traffic matters referred to them and we feel they should be given the preference over outside bureaus.

Membership.

Our membership during past year lost 18 and gained 26, making total net gain of 8. Those lost are accounted for as follows: 2 resigned, 2 failures, 1 consolidation, 1 loss by fire and 12 dropping out because of non-payment of dues.

Considerable work in our organization never goes on record or becomes public because the individual who asks for assistance does not wish his troubles to extend beyond the Secretary's office. We have had many calls and inquiries of various sorts and have aided in the adjustment and settlement of many differences and controversies, thus avoiding the necessity of arbitration. It has been our earnest endeavor to promote and maintain har-

mony and co-operation wherever possible and practical, and we want to thank all for their appreciative interest and hearty co-operation in all matters brought to their attention.

John Fields, vice-president of the Farmers' National bank of Oklahoma City, gave an interesting talk on the general business outlook. He said business conditions over the country were very fair with plenty of money in the banks. In a 6 months' period deposits in Oklahoma banks increased 47½ per cent, showing that the state was getting right financially. A survey showed that Oklahoma farms are mortgaged to 44 per cent of the total value of the crops produced in 1924, while Iowa farms are mortgaged up to 231 per cent of the value of the 1924 crops produced in that state. A half wheat crop in this state this year, and we will have more, only amounts to one-fourteenth of the total value of the farm crops of the state, which with our long growing season can be overcome by planting other crops.

W. C. Fidler, state senator of the 14th district, spoke to the dealers on legislation. He regretted that the state warehouse act was not amended to conform to the United States warehouse act. Also that funds represented by a bill of lading which come into the possession of a bank that goes into a receiver's hands should not be considered as the assets of said defunct bank. These bills should have been passed for the protection of all.

He complimented the millers and grain dealers for the fine way in which their representatives came to the legislature to ask for relief or present their opinions on proposed legislation. He said there were too many laws. He dwelt upon the need of a new state constitution and suggested many ways in which the right kind of a constitution could save the taxpayers a great deal of money.

A state that is top heavy politically cannot have prosperity. You must help to send the right kind of people to the legislature.

The Transportation Question.

C. D. Morris, assistant chairman Western Railway Committee on Public Relations, addressed the convention on the Transportation Question. He said in part:

Increased revenues are absolutely necessary to the railroads if the present efficient service is to be maintained. The railroads are not now earning, nor have they been able to earn in the past five years, the "reasonable" return the Transportation Act contemplates they should earn. They have, in the face of this discouraging situation, gone on improving their service by the investment of fresh capital in their properties, believing that adequate returns were sure to come in the early future. Improved conditions, however, so far as net returns are concerned, have not come and the roads have now been forced to ask the Interstate Commerce Commission to authorize a slight increase in rates.

The need of the hour is that we begin to look the transportation question squarely in the face, considering the railroads quite aside from politics. Their maintenance and operation is a serious and complex business problem, one in which the question of politics should never arise. They should be, and are being, operated honestly, efficiently and economically and are providing this country with the very best and most efficient transportation service the world knows anything about. This is what the people want and, in my judgment, they will be satisfied with nothing less. And for such a service I am constrained to believe they are willing to pay a fair price, such a price as will encourage the railroad executives to go on with their plans for future improvement and development.

Wheat Report.

Carl M. Robinson, statistician U. S. Department of Agriculture, made a report on the Oklahoma wheat crop situation. He said in part:

Oklahoma stands to produce not more than 30,000,000 bushels of wheat this year. I am not prepared to state how low the production may fall as blight, rust, unfavorable weather from now to harvest and during harvest, and what not, may reduce the prospects to an extremely low figure. The reason I think Oklahoma's crop cannot be more than 30,000,000 bushels is because of the poor stands due to winter kill and drought. I am counting on an excellent fall to get the maximum I have mentioned.

Last September a heavy, beating rain considerably damaged the early planted wheat. Then a drought set in which was, for the most of the large wheat areas, unbroken until along about the first of April. During the last half of December and

early January the crop was covered by a thin sheet of sleet and ice, and extremely cold weather for this latitude was experienced. A great deal of winter kill resulted. Some of the damaged wheat might have pulled through with favorable weather but, due to the drought, it was not able to recuperate and was abandoned. The recent rains have benefited wheat wonderfully, but they can only in a small degree overcome the effects of winter kill and drought.

In my crop report of May 1, 1925, the crop was estimated at 27,789,000 bushels from a harvested acreage of 3,037,000 acres and the yield was estimated at nearly nine and one-sixth bushels. I feel that this report will come pretty close to the facts, providing average conditions exist through harvest time. The report was based upon the replies of slightly more than 1,300 correspondents, or an average of 22 replies, from each wheat growing county.

Foreign Wheat Crop Prospects.

Conditions in Canada are unofficially reported as ideal, with preparation of the land and seeding from 10 days to two weeks earlier than in 1924 and an excellent prospect of all seeding being completed by May 15. Reports received by the Manitoba Free Press indicate an acreage of spring wheat about the same as last year, or roughly 21,000,000 acres. Should this estimate of spring wheat acreage be borne out and added to the official winter wheat acreage, and yields be equal to the ten year average, the 1925 wheat crop of Canada would be about 30 per cent greater than the 1924 crop. There is an abundant supply of moisture, particularly in Saskatchewan and Alberta, which suffered from drought last year. In southern Alberta conditions are said to be better than at any time since 1915.

The present indications are that the markets of the United States for winter wheat will be on a domestic price basis during the greater part, if not all of next month. The indicated reduction of 146 million bushels in the May 1 forecast for winter wheat, if realized, will leave little or no wheat to be exported as grain.

The world wheat markets are likely to be upon a high level. It is too early to forecast definitely whether or not the world supplies will be greater or less than last year. The forecasts of production of wheat in India and winter wheat in the United States indicate a reduction of nearly 190 million bushels compared with last year, but better conditions in Europe and prospects for a better crop in Canada may offset the prospective reductions in these two countries.

The area of wheat to be harvested in 1925, as reported to date in the northern hemisphere, amounts to 126 million acres, as compared with 128 million acres last year, a reduction of 1 1/2 per cent. This accounts for practically two-thirds of the total wheat area in the northern hemisphere, outside of Russia.

It is evident that there will be a considerable shift in the international trade in wheat next year. It now seems probable that Europe will not require as much as in the past year. However, since the present indications are that neither India nor the United States will have an exportable surplus, Europe will have to depend upon Canada, Argentina and Australia almost entirely for her foreign supplies.

Protection from Lightning.

Advantages of Protecting Elevator Property with Lightning Rods was the subject of an address by E. C. Rea of Dodd & Struthers, Des Moines, Iowa, who spoke in part as follows:

Any discussion of this subject necessarily takes us back to the early history of the United States. Benjamin Franklin, one of our greatest statesmen, experimented with lightning and you all remember his experiments with the kite and the deductions that he made showing that lightning was electricity. Franklin protected several buildings in London, Paris and the United States with an iron lightning rod. The essential principles that he used are the same that are employed today.

For a great many years the lightning rod fell in disrepute. You all remember that the lightning rod fakir or peddler systematically covered the United States; he dressed in fine clothes, drove a fine team of horses and a good buggy. The rural districts did not have the means of communication that they now have and the smooth talking lightning rod salesman found the farmer an easy mark. There was no knowledge available as to the scientific installation of lightning protection. The result was lightning rods were installed and the farmer paid whatever the peddler required. He often found when he went to pay his note that it had been raised and instead of paying the agreed price of \$50 or \$60, he was required to pay at his bank from \$300 to \$500 or \$600. The sad part of it was that the lightning rods did not protect his buildings.

All that has been changed, and the change dates back about 35 years. At that time Mr. West Dodd was living on a farm in northern Iowa trying to earn enough money to keep his wife and family, which he found a very difficult job. He was a man of inquiring mind and often marveled at the terrific displays of lightning during a storm. One night when there was a bad storm on he came to the door and stood there watching the lightning as it was playing about the heavens. After a time he returned to his bedroom. He had not left the door more than two or three minutes until a bolt of lightning struck the house, shaking it to its foundations. There

was an eave trough running along above the front door and the lightning riddled the door post against which he had been leaning a few moments before. Pondering on this remarkable escape from death, he felt sure that there must be some means to provide protection for lives and property against this display of nature. He read all of the available literature and started experiments of his own. This was the beginning of the modern lightning rod system. Up to this time, an iron rod had been used, but because of the fact that copper is a better conductor of electricity Mr. Dodd used a continuous copper cable for the protection of buildings. He found in his studies that in order to follow the scientific principles that a circuit consisting of at least two groundings must be run over the house and the point securely attached on the high places on the building in order to fully protect.

The insurance companies that cover your risk have appreciated for a great many years the tremendous losses that occur to elevators from lightning and they have shown their appreciation by agreeing to give you a credit of 25c on your rate where lightning rods are properly installed. That means that they virtually pay for the installation themselves. The saving to the elevator owner will pay for the installation of lightning rods in from three to five years, so that the actual cost to you is nothing. We have many installations of lightning rods that have been doing service for over thirty years.

The U. S. government, appreciating the value of a lightning rod installation, has formulated a code which has just recently been published under the auspices of the Bureau of Standards of the Department of Commerce. The Underwriters' Laboratories of Chicago furnish a label service for properly constructed and installed lightning rods. The insurance companies have for a number of years granted a credit on farm buildings where lightning rods have been installed. In all of these cases the mutual insurance company has pointed the way. I am glad to announce to you that on the 20th of May the Actuarial Bureau of Chicago will announce a 10c credit for lightning rods installed on elevators to apply on all old line insurance carried on these risks. This, I believe, is a great victory for you.

You no doubt wonder what is before you so far as losses are concerned. I have here in my portfolio a record of fourteen elevators and mills struck by lightning up to the first of May this year—twelve of these were total losses, involving over \$300,000.00. I would be willing to take a contract to safely protect 4,000 elevators for that amount of money, so that you can see that the losses that occur are absolutely unnecessary and that you help pay for every one of them in the rate of insurance that you pay.

You naturally wonder whether a man who is prejudiced in favor of lightning rods as I am can be depended upon to give you actual facts. I refer you to the records of the insurance companies so far as losses on farm buildings, city buildings, churches, elevators, etc., are concerned and in every instance you will find that the properly erected lightning rod will give protection. In checking over our records of the past thirty-five years of business we find that we have protected over 300,000 buildings in the United States and Canada and our per cent of failure is only 1/20th of 1%. Now, do you know of any other business that comes as near being perfect as that? It sure is a "far cry" from the old time fake lightning rod man.

If you will co-operate in your association with your secretary, Mr. Prouty, and if a number of the owners of elevators will agree to have their houses protected we will be glad to name a special price and will send out a gang of experienced men to do the work. I am not here to sell lightning rods, but to try to impress upon you for your own good the fact that if you do not install them sooner or later you will have a loss, for the insurance companies' records show that over 23% of the elevators in the United States have been struck by lightning and damaged in the last few years. In view of the fact that the insurance companies will reduce your

rate of insurance so that it will not cost you anything, why should you run this risk any longer?

Wednesday Morning.

The morning session was opened with an address by F. G. Horner, president of the Grain Dealers' National Ass'n, who spoke in part as follows:

National President's Address.

The history of the grain business has been one of continual progress and without exception has been along lines of competitive individualism and without any attempt to pervert any of the natural laws of supply and demand or to divert any of the natural channels of trade, and this is why our position is now so solid and substantial and rests upon facts and accomplishments, while that of our critics rests on theory and prejudice and lacks form and substance.

It will be freely admitted that, prior to the passage of the Hepburn Anti-Rebate Law, the grain trade was laboring under artificial conditions, brought about by the prevailing system of freight rebates, and for whatever abuses existed at that time, we have no apologies to make and no excuses to offer, except to say that they were the natural effort of the trade to accommodate themselves to conditions over which they had no control. Since the passage of the Hepburn bill it must be conceded that there has been no more natural development or more highly competitive conditions in any line of business than in the grain trade.

Our associations have consistently bent their efforts towards such ends as standardizing and perfecting a system of weights and grades; raising the standard of business ethics and increasing the efficiency and economy of our handling facilities; harmonizing and applying rules for equitable trading; and developing machinery for the prompt and economical settlement of disputes, until we have today reached such a point that the economy and rapidity with which the grain trade is carried on is not exceeded in any line of business in the world. The last session of Congress passed a law which expressly sanctions the legality of such arbitration contracts as those used by our associations and in so doing they were compelled to admit, by inference at least, that the orgy of law making in which our legislative bodies have been engaged has so clogged our administrative and judicial channels that it has become necessary to seek relief through such independent agencies as the arbitration bodies which have been developed by our grain trade organizations.

There is one fact which stands out especially clear and should be particularly impressive to any student of the grain business and that is that, after years of investigation and study on the part of the government and countless independent bodies, no suggestion of improvement in our marketing machinery has been made which has been able to stand the acid test of experience. We have numerous instances of co-operative or semi-co-operative ventures by farmers in the grain business which have met with various degrees of success but it should be noted that, without exception, where success has been met, these companies have followed, in their business methods, the accepted practices prevailing in the trade and such instances have invariably been confined to small local units. There is yet to be found one instance of sustained success by any large, pretentious venture into the field of co-operative grain marketing.

The theory of the pool is fundamentally unsound and doomed to failure and at best may be considered as merely a passing phase. It is essentially speculative and therefore its only hope for success lies in a constantly advancing price structure, as any market protection such as hedging would be entirely contrary to the conception of pooling and is automatically estopped by the enormous operating costs of the pools, as without a speculative profit they could never hope to be able to hedge their holdings at a figure that would

cover such handling charges as those under which they are operating.

Co-operative enterprises fostered and sustained from various angles by the National Government may quite naturally not be expected to respond so readily to the play of natural laws or to succumb so quickly to the effect of competition with the more economical handling methods of the trade.

Perhaps no more honestly constituted or more efficiently administered bureau could be found than the Interstate Commerce Commission, yet, within the memory of the present generation, our railroads have been bankrupted and paralyzed until the transportation necessities of the country demanded that it be rehabilitated by granting permission to advance the rate structure to the present exorbitant figures, in order to permit the railroads to carry the wasteful operating conditions with which they have been saddled by public control and to meet the confiscatory taxation with which they have been burdened. Yet in spite of this and in the face of generally increasing earnings of the carriers, the great systems of our Northwest are now suffering actual distress through the rigidity of a rate structure which it is found impossible to adjust to the constantly changing conditions of trade, and this situation is typical of the results of highly centralized control.

Our Federal Reserve System is justly viewed as one of the most constructive advancements which we have ever made in our banking business but we can properly view with at least misgivings the concentration of credit power which it entails. The last annual report of the Reserve Bank of New York has disclosed that the open market transactions of these banks in securities are conducted by co-ordination through a committee of the Reserve Banks with the participation of the Reserve Board and such power for influencing speculation may well be viewed with concern should it happen that at some future time this control should be found to rest with men of less wisdom and discretion than has been the case up to the present time.

We have seen our Postal Department, although occupying rent-free government buildings, attempt to cover up a deficiency in operating income by compelling the railroads to carry the mails at an actual loss and make up such losses by higher freight and passenger rates.

Our President and Secretary of Commerce are now engaged, with the hearty approval of the entire country, in the task of curbing waste and extravagance, yet the greatest waste is in the unwarranted activities of governmental bureaus and the direct cost of this machinery is utterly insignificant in comparison with the stifling effect which they incur on all the business with which they come in contact.

It will be readily conceded that it is proper for the government to gather and compile information and statistics which could be secured for the information of the general public in no other way but it must also be conceded that statistics are being issued by Washington that are little better than rough estimates and their issuance is frequently accompanied by interpretations that are nothing more than opinions of bureau clerks, yet they carry all the weight and prestige of the authority of the government. What good purpose is served by such a statement as that credited to the Department of Agriculture on March 7th last to the effect that "if reports indicate a larger production of wheat next season, a slight rise just before harvest may be expected, but if a short crop is indicated, bidding for wheat now on hand would force the price to an appreciably higher level." Do such statements serve any useful purpose or warrant the expense of the maintenance of such "dope" service?

The record of the government in business is one of repeated failures and consistent reversals. It marches up the hill only to be able to march back down again. It is busy in this decade in attempting to build up that which it tore down in the previous one. And our farmers and Congress may profitably pause and carefully consider whether they will destroy or further hamper the present grain marketing machine in order that in a few short years they may begin to gradually rebuild that which they have just destroyed.

The record of the present administration is to date commendable to a degree. President Coolidge is hard headed and sound to the core on the fundamental principles of government and Prof. Jardine and his other most intimate councillors are of a similar mind. In the face of these facts and conditions it seems almost incomprehensible that the grain trade should be threatened with such a program of legislation as the Capper-Haugen bill, establishing a Federal Marketing Board, which the administration sponsored in the last session of Congress, yet such is the case and can only be explained as one of the inconsistencies of politics. But the grain trade may well take heart from the fact that the tendency of the times is against further radical legislation and we may expect a more receptive hearing for the facts and true conditions in the grain business.

The needs and problems of the Country Grain Dealer was discussed by V. E. Butler of the Grain Dealers' Fire Insurance Co., of Indianapolis, Ind.

His talk was instructive and interesting and will be published in an early issue. We hope our readers will read it carefully. His talk brought out many interesting viewpoints.

In the discussion of Mr. Butler's ad-

dress L. O. Street said: "You should not only be paid a reasonable profit on your business but also on your knowledge of the business. You should buy your grain at a profit."

Mr. Shepard said: "There is a great deal of grain bought at a loss at the time of its purchase."

Mr. Burke said: "Competitors should understand each other."

Geo. M. Cassety said: "There is too much stuff bought on a basis that looks good and we hope for an advance in the market. The grain business is a business of honor. Our organization should stick together for the troubles that have come upon us will pass and the grain trade will come into its own again."

Treasurer's Report.

C. F. Prouty presented the treasurer's report, which showed receipts and disbursements as follows:

Total receipts from all sources....	\$3,999.15
Expenditures—	
Office rent	\$ 288.00
Traveling	172.63
Phones, stamps, stationery and printing	222.15
Expense last annual meeting	133.90
Received on Sec'y's salary.....	3,182.97
	\$3,999.65
Due on Sec'y's salary	\$ 417.03
Due on quarterly dues.....	67.50
If collected will leave deficit	326.72

Report of Resolutions Committee.

F. R. Milbourn presented the following resolutions, which were adopted:

WHEREAS, the purpose of this Association is to help the grain dealers of Oklahoma to improve the trade methods and practices to the end that they may attain greater efficiency and surer rewards for their service; be it

RESOLVED, by the Oklahoma Grain Dealers' Association in the convention assembled at Oklahoma City, that we urge every elevator operator of the state to study carefully the cost of handling grain from farmers' wagons to the scales at destination, and that we do our utmost both as an Association and as individuals to inculcate in all dealers the spirit of honesty and fair play to the end that we may raise the grain trade to a high plane of efficiency and establish the highest ethical standards.

Whereas, the handlers of grain throughout the land have been confused and confounded by erroneous crop and market information to the disadvantage of themselves and the producers; be it

RESOLVED, That we appeal to the Honorable Secretary of Agriculture and to the grain exchanges to do everything in their power to prevent the dissemination of the false and misleading crop and market information to the end that the prevailing grain prices may more accurately reflect the true conditions of supply and demand.

Whereas, Gross errors by grain inspectors and Federal supervisors have forced many heavy losses upon grain dealers, be it

RESOLVED, By the Oklahoma Grain Dealers' Association in convention assembled at Oklahoma City, that if buyers and sellers are to be required by law to accept the grading of grain by Government officials and pay for it, then the body conducting the grading should be held responsible to the parties interested for any errors committed by its agents; and be it further

RESOLVED, That a copy of this resolution be sent to the Secretary of Agriculture in Washington and to the authorities having charge of the grading of grain in any market receiving grain from Oklahoma shippers.

Realizing the efficient manner in which the Regional Board has handled the car situation during the last year,

RESOLVED, That the Oklahoma Grain Dealers' Association, in convention assembled, extend our thanks for the service rendered and commend a continuation of such service.

The following resolution was tabled after a liberal discussion of the proposition:

WHEREAS, It has been called to our attention that there is some discussion or likelihood of interior points being made delivery points on Chicago grain contracts, be it

RESOLVED, That the Oklahoma Grain Dealers' Association in convention assembled hereby recommend for consideration and designation, Fort Worth, Texas, as a suitable interior point to be designated as a delivery point for southwestern grains where hedged on the Chicago Board of Trade.

We trust that an equitable and practical method may be arrived at whereby Fort Worth may be designated for delivery point on Chicago contracts inasmuch as suitable elevator storage is available there on fair terms for such grains as may be shipped there for delivery against Chicago contracts. Be it further

RESOLVED, That the Secretary be instructed to send a copy of this resolution to the President of the Chicago Board of Trade.

In discussing the last resolution, Jule G. Smith said: "The Chicago Board of Trade has recently started trading in cotton with Houston and Galveston as points of delivery, it is therefore thought that other points should be designated for delivery of grain and that it would have a stabilizing effect on the market and that Ft. Worth with its storage capacity would make a good delivery point in line with the rate structure and export demand. Also additional storage facilities can be readily provided. I believe it will stabilize prices. I believe in the centralization of the contract market but in the distribution of the delivery points. It is a forward thought that can do no one any harm."

V. E. Butler said: "This thought was suggested to the Department of Agriculture in 1918 by an investigating committee at that time."

Mr. Black said: "It would work a hardship on the local dealers and depress the cash market."

Wm. Murphy said: "I don't believe future contracts could be made in Chicago specifying Ft. Worth delivery."

Nomination and Election of Officers.

The nominating committee made their report and the following were elected as officers for the ensuing year:

President, L. O. Street, Woodward; vice-pres., F. R. Milbourn, Fairland; sec'y-treas., C. F. Prouty, Oklahoma City; directors: M. E. Humphrey, Chickasha; C. H. Cox, Enid; J. J. Stinnett, Oklahoma City; J. R. Thomas, Carnegie; R. E. Nelson, Clinton.

Arbitration Committee: V. T. Goltry, Enid; Harry Hunter, Okarchie; E. W. Mashburn, Oklahoma City.

Member Tri-state Appeal Board: W. M. Randels, Enid.

The grain dealers of Enid extended an invitation to the association to hold its 1926 convention at Enid. A vote was put and it was unanimously decided to go to Enid next year.

PACIFIC NORTHWEST CONVENTION.

The program for the fifth annual meeting of the Pacific Northwest Grain Dealers' Ass'n at Walla, Walla, Wash., is just out. Among the interesting papers to be delivered are the following:

"Latest Tendency in Agricultural Legislation," by Secretary Quinn of the National.

"Establishing Grain Futures Market on the Pacific Coast."

President Richard J. Stephens of Spokane urges grain merchants in markets transacting business in the Northwest to be present.

DISTRIBUTION COSTS HIGH.

The business of getting merchandise from the hands of the producer into the hands of the consumer, was given the commanding position among the economic problems of the present day by Alvin E. Dodd, manager of the domestic distribution department of the Chamber of Commerce of the United States, in an address before the Washington Chamber of Commerce last week.

"During the past fifty years," said Mr. Dodd, "the cost of manufacture has been going down and the cost of selling has been going up."

"Costs of distribution have climbed since the World War, but prices have not climbed so rapidly as wages and rents, two of the largest items of expense in distribution."

"Yet there are wastes in distribution which could be eliminated,—the cost of which is included in the cost of the merchandise. In 1922 the country sustained an aggregate loss of \$400,000,000 from business failures, many of which might have been prevented if there had been available more adequate information concerning market conditions. Duplication of selling effort and duplication of merchandise, overlapping trade territory and other uneconomical practices, many of which are adopted to meet the demands of the consumer, add unnecessarily to the cost of selling."

"What is most needed at this time is

accurate information concerning distribution which can be made the basis of economics and at the same time bring home to the consumer that he is paying for many things besides raw material and cost of labor in the price for which he obtains an article from the retailer."

"An attempt in this direction is now being made by the National Distribution Conference organized under the auspices of the National Chamber. A representative group of business men directly interested in distribution have undertaken a study of the problem. Six committees have been appointed each to deal with a different phase of the question, and to determine what steps may be taken to bring to bear upon distribution costs the same critical analysis which has succeeded in reducing costs of manufacture."

DEPARTMENT OF AGRICULTURE APPOINTMENT.

The appointment of Nils A. Olsen as assistant chief of the Bureau of Agricultural Economics was announced April 30 by Secretary of Agriculture W. M. Jardine. The appointment is a promotion for Mr. Olsen, who has been connected with the Department of Agriculture since 1919. He was first employed as an assistant agricultural economist to do research work in agricultural history. In 1922 he assisted in the administration of the seed loan funds in the Northwest, and later was placed in complete charge of this work, with headquarters at Grand Forks, N. Dak.

In July, 1923, Mr. Olsen returned to Washington where he was made executive secretary of the committee which prepared the report on the wheat situation submitted to President Coolidge in the fall of that year by Secretary Wallace. Following this, he was placed in charge of the Division of Agricultural Finance in the Bureau of Agricultural Economics, conducting studies relating to farm credit, farm taxation and farm insurance. His work in the department won the admiration of the late Secretary Wallace, and Mr. Olsen was called upon frequently to assist the Secretary's office in connection with nation-wide agricultural problems. He collaborated with Secretary Wallace in the preparation of his book, "Our Debt and Duty to the Farmer," which only recently came from the press.

Secretary Jardine recognized the ability of Mr. Olsen, and approved the recommendation of Dr. H. C. Taylor, Chief of the Bureau of Agricultural Economics, for his promotion to the position now announced. His duties will deal with the coordination of the work of the various units of the bureau doing research work, developing programs of investigation, and applying the results to the practical benefit of the Nation's agriculture.

The appointment of an assistant chief in charge of research is especially important at this time, in view of the plans being developed for co-operation with the State Agricultural Experiment Stations for Economic Research with funds made available by the Purnell Act and the projected absence of the chief of the bureau during the next few weeks in attendance at conferences in Europe on the adoption of universal cotton standards.

Mr. Olsen was born on a farm at Herscher, Ill., August 31, 1886. He received the A. B. degree from Luther College, Iowa, in 1907, did graduate work in history and economics at Johns Hopkins University in 1907-8, and received the degree of A. M. from the University of Wisconsin in 1909. He was an instructor in history and economics at Muhlenburg College, Pa., 1909-10, following which he spent two years in graduate study at Harvard University. He received a traveling fellowship from this institution, from which he resigned in 1912 to assume the management of a corn belt farm, continuing in this work until his appointment to the department in 1919.

ANOTHER COURSE IN ELEVATOR MANAGEMENT.

A short course in grain elevator management will be held at the College of Agriculture, University of Illinois, June 16 to 20. Among the subjects on the program are grain elevator accounting, grain economics and elevator management, leading problems of grain elevators, financial problems of grain elevators, trends in grain prices, forecasting crop yields, federal and state grain inspection, world trade to Illinois grain and grain products, problems in hedging and speculation, economic meaning of marketing, a wheat production program for the state, the United States grain futures administration, grain grading, the power problems of grain elevators, grain mixing and conditioning, farm storage of grains and the breadmaking qualities of Illinois wheats.

NORTHWESTERN GRAIN DEALERS' CONVENTION.

J. C. Templeton of Great Falls, Mont., announces that the eleventh annual convention of the Northwestern Grain Dealers' Association will be held at the Placer hotel, Helena, on June 12 and 13.

The complete program for the meeting has not yet been made up, but speakers from Minneapolis and from the west coast have already been arranged for and National Secretary Quinn is to make an address so that a profitable time can at this time be definitely promised to those who attend.

Reservation should be made in advance with Secretary Templeton, to insure proper accommodations.

PANHANDLE GRAIN DEALERS MEET.

AMARILLO, TEXAS, May 19.—Lester Stone of Amarillo was elected president of the Panhandle Grain Dealers' Association in the tenth annual convention held here May 18. More than 75 grain men from Texas, Kansas, Oklahoma and New Mexico were here.

Other officers elected were: Burton Thornton, Lockney, vice-president; J. N. Beasley, re-elected secretary-treasurer; directors: W. A. Barlow, Amarillo; Ernest Shuman, Happy; A. P. Liske, Canadian; Tom Davis, Calude, and Ollie Harwell, Vega; arbitration committee: U. S. Strader, H. C. Adams and Harry L. Kearns, all of Amarillo.

Resolutions condemning the Southwestern Telephone and Telegraph Co., for the prices charged in person to person and station report calls were unanimously passed, as was one condemning the interference of the federal government in any legitimate business.

The wheat crop this year will be approximately 4,000,000 bushels, according to estimates submitted by the delegates representing every section of the Panhandle.

W. H. Fuqua, president of the First National bank, spoke to the grain men laying emphasis upon the resources of this country and pointing out the ever increasing quantity of oil and gas produced in the fields nearby. He said he did not look for a revival of business until next fall.

Jules G. Smith of Fort Worth urged that Fort Worth be made the point of delivery for Texas grains bought in the Chicago market just as Galveston and Houston are for Texas cotton bought there. Mr. Beasley was instructed to draft a resolution asking the Chicago Board of Trade to adopt such a rule.

The following committees were appointed:

Resolutions, A. Liske, Canadian; W. A. Barlow and C. R. Slay, Groom; auditing, E. W. Harrison, Hereford; Tom Davis, Claude; L. S. Cobb, Plainview; nominating, H. L. Kearns, A. G. Hinn, Plainview; John Elliott, Kress; trade rules, L. C. McMurtry, Pampa; J. G. Smith, Fort Worth, and O. W. Smalley, Claude.

If you are looking for paying results in business, have the confidence to advertise

ANNUAL CONVENTION KANSAS GRAIN DEALERS

Entertained by Wichita Dealers. C. M. Cave of Sublette, President-Elect; Secretary Smiley's 28th Year.

Following registration as handled by the Grain Dealers' Fire Insurance Company, the grain dealers of Kansas opened their 28th annual meeting at Wichita May 21, with a particularly timely address by President C. C. Isely.

President's Address.

The country grain shippers of Kansas have probably handled more grain in the 1924 crop year than has ever before been handled in the state for one season.

It may well be a matter of pride to the grain trade that, through economy and efficiency, the farmer's grain has been handled at a merchandising margin incomparably less than that of any other commodity of commerce. Competition has been so keen that in many markets the buyers bid the full value today for what they hoped the grain would bring them loaded on a car tomorrow. Any profit made by such a method is purely speculative and it is reasonable to assume that most of the profits which have accrued to country shippers have been of this nature largely speculative. Merchandising grain in this way is a precarious business. The farmer is a keen salesman; he is a reluctant seller on breaks and does a good job of unloading on the bulges. He knows his grades and always assumes that his grain is a grade higher or contains a percentage more of protein than the official inspection or chemist's tests find after the car arrives at the terminals. In this connection, with a practical grain man in the chief inspector's office, all the farmers' organizations should be invited to join with us to support the new chief in taking his department out of politics.

The sharply rising price of all grains for a year past has accentuated the speculative feature. The price advance was due in part to the world crop being somewhat short of the year before, but was more largely influenced by the greatly improved monetary and economic conditions prevailing throughout the world. The acceptance of the Dawes plan caused the flood of gold pouring into America at the rate of 40 millions a month to recede last July and by December the outward movement was 30 millions, and in January our net exports of the yellow metal were 80 millions. Germany's recovery of monetary stability improved the buying power of all Europe and especially of central Europe and their consumption of meat and grain products in the last 12 months has upset all ordinary comparisons for recent years.

The confidence with which the tremendous early offerings of wheat were absorbed by millers, exporters, speculators and flour buyers gave fear for actual exhaustion of domestic supplies and hope for much higher values.

The sensational sustained advance after election reached its crest late in January. The succeeding declines and fluctuations have been dealt with in the press as something of a mystery, but a spirit of optimism and a belief in the general bull movement prevailed everywhere.

Now all of this is no mystery to anyone who will take the pains to look under the surface. We country grain merchants are concerned, because we are part of the nation's grain merchandising machine, and demoralization such as we have had makes merchandising almost impossible, and we are condemned for causes entirely beyond our control.

Secretary Jardine's statesmanlike proposal that the boards of trade and the grain trade in general correct their own abuses ought to be followed up effectively. His proposal for limiting the daily fluctuations will not, however, effect a cure. He does not claim it will; he has put it up squarely to the grain trade.

We will throw into the hopper two or three more suggestions.

In the first place, the grain exchange should become a clearing house for all information pertaining to the grain trade; it should be more than a facility where traders can get together; it should be to the grain trade what the Federal Reserve Bank is to our banking system. It seems to me the boards should officially furnish information that will be a cross section and consensus of the best thought in the market.

Second: To further curb unreasonable fluctuations when the market reached, or appeared to reach a danger point as it did in December and the early part of January, the board should officially widen the margins for option trading. This could be done by anticipating the situation. If \$1.80 appeared to be a danger point, the boards could announce when the grain reached \$1.75 that the margins would be increased as soon as the market reached \$1.80 and might be further increased when it reached \$1.90. This would have the same effect as changes in the discount rate made effective by the Federal Reserve Board.

In the third place, the boards should discountenance and eliminate done peddlers. Most boards have a rule against circulation of rumors, but there is no rule against done or gossip. This is much easier said than done. Nevertheless something ought to be done about it.

Fourthly, something should be done to curb the activities of cycle doctors. The

splendid information disseminated by Babson, Alexander Hamilton's Institute and Harvard University's economic service is marred by the fact that they all attract all kinds of people to buy stock and grain and provisions as they study the curves of the cycles that are platted by these so-called experts. A whole group of forecasters are following in the wake of these better concerns, and the public is flooded with "sure fire" information as to when the market will go up or go down. The result is that grain is not bought for an investment; the big game is to scalp the market.

Finally, the grain business above all needs stabilization. Next to the initiation of the Dawes plan the resumption of the gold standard by Great Britain is a stabilizing influence of the greatest magnitude. We should congratulate our Federal Reserve Bank and our big banking institutions for their work in helping accomplish this noteworthy achievement. If financial stability could now be brought to Belgium, France and Italy, the adjustment of the post-war economic difficulties would be nearly complete. For the benefit of the agriculture of this country it is therefore highly essential that our government should apply the principles of the Dawes plan in settling the debt problems of these countries. It is tremendously important that they do not follow the misleading counsel of Senator Borah as exhibited recently in his misrepresentations in the press.

Secretary's Annual Report.

In preparing this, my 28th annual report, I can only briefly review some of the accomplishments of the organization for the past year, with suggestions or recommendations that in our judgment will tend to improve some of the conditions you have had to contend with during the past year.

To the best of my recollection, the past year is the first year of record that the Kansas railroads have been able to furnish the necessary equipment to move all grain tendered for shipment during the free movement of July, August and September. Our office has only received two complaints of car shortage during the crop year. This is certainly remarkable service. We think this can be accounted for, first, because all Kansas lines secured return of their own equipment to their own lines and had same carefully inspected and where found defective, repaired, before going into service. When one takes into consideration that the past year the movement of revenue producing freight was the greatest in the history of the country, it makes it the more wonderful.

While upon this subject, I wish to caution all shippers to make a very careful examination of all box cars tendered, previously loaded with lumber, for loading with grain. All lumber, especially dimension lumber, when loaded in box cars, shifts its position while in transit, thereby weakening the corner and end posts of the car. When the lumber is removed from the car each corner and end post springs back into position and the defect is not noted until the car is loaded, and quite often not noticed until the car is actually in transit. Where defect is found, before loading, refuse to load; if not discovered until after loading, call to the attention of the agent for the company and have him make the notation on the bill of lading showing the defect. This will make claims for loss in transit more easily collected. Bear in mind that claims for loss in transit on clear record cars are hard to collect for the full amount of loss sustained. In this connection I wish to call to your attention the neglect of many shippers to file claims for loss immediately on return of weight certificates showing the amount of loss. A number of shippers have adopted a plan to hold all account sales, weight certificates and other papers, and file claim for loss at the close of the shipping season. A mistake is made in doing this as claims should be filed as soon as possible after notice of loss.

State Legislation.

Your secretary proposed three bills for introduction in both houses of the legislature. The first bill, to reduce the cost of inspection and weighing; the second, to increase the salary of the chief grain inspector and his first assistant; the third, a bill to repeal the local warehouse law enacted in 1923. We secured the enactment of the bill providing for material reduction in the fee for inspection and weighing of grain. The law now provides that where the money in the revolving fund amounts to \$80,000, the fee for inspection and weighing shall be reduced to 60 cents per car for both weighing and inspection, until the amount in the revolving fund is reduced to \$40,000, then the fee shall automatically increase to \$1 per car.

Having the authority of the legislature, your secretary will make it a point to see that this law is enforced to the letter, which will mean a saving of 80 cents per car to shippers in Kansas, as well as those in other states that have their grain inspected at points in Kansas. We failed to secure the enactment of a law increasing the salary of the chief inspector and his first assistant.

Unless some plan can be devised and

made effective whereby this department can be taken out of politics, and men qualified for this position maintained in the department, regardless of their political affiliations, we cannot hope for an improvement in the service. Much as I am opposed to government interference, I believe that unless some change can be made that the only way to obtain better service and more satisfactory service will be government inspection. Today, under government supervision, the government supervisor is the final arbitrator, and it is assumed that men qualified for the position will be retained under government control regardless of change in administration. The bill to repeal the local warehouse law enacted in 1923 failed of enactment. We think this one of the most vicious laws on our statute books. The bill as it stands is a protection to crooks and a number of them are taking advantage of the law. The bill prepared by us would eliminate all local elevators as public warehouses as provided for in the statute.

For some unknown reason, the farmer members of the agricultural committee of the House and Senate to whom this bill was referred, opposed its enactment into law. They appeared to think that it was an attempt on the part of the Kansas Grain Dealers Association to put something over. We expect to re-introduce the bill, or a similar bill, at the next session

E. J. SMILEY

Secretary, Kansas Grain Dealers' Ass'n, Topeka.

of the legislature, and will continue to introduce the bill until finally enacted into law. A bill was introduced by the State Board of Agriculture to include "chops" made from whole grains in the so-called "Feedingstuffs Law." This bill was killed in committee.

Kansas Co-operative Wheat Marketing Associations.

One year ago, present month, the organizers of the Kansas Co-operative Wheat Marketing Association made an unsuccessful attempt to secure the signatures of Kansas wheat farmers to an iron-clad contract binding them to deliver their entire production for a period of five years to the promoters of this organization. They proposed to secure contracts covering 44 million bushels of Kansas wheat. That the attempt was a failure goes without saying as they secured contracts covering less than four million bushels.

Time and space will not permit full details of the failure of the Kansas Co-operative Wheat Marketing Association in Kansas. The fact that farmers in different counties in the state have refused to make delivery of wheat grown on their land to this organization, and the further fact that hundreds of farmers that signed the contract have leased their land and are no longer growing wheat for their own account, and the further fact that the promoters are using the courts to compel delivery of this wheat, is sufficient evidence to prove that the majority of the farmers that signed the contract are dissatisfied. My limited vocabulary does not permit me to express my condemnation of this organization. Neither can I conceive of the state of mind of a farmer that would sign a contract whereby he agrees to deliver the entire product of his farm to comparative strangers for a period of five years, not knowing what he will receive for his product or when he will receive the moneys due him.

We do not believe that this organization will last another year; in fact, there is sufficient evidence available at this time to convince me that when the final returns are made to the farmers for their 1924 wheat crop, that they will be so highly incensed that drastic measures will be

taken to wind up its affairs. I again repeat what I have often stated that whenever there is a plan presented having merit and one that will stand close investigation, where grain can be marketed from the producer to the consumer, or from producer to manufacturer, more economically than it is at the present time under the present methods, that I am for it.

The Grain Marketing Co.

I take this opportunity of paying my respects to the Grain Marketing Co., lately organized and incorporated in the state of Illinois. It was the original intention of this gigantic concern to sell all of its stock to the farmers of the Middle Western states. According to advertisements appearing in the daily press, this company is a farmer owned, farmer controlled, and farmer managed corporation, to market the farmers' grain for the farmers' benefit. It is a non-profit, non-speculative, co-operative organization working with country elevators to effect a more direct and more efficient distribution of grain. Sounds nice, doesn't it? However, the farmers have refused to purchase stock in this wonderful profit-sharing organization. I want to say to you, as we have said before, that this Grain Marketing Co. is not owned by farmers, operated by farmers nor controlled by farmers. An effort was made at Washington during the last session of Congress to amend the Capper-Volstead Act so as to let the Grain Marketing Co. under its provisions, regardless of the amount of business which was done with its members. Failing in this attempt, a final effort was made to get a ruling from the Department of Agriculture interpreting the Capper-Volstead Act in such a way as to include the Grain Marketing Co. This, too, failed.

Price Fluctuations.

In a bulletin issued from our office last fall, the statement appeared that when individual or company that was unable to make money in the handling of the 1924 wheat crop had better change occupations. I take this opportunity of retracting this statement. While it is true that we had an advancing market during the free movement and every one connected with the grain trade made money, the wild fluctuation in prices beginning Jan. 2, at which time May deliveries closed at \$1.70 1/4, until July 3, when May deliveries closed at \$1.36 1/2, heavy losses were sustained by a number of country dealers. Under the grain futures act the Secretary of Agriculture is authorized to designate contract markets on which future trading may be done. According to the definition contained in the act, these must be markets where the volume of trading in cash grain is sufficient to reflect accurately the value of the grain. They also must have facilities for proper inspection of grain. Before designation as a contract market the Board of Trade must obligate itself to promulgate and enforce rules which contemplate, among other things, the prevention of manipulation of prices or the cornering of grain by dealers or operators upon such boards.

Charges have been preferred against certain professional traders in Chicago for selling short millions of bushels of wheat on the opening of that market. If the charges made are proven true there is little doubt but what the Secretary of Agriculture will recommend drastic legislation by the Congress at the next session. According to press reports, a suggestion has been made that the Secretary of Agriculture recommend as an amendment to the Capper-Tincher bill, limiting the daily spread in fluctuations. Whatever the result of the investigation is, one thing is certain: the Boards of Trade will not have the united support of the grain trade and railroading industry in opposing this class legislation. Since Jan. 1, millions of dollars have been paid in commissions to Boards of Trade in option trading. Many well posted grain men now are of the opinion that manipulation has killed the goose that laid the golden egg, as the public at large that is disposed to speculate will attempt to find some other field. Millers that in the past have hedged sales of flour by buying the deferred option will now buy the cash grain to protect such sales of flour. Country grain dealers will be compelled to sell or merchandise all grain day of purchase, and even then will be compelled to buy on a greater margin of profit. The worst feature of the situation is that it will give politicians the opportunity they have been looking for, and that is proposed radical legislation. Before closing, I wish to make some suggestions that I trust you will accept in the friendly, kindly spirit in which it is given.

(1) Confirm all sales of grain on printed form day of sale.

(2) Read carefully your confirmation of purchase as soon as received. Bear in mind that a confirmation is a contract and is enforceable. Bear in mind that a contract, according to common law, does not become a contract until closed, and conclusive evidence shows that the minds of both seller and buyer have met in agreement on the vital matter of the contract.

(3) Do not accept bids on sale of grain from parties not known to you. Our office will cheerfully furnish you information as to the standing and reputation of any firm in the country.

(4) Refuse to sign any agreement or contract that you do not fully understand.

(5) File claims for loss in transit, overcharges, etc., as soon as you secure supporting papers.

(6) Do not buy grain unless you have a profit at time of purchase.

(7) See that your bank forwards all drafts to which its attached B/O bills of lading, in order that such drafts will reach

their destination on arrival of car, saving demurrage and reconignment charge.

(8) Do not accept farmers' statements of prices paid in competitive towns above what the market will justify.

(9) Do not attempt to hide or conceal inferior grain when loading cars. Sooner or later you will be caught and your reputation for square dealing will be questioned.

(10) Attend all group meetings of grain dealers when held in your community. Doubtless you will pick up some information of value to you in your business.

(11) Give your association the support to which it is entitled; speak a good word for the association whenever the opportunity presents. Remember this is your organization.

(12) Do not talk about your competitor; talk to him: your interests are mutual.

President F. G. Horner of the Grain Dealers' National Assn, addressed the meeting along lines similar to his report in full as published on another page.

H. S. Ives of Chicago spoke on "Harvesting an Insurance Crop."

Harvesting an Insurance Crop.

American industry continuously is harvesting an insurance crop. That crop has been developed by the scientific application of the law of averages to economic situations. It is a crop of business principles intermingled with social laws.

The chief crop of insurance is the principle of saving today for protection tomorrow. The old Greek philosophy, based on the proverb, "Let us eat and drink, for tomorrow we may die," often was the extent of business foresight until insurance taught the more sensible theory of levying on the present to provide reserves with which to meet future contingencies. Insurance has indeed taught business how to live from decade to decade instead of from year to year or from day to day.

Risks of course have not been eliminated by insurance, but many of them have been made impotent by the distribution of their incidence over a wide area or over a wide variety and selection of subjects. Wrecks, fires and tornadoes have not been abolished, but the human and property losses, so far as such losses may be compensated for in terms of dollars, which they occasion quite generally have been lifted from the shoulders of the individual and so distributed as to minimize their social and economic effect.

In its early stages insurance itself was highly speculative. The institution lived from day to day. Both parties to the contract were engaged in a semi-gambling enterprise. It was soon discovered, however, that the first duty of any organization purporting to supply insurance in any form was to remain solvent. To effect permanency and solvency the law of averages was brought into play.

Sound insurance today lives by the law of averages. All charges are based upon it. It has developed insurance from a speculative enterprise to a well ordered and settled business. But insurance could not successfully be conducted by relying solely on such statistics. As an institution it could not live on a day-to-day or a year-to-year basis. It must provide against catastrophes and disasters of all kinds. In order to remain solvent it must make provision for the payment of future or long deferred liabilities and must so adjust its income and outgo that there always is something put aside in the rich years to take care of the losses in the lean years. Here the law of averages is brought into play again, but with a different stage setting.

The institution of insurance indeed was the first modern business to adopt a stringent and adequate reserve policy, and that is the chief insurance crop which American business is harvesting today.

Sound business is applying the law of averages to its bookkeeping and like insurance is keeping in its rear line money trenches sufficient liquid capital to absorb to the greatest possible extent most every sort of future risk which may reasonably be anticipated. It is working on a ten-year or a twenty-year spread of experience.

In my opinion business has learned the reserve habit from insurance; it has learned from insurance to apply the law of averages to an extended period of operation and not to confine it to a day, a month or a year. And all of this is a part of the insurance crop which American business continuously is harvesting.

But business has of late so successfully harvested the crop of insurance principles that it has been able to adapt them to other situations to which insurance itself does not apply. The practice of legitimate hedging in the grain market is a part of the insurance crop. When a grain dealer sells a future contract to hedge against a price decline while he is marketing his cash grain, or a miller likewise acquires a future contract to protect himself against a loss while he is manufacturing flour, they are obtaining protection against a definite risk in much the same way that one obtains protection against certain hazards through the purchase of certain types of insurance.

And just as hedging tends to reduce the cost of marketing grain, so insurance has been a most effective cost reducer in the fields in which it may operate. If life, fire and casualty insurance were to be wiped out tomorrow commodity prices in America would increase enormously for each producer, manufacturer and seller would have to assume his own risks, and the added cost of such assumptions would be enormous.

Although, as I already have stated, insurance does not and cannot cover all risks, yet the institution constantly is expanding. It is to be found at work in every field of human relationship. You all are familiar with the ordinary forms of insurance, but during the last few years these have been tremendously extended due to the constant research of specialists in adapting the law of averages to new situations. Such comparatively recent developments in the insurance field as crop insurance, use and occupancy, engine breakage, tourist floater, riot and strike, rain, rental value, leasehold, surgeons' liability, water damage and poisoned food are an indication as to the rapidity with which the insurance principle is being extended. The greatest growth has been in the so-called casualty lines, involving all kinds of liability coverage, and including fidelity and surety bonds and other like risk bearing devices.

The greatest field left open for the development of the principles of insurance is that of agriculture. The American farmer is the premier speculator of the day, due chiefly to causes which seem to be beyond his immediate control. How far the institution of insurance can go in reducing the speculative element in farming is as yet an unsolved problem, although some of the best minds in the insurance business are working on it and are hopeful of the outcome.

But before the farmer is able to obtain adequate protection for his crops at a price which he can afford, it seems to me that he might on his own account do a little harvesting of the present insurance crop of principles. He is still doing business on a year-to-year basis, and apparently has not learned, as a class, to lay by reserves in fat years to take care of losses in lean years. That is the primary insurance principle, based on the law of averages, and its general adaptation by the business world saved this country from a severe panic in 1921. Those who did not follow it, however, were for the most part ruined, and among them were the farmers who are just now recovering from the unexpected era of low prices for what they sold and high costs for what they bought.

It is, of course, much easier to advise the farmer to put aside reserves than it is for the farmer actually to do so. The farmer is an individualist, and has not the organization or facilities for mass action which are to be found in large corporations. And perhaps it is just as well for the country that he remains an individualist. We are today suffering from too much collectivism and even though individualism has its drawbacks it is a relief to know that the backbone of America still retains most of its traditional sturdy independence.

The risks to which the farmer is subject and which are entirely beyond his control, however, offer a most inviting field for insurance and for the incidental performance of a great public service. The farmer is now quite adequately provided for by insurance against fire and wind-storm. Livestock insurance is offered to a limited extent, covering loss of livestock due to disease or accidental death, and hail insurance may generally be purchased to protect against crop damage from that source. Life and personal accident and health insurance, of course, are as much available to the farmer as to any other citizen.

But these do not cover the most important risks the farmer has to assume, which have for their causes the uncertainties of weather and market conditions as they affect his growing crops. It is in this sphere that insurance will see its next big development, in my opinion, although it must be confessed that attempts so far to furnish crop insurance generally have been unsuccessful. In fact, one of the large fire companies dropped \$1,700,000 in one year in such an experiment and the others who have tried it have been equally unfortunate. The casualty companies are now investigating the field also, but none has as yet produced a satisfactory or workable policy form.

As I have tried to tell you, private insurance companies are working energetically to solve the complicated crop insurance problem. It is the insurance cross-word puzzle of the day. And you may depend upon it that if it is possible of solution private enterprise will solve it.

The only danger to this program is the agitation started some time ago for political crop insurance. An elaborate plan for injecting the Federal Government into the insurance business was outlined, and a Senate committee held a number of hearings. So far nothing has come of it, but you may be sure the people who are trying to get the government, state or national, to go into some kind of business or other never sleep. I do not think the intelligent farmers of the country want government crop insurance in any form, and I feel quite satisfied that they realize that private enterprise alone can solve that problem for them. The government never has solved an economic problem by political methods and never can.

There have been many recent efforts throughout the country to put the states into the insurance business, and already sixteen states operate funds for the writing of workmen's compensation insurance, seven of them being state monopolies. Because of the obvious fact that through its business operations and its investments insurance is perhaps more intimately connected with all business and with human enterprise generally than is any other single business, the danger of its socialization is very real, and it would be particularly real if the Federal Government should decide to get into the crop insurance field. The grain dealers of this country will remember the socialization danger which

they faced last year through the proposed McNary-Haugen bill, but this was not nearly as dangerous potentially to our economic stability as would be the socialization of insurance.

And in this connection let me say that it is about time that the interests affected by the government ownership menace combine for their own protection. Many of them are today actually fighting each other. How preposterous it is to have insurance men supporting the McNary-Haugen bill and to have grain dealers supporting state and federal insurance schemes. The community of interest between the jeopardized industries has been too long ignored. The insurance man who supports the socialization of the grain business has no right to complain when his business is threatened, and the grain dealer who supports the socialization of insurance has no logical ground to base an objection to the government ownership of his particular business.

And in parting with you let me impress it upon you that the institution of insurance has reached its present commanding position solely through individual initiative. No state ever has added one thought to its development, one principle to its practices, one idea to its extensions. Entirely without the sphere of state interference and control it has, however, through example and precept, produced a crop of business policies and procedures which has had much to do with the industrial stability of the nation and which will continue to render a public service unless cursed by the blight of governmental despotism.

L. H. Powell of Wichita commended the association in securing better freight rates, railroad facilities and claim collections.

Prof. R. M. Green, of Manhattan, speaking on "Price Trends in the Wheat Market," illustrated his address with three charts.

E. D. Clark of Tampa, speaking to the subject "Reasons Why Shippers Should Not Be Compelled to Pay Interest on Grain Sold F. O. B. Track," said that the buyer purchased his goods at the station where loaded, thus the interest item should not be charged to the seller.

Judge C. M. Reed of Kansas City discussed the question of "Freight Rates on Coal," a timely subject to many grain dealers handling side lines.

J. R. Ladlie of Liberty spoke appropriately to the subject "Bunc," referring to organizations and private corporations which have failed to continue in business simply through poor business practices.

Officers.

The Hon. C. M. Cave of Sublette, delivered a splendid address, "Legislative Efforts and the Results." He was later elected president of the association.

Harry Rhodes was elected vice president; E. J. Smiley, secretary, and the following directors: C. L. Parker, C. A. Kalbfleisch, W. W. Lamb, H. B. Wheaton, E. L. Brown, J. M. Rankin.

The Kansas Wheat Girl.

Miss Vada Watson, who has been on the front pages of the newspapers over the country recently, related her experiences as she traveled about, the living exponent of the Kansas wheat crop.

Woody Hockaday told why Kansas grows the best wheat in the world.

H. P. Trusler of Emporia spoke as follows:

Why Privilege Trading Is a Protection to the Country Elevator Operator.

The country elevator man does not wish to speculate. He is primarily interested in merchandising the products of his community, in buying wheat or corn or other grain from the farmer and in acquiring a reasonable profit by putting it into consumptive channels. Since values are constantly changing, he can never quite avoid speculation. But when fluctuations enlarge, his risk increases; and when prices are very nearly constant, his risk is accordingly smaller.

After the violent price changes of the recent season, it is not surprising that the most prominent topic of conversation at this convention has been the possibility of diminishing price swings by artificial means. Some suggest a daily fluctuation limit such as the cotton market now enjoys; others think the same result might be better accomplished by forbidding the issuance of private crop reports, or by limiting the quantity of grain in which any one individual may trade.

These three plans have been tried at various times but always with rather indifferent success. Should a flat limit of say 3c per bushel be placed on daily fluctuations, and should the market make this change before closing time, it would mean that the market would be virtually closed for the balance of the day. For no matter how many buying orders he received, no broker could pay above the limit thus artificially established, and although there were a million wheat for

sale an eighth higher, he could not buy it to fill his customers' orders. Perhaps his customers are exporters or millers seeking to protect cash transactions. Perhaps they would willingly pay the price asked by the seller. Yet the law would forbid them, because the day's allowable fluctuation had been made.

But suppose we have no such limit. Suppose the rules continue as they now are, but that there were some insurance company, some insurance company so huge that it could say, "If prices advance 3c tomorrow we will sell you all the wheat you want on a scale up above that limit." Now let us suppose July wheat has closed today at \$1.50. By midsession tomorrow it has reached \$1.53. This insurance company, through its broker, offers let us say one million wheat at \$1.53½; should it be taken, they offer another million at a quarter, another at three-eighths, and so on until by the time the market has reached \$1.54 they have sold eight million wheat.

This selling would in all probability satisfy the buying demand and the market would be held within reasonable bounds instead of recording a sensational advance.

In a similar fashion this insurance company would support the market should it decline instead of advance, and below \$1.47 they would buy large quantities of wheat and prevent an undue depression of prices. Moreover if everyone knew that these restraining orders were in the market, there would be no disposition on the part of large speculators to press either advances or declines. That is exactly the point; the mere knowledge that these orders existed would so restore confidence that in all probability the market would not move far enough in either direction to make the filing of the orders necessary.

I think everyone will agree that this would be the most effective and satisfactory stabilizer imaginable. It would discourage manipulation, yet it would allow free trading. When an actual demand for wheat existed, it could be filled. When shipments were heavy, they could be absorbed. It would be elastic and therefore as superior to a fixed limit as balloon tires are to a lumber wagon.

Now we once had a system of trading which acted very much after this fashion. It was not perfect. It did not always suit everybody. No one ever claimed it was perfect or that it suited everybody because we grain men know that we are not smart enough to devise these perfect plans. Kansas has been plentifully supplied with the tinnest messiahs who without the least knowledge of the matter in hand, who without the slightest study or preparation, can forthwith make laws to govern the grain trade and every other line of business as well, can decide all religious controversies, can tell us what to drink and what to smoke, tell the girls what to wear and instruct the women how to bear children.

As I have said, these rabble rousers are more ingenious than we, and to them must be allotted the devising of perfect schemes. But pending the concoction of these panaceas, the grain trade wants something which will actually make the market more stable. Permit me to say that I believe this can be accomplished without harm to anyone, and in the most natural of all manners, by the resumption of privilege trading.

Privileges or indemnities are a form of insurance. It is insurance sold, not by an organized company, but by individuals who for a consideration are willing to assume a risk. This is, of course, the principle of all insurance.

The future deliveries of grain are quite generally referred to as options. This is quite incorrect, for there is nothing optional about them. They are straight, out and out, contracts and every one of these contracts is filled. Privileges, however, are really options in the true sense of the word.

There are few of us who have not, on some occasion, taken an option on a piece of land or a building, for a stated length of time at a stated price. For this option we paid a small sum. During the time specified we were privileged to buy or not to buy, and might do which seemed the better. If we did not exercise our option, then we lost merely the amount paid for it.

Now let us suppose me the owner of ten thousand bushels of wheat which is today worth \$1.50. I do not care to sell at that figure, but am willing to take \$1.53 for it, should such a bid appear by tomorrow afternoon. Likewise let us suppose you an exporter, engaged in the selling of wheat abroad. Each day you cable offers, and each day following await the replies, which reach you around noon. You know that you can buy wheat at \$1.50 today; but you do not know what it will cost by noon tomorrow. You find that I have wheat for sale, but that I ask over the prevailing market, so you say, "I can not give your price at the moment, but I will pay you \$10 for an option on your wheat at your price, \$1.53, good until the market's close tomorrow." I accept the \$10 and sell you the option. You in turn send offers abroad. Toward noon tomorrow you find that some of them have been accepted and that you are short considerable wheat. As you are a merchant, not a speculator, you wish to procure this as rapidly and at the same time as cheaply as possible.

If you can buy the wheat elsewhere at less than \$1.53, you do so. In such case you have paid me \$10 for insurance, and the \$10 is gone, but it has assisted your business and been a profitable transaction for us both. But suppose the market had advanced so as to prevent your buying at \$1.53 or less. Let us assume the market

is by this time at \$1.54. You would then come to me, exercise your option, and buy my wheat at \$1.53 thus concluding your transaction at a profit when otherwise it would have been at a loss. At the same time I have been paid the price-satisfactory to me.

When there is an open market interest of many million bushels, it is natural that options on a great many million bushels would be for sale each day. Likewise with many people short wheat for future delivery, it would be easy to find those who, for a slight sum, would agree to take wheat off your hands at say 3c lower than today's close providing you could not dispose of it to better advantage in tomorrow's market.

Thus we have the principle or privilege trading; the buyer of indemnities purchases the optional right to buy or to sell a fixed amount of grain at a fixed price, and has until the close of the market on the following day to exercise his right. For this right he pays at the rate of \$1 per thousand bushels.

Now the greater portion of future trading is of a speculative nature, and the greater portion of privilege trading, in the old days, was of a likewise speculative nature. And in my opinion right there lies its greatest advantage. The head of a large Chicago house has told me that twenty million privileges, good the following day, was a fair average of trade. Taking as examples the prices used a few moments ago, we will suppose the market has today closed at \$1.50, and that four-fifths of the total amount sold or sixteen million privileges have gone to buyers who have taken them merely as a speculation, in the hope of realizing a return upon the following day. Again let us assume the market advances to \$1.53.

Some of those holding offers will say, "I will sell wheat in the market at \$1.53 to equal the amount of offers which I have purchased, because should the market advance so that this sale can not be covered at a profit, I can demand the wheat from the party who sold me the offers, and I will get it at \$1.53 regardless of the prevailing price. Thus I can lose nothing, while there is a good chance that the market will decline before the close and permit me to buy back my wheat at say \$1.51 and make a fine profit." So he instructs his broker to sell at \$1.53. And while his order, by itself, will have no visible effect upon the market, yet we may be sure that the combination of hundreds of like orders will prevent its advancing so rapidly as otherwise it would. In a similar fashion other holders of privileges will sell at \$1.53%, at a quarter, at a half should the market reach it, every sale tending to retard the market's advance and thereby diminish its fluctuation for the day. But if instead of advancing, the market had declined, those who had bought bids would become buyers at \$1.47, \$1.46%, %, and so on. Should such conditions develop as would warrant extreme price changes, they would not, of course, be prevented. But they would be cushioned and made less acute, and this is exactly what we desire.

When there was an active privilege trade, bids and offers for the following day were often very close to the current day's closing price. I have several times seen them as close as one-eighth of a cent and once or twice only a split away. These are extreme cases and of course no one would be so foolish as to sell privileges very near the market under the present uncertain conditions and with prices so high. Therefore I have used a 3c difference in my examples because I believe this is about the difference at which privileges would sell were they now traded in. At Winnipeg they are running a little further away than that, but the privilege trade there is very much smaller than it used to be in Chicago, and it has but little influence upon the market in general. Chicago, which now has no privilege trade, exercises such an enormous influence over the Winnipeg market that its little privilege trade is lost sight of.

It is evident that the closer privileges are to the market, the more they will tend to restrain fluctuations in either direction and the more useful they are to the trade in general. For example: I am operating an elevator in the wheat belt. At noon today one of my customers calls and tells me he will begin threshing his five thousand bushels of wheat tomorrow and asks that I come out and bid on it. Next morning I get the opening prices via radio, then get into my car and start out to look at my customer's wheat. I bid for it upon the basis of the quotations I received before leaving the office. After an hour's conversation the farmer sells me his grain, and I start back to my elevator. By this time two or three hours have elapsed, and when the radio next brings me quotations, I learn that in the meantime prices have declined several cents. Now I was a speculator, in this case, not because I wanted to be but because I could not avoid it. But, on the other hand, suppose that we had active privilege trade. Suppose that after talking with my customer the previous day I had reasoned thuswise: "I am going out to see this man tomorrow, and as he usually sells to me, I am almost certain to buy his wheat this year. But of course I won't have a chance to sell against it until I return along towards noon, and by then the market may be either up or down. I will have my broker buy five bids for me if they are not too far away today."

Accordingly I call my broker, learn the bids are, say, 1½c away and instruct him to buy five. This costs me \$5, no more. Then I go out and bid on the wheat next day. I know that should the market de-

cline I will get within 1½c of today's prices, and that should it advance, I will be that much better off. Perhaps this feature of privileges is not so important as the other, but surely no harm in having it at hand.

In 1921 it was popular to condemn the Board of Trade. Mr. Capper likened it to Monte Carlo, to a den of robbers, to a gambling hell, etc., and the farmers took kindly to this pishposh because month after month wheat had declined in price and they had not sold at the top. To blame our misfortunes on someone else is human nature. So the Capper-Tincher bill went onto the statute books. Ostensibly to prevent manipulation and stabilize the market, it incidentally abolished privilege trading, which was the greatest stabilizer of all. No one at this time or since then has been able to give a good, adequate reason for abolishing privileges, and I challenge anyone to expose the benefits which have accrued from their abolition, or to show why such trading should not be restored.

As I before suggested, this plan is not flawless. The largest disadvantage which occurs to me is that a man of small capital, who is perhaps unfitted for speculation, can buy \$5 worth of privileges and thus get interested in the market. This is unfortunate, and should be prevented if any fair and workable means of preventing it can be devised. On the other hand a man with \$5 can make a first payment on a second hand car, can take it out and with it burn up every cent he can make, besides endangering the limbs and the lives of his neighbors while he learns to drive. Yet this harm is small compared to the many benefits of the automobile, and we would surely not consider destroying all automobiles on this account.

Again we occasionally hear of a dishonest elevator operator burning down his over-insured house so that he may collect the insurance money. Yet no one suggests that we forbid the selling of insurance. We merely seek to eradicate these evil features.

Perhaps privilege trading might be restored with modifications which would shut out all the evil features and make it even more satisfactory than it used to be. Men wiser and more experienced than I can answer with more assurance. It behooves every elevator man in Kansas to get behind the movement for restoration of privilege trading which, without enacting laws, without creating bureaus, without making a single political job, without spending a dollar of the taxpayers' money, will help narrow the fluctuations of the market, will enable dealers to make closer bids, and will make trading more satisfactory generally.

C. D. Morris of Chicago addressed the Kansas dealers along similar lines to his several convention addresses recently, one of which is reported on another page.

John Baker of Kansas City addressed the meeting on clear record cars, loading, loss damage claims and kindred subjects.

The financial report of the secretary and the audit of his books showed a clear record.

The resolutions included the free use of the Kansas Grain Inspection Department by grain producers for the same charges to regular grain dealers.

Endorsement of the World Court idea. Opposition to the proposed metric system legislation.

Disapproval of the Kansas law whereby 10 per cent is taken from the grain fund of the state and placed in the general fund as a contingent fee.

Objection to the political influence of the state on Kansas grain inspection.

Endorsement of Mr. Hockaday's service for the grain trade of Kansas and recommendation that any surplus funds in the inspection department from samples taken from cars of wheat be turned over to him.

A vote of thanks to the officers of the association and for the entertainment furnished by the members of the Wichita Board of Trade.

CORN EXPORTS FROM ARGENTINA.

Argentina will have less corn to export this year. In the first official forecast of the crop received by the Department of Agriculture from the International Institute of Agriculture at Rome the crop is forecast at 187,155,000 bushels, as compared with 276,756,000 bushels produced last year.

Allowing some 80,000,000 bushels for home consumption and seed requirements, there should be somewhat more than 100,000,000 bushels from the current crop available for export and carryover, the department says. Exports from last year's crop May 1, 1924, to March 1, 1925, totaled 178,000,000 bushels.

HAYCROP REPORTS--REDUCED ACREAGE

Cold Dry Weather Holding Many Meadows Back—Many Fields Plowed Up and Planted to Corn—Light Crops Indicated for This Year.

The regular PRICE CURRENT-GRAIN REPORTER crop reports appear on pages 14 and 15 of this issue, in addition to which the following survey of crop acreage and especially data on the hay crop is most pertinent and seasonable. It is compiled through the courtesy of Albert Miller & Company's hay department manager, John H. Devlin, a director of the National Hay Ass'n and a close student of production and marketing.

The information below has been secured within the past three weeks and is briefed for your information and guidance in contemplating the cleaning up of the old hay crop; suggesting an almost unprecedented shortage in the new hay crop and a very considerable increased acreage devoted to corn from hay lands which have been plowed under.

ILLINOIS.

Shobonier, Ill.—Heckethorn Produce Co.: New hay is nearly a total failure because of lack of rain. In regard to the old crop there is very little hay in the country now.

Chesterfield, Ill.—Jas. T. Rigsby & Son: Meadows will be short this year on account of dry weather. Some old hay but farmers are holding waiting outcome of new crop.

St. Anne, Ill.—Richard Dressel: Prospect for the new crop looks very poor. Little old hay in this neighborhood.

Pierron, Ill.—Essenpreis Bros.: Timothy and clover will be a light crop. Not much old hay available at present.

Manteno, Ill.—Leon Euziere: Not any hay of last year's crop to market. Prospects are the poorest for new crop they have ever been. Too dry and cold for hay.

Paris, Ill.—C. H. Wade: About four weeks without rain. Grass is very short. Fifty per cent or more of the meadows have been plowed up for corn. Crop will be very light, not much of last year's crop left. Those that have it won't sell.

Camp Point, Ill.—R. C. Hussong: Outlook extremely limited, although meadows that gave no promise up to a week ago are looking much better after a few days' sunshine. There is practically none of last year's crop on hand.

St. Joseph, Ill.—St. Joseph Farmers Co-op. Ass'n: Recent cold and dry weather is cutting the growth of the new hay crop. Not much old hay left.

Carlinville, Ill.—A. G. Dohm: Great amount of our timothy meadows has been put into corn. Timothy crop is going to be very short.

Granville, Ill.—Granville Co-op. Co.: Hay at present looks good. No old hay to move.

Grant Park, Ill.—A. C. Holzman: Acreage smaller than last year. Looks like short hay on account of dry spring.

Trilla, Ill.—Clark Brown, Mgr. Trilla Shipping Ass'n: Hay crop will be short as there has been much meadow plowed up. Lots of old hay here.

Bement, Ill.—Ray Plummer: It looks like a short hay crop as the most of the meadows have been plowed up and the dry weather has caused what meadows were left to be very poor. No hay for shipment out of this territory.

Winchester, Ill.—W. M. Carlton: Hay crop here looks very short. What meadows that are left look like nothing.

Mendota, Ill.—Peterstown Farmers Elev. & Supp. Co.: New hay crop looks like it will be a bumper. Not much of old crop or last year's available for market.

Sullivan, Ill.—A. E. McCovrie: Prospects very light. Not much old hay on hand.

Arcola, Ill.—T. E. Hamman & Co.: Clover froze out heavy in this territory. Very little hay for sale.

Chillicothe, Ill.—Guyer Grain Co.: Meadow conditions below normal. Timothy meadows are especially backward. Acreage is also possibly 10% less than last year.

Bowen, Ill.—W. J. Carlin: Prospect is for a good hay crop in this locality. Mostly mixture of timothy and clover. Very little of the old crop left, and what is, is very poor quality.

Mattoon, Ill.—Phillips & Johnson: Meadows not doing any good. Very dry and very cold.

Butler, Ill.—Ware Bros.: Conditions of hay crop poor. Acreage 40% of last year. Amount left from last year 20%.

Irving, Ill.—Cook & Giberson: New hay crop does not look very promising. Some old hay in the country yet grading No. 2 and 3.

Le Roy, Ill.—Le Roy Feed Co.: Meadows do not look promising. Some old hay in country, but holding it.

Fairview, Ill.—Fairview Farmers' Elev. Co.: Meadows are normal in condition, acreage large. Large crops anticipated. Twenty per cent of old crop held back on account of price condition and no local demand.

Poplar Grove, Ill.—Frank Bullard & Son: New crop looks good. All alfalfa is about

killed out, but a world of old alfalfa on farm, but no market.

Toledo, Ill.—R. Richardson & Son: Timothy meadows looking better than they did last May. There is more old crop in the farmers' hands now than I ever knew at this time of year.

Mulberry Grove, Ill.—Valier & Spies Mfg. Co.: Condition of the meadows has been poor on account of dry weather. Could get 100 or 150 tons in two or three hours driving if market would get a little stronger.

Quincy, Ill.—Pape & Loos: Meadows good shape but a good many plowed up. Quite a bit of old hay.

Fenton, Ill.—Emmett C. Thompson: No old hay for market. Reports to us would indicate a short hay crop.

Morrisville, Ill.—Schmeitz & Todt: Hay crop will be short. All meadows plowed up and put to corn. No old hay available.

Braceville, Ill.—John Perino: All last year's hay crop has gone to the market.

Huntley, Ill.—Huntley Farmers Supply Co.: Prospects are good for hay. None of last year's crop available for the market.

Sullivan, Ill.—Floyd Freeman: The new hay crop is about the same in acres but needs rain. About one half of the last year's crop here yet counting both clover and timothy.

Paxton, Ill.—Paxton Farmers Gr. Co.: Conditions for a hay crop around here are poor.

Dorchester, Ill.—Dorchester Co-op. Elev. Ass'n: Timothy very poor. Clover will be a failure. Farmers plowing it up for corn. Quite a bit of last year's crop still available but farmers are holding on.

Georgetown, Ill.—Herman Hollingsworth: New hay crop is light. Plenty of the old crop left more than will be sold in the township.

Shirland, Ill.—Jewett Elev. Co.: Too cold and dry for good hay crop.

Waverly, Ill.—P. T. Connair: I have been across the state east and west from Danville to Hannibal, Mo., and two hundred miles south of Danville. The prospect is good for a bumper crop of hay.

Sycamore, Ill.—Claude Clark: Twenty-five per cent left on the farm and about 15% will be marketed. New crop will not be over 75% of normal.

Farina, Ill.—C. T. Wade: Old meadows mostly plowed up and new ones drying up. There will not be enough new hay through this section to feed the rabbits if it does not rain soon.

Roberts, Ill.—Roberts Grain Co.: Condition of meadows is very good but the weather is too dry and cold for rapid growth.

Deer Grove, Ill.—Cooney & Keefe: Very little hay here as far as the new crop is concerned. I drove 90 miles Sunday and hay is looking good.

Vandalia, Ill.—J. H. Brooks: Through the Central Illinois hay belt about ½ less acreage than last year. Outlook is for about 50 to 75% of a crop on the remaining acreage. About 25% of last year's crop still on hand.

Kewanee, Ill.—R. T. Otley: Hay looks very good just now. Don't think there will be any shipped from here at present.

Freeport, Ill.—H. A. Hillmer Co.: Present indications are that we will have a good crop of hay. However, we will have to have good rains right along for there is a deficiency in subsoil moisture.

Marengo, Ill.—J. H. Patterson: New seeding is looking fine. There will be more hay than last year if nothing happens to it.

Charleston, Ill.—O. F. Ryan: New crop of timothy looks like will be short, new crop clover is fair.

Maroa, Ill.—G. A. Austin: Clover crop about like last year. Timothy only looks fair, not over 70% as many acres as last year.

Farina, Ill.—Fred Schmidt: New crop prospects not good, too dry. About ½ of last year's crop still here.

Altamont, Ill.—J. F. Smith: New crop very poor. Will not be half a crop. Quite a lot of old hay on hands.

St. Peter, Ill.—Aug. Borchelt & Co.: New meadows no good at all. Old meadows fair. Fifteen per cent of old crop on hand here.

Woodstock, Ill.—Thomas Davis: Quite a lot of old hay baled and ready to sell. Old timothy meadows are good so I think there will be plenty in this locality.

Warren, Ill.—John Berryman & Son: Around the northern part of Illinois and Southern Wisconsin there will be a good hay crop although possibly a little late on account of the wet and cold spring.

Hettrick, Ill.—F. O. Mefford: More of last year's crop on hand than I ever saw at this time of the year but the grade is below the average.

Greenup, Ill.—C. V. Nunamaker: Conditions very poor at the present time. Very dry and cool. One fourth of the old crop here yet.

Mason, Ill.—D. H. Holloway: Hay looks good now. Quite a lot of old hay on hand.

McConnell, Ill.—Sanford & Hartman Lbr. Co.: Prospects are very promising. No good hay left from last year's crop.

Knoxville, Ill.—Gottrick Bros.: Fifty per cent of the old meadows were plowed up for corn. Some new meadows coming on but mostly alfalfa or clover.

Vermont, Ill.—Bader & Co.: Indications are for a good crop of hay through this section. Quite a lot of last year's crop of hay to be moved.

Raymond, Ill.—Adolph Oberle: Condition of the growing crop is not too promising. Too cool and dry here. Quite a bit of old hay in the country.

Roberts, Ill.—Roberts & Gullert: No hay raised for market in this locality. Prospects for hay here best for years.

[Concluded on page 31.]

Crop Reports

Compiled by GEO. A. WELLS

MARKETING CONDITIONS.

The general reports indicate that there will not be much of a movement of corn anywhere in the corn belt except in Central Illinois, where the farmers are selling some corn. The farm reserves of corn are very low and it is six months until the new crop will be ready for marketing. Farmers are inclined to hold whatever corn they may have until they know what the new crop will be. The stocks of oats in country elevators are up to the average for this season of the year, but the farmers consider the prices "too low" and are disposed to hold oats until the new crop has developed.

Crop Reports.

Soil Condition: The soil condition is entirely "too dry" throughout the states of Indiana, portions of Illinois, in Iowa, North and South Dakota, largely "favorable" in Ohio, Missouri, Minnesota, Montana, Nebraska, Kansas and Oklahoma. The drought condition is in fact becoming critical in Indiana, Iowa, South Dakota.

Growth Condition: Basing the government term normal at 100 the estimated percentage comparison of the growth of winter wheat on acreage that has not been abandoned is as follows: Ohio 60, Indiana 76, Illinois 79, Missouri 82, Iowa 82, Montana 82, South Dakota 94, Nebraska 85, Kansas 70, and Oklahoma 61.

Spring Wheat: Minnesota 94, North Dakota 88, Montana 85, South Dakota 94.

Oats: Ohio 90, Indiana 85, Illinois 84, Missouri 90, Iowa 86, Minnesota 94, North Dakota 83, South Dakota 88, Nebraska 97, Kansas 94, and Oklahoma 84.

Corn: The percentage of acreage of corn that has now been planted is reported on the average as follows: Ohio 82, Indiana 80, Illinois 87, Missouri 69, Iowa 82, Minnesota 64, South Dakota 71, Nebraska 73, Kansas 80 and Oklahoma 96.

General Reports.

The general reports given below are self-explanatory as to whether or not there will be a movement of corn from farmers' hands immediately following corn planting, also as to movement of oats at present market values and whether stocks of oats in country elevators are "large," "average" or "small."

ILLINOIS.

Sparta, Ill. (6): Very little corn to come in.

Eureka, Ill. (1): Some corn will move, also oats. Average stocks of oats in country elevators.

Wenona, Ill. (4): Some corn is moving now. Oats have all been moved. Oats all cleaned out around here.

Odell, Ill. (7): Think the movement of oats and corn will be light this month and stock of oats in elevators small.

Mt. Carroll, Ill. (4): No corn here. Very few oats. Shipping in corn and oats. Oats in farmers' hands holding for 50c.

Earlville, Ill. (4): Some corn will be moved but not a large amount. Large

stocks of oats in farmers' hands, also in elevators.

Mt. Pulaski, Ill.: Small movement of corn now in progress. Few oats moving. Stocks average to large in the country elevators.

Freeport, Ill. (4): Anticipate small movement of corn in next two weeks. Country elevator stocks of oats are a little above average.

Paris, Ill. (8) I do not think there will be much corn moved. Farmers holding oats for higher prices. Not moving oats in elevators.

Highland, Ill. (6): Very little surplus corn and no surplus oats for shipment. Hessian fly is badly damaging wheat. Oats prospects cut in half.

Riggston, Ill. (5): Do not expect a movement of corn from farmers' hands immediately following corn planting. No oats here. No oats in store.

Vermont, Ill. (2): Look for fair movement of corn after planting. Also some oats but great many oats being fed. Stocks of oats not over average.

Decatur, Ill. (5): Light movement of corn after corn planting. Not many oats left in farmers' hands. Average stocks of oats in country elevators.

Ashton, Ill. (4): Will be a fair movement of corn after planting. Movement of oats at present values will be moderate and elevator stocks light.

INDIANA.

Lawrenceburg, Ind. (9): Not much corn to move. Oats are all gone.

Decatur, Ind. (7): No corn to move. Feeding oats. Country elevator stocks small.

Bloomington, Ind. (3) Some corn moving. No oats to move. Stocks are exhausted.

Brook, Ind. (1): No corn here. Some oats will move after planting. No oats in elevator.

Winamac, Ind. (1): Little corn to move, also oats. Stocks of oats are very small.

Rushville, Ind. (8): No heavy movement of corn or oats. About average amount of oats in elevators.

Jasper, Ind. (3): Corn will move very freely now. Oats all sold. None to move. Are having oats shipped in.

Angola, Ind. (7): No home grown corn for sale. Very few oats coming to market. Stocks of oats very small.

Marion, Ind. (5) No corn to move to market. Some oats to move. The stocks of oats in country elevators are small.

Frankfort, Ind. (2): Do not anticipate large movement of corn or oats at present. Stocks of oats small in elevators.

Winchester, Ind. (8): No corn to move. The stocks of oats in the country elevators are larger than usual but being sold to feeders.

Tipton, Ind. (5): Do not anticipate movement of corn. Will feed rather than sell at present prices. There are large stocks of oats in country elevators.

Markle, Ind. (7): There is no corn in this territory to move. Farmers are

Authorized in States of Iowa, South Dakota, Nebraska, Kansas, Illinois, Ohio and Pennsylvania

Western Grain Dealers Mutual Fire Insurance Company

Hubbell Building

Des Moines, Iowa

CARELESSNESS

Accumulations of dust and dirt in pit, workfloor and cupola of elevator, neglect to lubricate motors and bearings, untidiness and bad housekeeping inside and about the premises, are the causes of most of the fires recorded as "Unknown," and the result of CARELESSNESS. It is obvious that the burden of reducing the cost of insurance rests upon the policyholders and the habit of CARELESSNESS should be corrected.

all out of corn. There is no movement of oats at present market values. The stocks of oats in country elevators are small.

Rensselaer, Ind. (1): Do not anticipate a movement of corn from farmers' hands immediately following corn planting. Very few oats left to move here. Stocks of oats in country elevators in this locality are very small.

Wabash, Ind. (4): Do not look for a movement of corn from farmers' hands immediately following corn planting. There will be no movement of oats at present prices. The stocks of oats in country elevators are about average.

IOWA.

Randolph, Ia. (3): No movement of oats.

Jefferson, Ia. (5): Very little corn left here.

Indianola, Ia. (6): No corn or oats shipped.

Hamlin, Ia. (2) There is neither oats nor corn to sell here. Everybody is short of feed.

Corydon, Ia. (6): I do not expect to see corn or oats move. Looks as though no surplus of oats here.

Gilbert, Ia. (5): There is some corn to be moved in the next two weeks. Oats will not move at this price.

New Sharon, Ia. (5): Very little corn available. No oats moving and not many in country. No oats in elevators.

Wall Lake, Ia. (2): Very little corn will move after planting. There will be a light movement of oats. Stocks in elevators small.

Guthrie Center, Ia. (2): Wheat and oats are recovering from the late frosts. Oats are beginning to show the effects of dry weather.

Arthur, Ia. (2): Do not look for a movement of corn from farmers' hands until after corn planting. No oats will be sold at present prices.

Belmond, Ia. (4): No corn for shipment. Farmers buying corn from elevators. Many farmers feeding oats to hogs as they have no corn.

Henderson, Ia. (3): There will be some corn movement after planting but not big. No oats for market. Stocks of oats are small in elevators.

Osceloa, Ia. (6): There will be little or no movement of corn after planting. No oats will move off farms at present prices. Elevator oats stocks are below average.

Glidden, Ia. (2): If price stays up there may be a movement of corn from farmers' hands immediately following corn planting. The stocks of oats in

country elevators in this locality are average.

New Hampton, Iowa: The condition of the soil is very good now for the growth of oats and corn. Practically no oats or corn for sale by the farmers now and very little of either in the elevators.

Onawa, Ia. (2): Do not believe there will be any movement of corn after corn planting. There will be no movement of oats at present market values. Practically no corn and oats back in farmers' hands.

Guthrie Center, Ia. (2): There will be very little corn received from farmers till a new crop is raised. Some oats in the country but all held for feed. Elevators are practically empty here and at town nearby.

Tama, Ia. (5): Anticipate a light movement of corn from farmers' hands immediately following corn planting. Slow movement of oats at present prices. Not much corn or oats left to move from farmers.

Lowden, Ia. (8): No corn for sale. No oats for sale to market. Every bit of grain grown here will be consumed at home. Have paid out \$70,000 for corn shipped in. Not a bushel of oats in elevators and farmers will not sell any under 50c.

KANSAS.

Madison, Kans. (9): No corn to move. No oats to move.

Oberlin, Kans. (1): Light movement of corn is looked for soon.

Logan, Kans. (4): Very little old corn to move out. No oats.

Sedan, Kans. (9): Wheat looks good. Will be harvesting two weeks early.

Wellington, Kans. (6): Little or no corn left on farms to move. No oats here.

Wichita, Kans. (6): Corn fairly well moved. Very little oats left in this territory.

Mahaska, Kans. (4): Not many oats here. Small stocks of oats in country elevators.

Neodesha, Kans. (9): No corn to sell. No oats to sell. Small stocks of oats in farmers' hands.

WHEN SEPT. WHEAT WAS SELLING

in the low 130s, we predicted it would sell up 30 cents per Bu. It has already made two-thirds of this and will make the other one-third soon.

We confidently believe our estimate of not over 400 million Winter Wheat crop will be realized.

Freak weather is always followed by poor crops.

Stocks and Cotton continue to follow our predictions.

Ask about our wire and letter service.

MARKET CHART

O. D. WEAVER, Manager

309 So. LaSalle St.

Chicago, Ill.

HENRY RANG & CO.

Established 1862

Grain Merchants

CHICAGO MILWAUKEE
SIOUX CITY

Satanta, Kans.: No surplus corn or oats to move.

Ashland, Kans. (3): Will be no corn or oats to move. Oats stocks in elevators are very small.

Minneapolis, Kans. (4): No corn to sell. No oats to offer. Small stocks of oats in country elevators.

Lyons, Kans. (5): Very little surplus corn and no oats in this territory. Corn quoted about \$1.00 per bushel.

Hillsboro, Kans. (5): Not much corn moving. Very little oats coming in. Stocks of oats in elevators small.

Uniontown, Kans. (9): Farmers will sell corn as soon as they can get \$1.00 per bushel. No oats to move. None in elevators.

Greensburg, Kans. (6): Very little surplus corn in farmers' hands and not much will be offered until next crop is insured. No oats in this locality.

Belleville, Kans. (4): The balance of corn that is in farmers' hands will be fed to hogs and cattle. There are no oats to be shipped out of here and none in the elevators.

Concordia, Kans. (4): Do not anticipate a movement of corn from farmers' hands immediately after corn planting. No oats to market. Small stocks of oats in country elevators.

Pittsburg, Kans. (9): Weather entirely too cool for corn here, which has all been planted and is being cultivated. Plenty of moisture and cool, so wheat should be good. Some local wheat but it has not made the progress that it should. We estimate that it has gone back 10 points within the last three weeks.

MINNESOTA.

Prior Lake, Minn. (6): No corn or oats here for market.

Donnelly, Minn. (2): No corn to ship; 90 per cent of oats sold. Stocks of oats in elevators small.

Eden Prairie, Minn. (6): Most all corn and oats fed up. There is no grain stored in any elevator.

Wells, Minn. (6): Not much corn left in this territory to move. Light stocks of oats in farmers' hands holding for 50c.

Warren, Minn. (1) No oats moving. Small stocks of oats in farmers' hands and small stocks in elevators. Still freezing nights.

Hutchinson, Minn. (6): Not much corn here. No oats to be got at the market price. There will not be any more oats shipped from here.

London, Minn. (6): No corn here for sale. Not much oats to be sold at present prices. Stocks of oats in average. About 33 per cent of the oats are on farms.

Minneota, Minn. (3): Look for free movement of corn after corn planting. Oats will move slow at present prices. Stocks of oats are considerably larger than average.

MISSOURI.

Paris, Mo. (5): Corn will move very slowly. No surplus oats here.

Bethany, Mo.: Weather warming up. Wheat not improving as it should.

Columbia, Mo. (5): No corn to move. Shipping in a big way. No oats in this section.

Chillicothe, Mo. (1): No oats or corn will be sold in this territory. Elevators shipping in oats.

Higginsville, Mo. (2): Farmers inclined to hold corn and await results of the growing crop.

Springfield, Mo. (3): Do not expect free movement of corn or oats. No oats held in elevators.

Marionville, Mo.: No marketing of corn; 98 per cent of corn planted. No oats stored for sale.

Lamar, Mo. (3): Do not look for much corn movement. No oats here to move. Very few oats in elevators.

Salisbury, Mo. (4): Do not look for a movement of corn until new crop. No oats here. Stocks in elevator small.

MONTANA.

Kalispell, Mont.: Small stocks of oats in elevators.

Glendive, Mont.: No corn to sell here. None in the country. Very small stocks of oats in elevators.

Glasgow, Mont.: No corn for shipment here. No oats for shipment. Just enough oats for local consumption. Has been freezing ice a lot and damaging crops.

Billings, Mont.: No commercial corn. No oats on hand.

NEBRASKA.

Oakland, Neb. (7): No corn to move here.

Winnetoon, Neb. (7): No corn or oats here to move.

Superior, Neb. (9): No movement of corn here. No oats in any position.

Roseland, Neb. (9): Wheat is spotted and thin in places. Color and growth good.

Humboldt, Neb. (9): Shipping in corn and oats. No oats will be sold at present prices.

Superior, Neb. (9): Very little corn

Total American, Canadian, afloat and British visible supply:			

or oats left in farmers' hands. Oats stocks are small.

Orleans, Neb. (6): After corn is planted farmers will sell freely. Few oats planted here this year.

Central City, Neb. (9): Think corn movement will be light. No oats in this territory. No oats stocks in elevators.

Belden, Neb. (7): Some corn will move after planting. No oats moving. Stock of oats in country elevators small.

McCook, Neb. (6): We do not expect any heavy movement of corn in the near future. No oats in this section of the state.

Nebraska City, Neb. (9): Some movement of corn if prices stay up. No oats to move. Very light stocks of oats in the country elevators.

Neligh, Neb. (7): Not a great deal of corn to move, mostly fed; some will move in June. No oats to move. Stocks of oats in country elevators are very small.

NORTH DAKOTA.

Cavalier, N. Dak.: Stocks of oats in country elevator average.

St. Thomas, N. D. (7): No corn to market. Average stock of oats in elevators.

Lakota, N. D. (7): No oats will move at present prices. Stocks of oats in elevators small.

Carrington, N. D. (5) No corn to move. Very little oats left. No one selling. Stocks of oats in the country elevators are average.

OHIO.

Lima, Ohio (1): Only very few farmers in this vicinity have marketable wheat, corn or oats on hand.

Blanchester, Ohio (3): Farmers buying corn. No oats for sale on farms. The stocks of oats in the country elevators are small.

Bucyrus, Ohio (4): We do not anticipate a movement of corn from farmers' hands immediately following corn planting. No movement of oats at present market values.

CASH PRICES FOR GRAIN.

Terminal Markets

MEMPHIS.

George Williamson, Correspondent.

W. H. Bone of the Thomas Milling Co., El Reno, Okla., was a recent visitor.

H. C. Kaplan of New Orleans was on the Merchants' Exchange floor Wednesday.

Donald Ame of the Knollenberg Mill Co., Quincy, Ill., was mingling with the flour trade here during the week.

Milton R. Hunt, merchandise broker and son of Milton H. Hunt, president of the Oliver-Finne Grocer Co., accidentally shot his hand Friday night and it had to be amputated.

Farm work is being pushed as rapidly as possible, but rains are beginning to be needed again, as those received recently were insufficient following such a long drought. Since the first of January this station shows a deficiency of slightly over 13 inches from normal.

C. S. Kenney of John Wade & Sons was recently elected vice-president of the corporation. Our readers will recall the statement in a recent issue that he had been placed in charge of the business as general manager and with the vice-presidency his position and influence will carry still further weight.

Ben H. Williamson, Jr., who has been operating the brokerage firm of Ben H. Williamson & Co. since the death of his father some months ago, specializing in flour and millfeeds, has sold the controlling interest in it to M. G. Odeneal, well known to the local trade for several years. Mr. Williamson will go to Florida soon and may possibly locate in that state, although he has not definitely determined to leave this city.

Because of his wife's health, E. W. Sommers, who has been engaged in the brokerage business under the style of the Valley Brokerage Co., has sold the control of it to Walter M. Browne, who has been in the brokerage business for several years as Walter M. Browne & Co. The latter will operate both, as the lines handled are somewhat different. Mr. Sommers contemplates going with the 3-Minute Cereal Co. of Cedar Rapids, Ia., later.

Receipts of corn for the past week increased 122 cars, the largest in some time, but demand is still reported slow. Buying is of hand to mouth sort, feeders still giving preference to oats. Cash No. 3 white corn is quotable at \$1.21, No. 3 mixed at \$1.14 and No. 3 yellow at \$1.22. Receipts of oats were 135 cars, less than for several weeks, so stocks are rather small and the market is slightly firmer. Track No. 3 white are now selling at 51½ to 52c.

BALTIMORE.

Robert C. Neu, Correspondent.

The products of the Bay State Milling Co., Winona, Minn., will henceforth be distributed in Baltimore by George Ruhl, flour jobber.

For the first time in many months rye stocks in the Baltimore market have now dwindled to below the million bushel mark. New export business, however, in this grain is light.

Receipts of water-borne corn in the Baltimore market so far this season amount to 110,000 bushels, compared with 304,000 bushels arrived up to the corresponding date last year.

Henry A. Lederer, of Lederer Bros., grain and flour commission merchants of this market, who has been on a four-months' cruise around the world, is expected to return to Baltimore early in June.

Thomas Johnston, head of the grain firm of Thomas Johnston & Co., Chamber of Commerce building, this city, has entirely recovered from the effects of his recent fall and is again looking after the affairs of his business.

Charles England and Ferdinand A. Meyer, both former presidents of this organization, represented the Baltimore Chamber of Commerce at the meetings in Washington last week of the Chamber of Commerce of the United States of America.

Among the out-of-town visitors on the floor of the Baltimore Chamber of Commerce last week were Kenneth P. Ed-

wards, of Chicago, Ill.; David G. Page, miller, of Topeka, Kans.; J. H. Woolridge, secretary of the Potomac State Bakers' Association, with headquarters in Washington, D. C.; H. G. Fansius, railroad agent, of New York City.

Final preparations for the entertainment of the delegates and friends of the National Federated Flour Clubs, of which A. W. Mears, president of the Baltimore Chamber of Commerce is the head, are being made by the local committee in charge of this event. Acceptances to attend have been received from members of four clubs in Chicago, Buffalo, Boston, Philadelphia, Pittsburgh, Kansas City, St. Louis and New York, and a successful meeting is anticipated. The convention will take place June 5 and 6, with headquarters at the Southern Hotel.

One of the interesting side trips in connection with the forthcoming annual convention in this city of the National Federated Flour Clubs will be a boat trip to the historic old State House at Annapolis, Md., where Washington, the father of his country, tendered his resignation to the Congress there in session as commander-in-chief of the Continental Army, on Dec. 23, 1783. The old Senate chamber, in which this historic event occurred, has been preserved in the same condition in which it then was, and the desk over which Washington's resignation passed is still there today.

Flour: May 23, 1925. The domestic demand for flour is rather limited and only an occasional car of some special brand is changing hands. The mills, however, are maintaining rather firm views on winter wheat brands of flour. Export business has fallen off sharply and rye flour is quiet. Quotations, per 98 lbs. cotton or jute sacks, follow: Spring patent, \$9.25@9.50; spring straight, \$8.75@9.00; hard winter patent, \$9.00@9.25; hard winter straight, \$8.50@8.75; winter patent, \$9.00@9.25; winter straight, \$8.25@8.50; rye flour, dark to white, \$7.00@8.00.

PORTLAND, ORE.

Among the Portlanders who attended the meeting of the Chamber of Commerce of the U. S. in Washington, last week were O. M. Clark, F. C. Knapp, W. B. D. Dodson, R. H. Burnside and R. W. Jacobs.

On his return from a trip to his old home town of Pendleton, W. L. Thompson, vice president of the First National bank, reported that farmers there believe they will harvest 50 per cent more wheat this year than last. Much wheat has already been contracted at \$1.25 a bushel for No. 1 grade, Mr. Thompson reported.

Erection of the wooden laminated grain bins on property of the Crowns mills, to be located in the rear of the north dock, in connection with new bulk wheat facilities, has been approved by the commission of public docks. The north dock was built during the last few years. The bin system will cover a space 50 by 100 feet back of and adjoining the dock proper.

Peanuts from the orient are playing a more important part this season in offshore receipts at Portland. A gain had been recorded up to May 1 in the volume over last year's showing for the first four months, and the May receipts presage even further relative increases in the trade. A reason advanced for heavier importations is a shortage in the domestic crop.

Under auspices of the foreign trade department of the Chamber of Commerce a luncheon was given on May 15 in the main dining room honoring Harold Dotterer of Washington, D. C., chief of the division of district offices of the bureau of foreign and domestic commerce; James E. Peebles, district manager in charge of the new Portland office; Shirl H. Blalock and Leonard H. Gary, district managers at Seattle and San Francisco, respectively.

Farmers about Pendleton are thankful for the existence of federation wheat, according to E. B. Aldrich, publisher. Mr. Aldrich is at the Multnomah hotel, coming to Portland on business connected with Oregon Agricultural College, of the board of regents of which he is a member. Much of the area in which wheat was frozen out last winter was reseeded to federation

wheat and it is looking remarkably well, he said, although it is still too early to make crop predictions.

April flour exports to the far east were 14,651 barrels, while in April, 1924, the orient drew 104,279 barrels. For the season up to April 30, Columbia river flour shipments to the far east are shown as 271,140 barrels, and for the same period in the 1923-24 season they were 2,379,694 barrels. Puget Sound exports to the Orient were 19,246 barrels in April as compared with 92,161 barrels the same month last year and for the present season to April 30 have been 818,923 barrels, where for the same time during the 1923-24 season they were 2,541,771 barrels.

Flour parcels for Hongkong aggregating 9,900 barrels, others for Manila amounting to 2,125 barrels and one lot for Cebu, making a total of 12,275 barrels, represent the principal cereal consignments aboard the steamer West Jessup, cleared the 16th. There was a small lot of bran for Manila delivery. Flour exports in that direction have been nominal this season. Merchants' Exchange records indicate the total on the West Jessup was the largest amount shipped from Portland on an oriental freighter since September, though in January one vessel carried 11,224 barrels and some steamers have been dispatched with as much as 10,000 barrels.

The Western Traffic Conference held its fourth annual convention in this city on the 19th, 20th and 21st. Among the topics discussed were rate adjustments, foreign freight forwarding, forms for traffic departments and store door delivery.

Terminal receipts, in cars, were reported by the Merchants' Exchange as follows:

	Portland—	Wht. Bly.	Flr. Cn.	Ots.	Hy.

WINNIPEG.

Geo. H. Measham, Correspondent.

Oats are firm and continue to be in good demand.

There is also a fairly active market for barley. Rye continues to be a drug on the market. Flax is steady on a light trade. Stocks at the lake head are being rapidly reduced and it looks as though there will be very little left for shipment after June 1.

The flour demand, which has been very slack for quite a long time, is reported as showing improvement at the week end. Domestic orders are coming in in fair volume, but there is very little doing in export circles. There is a steady demand for mill feed.

The Free Press crop report published Saturday indicated condition about as expected. For the present things look good. That there is no increase in wheat acreage was a disappointment to bears, who have been confident there would be. Light rains in various sectors have been beneficial. The Canadian west as a whole can get along nicely without rain for another couple of weeks.

Wheat has worked to higher levels during the week on a nervous and erratic market. The weather has been an influence and a weather market is notoriously unstable. Statistics, however, are becoming increasingly favorable to the bulls. There is export business going on in Canadian low grade wheats, but so far transactions have been confined to stocks at the seaboard or near by.

North American crop news is decidedly mixed. From what can be digested from the various reports of examiners in the fields, U. S. winter wheat has not improved since the last government report was issued and spring wheat has been held back by hard frosts and is now needing rain. The Canadian crop on the whole looks well. Wheat seeding is finished and most of the coarse grains sown. There are complaints of slow germination in some sections and of dry conditions in others. Showers on Friday benefited many districts.

The feature of Saturday's market was an active inquiry for cash wheat for mid-summer shipment judged to be coming from British millers. They will probably realize that they have overstayed the market and a scramble for what top grade

The Rocky Mountain Grain Co.

Branch Offices: Nantes Bordeaux Marseilles

hard wheat is left in North America would surprise no one. The fact that Canadian mills bought 100,000 Duluth spring wheat earlier in the week was a strange development. Holders have no notion of selling cash wheat for future positions, being firm in the belief that top grades will command fancy premiums later on.

DES MOINES.

J. H. Owens, Correspondent.

The Chris Williams elevator at Boone was destroyed by fire Saturday.

J. D. Kent, president, Des Moines Elev. & Grain Co., was a visitor in Kansas City last week.

Frank Pagett, of the Des Moines Elev. & Grain Co., spent two days in Chicago last week.

Mr. and Mrs. Lee Lockwood have returned from a three weeks' automobile trip through Tennessee, Alabama and Arkansas.

The weather the past week has been quite freakish. The temperature dropped from 98 degrees on Friday, which was the hottest May day on record here, to 28 degrees on Sunday.

OKLAHOMA CITY, OKLA.

W. F. Kerr, Correspondent.

J. L. Yergler, formerly grain buyer for the Oklahoma Mill Co. at Kingfisher, has been employed as manager of the grain and traffic department of the Acme Milling Co., Oklahoma City.

Labor bureaus are doing Oklahoma an injustice in advertising that the state will need 7,500 harvest hands, says Claude Connally, State labor commissioner. No outside help will be needed in the harvest, Mr. Connally believes, due to the short wheat crop and the increased number of combination cutters and threshers in use.

The Mashburn-Mullin Grain Co. has been organized by P. J. Mullin and E. V. Mashburn, with offices at Ft. Worth and Oklahoma City. Mr. Mashburn was grain buyer for the Shawnee Milling Co. and will run the Oklahoma City office. Mr. Mullin will have charge of the Ft. Worth office. He has been in the grain business for many years at Ft. Worth.

The Santa Fe better wheat special this year starts its tour of Oklahoma on June 1. Among the speakers will be Dr. Bradford Knapp, president of the Oklahoma A. & M. College, J. A. Whutehurst, president of the State Board of Agriculture, H. M. Bainer, director of the Southwest Wheat Improvement Association, E. H. Linzee, state grain inspector, and some minor officials of the A. & M. College.

NEW YORK.

J. M. Nugent, Correspondent.

Rye export still continues sluggish, there is an inquiry for small lots on the breaks but no aggressive foreign buying to report, stocks are still ample at the American seaboard and the new crop is progressing.

The continent bought several full cargoes afloat during the latter part of the week from the Plate and Australia. England has bought 15 or 20 loads of Manitobas for October shipment (new crop), probably speculatively.

Export business in wheat during the past week has been spasmodic, some 2 hard winters and 1 northern spring Duluth wheats have sold to the United Kingdom together with fair quantities of 1 Manitobas as well as some low grade Manitobas to the continent.

Buying of oats for continental account has been quite active this week, but mostly of the Canadian varieties. Barley remains dull and uninteresting, the heavy rains in California have not been beneficial and some of the new barley there is consequently stained.

The following visited the New York Produce Exchange during the past week: W. P. Anderson of Chicago; A. P. Schiltuis of Rotterdam; J. M. Lazano of Cuba;

Flour Situation: There has been a better demand for flour especially from small jobbers, this is the first sign of any inquiry to amount to much and apparently stocks are light. There is a fair inquiry in northwest and southwestern milling centers with prices of both winter and spring flours firmly held. Exports are light and clearance small.

Spring wheat patents, \$8.50@9 per barrel.
Soft winter patents, \$8.50@9 per barrel.
Hard winter patents, \$8.50@9 per barrel.

SIOUX CITY.

Harrison Kilborne, secretary of the Chamber of Commerce, seriously injured his left leg recently through misjudging the height of the curbing.

John Adams has been reappointed assistant secretary of the Chamber of Commerce and Harrison Kilbourne has been re-elected general secretary.

F. L. Eaton, having resigned the position of president of the Chamber of Commerce, to which he was recently unanimously elected, David W. Stewart has been chosen to fill it.

Installation of newly elected officers of the Sioux City Traffic Club were held at the Chamber of Commerce on last Wednesday evening. L. E. Perry, president; Allen Johnson, vice president; Ray Burke, secretary-treasurer, and E. P. English, Frank Higgins, Fuller Haskins and George Simmons, directors, will assume office at that time.

NEW ORLEANS.

M. L. Davis, Correspondent.

John B. Sanford, superintendent of the Public Grain Elevator, is on a business visit to St. Louis, Chicago, Kansas City, and Omaha.

Stocks in elevator as of today are: Wheat, 1,449,000 bus.; corn, 46,000 bus.; oats, 59,000 bus.; rye, 2,000 bu. Cars on track: corn, 23.

Standard blackstrap molasses is firm and unchanged at 13c per gallon, f.o.b. tank cars New Orleans; medium is quoted at 13½c and light blackstrap at 14c per gallon.

Victor M. Cutter, president of the United Fruit Company, spent several days in New Orleans this week as a guest of Crawford H. Ellis, vice-president of the company.

The West Kentucky Coal Company's tow boat C. F. Richardson arrived this week from Cairo carrying 138,000 bushels wheat consigned to C. B. Fox Company, for export.

W. J. Finlan, manager of the Aluminum Line, has returned from a 6-week business visit of the Leeward and Winward Islands and ports on the north coast of South America.

M. L. Costley, general freight agent of the I. C. R. R., announced that the company's fast freight schedules between New Orleans and Chicago, Louisville, St. Louis, and Indianapolis, and other points north, has been shortened by one day. Commodities formerly classed as time freight will be speeded up two full business days when moving between the same points. A relative shortening of the schedule is in effect between intermediate points such as Memphis, Fulton, Ky., and Cairo, Ill.

BUFFALO.

E. C. Bennington, Buffalo branch manager of the Chase Bag Co., together with the other branch managers, has been on an inspection tour of all of the Chase bag plants.

John Gerard, for several years wheat buyer at the Buffalo plant of the Hecker-Jones-Jewell Milling Co., is now located in New York in the same capacity, taking the place of E. R. Coker, who died.

The Chase Bag Co. announces the reconstruction of the Buffalo plant which was started Monday, May 25. Contracts have been awarded for an extensive addition along with remodeling of the present plant and equipment. New machinery will be added and the capacity greatly increased, making it one of the most modern bag manufacturing plants in the country.

It is reported that the Grain Marketing Co. is no longer operating the local business known as the Buffalo Cereal Mill, but this is incorrect and doubtless due to the recent resignation of H. C. Lee, now in charge of the Eastern States Farmers Exchange Buffalo mill. W. H. Hudson is the present manager of the Buffalo Cereal Co., an experienced and long standing member of the trade, until recently managing the export elevator in Buffalo and for many years located in Chicago.

The new president of the New York State Feed Manufacturers Ass'n is C. A. Coddington of the Beacon Milling Co., Cayuga, N. Y., succeeding E. N. Elmore of Oneonta, N. Y. The other officers are: First vice-president, H. L. Hammond, Charles M. Cox & Co., Boston; second vice-president, James Boyce, Thomas Boyce Feed Co., Attica, N. Y.; treasurer, Lloyd Hedrick, Ralston Purina Mills, Buffalo; secretary, Fred E. Pond, Buffalo. President Coddington was elected chairman of the executive committee, the other members being E. N. Elmore, Oneonta; A. M. Cooke, Syracuse; Max Cohn, Waverly, and George E. Todd, Buffalo. Ex-officio members of the committee are H. L. Hammond, Boston, and James Boyce, Attica.

LOS ANGELES.

C. G. White, Correspondent.

The annual picnic of the San Bernardino County Farm Bureau will be held Saturday, June 13th, at Camp Cajon.

A. Gregory of Redlands, Calif., has imported several carloads of thin cattle from Mexico. Mr. Gregory has been very successful in fattening cattle, value of the fertilizer for his large citrus grove alone running into large sums.

About fifteen members of the Los Angeles Grain Ex. are planning on attending the regular meeting of the Pacific Coast Regional Advisory Board at Fresno on May 22nd, for the purpose of obtaining the bulletin system of notification on carloads of grain, hay, seed and straw held for inspection at Los Angeles.

Announcement was made this week by the J. B. Hill Grain Co. of Fresno, Calif., of the opening of an office in this city on June 1st. The new office will be in charge of Mr. C. B. Holladay, who has been connected with Smith & Scott, Inc., for the past four years. The new firm will be located at 633 I. W. Hellman building and will handle hay and grain for import and export in any quantities.

The market during the past week has shown greater activity and a stronger demand than for several weeks. The increased demand for grain and grain products in the southern part of the state has stimulated trading here to a great extent. The 1925 crop of Imperial Valley barley is now arriving at this terminal; the quality is very good. The San Joaquin Valley crop from the northern part of the state should be moving by the 1st of June.

It is reported that the famous bull, Prince Aaggie of Berywood, and 165 cows, together with most of the movable equipment of the Berywood Stock Farm, have been sold to August A. Rubel of Ventura county. He has purchased the Camulos ranch in Ventura county and expects to have a Holstein herd second to none. It is understood that the total purchase price of the Berywood herd was \$175,000, of which \$110,000 was paid for Prince Aaggie.

Fifteen-day barley is selling at \$1.80 per cwt. No. 3 or better bulk kafir for prompt shipment is selling at \$2.26; No. 3 or better bulk kafir board terms selling at \$2.25; No. 2 yellow corn prompt shipment selling at \$2.46; No. 2 Yellow corn board terms selling at \$2.48@2.49; December barley in 100-ton lot is being offered at \$1.72½, while June is selling at \$1.70. The ground feed arrivals for the week amounted to 29 cars; the market is very active. Utah-Idaho mill-run selling at \$40; Kansas bran, \$36; alfalfa meal, medium ground, \$29; molasses alfalfa, mixed, \$27; cottonseed meal, \$40; beet pulp, \$40.65; rolled barley, \$39; Copra meal, \$30; linseed meal, \$41.

OMAHA.

Leigh Leslie, Correspondent.

John C. Ackerman of the Mid-West Grain Co. made a trip over the state this week.

S. S. Carlisle, formerly president of the Carlisle-Burns Grain Co., returned to St. Louis Thursday after a two weeks' visit with friends in Omaha.

Beatrice, Neb., wired: "Farmers in Gage county report that much corn was washed out by the heavy rains of last week. In some of the fields worms are doing damage as a result of the cool, backward weather."

A report from Gretna, Neb., under date of May 22, says: "Unless rain comes soon the wheat crop in this part of the state will suffer. The oats crops also needs rain badly. In some fields wheat is heading prematurely."

A wire from Norfolk, Neb., under date of May 20, says: "A heavy rainstorm, accompanied at some places by hail, swept through this part of the state Tuesday night. The storm extended from North Bend through West Point, Wayne, Royal, Wakefield and Randolph. Some damage to crops was reported."

Reports received here are to the effect that the first two weeks of May were generally favorable for grain crops in Nebraska, the surface soil receiving plenty of moisture, although temperatures were abnormally low. Advices received by the Burlington railway give the condition of winter wheat on that road's various divisions in this state as follows: Omaha division 64, Lincoln division 80, and McCook division 85. The average for the whole state is reported to be 73.5. The condition of oats and other small grains is excellent, according to the Burlington's advices. Corn planting has been delayed by the cool weather but it was practically completed this week.

PHILADELPHIA.

Geo. A. Rudderow, Correspondent.

Exports of grain for the week ending May 22 were: Wheat, 385,411 bus.; corn, none; oats, 205,000 bus.; rye, none; barley, 100,000 bus.

Receipts for the week ending May 23 were: Flour, 34,314 bbls.; wheat, 589,963 bus.; corn, 4,946 bus.; oats, 336,136 bus.; rye, 44,042 bus.; barley, 239,676 bus., and 420 tons of feed.

Ellis McMullin of the grain and feed firm of David McMullin & Co., who was stricken with pneumonia after returning from a fishing trip down in Virginia is now convalescent.

The members of the Philadelphia Flour Club are looking forward with much interest to the coming convention of the Federation of Flour Clubs to be held in Baltimore on June 5th and 6th next.

A conference was held the early part of the week between the feed committee on one side and G. C. Wheeler of the Agricultural Department, Washington, D. C., on the other, to discuss the mode of sending out reports by the agricultural bureau to farmers throughout the country. The government in its reports quotes the prices to the farmer on the same basis as the jobber pays for his to the manufacturer, and on sight draft instead of arrival draft which makes considerable difference. The jobber cannot sell at retail to the farmer at the price paid the mills.

Out of town visitors registered at the Commercial Exchange during the week ending May 23, were: E. O. Wright, Menominee, Wis.; C. A. Berkenback, Kansas City, Mo.; G. A. Wesdom, Kansas City, Mo.; G. E. Tawney, Chicago; R. W. Goodell, Minneapolis; S. L. Rice, Metamora, Ohio; J. W. Arthurs, Kenton, Del.; F. Anderson, York, Pa.; Frank Patterson and W. H. Manbeck, Mifflin; Stauffer Hiestand, Lititz, Pa.; P. C. Wheeler, Washington, D. C.; J. Frank Webb, Smyrna, Del.; J. R. Eddington, Federsburg, Md.; S. M. Beck, Townsend, Del.; G. R. Forrester, Toledo; J. N. Frankel, Chicago; E. A. Trexler, Trexler, Pa., and H. E. Tweeden, Buffalo.

Flour: Receipts of flour for the week ending May 23d were 34,314 bbls. The market was without material change and prices were steadily held. Purchasers still operate for present wants but millers are not inclined to make much concession in order to force business.

We quote per 196 lbs packed in 140-lb. jute sacks:

Soft winter straight, western...	\$ 8.50@ 9.00
Soft winter straight, nearby...	8.50@ 8.75
Hard winter straight.....	8.50@ 9.00
Hard winter short patent.....	9.00@ 9.50
Spring first clear.....	7.75@ 8.25
Spring patent.....	8.50@ 9.00
Spring short patent.....	9.50@10.00
Fancy spring and city mills	
patent family brands.....	10.10@10.75
Rye Flour—\$7.40@7.75 per bbl. in sacks	
as to quality.	

MILWAUKEE.

D. K. Steenberg, Correspondent.

Receipts last week were 76 cars barley, 34 corn, 134 oats, 12 wheat, 13 rye, 0 flax, 4 miscellaneous; total 273 cars, against 338 the week before, 172 a year ago and 273 in 1923.

Shipments last week were 173,715 bushels of oats, 275,014 corn, 46,560 barley, 45,933 wheat, 18,120 rye; total 559,342 bushels, against 313,687 the preceding week and 646,141 a year ago.

The Crawford-Reitman Mill Co. of Galesville, Wis., opened a branch office and warehouse at 200 South Front street, La Crosse, Wis., on Monday, May 18. The branch will handle flour and Purina feeds.

Irregularity in price fluctuations continues. Wheat is at better premiums for spring, but easier for some other descriptions; oats, ½@1c up; barley remains unchanged; corn is easy, and rye 5c lower. Movement light and demand fair.

Officials of the Milwaukee road have recently returned from a survey of the northwest. They predict that the wheat crop will be large in the region this year and are now rushing orders so as to obtain deliveries on approximately 3,000 new cars in time to be used in the fall wheat movement.

The Harmony Co-operative Produce Co. at Colby, Wis., is now rebuilding its elevator. The building will be thoroughly modernized and otherwise improved and considerably enlarged. When operations are completed the company will have one of the finest elevators and warehouses in northern Wisconsin.

One of the finest beds of tulips in the state, including more than 2,000 blossoms and many rare varieties, is now in full bloom in the garden at the home of Leroy La Budde of the La Budde Feed & Grain Co., Milwaukee. Mr. La Budde lives at 1540 Farwell avenue. His garden is attracting many interested visitors from all over Milwaukee county.

Milling production at Milwaukee last week amounted to 7,200 bbls., the same as in the preceding week, as compared with 2,000 in the same week of 1924. Receipts of flour at Milwaukee last week were 54,950 bbls., as compared with 39,990 bbls. in the same week of last year. Shipments were 10,640 bbls. last week as compared with 15,040 bbls. last year.

Minn., were among visitors at the Milwaukee Chamber of Commerce last week.

Wisconsin's wheat acreage this year is only 100,000 acres, the smallest since the state was settled, according to B. H. Hibbard, professor of agricultural economics at the University of Wisconsin. In pioneer days the wheat acreage in the state usually approximated 1,500,000 acres. The early farmers, however, did not use scientific farming methods and wore out the soil. Consequently the crops became poorer and poorer until gradually dairying supplanted wheat raising on Wisconsin farms. Wheat attempted a revival in Wisconsin on two different occasions. During the Civil War the revival failed because of the chinch bug and in the World War the revival failed because in the aftermath wheat prices declined faster than dairy prices.

DULUTH.

S. J. Schulte, Correspondent.

Wheat, durum and other grains being received are still grading up exceptionally well, according to officials of the Minnesota State Inspection Department. Little smutty wheat is showing up in the current receipts.

Stocks of oats in the elevators here are being gradually worked down but an aggregate of around 7,200,000 bushels is still being carried in the elevators. A feature of the last week was the closing of the

sale of a lot of oats for export. Over 480,000 bushels of oats were loaded out from the elevators at the end of the week for Buffalo delivery. The spot basis in oats here remains at 2½ cents under the Chicago July price. Operators here who were prominent in handling the last oats crop are expected to take a strong hand again next fall.

Buyers of the Occident Elevator Co. have been active in the spot market in spring wheat and durum all along so far this spring. The Barnum Grain Co. has also been a good buyer. The new Occident elevator is credited with being a material factor in making Duluth a better market in spot spring wheat and durum. With that competition country shippers have found it more profitable to ship a good proportion of their grain this way. A feature coming in for comment during the last week was the movement of a considerable tonnage of spring wheat up here from Minneapolis for eastern shipment.

Vessels handling grain have experienced an off period so far this spring. More boats are in the trade than there is grain offering for movement. Boat space for moving wheat and rye to Buffalo was offered during the week at 1½ cents a bushel. All but the larger steamers are chary about accepting charters at the current low figures as they claim they are unable to pull out even. They are in hopes of demand for space picking up a little later

on and then being able to obtain fair rates. A fair sized lot of spring wheat was sold by an elevator at the end of the week for shipment via Montreal.

Elevator men on this market claim to be showing better earnings than ordinarily for this off period of the year. Holdings of grain in the elevators are being reduced slowly by reason of the light shipping directions. Stocks aggregating over 20,000,000 bushels of all grains are being carried in the elevators, as compared with 35,000,000 bushels at the opening of navigation. A good proportion of the spring wheat and durum has been sold for eastern delivery, but buyers have been slow in taking it out. Millers' buying of wheat and durum has lately lacked aggressiveness. It was regarded as notable that buyers for the mills cut down the heavy premiums they had been paying for durum running high in protein 10 cents late in the week. They claimed that as they were covered for the time being they could not see any sense in continuing to pay fancy prices.

MINNEAPOLIS.

A. Paul, Correspondent.

Livingston Dickey of the Peavey Co. was married Saturday, May 23, to Miss Evelyn Beaudoux.

S. J. McCaull of the McCaull-Dinsmore Co. left Wednesday for a six weeks' tour of California.

Harter Walters of the Chas. E. Lewis Co. is among those touring the northwest on the "Friendship Special."

F. J. Seidl of the Stühr-Seidl Co. is making an extensive eastern trip, calling on business connections.

J. G. Hessburg of the Hiawatha Grain Co. is calling on the grain trade in Milwaukee, Chicago, Peoria and intermediate points.

Peter Merritt of the Turle Co. is back on the trading floor again after several days spent in the hospital having his tonsils removed.

Among the visitors on Minneapolis 'Change during the past week were the following: M. L. Grover of Milwaukee, B. F. Schwartz of New York City, S. Kameoka of Manchuria, J. W. Wood, H. W. Wilson and D. A. Willard of Duluth, E. E. Roseth of Aberdeen, S. D., J. A. Rasmussen, M. R. Robb, W. A. Wilkins and A. Carnes of Winnipeg.

MINNEAPOLIS CASH MARKETS.

Wheat: There were a number of important features in connection with the local cash wheat market during the past week. The first one was the further heavy depletion of the visible stocks, the cut for the past seven days totalling very close to the two million bushel mark, being 1,925,582 bushels vs. 1,451,681 last week and 467,400 bushels a year ago. Shipments were much heavier than receipts and the amount in store here today is some 3,000,000 bushels less than the same time a year ago.

A local house having wheat in store in Duluth worked two lots of 100,000 bushels each, on Friday and Saturday, to Canada; presumably for mill consumption. This would indicate that the large stocks at Port Arthur and Fort William are in strong hands and not to be had, when Canadian milling interests are willing to pay the freight and duty in addition, in order to secure the American wheat.

Although receipts are heavily overshadowed by current shipments, there was improvement noted in the matter of country car loadings during the past week; this improvement, however, will not be noticed until some time the coming week.

Local mills report flour business as being largely nominal in character but according to a statement credited to the wheat buyer for a large local mill, who happens to be in the southwest at the time, they expect a material improvement in flour sales during the next six weeks. The mills have been waiting for this improvement for more than six times six weeks but it never seems to have materialized. Flour buyers have been buying on the hand to mouth basis for such a long time now that nothing short of a miracle can bring about any big influx of business from that source. But whether the mills get the benefit of this long expected rush of buying or not, the fact remains that as each week passes, our stocks of wheat assume a much more desirable character.

Bad crop reports are beginning to come in from the spring wheat country; a number of commission houses having advices from supposedly reliable sources to the effect that the cold spring had resulted in killing the stools over widely scattered areas. Without question, the government report as of June 1st, will carry more of interest than any of similar date for a number of years past. The figures from the southwest were sufficiently bullish but if we are treated to one of similar character from the spring wheat country, there is strong likelihood of the revival of public interest in wheat futures again, such as we saw a few months back. Local May deliveries total 2,415,000 bushels up to date.

Based on Saturday's range of sales, No. 1 hard spring sold at 6@43c over the July; No. 1 dark northern, 5@42c over and No. 1 northern, 4@41c over. Durum wheat was slow sale; No. 1 amber being worked at Duluth July price to 13c over; No. 1 durum, 5c under to 10c over; No. 1 mixed, 8c under to 10c over.

Corn: Taken all in all, the local cash corn market was a dull affair during the past week. Receipts were very light naturally but there was but very little interest

shown in the limited offerings. One or two days there was fair demand for the dry corn but it was hard to interest the shipping trade in much of anything else. Shipping sales were generally light; the heaviest day being some 40,000 bushels. To many in the trade, corn looks low at present levels but when it is brought to mind that when it was twenty cents higher than right now, it really looked like a better buy than it does today and further, that the big industries began to back away from it then, saying that they could not afford to manufacture their various products from corn at that figure, it does not look quite so alluring from the standpoint of the prospective long. Local stocks showed a further decrease of some 125,000 bushels during the week; the total being 275,344 bushels vs. 410,786 last week and 502,923 last year.

Saturday's range of sales showed No. 1 yellow selling 1@3c under Chicago May, No. 4 at 6@8c under, No. 5 at 10@14c under and No. 6 at 16@18c under. No. 3 mixed sold at 7@9c under, No. 4 at 9@11c under, No. 5 at 13@16c under and No. 6 at 18@20c under.

Oats: This cereal came in for a very bad time of it during the past six days and each succeeding day was worse than its immediate predecessor as far as premiums for the cash article were concerned. Early in the week there was a fair demand for the real choice stuff but as it drew to a close, even this quality was in poor request. On Monday bids for No. 3 white were ½@1¼c over July but today, Saturday, it was a mighty difficult thing to get better than July price for them. Shipping sales averaged close to 150,000 bushels daily; one day there was talk of a round lot of a half million being taken by shipping interests but this could not be confirmed. Deliveries here have been very light so far this month, being only 15,000 bushels. It is to be expected that there will be a large load of this stuff delivered some day before the end of the month. Local stocks total 14,200,514 bushels vs. 14,978,571 last week and 1,530,390 a year ago.

PEORIA.

L. L. Eckard, Correspondent.

Grain receipts and shipments at Peoria for week ending Saturday, May 23, as compared with same week last year, as reported by secretary of the Peoria Board of Trade:

	1925.	1924.
Receipts—		
Wheat	39,600	15,000
Corn	333,800	366,000
Oats	187,300	156,250
Barley	7,000	4,200
Total	567,700	542,250
Shipments—		
Flour, barrels	35,700	32,700
Wheat	8,400	16,800
Corn	161,600	86,500
Oats	117,100	123,200
Barley	2,400	4,200
Total	289,500	230,700
Flour	34,300	31,800

Hogs at local yards were quoted 40@50c lower Saturday, with \$12.30 paid for choice weights. Market was very irregular and slow. A few early sales of choice sorted 180 to 200 pounders sold up to \$12.30; the bulk of good stuff sold late in session at \$12.10@12.25; packing grades, \$10.50@10.75; stags, \$9@9.50. Receipts were 1,200 head and some were carried over. Light hogs, \$11.10@12.30; medium, \$12.10@12.30; heavies, \$12.10@12.25; packers, \$10.50@10.75.

Cattle tone was steady with the week's decline, with the good veal calves selling at \$9.50 and down. Receipts were very light.

Corn receipts the past week showed a moderate increase. With 53 cars Saturday the offerings were in good demand on both local and shipping accounts and receipts were well cleaned up at prices 1 higher. No. 3 white, \$1.12½; No. 2 yellow, \$1.14@1.14½; No. 3 yellow, \$1.12½; No. 4 yellow, \$1.11½; No. 6 yellow, \$1.09½@1.10½; No. 2 mixed, \$1.14; No. 3 mixed, \$1.12½; No. 6 mixed, \$1.10½. Although offerings of corn to arrive have been somewhat larger the past week, the run is not near as large as expected.

Oats receipts were only 6 cars and no new business reported and market was very inactive.

James E. Bennett, president of James E. Bennett & Co., stopped at Peoria Thursday while making an extensive tour of the Illinois grain belt and stated that crop conditions were very favorable and at least a week to 10 days earlier than last year.

Heavy frosts were reported throughout the district Monday morning and no doubt considerable damage was done.

ST. JOSEPH.

N. K. Thomas, Correspondent.

Work on the storage tanks of the addition to the Burlington Public Elevator is almost completed insofar as the pouring of concrete is concerned.

B. V. Wasser and Martin Hayes, for years operating the Shannon Commission Co., office here, will on June 1st be affiliated with J. C. Moats & Co., at room 1406, Corby building. J. C. Moats & Co. will operate a wire house, with Jackson Bros. & Co. of Chicago as their correspondent.

Farnum-Winter & Co., the large Chicago house, has taken over the lease formerly held by Shannon Commission Co., effective June 1st, and will operate a wire house in room 1407, Corby building, han-

DANNEN HAY & GRAINCOMPANY

Shippers of Choice Quality Grain & Hay Write or Wire us for Delivered Prices
St. Joseph, Mo.

ding orders for both grain and stocks. Ross G. Wheaton, who will manage the office, has made application for membership in the St. Joseph Grain Exchange.

Arrivals of grain at St. Joseph showed an increase toward the close of the week ending May 23d. Wheat prices are five cents lower for the week on hard winters, and two lower on soft wheat. Corn values unchanged to 2 cents under previous Saturday. Oats values a cent lower for the week. Demand fair for corn and slow for hard wheat of common character.

ST. LOUIS.

A. T. Bales of the Geo. P. Plant Milling Co., has been in Kansas City.

R. E. Rye, St. Louis representative of the Denver Alfalfa Milling Co., was a recent visitor in Memphis.

W. G. Gorceion, branch manager in this city for the Southwestern Milling Co., was a recent visitor at the home office in Kansas City.

J. F. Hall is announced as the general manager of the old Koehler Flour Mills property which was recently purchased by the Marshall Hall Milling Co.

Among recent St. Louis visitors were Wm. Waterman, manager, J. S. Waterman & Co., New Orleans, and C. B. Stout, manager, Dixie-Portland Flour Co., Memphis.

Emil Summa, whose death was announced in the May 13 issue of this paper, was one of the oldest members of the Merchants Exchange, having joined about forty years ago.

W. K. Woods and W. J. Edwards represented the Merchants Exchange at the annual meeting of the Chamber of Commerce of the U. S., in Washington, D. C., last week.

John B. Krieger of the John B. Krieger Real Estate Co. reports having sold to A. H. Handlan the large property of the Regina Flour Mills, which covers a half block of ground on First street, running from Plum street to Poplar street with a depth of 165 feet, comprising about 38,000 square feet, on which there is a five-story brick building and a two-story corrugated iron building. This property is served by two switches from the Missouri Pacific Railroad.

Flour output of the following mills was 52,124 bbls. last week, against 45,700 the week before, as follows: G. P. Plant Milling Co. (city), 8,000; Stanard-Tilton Milling Co. (Alton, Ill., and Dallas, Tex.), 10,624; Kehlor Flour Mills Co. (East St. Louis, Ill.), none; Sparks Milling Co. (Alton, Ill., and Terre Haute, Ind.), 8,000; Saxony Milling Co. (city), 3,600; Meyer Milling Co. (Nashville, Ill., and Springfield, Mo.), 2,900; Hezel Milling Co. (East St. Louis, Ill.), 1,500; J. F. Imbs Milling Co. (Belle-ville, Ill.), 4,500; Bernet, Craft & Kaufmann Milling Co. (Mt. Carmel, Ill.), 6,500; Valier & Spies Milling Co. (4 mills), 5,000; Annan, Burg & Co. (city), 1,500.

KANSAS CITY.

T. J. Tanner, Correspondent.

M. Rosenbaum-Lorders, a German grain importer, with offices in Berlin, Hamburg and Rotterdam, was a guest of the Hall-Baker Grain Co. Friday.

Sixty thousand bus. of wheat, 643,000 bus. of corn and 150,000 bus. of oats have been delivered on Kansas City May contracts since the first of the month.

Visitors at the Board of Trade this week included J. W. Avery, Minneapolis, Minn.; G. Wood, Chicago, Ill.; J. D. Kent, Des Moines, Ia.; C. Douglass, Cedar Rapids, Ia.; H. Baldwin, Okmulgee, Okla.; J. W. Craig, Wichita, Kan., and L. Blacker, Gardner, Kan.

H. M. Bainer of Kansas City, director of the Southwestern Wheat Improvement Association, is one of the lecturers on a wheat demonstration train being operated in Kansas by the Atchison, Topeka and Santa Fe Railroad. Forty-two counties will be visited.

B. C. Moore and C. W. Lonsdale, members of the Kansas City Board of Trade, attended the annual meeting of the Chamber of Commerce of the United States in Washington, D. C., this week. Mr. Lonsdale was nominated as a director of the chamber to succeed himself.

As the result of a squabble between stockholders, the Producers' Warehouse Co., 1501 Guinotte avenue, Kansas City, went into the hands of a receiver Thursday. Henry Bundschu, a lawyer, took charge of the concern, which is capitalized at \$150,000. The company deals in broom corn.

Thomas B. Armstrong, former member of the Kansas City Board of Trade and employe of the Denton-Hart Grain Co., will be an inspector in the Kansas City Grain Inspection Department under W. R. Dalton, chief. Mr. Armstrong was an inspector under the administration of Governor Allen.

C. G. WILKINS

Prominent in the Southwestern grain trade and recently making a connection with Uhlman Grain Co., Kansas City, Mo.

Jere Kimmel of Robinson, Kan., an implement dealer, claims the distinction of being the first man to have used an airplane in making a crop observation trip. He flew from Hiawatha to Horton, St. Marys and Wichita. His report indicated a degree of success about equal to that of the ordinary car window inspector.

F. W. Hipple of the Hipple Grain Co. has closed his business and sold his Board of Trade membership to Edmund M. Marshall of the Marshall Commission Co., for \$9,500. Mr. Marshall is the son of W. H. Marshall, head of the Marshall Company. He is 22 years old and probably will be the youngest member of the exchange.

W. J. Mensendieck and James N. Russell, Board of Trade members, spent the week in touring Kansas and reporting crop conditions. During the heat wave of Thursday and Friday, when temperatures reached 100 degrees at many places, the reports had a serious tone, as wheat heads coming into the milk stage were in great danger of blighting.

W. W. Young, who is to be general manager of the newly formed Kansas Co-operative Grain Co., a subsidiary of the Kansas Wheat Growers' Association, has applied for membership in the Kansas City Board of Trade on a transfer from E. R. Downie, who has been general manager of the parent body. Mr. Young will manage the Chicago and Alton elevator, now under construction for the wheat growers. L. L. Wilson, vice president of the wheat growers and secretary-treasurer of the grain company, recently was admitted to membership in the Board of Trade.

W. R. Scott, secretary and transportation commissioner of the Kansas City Board of Trade, and J. H. Tedrow, traffic manager for the Kansas City Chamber of Commerce, were in Jackson, Miss., this week to protect the shipping interests of this market. The occasion was a hearing given by the Interstate Commerce Commission on the proposal of the Illinois Central Railroad to absorb the Vicksburg, Shreveport and Pacific Railroad. It is feared by Kansas City shippers that much freight, now routed through here, would be diverted over lines east, possibly through St. Louis, if the acquisition were allowed.

Conferences of farmers, dealers and county agents for the consideration of wages to be paid wheat harvesters are to be held in Kansas and Oklahoma May 29. Newton, Kan., is taking the lead in the movement. It is expected that wages will vary between \$3.50 and \$4 a day, depending

made good progress. No more than the usual amount of replanting is expected.

Oats.—Receipts, 69 cars, against 23 a week ago and 32 a year ago. Nearness of the harvest period had a bearish influence on the market. Actual offerings on the trading floor were not large, as many samples had been bought to arrive. White oats declined 2½¢@3¢ and red closed 2@3¢ off. Final prices were: No. 2 white, 48½¢; No. 3, 46¢@47½¢; No. 2 red, 47¢; No. 3, 45¢. A reduction of 112,000 bus. in local stocks was recorded, leaving 459,000 bus. in store, against 105,000 last year. The Southwest is looking for a good crop.

Kafir and Milo.—Receipts, 87 cars, against 60 a week ago and 37 a year ago. The market was dull and without special features on most days of the week. Price changes, however, were less subject to fluctuations of corn, working upward while corn suffered a net loss for the week. Kafir closed unchanged to 1¢ per cwt. higher, except on poor No. 4, which was 2¢ lower. Milo was unchanged to 1¢ up at the close. The final quotations were: No. 2 white kafir, \$1.74@1.75; No. 3, \$1.74; No. 4, \$1.68@1.71; No. 2 milo, \$2.05@2.06; No. 3, \$2.03@2.04; No. 4, \$2.01@2.03. Stocks in the elevators decreased 13,000 bus. to 255,000, against 458,000 a year ago. New crop planting has proceeded under fair conditions. A large acreage is expected, owing to abandonment of wheat in some localities.

CINCINNATI.

George Mosbacher, Correspondent.

Oats prices eased off largely in sympathy with the weakness of other grains, but the demand was also slower and receipts fairly large.

Will G. Stueve, of Henry W. Brown & Co., returned Monday with Mrs. Stueve from a pleasant vacation of two weeks spent in the East.

August Ferger of Ferger Bros returned from a month's vacation and business trip to the South this week with interesting stories pertaining to Florida real estate transactions.

Lew McGlaughlin of Dan B. Granger & Co., who underwent a minor operation for a kidney disorder in a local hospital last week is reported much improved and will soon resume his grain and hay trade duties.

Stocks of grain in Cincinnati elevators

upon the distance men have to travel and the prospective yields of wheat. The indications are that an abundance of labor will be available, as employment officials in Topeka have been flooded with inquiries from eastern states as to the opportunities for work. A distributing bureau will be conducted in Kansas City for Kansas and Oklahoma.

Cash Grain Markets.

Wheat.—Receipts for the week, 550 cars, against 177 a week ago and 444 a year ago. The influx, which included considerable shipments from Colorado and Western Kansas, was regarded as a clean-up of country elevator holdings. It was nearly all of the hard and dark variety and of varying quality. Soft wheat offerings were moderate and mostly inferior samples, not wanted by mills. The hard and dark wheat was well taken by local mills and elevator men, who took advantage of the liberal supply to depress both premiums and prices. Shipments from store continued active, with grain applied on old as well as new sales for export and domestic account. Hard and dark closed with net losses of 2@4¢, with No. 1 at \$1.59@1.75, No. 2 at \$1.58½@1.75, No. 3 at \$1.58@1.74 and No. 4 at \$1.55@1.72. Soft wheat ended the week unchanged to 10¢ down, but the recession was chiefly in No. 3 and No. 4. Final prices were: No. 1, \$1.67@1.71; No. 2, \$1.66@1.70; No. 3, \$1.59@1.69; No. 4, \$1.50@1.62. Stocks of wheat decreased 517,000 bus. to 2,007,000, as compared with 7,234,000 last year. The week brought abnormally hot weather all over the Southwest, arousing fear of damage to the crop, especially in Kansas, where wheat is heading, but on Friday night the heat subsided and temperatures dropped below normal for the time of year. Harvest in Kansas and Missouri is expected to begin about June 15 and wheat will be cut in Oklahoma and Texas before that date. Popular estimates on the Kansas crop are running from 80,000,000 to 90,000,000 bus., or 6,000,000 to 16,000,000 under the Government estimate as of May 1. Recent private advices indicate yields running all the way from 6 to 20 bus. an acre, mostly 10 or 12. The Hessian fly is often mentioned as a factor in deterioration and much damage is attributed to April frost effects.

Corn.—Receipts, 212 cars, against 177 a week ago and 159 a year ago. Weakness early in the week was followed by a strong tone, but samples sold slowly practically all the time. Distribution to feeders was fair and elevator men bought when they could do so on a hedging basis. Local and outside industries took limited supplies. There were large shipments from store on contracts. Carlots closed 1@3¢ lower, with No. 2 white at \$1.09½@1.10, No. 3 at \$1.07@1.08½, No. 2 mixed at \$1.06½@1.07, No. 3 at \$1.04½@1.06, No. 2 yellow at \$1.11@1.12, and No. 3 at \$1.09@1.10½. Stocks in elevators decreased 315,000 bus. to 3,739,000, against 1,198,000 a year ago. Planting of a big acreage in the Southwest is nearly completed and cultivation has

for the past week and previous week were
as follows:

	May 22, 1925	May 15, 1925
Wheat, bus.....	112,052	114,787
Corn, bus.....	222,751	191,369
Oats, bus.....	77,184	83,454
Rye, bus.....	4,076	3,476

The corn market speculatively was under a good deal of selling pressure during the week, but the cash situation here held up fairly well, and only 1c to 2c lower for yellow and mixed and unchanged for white. Prices were maintained by an improved demand from southern mills, who had better inquiries for meal, but outside buying of yellow and mixed was considerably slower. The prospect of increased receipts right after planting is believed to be affecting the demand.

The poor prospect of the winter wheat crop and the firmness with which the re-

maining stocks of old wheat are being held was an influence of strength in the local cash market the past week, and to some extent offset the weakness of futures, closing only about 2c below last week's prices. The demand, especially from southern mills, was good but more of a hand to mouth character as was shown by the fact that nearly all orders were for one and two car lots, and for quick delivery. The trade complained more than usual of the difficulties to obtain prices, and that margin of profit was very close. Several mills in the South were reported as having shut down until new crop becomes available.

CHICAGO.

Recent sales of membership on the Board of Trade have been at a net price of \$7,500.

Alexander Stewart, general traffic manager, Grain Marketing Co., has been on a tour of Baltimore and other eastern points.

Paddleford & Lamy, grain merchants, have moved their offices into new quarters in rooms 976-980 No. 208 South La Salle street.

John F. Barrett has returned from New York bearish on wheat. He said there is no export demand and he could not learn of any vessel room having been chartered for June, July or August shipment.

feed, corn gluten meal and corn oil cake meal, this bureau will do no selling. Its chief purpose is to co-operate with agricultural experiment stations, cow testing associations and county agents in conducting feeding experiments on a larger scale than heretofore undertaken.

There is just as much difference in dealing with mass and class in feeding as there is in dealing with the small class and large mass in our human relationships. It often happens that a feeding experiment with five or ten cows produces results that are seldom obtainable when feeding a herd of 25 to 100 cows. The same thing applies to the feeding of hogs and beef cattle.

This new feed research bureau will be conducted along broad and liberal lines for the purpose of standardizing the feeding quality of all meritorious concentrates, grains and roughages. It will be tremendously helpful to the feeder, the feed dealer and the mixed feed manufacturer.

Mr. Van Pelt is splendidly qualified, both by education and experience, to direct this important work. He is a graduate of the Iowa State College of Agriculture and is a well known feeder of champion hogs and steers. He fed the prize-winning herd of dairy cattle at the World's Fair in St. Louis in 1904. Out of the thirteen highest cows in this contest twelve of them were Jerseys fed by Mr. Van Pelt.

Mr. Van Pelt was later teacher of dairy husbandry at the Iowa State College and also dairy commissioner of this state. He then became superintendent of the famous Hartman farm at Columbus, Ohio. He is the founder of Kimball's Dairy Farmer and owner of the well known Waterloo Jersey farm. The association of manufacturers which is sponsoring this new bureau for feed research is very fortunate in obtaining Mr. Van Pelt's services.

Trade Opinion.

It will be some time before the effect of low temperatures will be shown in the crop, but undoubtedly the nearly perfect early season promise has been impaired. A bullish June report now appears likely and there is excellent buying, with the market showing its ability to take selling and digest it easily. Would be little cautious in following the excited advances, but favor buying on the setbacks.—Logan & Bryan.

LeCount's crop report from western Kansas was regarded as bearish and influenced some liquidation. He said that present conditions indicated a crop above an average for that part of the state. It would indeed be strange if some part of that state did not raise a normal crop. Reports from the northwest claim a lack of subsoil moisture is general in North and South Dakota and in Eastern Montana and a generous rain is needed to prevent rapid deterioration when hot weather comes. A large share of the local receipts are billed direct from outside terminal markets and are being unloaded for delivery on May contracts. Around \$1.30 is now bid for new crop wheat in Kansas. We doubt if this price will attract any large movement of new crop grain.—Farnum, Winter & Co.

MEMBER CHICAGO BOARD OF TRADE

PHONES: HAR. 0622—HAR. 0625

The statement as to the belief in a particularly short crop of wheat this year by a prominent grain man helped to influence bullish sentiment. The crucial factor at the moment is the development of the spring wheat crop and any serious injury would reduce the present small indicated crop of wheat this year to a point where very high prices would not be improbable. We feel friendly towards Sept. wheat, but would not follow advances, not looking for a runaway market.—J. J. Badenoch Co.

It is too early to make a definite forecast of spring wheat in the United States and Canada. The acreage in the United States is increased about 15 per cent and in Canada it has increased about 5 per cent. The seed was put in under favorable circumstances, but there is a deficiency of soil moisture in both countries; so that conditions now can not be regarded as much if any above the average. An average yield per acre of spring wheat in the United States would produce nearly 25 million bushels less than the almost bumper crop of 283 million last year and in Canada an average yield would produce about 100 million more than last year's short crop.—Clement, Curtis & Co.

Sentiment is decidedly bullish due to continued crop deterioration. This is, of course, fundamental as a price making factor, and if the final out-turn in the winter and spring wheat crops is as bad as some of the present pessimistic reports would indicate, there is basis for a very firm price structure. We are inclined to think, from a temporary pit viewpoint, that heavy short covering has weakened the technical condition and accordingly we would wait for a substantial reaction before buying.—Cross, Roy, Eberhardt & Harris.

The array of news today has been sensationally bullish. Investigation of spring wheat conditions shows that following the recent freeze no moisture of consequence was experienced, such as should revive the plant and high temperatures following have caused deterioration. Southwest crop news continued decidedly pessimistic. A Northwest market made history today when 100,000 bu. of No. 1 northern wheat were sold to Canadian mills from there. The seaboard reported Portugal as having bought 4 cargoes afloat. Domestic demand continued in fair volume, with sales of 30,000 bu. reported. Today's market had to absorb very heavy realizing sales on the way up, and the manner in which this load was taken and the underlying conditions in the market suggest higher prices to us.—Bartlett-Frazier & Co.

Some well meant criticism is voiced by those directly interested in handling of the surplus grain distributed from country stations through the regular market channels to consumers, but every enemy of an open,

TOLEDO.

S. M. Bender, Correspondent.

Receipts of grain last week were 18 cars of wheat, 26 cars of corn, 39 cars of oats, 4 cars of rye, no cars of barley. Total 87 cars.

Sam Rice of Metamora, Ohio, president of the Ohio Grain Dealers, is in Boston and other eastern cities on a business and pleasure trip.

Fred Mayer of J. F. Zahm & Co. is sojourning at Atlantic City for a few days and reports the new lake to sea highway very fine for motoring.

Louis Chase, president of the United Mills Corp., Grafton, Ohio, was in Toledo last week visiting his friends among the grain and milling trade here.

C. DeWinter, export manager of the National Milling Co., has sailed for Europe, to be gone two months, visiting various continental countries and the United Kingdom.

The Michigan rye crop is expected to be about 5,000,000 bushels if the present condition of 88 per cent is maintained. This is about 2 per cent less than the 10-year average condition.

Flour production of Toledo mills as reported for last week was 36,900 bbls., equal to 77 per cent of capacity. The week before it was 30,000 bbls. and a year ago last week was 36,200 bbls.

The Great Lakes Regional Advisory Board, the Chamber of Commerce and the Toledo Transportation Club are planning on a joint banquet in the new Chamber of Commerce Club rooms when the advisory board meets here on June 9.

David Anderson, president of the National Milling Co., spent part of last week fishing at the Castalia Trout Club, Castalia, Ohio. He says he has not lost the

conservative market has his blunderbus loaded and aimed at the exchanges, especially at Chicago, but ignores the known sources of wild and incompetent speculative ventures under his own nose, i. e., the numerous branch offices whose interest and profit lies wholly in the promotion of speculation.—Pope & Eckhardt Co.

CHICAGO GRAIN STOCKS.

Wheat stock in all positions in Chicago increased 458,000 bu. last week, and rye 1,165,000 bu. Corn decreased 980,000 bu., oats 271,000 bu. and barley 24,000 bu. Details follow, last three ciphers omitted, except in the totals:

	Public.	Private.	*Total.	Last yr.
Wheat	2,032	1,776	3,808,000	11,083,000
Corn	4,143	5,040	9,183,000	2,965,000
Oats	1,353	8,368	9,721,000	2,117,000
Rye	3,899	89	4,037,000	1,973,000
Barley	214		214,000	146,000

*Includes 49,000 bu. rye afloat.

Contract stocks of wheat in public elevators in Chicago increased 620,000 bu. last week, and corn decreased 171,000 bu. Details follow:

	This wk.	Last wk.	Last yr.
Wheat	2,001,000	1,381,000	3,132,000
Corn	4,097,000	4,268,000	1,868,000
Oats	1,353,000	1,701,000	1,480,000
Rye	3,897,000	2,761,000	1,892,000

Agricultural conditions in Europe, with few exceptions, were reported to the Department of Agriculture today as better than on the same date last year.

art of casting a fly even though he fished for whales while in Florida the past winter.

The Ohio Farmers Elevators Managers Club met last Friday in the Boody House, Toledo, Ohio. About twenty-five managers attended and heard an excellent program arranged for their benefit. A noon luncheon in the dining room furnished a fitting break to the morning activities.

The flour trade shows more life than for some time and millers say that stocks are so small that buyers must soon make generous purchases. Millfeeds have been very strong and orders coming in too fast for some mills who have been on a low production schedule. Prices were higher last week and the outlook remains good.

Recent rains have helped the crops in Ohio some but more are needed to promote the growth. Some fields show decided improvement and others are not looking as well as two weeks ago. Corn planting is in full swing and it appears there will be a larger acreage. Oats are doing fine and should make a very good crop. Farmers are not selling wheat, as they are hoping for higher markets. Warmer nights are needed for all small grains as some fields have been affected by quite heavy frosts.

Winter wheat in Michigan is quite spotted over the state. Early sown wheat on level, fertile lands is mostly in excellent condition and making normal growth. Fields that were sown late developed but little top last fall and the continued dry weather this spring has not permitted them to reach a normal state of growth to date. The loss due to abandonment in the state is small, amounting to only 2½ per cent. The prevailing condition of 83 per cent should make a crop of 15,000,000 bushels if

News of the Country Grain Trade

ARKANSAS.

Greenway, Ark.—Chas. S. Kelley now has full possession of the Greenway flour mill.

Newport, Ark.—John R. Loftin, well-known feed and livestock dealer, has completed the construction of a new modern feed store.

Tillar, Ark.—On May 13, officers and trustees of the Southeast Development Ass'n met and discussed the question of locating a paper mill and a corn products factory in southeastern Arkansas.

CANADA.

Winnipeg, Man.—An act will be introduced at the next session of the Manitoba legislature, along the lines of new legislation to tax grain futures.

Ottawa, Ont.—An appropriation of \$150,000 has been passed by the Dominion parliament for commencing construction work on the grain elevator for which foundations are now being built at Prince Rupert. The elevator will hold approximately 1,250,000 bushels of grain.

Toronto, Ont.—The Tillsonburg property, of the Canadian Cereal & Flour Mills Co., Ltd., consisting of a flour mill, barley and pea mill, and including the elevator with steam and electric powers, was sold to R. B. Moulton for \$5,900 plus \$2,600 taxes. F. J. Cairns purchased their property at Lindsay; flour, oatmeal and chop mills, with middlings, power plant and elevator, for \$100 with a liability of \$8,700 for taxes.

ILLINOIS.

Thawville, Ill.—A coal conveyor and Kewanee Dump have been installed by the Thawville Grain Co.

Secor, Ill.—The Secor Farmers' Elevator Co. is installing a Howe scale and two Kewanee Truck dumps.

Graymont, Ill.—A warehouse is being erected by the Graymont Farmers' Elevator Co. for feed and cement.

Milford, Ill.—The Milford Grain Co. is making repairs on its elevators and covering it with corrugated iron.

Owaneco, Ill.—The Owaneco Elevator Co., managed by John Connerly, contemplates erecting an elevator in the near future.

Missal, Ill.—An 18 h. p. gasoline engine has been installed by the Missal Farmers Elevator Co. They will shortly build a new office.

Bartlett, Ill.—The Bartlett Feed & Lumber Co. has filed voluntary petition in bankruptcy, their liabilities scheduled at \$34,683 and assets at \$21,447.

Winchester, Ill.—A Kewanee Dump and a 10-ton Howe truck scale are being installed in the elevator of the Farmers Elevator Co., managed by Gus Kilver. They are building a brick cob burner 18x20 ft. high, lined with fire brick.

INDIANA.

Winslow, Ind.—Keller B. Thompson has purchased the interest of Herman Bryant in the Winslow Mill and has been elected president and general manager of the company.

Columbus, Ind.—Fire, starting in a hot box, destroyed the Stone Head Mill, the last flour mill in Brown County. Loss is estimated at \$15,000 and the insurance carried was about \$8,000.

Elkhart, Ind.—The mill of Pancost Milling Co. was slightly damaged by lightning recently.

Madison, Ind.—The former Wymond elevator property has been acquired by the Ohio River Elevator Co. who will begin operations shortly. Members of the organization are H. H. Potter, G. T. Lloyd and J. T. Hatfield.

Mount Vernon, Ind.—The Home Mill & Grain Co. is erecting a work house and storage tank combined, the work being done by The Polk-Genung-Polk Co. of Ft. Branch, Ind. The new tank will afford space for the storage of 12,000 bushels of wheat, in addition to providing room for the installation of new machinery for the blending and conveying of grain.

IOWA.

Everly, Ia.—F. W. Roberts has installed a Kewanee Truck lift in his elevator.

Craig, Ia.—The elevator of the Farmers Elevator Co. will be repaired and painted.

Lineville, Ia.—The Lineville Flour Mills will rebuild their house, recently destroyed by fire.

Audubon, Ia.—A broken electric light wire caused a small fire loss to the Audubon Milling Co. mill.

Hayfield, Ia.—The old elevator belonging to the North Iowa Grain Co. of Mason City is being torn down and a new plant will be rebuilt.

Fernald, Ia.—The Hesson & Lynch Elevator, owned now by the North Iowa Grain Co., is being repaired and the roof and sides covered with steel.

Cedar Falls, Ia.—The Cedar Falls Mill Co. has abandoned its plans to enter in business here, because of inability to obtain sufficient capital.

Weston, Ia.—The Farmers Co-operative Elevator Ass'n. is installing concrete dumps and other concrete work, safe-guarding against rats. Everything is being put in readiness for handling the coming crop.

Mt. Ayr, Ia.—The Iowa-Missouri Grain Co. will be reorganized and incorporated with a capital stock of \$25,000, \$15,000 of which has been paid up, operating under the name of the Wilson Grain Co. The following officers were elected: F. F. Wilson, Pres.; Howard Tedford, Vice-Pres.; Chas. H. Wilson Sec'y. and Treas. Board of directors: F. F. Wilson, J. L. Kinsell, Sherman McCullough, Howard Tedford and Chas. H. Wilson. Sherman McCullough will continue as manager of the Mt. Ayer elevator, and John Geiger will continue managing the Redding elevator.

KANSAS.

Ford, Kans.—A large elevator is being erected by the Farmers Exchange.

Idana, Kans.—The Williamson Milling Co. elevator was slightly damaged by windstorm.

Esbridge, Kans.—Louis Thompson is again in charge of the elevator, relieving Davy McNight.

Calvert, Kans.—Fire destroyed the elevator of the Robinson-Wyatt Grain Co. There was about 1800 bushels of corn on hand besides other grain.

Wichita, Kans.—The Wichita Terminal Elevator Co. plans additions and improvements at an expense of \$150,000, enlarging the capacity of the elevator by 650,000 bushels.

BOARD OF TRADE

KANSAS CITY, MO.

Kansas City, Kans.—The Kansas Flour Mills Company smoke stack was badly damaged by windstorm.

Abilene, Kans.—A new concrete grain storage tank is being erected by the Abilene Flour Mills Co., 50 feet in diameter and costing \$10,000, to be completed by July 1st.

Eldorado, Kans.—The interest of L. H. Powell in the L. H. Powell & Co., grain, feed and coal dealers, has been purchased by his brother Carl E. Powell who will assume the sole ownership on June 1.

Salina, Kans.—L. M. Anderson, St. Joseph, Mo., has been appointed as grain inspector in charge of the Salina office and is now managing it. R. A. Summers, acting as temporary manager, returned to his home at Kansas City.

Wichita, Kans.—The Ross Brothers Seed Company warehouse, which was destroyed by fire recently, will be replaced with a \$25,000 brick building, according to Jesse D. Wall, administrator of the estate of the late Mrs. Mary Ross. The building was the joint property of Mrs. Ross' estate and J. J. Campbell. Insurance of \$22,000 will cover most of the cost of rebuilding.

KENTUCKY.

Grayson, Ky.—The Grayson Grist Mill, managed by Mat Back, has opened for business here.

MARYLAND.

Derwood, Md.—Geo. M. Hunter, President of the Montgomery County National Bank of Rockville, advises that the 50 barrel mill at Derwood has been sold.

MICHIGAN.

Linden, Mich.—The Stiles Elevator Co. is succeeded in business by the Stewart Elevator Co.

Ypsilanti, Mich.—The Ypsilanti Farm Bureau Ass'n. have decided to sell the mill they operate here.

Bailey, Mich.—Fire destroyed the grain elevator and warehouse of the Farmers Banking Co., causing a loss of \$10,000, covered by insurance.

Grand Rapids, Mich.—According to officials of the company, the Voigt Milling Co. will probably rebuild the Star Mill which burned recently.

Davison, Mich.—The Burroughs-Wolohan Elevator Co. are contemplating installing a small manlift, also dividing a large bin into four small bins and putting in a four-way distributor.

MINNESOTA.

Litchfield, Minn.—The Cargill Elevator Co. has installed a Globe Truck and Wagon Dump.

Kenyon, Minn.—A Carter Disc Separator has been installed by the Farmers Mercantile & Elevator Co.

Kiester, Minn.—The Kiester Farmers Elevator Co. has installed a new Fairbanks Scale and a truck dump.

Climax, Minn.—The St. Anthony & Dakota Elevator Co. will install a dump. The Monarch Elevator Co. will install a Globe dump at its station here this season.

Gibbon, Minn.—Fifty stockholders of the Minnesota Co-operative Wheat Growers Ass'n. organized a branch of that body at a meeting here, for the purpose of pooling the wheat crops as a means of stabilizing the market. Albert Lundgren was elected president.

MISSOURI.

Miller, Mo.—The elevator of the Miller Elevator Co. will be repaired this spring and will also be repainted.

Darlington, Mo.—Fire destroyed the mill owned by Alexander Owens but occupied by Mr. Tennant. No insurance.

Monroe City, Mo.—A 20x36 addition will be added to the Farmers Elevator Co. house, to be constructed of hollow blocks and concrete with concrete floor.

Farmington, Mo.—Peter Giessing has sold his interest in the Giessing Milling Co. to his brothers, Henry and D. F., and, with Mrs. Giessing, will leave for Los Angeles, Calif., in the early fall.

Wellington, Mo.—The Wellington Mill & Elevator Co. has been incorporated with \$10,000 capital, for the purpose of manufacturing, selling and buying flour, feed, bran and other wheat and grain products. Incorporators: W. F. Oberhelman, G. F. Oberhelman, O. G. Riesmeyer, Geo. Stalling, A. F. Wegener and M. H. Larberg.

MONTANA.

Outlook, Mont.—The elevator of the Farmers Elevator Co. will be repaired. The company is installing a new motor, painting the building, installing a car puller, and making an extension on the driveway.

Raymond, Mont.—A contract has been let by the Equity Co-op. Ass'n for the construction of a 30,000 bus. grain elevator, replacing the one burned last

Tabor, S. D.—The Western Terminal Elevator Co. at Vivian has sent Ed Jungbluth here to take charge of the firm's business.

TEXAS.

Ferguson Switch, Tex.—Fire destroyed the elevator of A. G. Cox.

Sherman, Tex.—The Fant Milling Co. will alter the plant and construct a warehouse at a cost of about \$30,000.

Houston, Tex.—The elevator storage of the American Maid Flour Mills is being increased at a cost of \$150,000.

Silsbee, Tex.—The Jo-Mil Feed Store, Inc. has been chartered with \$3,000 capital, by J. E. Josey, R. C. Miller and C. C. Chinsky.

UTAH.

Ogden, Utah.—Fire damaged a large quantity of straw, hay, grain and flour owned by Herman Rosenthal, causing a loss of \$2,600. The fire started when a wire on a bale of straw cause a short in an electric light wire in the ceiling. Damages was principally from smoke and water.

WISCONSIN.

Fond Du Lac, Wis.—Fire damaged the Helmer Milling Co. causing a loss of \$12,000.

Saukville, Wis.—The canning company of this city purchased the elevator of the Midwest Seed Co.

Mt. Pleasant, Wis.—The Wisconsin Cabbage Seed Co. has been incorporated by Wm. Hansch, Samuel Walker and L. J. Quinn.

LaCrosse, Wis.—A branch mill will be opened here by the Crawford Neitmann Mill Co. which will handle the Purina line of food for farm animals.

Pilsen (P. O. Luxembourg) Wis.—The Pilsen Milling Co. has incorporated with a capital stock of \$5,000, by A. Shvatik, Frank Zacek, John Ondrick.

the summer trade and prices have been exceptionally good.

Rains have continued up to the present date and the Grimm alfalfa fields about Springfield are fully three weeks ahead of the normal condition but growth has been retarded by pasturing and heavy cultivation and thinning.

Years of abundant water for irrigation are seldom good alfalfa seed crop years, but it is too early to forecast harvest results.

In this immediate vicinity there is little increase, if any, in the Grimm acreage, but other tracts are increasing their seedings considerably. Grimm alfalfa seed growing is a problem for the specialist who has learned from experience that the game is never twice the same. Growers generally are balancing their seed growing with stock raising and the man with the best pasture and some Grimm for seed is a fortunate mortal.—Arthur J. Snyder, Springfield, Idaho, May 18.

Montana Crops Good.

Price Current-Grain Reporter: Crop conditions over the entire State of Montana at the present time are very encouraging with the exception of winter wheat.

The reports we have received from our country stations indicate winter wheat is 75 per cent winter killed; however, the acreage is being reseeded to spring wheat and there will be no reduction in the wheat acreage.

About 90 per cent of the spring wheat is now seeded; a good deal of it is up and looking good. Soil conditions are ideal.

The barley and oats acreage will also be increased somewhat.—The Rocky Mountain Elevator Company, Great Falls, Mont., W. G. Kirkpatrick, General Superintendent, May 18.

Fine Cotton in Arkansas.

Price Current-Grain Reporter: The cotton crop of this section is in almost perfect condition with somewhat enlarged acreage. A marked increase in corn acreage also and it too is doing nicely.—E. P. Tawney, Little Rock, Ark., May 19.

Wants Paper and Year Book.

Price Current-Grain Reporter: Enclosed find our check for \$6.50 covering subscription on your valuable paper to May 1st, 1928, including the Year Book. We enjoy your paper and have always found the information contained therein reliable and accurate.—Andrews Grain & Coal Co., Electra, Texas.

Bean Stocks Small.

Price Current-Grain Reporter: The stock of beans in this vicinity is very small at the present time and the demand has been very good.

We believe that about the same acreage will be planted to beans in this county this year as were planted last year.—The Langenberg Co., Stevens Point, Wis., May 21.

Rain and Warm Weather Needed.

Price Current-Grain Reporter: The trade on alfalfa in our local community for the last four weeks has been very dull. Probably due to the cold weather we had for the past three weeks. If we should receive a good rain and warm weather probably there would be a better demand. This also applies to seed corn and cowpeas which have been very dull in our section and all the dealers have a good supply on hand.—St. Louis Seed Company, St. Louis, Mo., A. H. Hummert, Vice-Pres., May 21.

Wheat Thin and Spotted.

Price Current-Grain Reporter: I drove out 20 miles on our road and back on another and only saw one good piece of wheat. It looks thin and spotted; plenty of pieces that will not make 10 bus. per acre. I was through one of the best wheat territories in the state, on Illinois river bottom, best land in the state. Grass is no good. Corn that is up looks a good stand.—B. F. Green, of Oakes & Green, Riggston, Ill., May 16.

Idaho in Fine Shape.

Price Current-Grain Reporter: This section of Idaho never had a better season for starting all crops. There have been periodic rains just far enough apart to keep soil in perfect condition for working. All grains are up with perfect stands without irrigation.

Grimm alfalfa wintered perfectly, though in many sections the common variety winter killed due to the unusual cold following a very dry summer and fall.

There is no fear of water shortage this year. All the reservoirs are rapidly filling, though the spring run off has been comparatively slow due to cold weather over the entire area which produces water for storage.

Prospects for a fine yield on the dry farming sections are exceptionally good, though there was winter killing of wheat in some areas.

The remaining stocks of Grimm alfalfa seed in hands of Grimm growers will hardly meet the requirements for

MILWAUKEE SEEDS.

Movement of timothy seed and clover seed at Milwaukee as reported for THE PRICE CURRENT-GRAIN REPORTER by H. A. Plumb, secretary of the Chamber of Commerce, for week ending May 23, 1925:

	Receipts, lbs.		Shipments, lbs.	
	Tim.	Clov.	Tim.	Clov.
1925.....	19,830	122,215	237,937	244,743
1924.....				

ST. LOUIS SEED MARKET.

Quote timothy nominally at \$5.50 to \$6.00 (low-grade, weedy and dark at \$2.00 to \$4.50); German millet at \$4.00 to \$4.25; common millet at \$3.00 to \$3.10; hog millet at \$2.05 bulk basis; Sudan grass at \$3.65 to \$3.85.

Stock Peas—Quote whippoorwill at \$4.00; new era, \$3.75; mixed at \$3.00 to \$3.50 per bu.

Sorghum Cane Seed—Quote at \$1.50 per 100 lbs.

Sunflower Seed—Quote at \$3.25 to \$3.50 per 100 lbs.

TOLEDO SEED PRICES.

The following table shows the range of prices for seed on the Toledo market for cash and the futures of clover, alsike and timothy for the week ending May 23:

	Range for wk.		Close	Close
	High.	Low.	May 23.	May 16.
Clover—				
Cash	\$15.50	\$15.00	\$15.00	\$15.50
Oct.	13.90	13.25	13.90	13.35
Dec.	13.80	13.15	13.80	13.25
Alsike—				
Aug.	12.50	12.50	12.50	12.50
Timothy—				
Cash	3.15	3.10	3.15	3.05
Sept.	3.60	3.50	3.60	3.50

TOLEDO SEED MARKET.

TOLEDO, O., May 25.—Cash clover was lower this week while October and December were firm to higher. Some trade in cash clover around fifteen dollars. Orders are mostly of the one and two bag variety, say dealers, and the demand is over for this season. The carry-over is said to be the smallest in years here and in other markets. This should have a steady effect on cash transactions at least until another crop is assured.

October is fairly active with buyers bidding the market up last week. December is also being traded in at about

We buy and sell all standard varieties of grass, clover and farm seeds. Correspondence solicited.
WM. A. WARD SEED COMPANY
Sacramento, Calif.

ten cents under the October. New crop reports are not exactly optimistic and Western states as well as nearby need more rain to give the crop a good start. These bullish reports are sometimes accompanied with buying orders and this makes the bidding strong. Seedsmen will watch the new crop very closely as the small crop last year with normal demand has brought stocks down to very small figures. Should the new crop be small and the demand brisk clover could easily sell much higher.

Alsike and timothy are quiet with not much trade and the price trend very changeable. New crop conditions are being watched for any backward developments, but general conditions are so far pretty good, though some sections would welcome more rain for the hay crop.

CHICAGO SEED MOVEMENT.

Following is a statement of receipts and shipments of grass seeds at Chicago for the week ending May 23, previous week, same week of 1924 and for the season to date, starting July 1 of the years indicated (amounts stated in pounds, 000 omitted):

	Timothy.		Clover.		Other.	
	Rcts.	Shpts.	Rcts.	Shpts.	Rcts.	Shpts.
Week ..	272	70	43	67	
Prev. wk.	271	311	7	34	40	
1924.....	5	210	64	32	206
1924-25.	36,672	26,975	10,626	5,410	16,645	16,055
1923-24.	31,223	21,306	10,752	8,173	23,975	12,762
1922-23.	31,568	30,810	10,777	8,770	23,474	7,114

Timothy—Market was quiet and the prices were firm. Common country run about \$5.85@5.95 per 100 lbs., good country run about \$6.00@6.25 per 100 lbs., good seed \$6.30@6.35, high grades \$6.40@6.45, extra choice and fancy higher, possibly \$6.50@7.00.

Alsike—Quiet. Fair country lots \$15.50 @17.00 per 100 lbs. Good seed \$17.50@19.00; choice, \$20.00@21.00.

Alfalfa Seed—Recleaned \$21.00@22.00 per 100 lbs.

Flax Seed—Easier. No. 11 Northwestern closed at \$2.82½@2.87½ per bu. of 56 lbs.

Clover Seed—Dull. Country lots \$17.00 @19.75 for 100 lbs., good \$20.50@21.50, choice \$22.00@23.00, fancy \$24.00@25.00 and Mammoth \$20.00@25.00, according to quality.

DULUTH FLAXSEED.

DULUTH, May 23.—A firm but quiet market prevailed in flaxseed during the last week. Trading came within a narrow range from day to day. Little seed was offered with current receipts from the country showing small improvement. Their aggregate came to 41,754 bushels, and with shipments of 35,034 bushels, stocks of 244,000 bushels remained in the elevators. Spot, May and July flax lost ¾ cents during the week and the new crop futures gained from 3 to 3½ cents.

Field and Grass Seeds

Supplies of seed on this market are closely held, all but around 50,000 bushels of the stocks in hand belonging to linseed oil interests. The largest single lot, 100,000 bushels, was brought over recently from Fort William and is scheduled for shipment to Minneapolis. In view of the light supplies available of American seed, crushers are looking to Fort William to furnish supplies to carry their Eastern connections along. Canadian seed on the present spreads between the markets can be laid down cheaper at Lake Erie ports, but the Argentine seed has a moderate price advantage at the seaboard. From present indications, it is figured that Canadian supplies will be sufficient to cover the needs of Eastern crushers until past midsummer, and then it is presumed the oil men will pick up any Argentine product they may require.

Specialists in the flaxseed market are receiving encouraging advices from over the Northwest regarding the acreage likely to be seed to flax over the American ground. Large acreages of new ground are being broken over western North Dakota and Montana with a view to seeding it to flax. The trade is hopeful that the domestic flax production this season will come closer to covering home requirements than in any previous year in the history of the linseed oil trade.

Closing prices of flaxseed at Duluth as compared with the previous Saturday and the same period last year were:

	Saturday.	Wk. ago.	Year ago.
On track.	2.80½-82½	2.80½-82½	2.46½-48½
To arrive.	2.80½	2.80½	2.46½
May	2.80½	2.80½	2.46½
July	2.81½	2.81½	2.40
Sept.	2.60	2.56½	2.15½
Oct.	2.55	2.52	2.12½

MINNEAPOLIS CASH FLAX MARKET.

Country run offerings of seed were generally light during the week ending today. Crushers were bidding for the choice seed but were inclined to go slow on other qualities. Southwestern offerings of poor type brought out easy bids. Some Canadian seed coming in here via the head of the lakes. Toward the end of the week crushers were after the to arrive offerings more so than earlier.

Local deliveries on May contracts total 61,000 bushels up to the close of business today. Stocks are about unchanged with last week, being 297,027 bushels vs. 315,332 and 67,679 a year ago.

Based on today's range of sales, No. 1 seed on track brought 1 under at 2c over July for the ordinary; 3c over for fancy Montana and 1c under at 2c over for the to arrive seed.

INOCULATE ALFALFA SEED.

Alfalfa does not work alone in its nitrogen gathering campaign. In fact, the bacteria introduced by inoculation are on the agencies for taking nitrogen from the air and changing it to nitrate, so valuable to plant growth.

"Neglect of proper inoculation is a very frequent cause of alfalfa failure," J. B. R. Dickey, alfalfa specialist of Pennsylvania State College, advises. "Unless alfalfa, or sweet clover which uses the same bacteria, has been grown successfully on the field before the proper bacteria will not often be in the soil. Without these bacteria to produce nodules on the roots and supply the crop with free atmospheric nitrogen, the alfalfa must depend entirely on the nitrogen in the soil. Without them it will be yellow and unthrifty, will not produce a large yield or a high protein forage (protein is another name for nitrogen), will soon be choked out by weeds and will leave the soil poorer instead of richer."

The bacteria of alfalfa and sweet clover differ from those of the common clover. If manure from stock fed alfalfa hay is applied to the field, or dust

is blown or washed upon it from old alfalfa fields artificial inoculation is not always necessary, but it is invariably safer and involves little labor or expense, he states.

"The easiest method of inoculation is by the use of pure cultures of inoculants, which may be purchased from commercial companies. If these cultures are well made and fresh, and used according to directions results are ordinarily satisfactory," Dickey declares. "A sure method is to broadcast evenly on the new field 500 to 1,000 pounds per acre of soil from a place where thrifty alfalfa or sweet clover is growing. The soil should be taken from a healthy field, free from noxious weeds to prevent the spread of weed seeds and alfalfa diseases."

GROWING FLAX.

In a booklet just issued by the Linseed Oil Division of the Pittsburgh Plate Glass Co., there is presented in a general way, much valuable information on the growing of mixed crops of flax, grown with both wheat and oats.

Much of the material in the booklet was procured from the experiment stations of Minnesota, North Dakota, Montana, South Dakota, Iowa, Wisconsin and Michigan as well as from the U. S. Department of Agriculture and it has been put together in a brief but very interesting and attractive form.

Copies of the booklet may be had, without charge, by writing to the Pittsburgh Plate Glass Co., P. O. Box 1575, Milwaukee, Wis., or P. O. Box 74, Red Wing, Minn.

KANSAS CITY SEED MARKET.

KANSAS CITY, May '23.—While there is yet a chance for adversities in standard feed crops that would make a big demand for forage seeds, sales thus far have been limited and scattered, including fair-sized lots to Texas since the drought was broken in that state. Distribution is mostly in cane seed, on account of its cheapness. Sudan, also an inexpensive seed, is moving fairly. Local houses have little millet to offer, aside from Siberian. There is a fair demand. Sales of cowpeas and soy beans are making a good showing, with preference given to soy beans, which are cheaper than cow peas.

Changeable weather this spring has not been entirely favorable for growing crops of blue grass, timothy and clover. Blue grass, especially, is short in the heads, showing the effects of frosts. Many blue grass fields in Missouri are said to have been plowed up for corn fields, but this may not affect the seed-growing districts. There should be plenty of timothy seed. At present the condition of alfalfa and clover fields concerns only the hay situation, as seed will come from later cuttings.

The local market for seeds is quoted in a wholesale way as follows, per cwt., sacked:

Cane—Orange, \$1.80@1.90; red top, \$1.75@1.85; black and red amber, \$1.70@1.80.

Millet—German, \$4@4.50; common, \$3@3.50; Siberian, \$2.25@2.75; hog, \$2.25@2.50.

Sudan—Fair to good, \$4@5

Cow Peas—Per bushel, \$4.50@5; soy beans, \$2.15@3.25.

During the week ended May 16, no wheat was imported from Canada for consumption on which duty is paid, and none was imported into bonded mills for grinding into flour for export. During the period July 1, 1924, to May 16, 1925, only 255,000 bushels have been imported for consumption, and 4,943,000 bushels into bonded mills, compared with 14,267,000 bushels and 12,227,000 bushels respectively for the same period last year.

ILLINOIS CENTRAL GRAIN TERMINAL.

There is the possibility of further interesting developments in the Gulf Coast grain business of the Illinois Central Railroad. The carrier has made application to the Interstate Commerce Commission to take over the operation of the Gulf & Ship Island Railroad, which has its terminus at Gulfport, Miss. J. J. Pelley, vice-president of the railroad, advises in this connection that the suggested erection of a terminal grain elevator at Gulfport has not been acted upon. The railroad is not announcing definite plans until the above mentioned application is passed on by the Commission.

The readers will recall that the large terminal elevator at New Orleans, the Stuyvesant Docks, was recently leased by the Illinois Central Railroad to the New Orleans Board. The latter has for a month or so been operating both the public elevator and the Stuyvesant Docks, so the Illinois Central Railroad has at present no operating interest in the New Orleans grain trade.

If this paper pleases you kindly recommend it to your neighbors in the trade.

Feedstuffs

The Western Feed Manufacturers, Inc., of Chicago, closed up their business last week. It has for sometime been operated by Greenebaum & Sons, bankers.

BLACKSTRAP MOLASSES HIGH.

Black strap molasses has reached record prices this year, production also having been greater than ever, due largely to the fact that there has been more cane this crop than ever before. Also cane fires have been very numerous and burned cane is used only for producing molasses. At the beginning of the present crop the price paid was 2½¢ per gallon, from which point it has risen to 4¢ per gallon.

FEEDING FOR EGG PRODUCTION.

Experiments covering 10 years' work at the Missouri agricultural experiment station have demonstrated that grains and grain by-products when fed alone result in an average egg production of 61 eggs per hen as compared to 120 to 130 eggs with similar rations supplemented with such products as skim milk, meat scrap, or tankage. One year's test in which the mash, which constitutes approximately one-third of the total ration, contained 30 per cent soy bean meal and 4 per cent mineral mixture, produced 122 eggs per hen as compared to 69 eggs per hen on a similar ration which did not contain the mineral.

USING MUCH LIME.

Last year the farmers in Illinois bought 500,000 tons of limestone, according to J. R. Bent, director of the phosphate-limestone department of Illinois Agricultural association. This is about one-fourth of all the limestone used in the United States last year. It is the old story of acid soils here and there needing lime. Probably one of the factors in this need for lime is the necessity of non-acid soils in the growing of legume crops, particularly the clovers. In fact, it is probably safe to say that the failure of clover crops has often directed the farmer to investigating the reason and in the majority of cases it is an acid soil condition.

NEW FEDERAL TRADE COMMISSION CREED.

The new creed of the Federal Trade Commission in its attitude toward the country's business interests is thus defined by Commissioner W. E. Humphrey to the United States Chamber of Commerce:

"We do not believe that success is a crime.

"We do not believe that failure is a virtue.

"We do not believe that big business and crooked business are synonymous.

"We believe that 90 per cent of American business is honest.

"We want to help this 90 per cent of honesty.

"We want to control or destroy the 10 per cent that is crooked."

COTTONSEED MEAL.

KANSAS CITY, May 23.—Interest in cotton seed meal this week was not sufficient to affect prices. Trade was light with dealers not able to foresee a revival of activity during the summer unless drouth or other disaster should create excitement over the feed situation. The Kansas City price of Kansas City carlots, per ton, f. o. b., stood at \$41.80, the same as a week ago. Oklahoma mills offered meal at \$36.50 and seemed to have a fair amount left. In Arkansas the supply is said to be nearly cleaned up and the remaining holdings were held too high to come west. Texas reported the export demand weaker, but prices in that state were above the Oklahoma parity for shipments northward.

The linseed meal market, also, was stationary, with demand moderate in view of the premium over cotton seed meal. Minneapolis mills asked \$42.50 a ton for carlots and resellers offered at \$42. The Kansas City price was unchanged, at \$46.80, f. o. b.

Manufacturers of tankage reported fair rates to hog interests at \$50 per ton for carlots. This price has ruled for several weeks. Meat scrap, for poultry also was unchanged, at \$55. Demand was fair.

VAN DUSEN HARRINGTON WEEKLY CROP REPORT.

The weather throughout the North western states, Minnesota, North Dakota, South Dakota and Montana, has been very unsettled for the past week. During several nights ice formed in the northern half of the territory and this being followed by very warm weather the past two days. Some fields, especially in low spots, were frozen hard and the small grain, which was from 2 to 6 inches high, shows the effects of the cold. It is probable that little damage has occurred, but the growth will be retarded to some extent, making the crop a little later.

In order to properly revive some of the fields so affected, moisture is needed in conjunction with the present warm weather. The spring so far has been unusually dry. There have been no general, soaking rains. In some places there is sufficient moisture for the present, but as a rule rains are needed to produce the best growth, otherwise some unsatisfactory developments might occur.

Generally the small grains show good strong roots, and the final result is merely a question of favorable weather as the start was very favorable.

Some seeding of coarse grain is still being done. Corn planting has been delayed either by cold or dry weather. In some places, however, it is finished while at others it is just starting.

Probably about 60 per cent of the flax has been seeded. Breaking of new ground has been delayed at a number of points, because the soil is too dry. In the northern half of this territory, very little flax is above ground. Some of the early sown in Minnesota and South Dakota especially has been somewhat affected by the cold.

As previously reported, rye is very spotted and uneven. At places it has started to joint and there is some doubt as to the effect the extreme cold has had on it.

We believe that the present crop prospects of the Northwest are still very good, although it is absolutely necessary that we have moisture soon; otherwise the present standard cannot be maintained.—The Van Dusen Harrington Company W. G. Hudson, May 20.

Figures on this country's 1923 fire loss of \$533,372,782 indicate that matches and smoking ranked first, as causes with sparks on roofs and spontaneous combustion, ranking second and third.

LINSEED OIL TARIFF.

Agricultural interests of the country are urging upon President Coolidge the advisability of disregarding the report of the United States tariff commission indicating that a reduction in the present tariff rate on linseed oil would be justified.

The proponents of the present tariff provisions fear that any reduction in the rate on linseed oil would be followed by the displacement of the American products by larger imports at seaboard. They point out that the percentage reduction of imports of linseed oil to flaxseed during the first nine months of the present fiscal year is greater than any year since 1910, except 1911, 1922 and 1923.

They figure that if, with a tariff of 3c per pound, imports of linseed oil continue to equal 10 per cent of the combined imports of oil and seed, the rate on seed being 40c a bushel, a reduction in the former would increase imports.

The present tariff, shutting out imports to a considerable extent because supplied with a sufficient supply of flaxseed at home, is declared all the more necessary now because it is feared that there may come a slump in the market and some stagnation at home.

Should this be accompanied by a decrease in the tariff, it is argued, an excellent opportunity would be afforded American producers to export their oil to the United States, thereby relieving themselves of a considerable stock.

To the Europeans, the oil cake carries a higher value than is true in the United States. A wider linseed oil market, therefore, would permit of the production of a greater amount of cake for feeding purposes.

COTTONSEED MEAL MARKET.

The cottonseed meal market is quiet. Stocks on hands at the mills are not burdensome. The last census report, published on the 19th, shows there are only 13,000 tons more meal on hand at the mills this year than last and last summer grain feeds were on much higher basis than at present time and during the summer the cottonseed meal market moved gradually upward. Under the circumstances we can expect a slightly higher market during the summer months. There will certainly be enough to take care of carrying charges. Cottonseed meal usually moves along the given trend for some months at a time. Last October the decline started and lasted to the middle of March and since the middle of March the product has been gradually working upward. We are having some inquiry from abroad but most of this is for August onward. We do not hear of mills offering to sell for future shipments this year.

The new cotton crop has increased in acreage, but quite a few expert observers do not consider we will have as large a crop as we had last year, owing to the great deficiency in the West of winter rainfall, and past records show that it has always taken good winter rainfall to make a large crop in Texas and Oklahoma. It is almost impossible to raise a total big crop without a good production in the Western states where the acreage is so large.—F. W. Brodeur, Corporation, Memphis, Tenn.

OIL MEAL MARKET.

The pep seems to have gone out of the oil meal market. While asking prices for export cake at New York continue at the high point, at least on the current upturn, apparently the volume of sales to Europe is not as great as it was a while ago. This was, of course, one of the big factors which influenced the advance in oil meal in the West. Good sized quantities of cake have been shipped from Chicago to Europe.

At this time there are no signs of additional export sales from here and present domestic consumption is not sufficient to take care of production. The mills may, of course, decide to store meal for thirty days in anticipation of the good summer demand, or they may consign cake export for sale over there next fall, either one of which condition may maintain or possibly advance the Chicago market.

On the other hand, in the event of the mills deciding to sell their production from week to week, prices may work lower. However, no rapid decline can be expected and it is well to keep a fair tonnage of oil meal on hand. Our prices are exceedingly low. Get in touch with us.—*The Bertley Bulletin, Chicago, May 23.*

FEED MARKETS.

NEW YORK.

New York, May 23.—Feed prices are slightly higher. Western prices are strong but unchanged. Offerings are limited, but the demand is negligent. June shipments are easier.

MEMPHIS.

Memphis, May 23.—Firmness in millfeed has been the feature of the local market during the week, but business has been extremely quiet. Feeders were taking as little as possible before prices became so strong, but brokers say that business has come to a standstill since mills are so independent. Wheat bran is quotable at \$33 a rule, with gray shorts at \$39 up to \$40. Alfalfa meal is a shade firmer, but demand no better and receipts for the week were only 17 cars. Prices are 50c up, at \$27.50@28 for No. 1 on track or to come in. Cottonseed meal continues steady, but is no higher, \$38.50 for 41 per cent and \$40.50 for 43.

DULUTH.

Duluth, May 23.—Jobbers reported the market in feeds to be marking time, with buying from dealers over the district slow and eastern inquiry light. The tonnage of feeds shipped east was light, as buyers down that way had been curtailing their orders. The market held firm, reflecting strength in coarse grains. Closing prices per ton are unchanged, as follows: Bran, \$27.50; shorts, \$31; Boston mixed, \$31; flour middlings, \$34; ground oats, \$29.50; red dog, \$43; No. 1 ground feed, \$38.50; No. 2 ground feed, \$36.25; No. 3, ground feed, \$34; cracked corn, \$43; coarse corn meal, \$43.

BALTIMORE.

Baltimore, May 23.—Wheat feed prices hold their own under firm advices from primary producing sections, coupled with a fair demand here for sacked bran and middlings. Hominy feed is sparingly offered in near positions and about steady as last quoted. Gluten feed firm. Alfalfa meal in fair request from mixers. Dried beet pulp quiet. Quotations follow: Spring wheat bran, per ton, 100-lb. sacks, \$34.50@35; western middlings, per ton, 100-lb. sacks, \$36@36.50; hominy feed, per ton, \$42@43; gluten feed, per ton, \$39@40; alfalfa meal, per ton, \$32@33; dried beet pulp, per ton, \$37@37.50.

STALEY EXPANSION.

Local news from Decatur, Ill., refers to the proposed erection of a large terminal grain elevator by the A. E. Staley Mfg. Co. The company is negotiating for land along the Wabash Railway immediately north of the present plant.

On the completion of the elevator, the company contemplates a grain merchandising business of considerable proportions.

Changes in the present hominy mill and grain elevator will be made and the advantages of Decatur as a shipping point are featured in the news reports. More definite information is promised shortly by A. E. Staley, president of the company.

MILWAUKEE.
 Milwaukee, May 23.—Although recent price advances have greatly reduced the consumptive demand for wheat feeds they continue in a tight position in so far as immediate and May shipments are concerned. Present trade, however, is largely to even up commitments of the mixers and jobbers. July shipments are being booked at prices materially under present quotations. High protein feeds continue steady but aggressive demand is lacking. Current quotations, per ton, are: Winter bran, \$30.50@31.50; spring bran, \$29.50@30.50; standard middlings, \$32@33; flour middlings, \$35@36; red dog, \$42.50@43.50; rye feed, \$29.50@30; linseed oil meal, \$43.50@45; cottonseed meal, \$42@46; hominy feed, \$39.50@40.50; oat feed, \$6.50@7.50; gluten feed, nominal, \$32.80; in 100-lb. sacks, carlots, f. o. b. Milwaukee.

CINCINNATI.
 Cincinnati, May 23.—Scarcity of mill feeds, together with an urgent demand, particularly for immediate shipments, caused a decidedly stronger market and advances of \$1 per ton for all brands and middlings. The dullness of flour and consequent small production of by-products was largely responsible for the firmness of the market. Quotations represent 100-lb. sacks: Soft winter wheat bran, \$34@34.50; hard winter wheat bran, \$33.50@34; standard middlings, \$36@36.50; soft wheat middlings, \$38.50@39; gray hard middlings, \$38.50@39; mixed feed, \$35.50@36; No. 1 alfalfa meal, \$29; hominy feed, \$40@40.50.

PHILADELPHIA.
 Philadelphia, May 23.—Feed stuffs are quiet but steady under light offerings. Soft winter bran, \$38@39; winter middlings, \$38@44; spring bran, \$36@37; standard wheat middlings, \$38@39; flour middlings, \$41.50@45; red dog, \$49@50; rye middlings, \$36@38; reground oats feed, \$13@25; fine yellow hominy, \$44.50@45; fine white hominy, \$44.50@45; cottonseed meal, 36% protein, \$47@49; cottonseed meal, 41%, \$50@51; low grade flour, \$50@56.

MINNEAPOLIS.
 Minneapolis, May 23.—The same tight situation which has maintained during the past two weeks still holds good in this market. Local mills are far behind in their deliveries and holders having anything to offer for spot or immediate shipment did not seem to have much of any difficulty in getting the prices that they asked for their stuff.

The demand, however, seemed to be largely and almost entirely for the very nearby shipment. Jobbers were willing to sell bran for June shipment at a price approximately \$3 a ton less than for the spot delivery, but very little appeared to be worked on that basis.

The real fly in the ointment seems to be that the actual consumptive trade are not interested in feed at present levels. There can be no doubt but that stocks are reduced to the very minimum but still the trade is holding off. Apparently they are waiting to see what the grain markets are going to do. If wheat keeps on its upward course it naturally will pull the coarse grains along with it and then, of course, the feed trade might be forced in as in all likelihood the mill offal market would show a sympathetic advance.

Many in the trade here feel, though, that the top has been reached and say that the next movement of any consequence will be downward.

Today holders were asking \$27.50@28 for standard bran, \$28@28.50 for the pure, \$30@30.50 for shorts, \$34 for flour middlings and \$41@42 for red dog. Oil meal easier today at \$41.50@42.

Weekly shipments totaled 9,792 tons, vs. 10,326 last week and 10,867 a year ago. Season shipments since Jan. 1st, this year, 233,066 tons and 235,060 tons last year; since Sept. 1st, this year, 478,619 tons and 555,964 tons a year ago.

ST. LOUIS.
 St. Louis, May 23.—Rather easier on hard bran, with sales of 1 car at \$31 local prompt and 2 cars at \$30.50 local next week's shipment and \$31 quoted otherwise for bran and \$37 for gray shorts for immediate shipment; soft feed very scarce—split car (loaded) sold at \$32.50 for bran

GOOD DEALERS PROPOSITION.

Alfalfa Department

ALFALFA CHEAPEST HAY.

Cost records kept by southwestern Minnesota farmers show that alfalfa is not only the most valuable to feed but is also the cheapest to produce. The records, kept under the supervision of the farm management division of the Minnesota College of Agriculture, gave \$12.51 as the cost of an acre of alfalfa. Since the average yield was 2.2 tons per acre, the cost per ton was \$5.70.

Factors entering into the cost were as follows:

Man labor, 11.2 hours at 21c. \$ 2.34
 Horse labor, 13.2 hours at 10c. 1.32
 Machinery 1.60
 Rent 6.00
 Seed (one-fourth of total cost) ... 1.25

Total, 2.2 tons. \$12.51
 Cost per ton 5.70

In addition to the hay, some farms obtained hog pasture from the alfalfa so that the actual net cost was somewhat less than the figures given. Corresponding figures for clover and timothy on the same farms show an average yield of 1.1 tons and a cost of \$8.36 per ton.

ALFALFA MEAL MARKET.

KANSAS CITY, May 23.—Alfalfa meal millers admitted that trade in their product this week was very quiet. They said the outlook for the next 30 days was uncertain, because that much time will be required to shift the business over to the new crop basis. Prices here were unchanged. Carlots, per ton, were quoted as follows, f. o. b.: Choice, \$26.50 @27.50; No. 1, \$24@25; No. 2, \$19@20; No. 3, 18@19. The Colorado mills have shut down and are working off their old crop stocks. Mills in Kansas City have not reached the shut-down stage and are hopeful of maintaining operations.

Practically no changes in prices of grain and molasses feeds were reported. Manufacturers said the trade situation was a little better, though it continued to be mainly in horse, mule and poultry feeds. The quotations on carlots, per ton, f. o. b., were: Dairy feeds, \$35@46; cattle, \$39@44; hog, \$45@51; pig meal, \$68; horse and mule, \$33@43; alfalfa-molasses, \$26@32; scratch poultry, \$48.50@55; mash poultry, \$49@76.

FEED STUFF SITUATION.

Mill feeds for transit immediate remain quite firm, particularly standard middlings, with slight discounts offered on bran. Very limited demand for flour middlings and an ample demand for red dog to take care of present offerings. Considerable feed offered for 30 days and future at discounts, but buyers reluctant to contract for that time of shipment unless the price is made sufficiently attractive to warrant carrying charges.

MINNEAPOLIS.—Bran, \$27.50 to \$27.75; standard middlings, \$29.50 to \$30; flour middlings, \$33 to \$33.50; red dog, \$41 to \$41.50.

CHICAGO.—Bran, \$30.10 to \$30.35; standard middlings, \$32.10 to \$32.60;

flour middlings, \$35.60 to \$36.10; red dog, \$43.60 to \$44.10.

KANSAS CITY.—Bran, \$28.50; gray shorts, \$33.00.

ST. LOUIS.—Bran, \$30.90; gray shorts, \$35.40.

ALFALFA MEAL.

Demand is very good for this time of the year with prices holding firm. Gradual depletion of choice grades; limited tonnage available in No. 1; more tonnage available in No. 2 grade. Nominally quoted choice, \$30; No. 1, \$28; No. 2, \$23. For fine ground grades, \$3 to \$4 a ton more.

REGROUND OAT FEED.—Demand limited. Production also limited. Nominally quoted, reground, \$6.50 to \$7.50; unground, \$7.50 to \$8.50. Very little encouragement for increased demand for the present.

HOMINY FEED.—Demand equal to supply. Variation of prices dependent on fat contents offered. Nominally quoted, white, \$40.50 to \$41; yellow, \$40 to \$41. In bulk where available, \$1.50 to \$2 a ton less. Very little sellers' interest for future beyond 30 days.

LINSEED OIL MEAL.—Slightly easier from weeks previous. Mills asking about \$1 premium over re-sellers' ideas. Nominally quoted, Minneapolis, \$41.50 to \$42.50; Chicago, \$43 to \$44; \$2 per ton less for bulk when ordered.

GRAIN REGIONAL RAINFALL.

The following table gives the total average rainfall in inches, in each state in the grain regions beginning April 16 to May 18, inclusive, and the average fall in inches for each station in the state, as reported by the Weather Bureau for the week ending May 25:

	Sta- tions.	Total season.	Total week.	Total previous week.
Kentucky	17	4.59	.05	.53
Ohio	15	3.51	.54	.59
W. Virginia	1	5.42	.34	.02
Michigan	7	2.19	.07	.52
Indiana	16	2.45	.15	.25
Illinois	19	3.09	.37	.49
Wisconsin	5	2.53	.19	.47
Minnesota	18	2.35	.90	.39
N. Dakota	16	1.97	.63	.20
S. Dakota	13	1.42	.30	.55

Missouri	24	3.15	.19	1.11
Kansas	25	3.04	.19	.71
Oklahoma	11	2.54	.08	.04

LARGE CONTRACT AWARDED.

Our news pages have been filled during the past several months with much needed and widely scattered construction work. The trade had for a year or so, and with good reason, withheld the normal erection of new elevators and mills and the addition to present properties. Now things are different.

One of the most recent new jobs is for the Highspire Flour Mills, Inc., at Highspire, Pa. 105,000 bushel concrete storage bins and a concrete working house will be erected at an estimated cost of approximately \$65,000.

The contract has been awarded the M. A. Long Co. of Baltimore, Md. Work is to start immediately and the latest design and operating equipment will be installed.

VISIBLE GRAIN SUPPLY.

The following table gives the stock of grain in bushels in public and private warehouses at the principal ports and in transit by water on the date named, with comparisons as compiled by the secretary of the Chicago Board of Trade for the week ending May 25 (000 omitted):

	In store at	Wheat.	Corn.	Oats.	Rye.	Barley.

DISMISSES COMPLAINTS.

The Federal Trade Commission announces that it has dismissed its complaints against the following manufacturers of animal feed products: Quaker Oats Company, Chicago, Ill.; Ralston Purina Company, Inc., St. Louis, Mo.; and M. C. Peters Mill Company, Omaha, Neb. The complaints were dismissed for the reason that the contracts questioned, have been closed out.

Halliday Elevator Company

CAIRO, ILL.

Barley

CHICAGO BARLEY PRICES.

Following is the daily range of quotations for spot malting barley at Chicago:

May 18.....\$0.85@0.91 May 21.....\$0.80@0.92
May 19......85@.92 May 22......82@.89
May 20......85@.92 May 23......60@.89
Receipts of barley at Chicago for week ending May 23, 1925, were 84,000 bus., compared with 101,000 bus. same week 1924; shipments, respectively, 37,000 bus. and 55,000 bus.

RECEIPTS OF BARLEY.

Carload receipts of barley last week at different points named with comparisons, follow:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 18.....	52	32	12	8	22
May 19.....	14	14	6	22	14
May 20.....	11	16	11	3	18
May 21.....	17	12	2	18	3
May 22.....	26	21	4	17	7
May 23.....	5	9	7	18	12
Total	125	104	42	86	76

BARLEY MARKETS.

CHICAGO.—Unchanged. Stocks of barley in maltster's hands barely sufficient for the current season's requirements. Withdrawals, 72,467 bu.; screenings—exports, 25,000. Local receipts for week, 4,000 bu.; last year, 101,000 bu.; shipments, 37,000 bu.; last year, 55,000 bu. Sales were at 60¢@89c, according to ample. Receipts, 3 cars.

MILWAUKEE.—Barley receipts were exceptionally light in the Milwaukee market last week. There was a moderate demand throughout the period which absorbed all offerings. Malting varieties were in best request. The market closed unchanged and firm. Receipts were 76 cars as compared with 112 the previous week and 56 in 1924. Choice to fancy, 8 to 50 lb. test, quotable at 94¢@95c; air to good, 44 to 47 lb. test, 85¢@94c; light weight, 40 to 43 lb. test, 82¢@90c; feed, 70¢@85c. Iowa quoted 80¢@95c, as to quality; Wisconsin, 80¢@96c; Minnesota, 80¢@95c; Dakota, 80¢@95c; feed and rejected, 70¢@85c.

DULUTH.—Trade was more active in the barley market during the last week than in some time back. Buyers were in the market for good heavy barley and generally speaking, all offerings were readily absorbed. Receipts were the largest since last fall's rush, aggregating 104 cars. Closing prices are 1c off at room 71 to 85c.

MINNEAPOLIS.—Receipts of barley were generally light during the week but with the exception of today, the last of the week, there was not much of any interest being shown in the limited offerings. And even today, it was barley of choice quality only, that was wanted. Reports from the country indicate considerable reseeded of barley fields being necessary.

Deliveries on May contracts in this market total only 177,000 bushels so far this month. Stocks are 1,021,987 bushels vs. 1,139,381 last week and 196,907 a year ago. Today's range of sales showed barley quoted at 70¢@86c.

DULUTH.—Operations in the barley market showed a falling off during the last week. The market lacked snap, and with the completion of grain wanted or May delivery at Chicago, trading was draggy with the future spotty. Receipts were in fairly good volume but a proportion of the cars were on sale. A cargo of 260,000 bu. was loaded for shipment to Chicago. Stocks in the elevators were around 2,200,000 bu. Spot No. 1 rye closed 1½¢@1.16.

KANSAS CITY.—Receipts of 9 cars of barley this week were suggestive of satisfaction with the new crop outlook. Shipping and local manufacturing demand was not adequate and an accumulation of 3,000 bus. took place, making the elevator stocks 11,000 bus., against 10,000 a year ago. Prices were affected by weakness in oats. The market de-

clined 2¢@3c per bus., closing with No. 3 at 82¢@86c and No. 4 at 80¢@82c.

EXPORTS OF BARLEY.

The exports of barley (bus.) from principal United States ports, as reported by the Chief of the Bureau of Statistics of the Department of Commerce for each month, for years named, were as follows:

	Mos.	1925.	1924.	1923.	1922.
Jan.	1,522,000	299,000	661,000	385,000	
Feb.	881,000	613,000	1,194,000	463,853	
Mar.	864,000	969,000	1,012,000	836,000	
Apr.	934,000	706,000	708,000	1,002,000	
May	448,000	365,000	1,015,000	
June	513,000	362,000	1,153,000	
July	1,054,000	816,000	2,519,000	
Aug.	1,396,000	2,571,000	2,085,000	
Sept.	1,955,000	2,054,000	3,671,000	
Oct.	5,315,000	1,425,000	2,940,000	
Nov.	2,709,000	264,000	1,563,000	
Dec.	1,744,000	382,000	762,000	
Yr.	17,721,000	11,814,000	18,394,853	

RYE MARKETS.

CHICAGO.—Closed with gains of 1½¢@2¼¢ for futures and firm on car lots. There was a moderate trade and the market ruled fairly active. Rather a good class of buying was in evidence, which was encouraged by the strength in other grains. Quite a little pressure early, but it failed to check the advance. Deliveries on May contracts were 215,000 bu. Local sales to go to store 15,000 bu. Car lots were in fair demand at May price for No. 2. Offerings light. Local inspection, 16 cars. Seaboard clearances, 300,000 bu. No. 4 sold at \$1.10.

MILWAUKEE.—Rye prices closed 5c lower for the week on account of falling off the first few days. The market, however, closed comparatively strong, regaining 1¢@2c the last day. Receipts were 13 cars as compared with 19 cars in the previous week and 4 in the same week of 1924. Local buyers were not very active in the market but a good shipping demand continued throughout the period. Market closed at 1.13½¢@1.15½¢ for No. 2, inside for Wisconsin, ranging at 2 to 40 under May price, depending on billing.

MINNEAPOLIS.—Along with the unfavorable news coming in on spring wheat condition, there was some rather bullish reports on tap regarding the rye as well. One report said that this grain in that particular section was heading out at a height of only four inches; while there were a number of other advices to local houses which should give pause to the crowd who are inclined to pound the rye.

Mills were willing to pay right up for rye of milling quality but heavier receipts helped to hold the market only steady when ordinarily, it would have shown considerable firmness and even possible strength. Today No. 1 was quoted at 3¢@4c over the July and No. 2 at 1¢@2c over.

Deliveries in this market total 226,000 bushels so far. Local stocks showed a further small decrease for the week ending today, being 441,712 bushels vs. 479,057 last week and 7,001,708 last year.

RYE SPOT QUOTATIONS.

Closing outside prices for rye of No. 2 quality cash for the week ending May 23 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 18.....	1.13½	1.15½	1.12	1.16½	1.21
May 19.....	1.13	1.14½	1.19½	1.16½	1.18½
May 20.....	1.15	1.15½	1.21½	1.19½	1.20
May 21.....	1.13½	1.14½	1.17½	1.15	1.19
May 22.....	1.13½	1.13½	1.12½	1.16½	1.12
May 23.....	1.15½	1.16	1.17½	1.17½	1.14

CHICAGO RYE FUTURES.

Following is the range for future prices for rye for the week ending May 23:

	May	July	Sept.
May 18.....	1.21½@1.22½	1.12½@1.13½	1.04½@1.05½
May 19.....	1.19½@1.22	1.11 @1.13	1.03 @1.05
May 20.....	1.21½@1.22½	1.12½@1.13½	1.05½@1.06½
May 21.....	1.17½@1.21	1.11½@1.14½	1.04½@1.06½
May 22.....	1.12 @1.18	1.09½@1.12	1.03½@1.06
May 23.....	1.14½@1.17½	1.11 @1.14½	1.05½@1.07½

Receipts of rye at Chicago for the week of May 23, 1925, were 1,445,000 bus. vs. 19,000 bus. same week of 1924; shipments were 4,000 bus. vs. 21,000 bus. same week of 1924.

RECEIPTS OF RYE.

Carload receipts of rye at the principal primary markets in the Central West for the week ending May 23 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 18.....	13	36	41	4	5
May 19.....	3	26	60	4	2
May 20.....	3	10	45	3	3
May 21.....	15	11	12	1	1
May 22.....	8	21	5	6	1
May 23.....	5	6	16	5	1
Total	47	110	179	23	13

EXPORTS OF RYE.

The exports of rye from all United States ports, as reported by the Chief of the Bureau of Statistics of the Department of Commerce for each month, for years named, were as follows, not including rye flour:

	Mos.	1925.	1924.	1923.	1922.
Jan.	1,187,000	200,000	3,449,000	129,000	
Feb.	912,000	137,000	5,974,000	1,194,249	
Mar.	2,391,000	299,000	1,361,000	903,000	
Apr.	10,722,000	2,077,000	2,219,000	3,898,000	
May	1,924,600	4,611,000	5,483,000	
June	3,708,000	3,877,000	4,953,000	
July	1,306,000	3,328,000	2,789,000	
Aug.	1,469,000	1,741,000	4,610,000	
Sept.	11,563,000	2,558,000	11,130,000	
Oct.	10,852,000	455,000	2,197,000	
Nov.	1,297,000	755,000	5,431,000	
Dec.	832,000	522,000	3,763,000	
Yr.	35,664,000	30,850,000	46,460,249	

AMERICAN GRAIN EXPORTS.

The Department of Commerce reported the following exports of grain from the principal ports of the United States to foreign countries during the week ending May 16, 1925 (000 omitted):

Articles and countries.	Week ending May 16, 1925.	May 17, 1924.	May 16, 1925.
Barley	483	5	19,535
Corn	135	283	7,150
Oats	1,270	57	7,937
Rye	1,032	1,103	45,828
Wheat	2,318	1,052	183,191
To Italy	333	28	25,846
United Kingdom	331	121	38,853
Other Europe	500	71	60,424
Canada	38	49,407
Other countries	1,116	832	8,661
Total U. S.	5,238	2,500	263,641
Canadian in transit:			
Barley	664	12,326
Oats	1,468	12,361
Rye	10	73	4,014
Wheat	1,567	1,181	56,402
Total Canadian	3,709	1,254	85,103

*Including via Pacific ports this week: Flour, 103,900 bbls.

EXPORTS OF CORN.

The exports of corn from principal United States ports, as reported by the Chief of Bureau of Statistics of the Department of Commerce:

	Mos.	1925.	1924.	1923.	1922.
Jan.	789,000	2,788,028	7,163,422	19,233,394

BEANS AND POTATOES.

Quotations follow for bids of good quality condition beans and potatoes sacked, per cwt., unless otherwise specified, as of week of May 23:

Beans—Chicago—Old beans still available, but only in limited supply. Local dealers can job large lots out of store at following prices, which are steady to firm: Per 100 lbs.—Spot navy beans, Mich., fancy, \$5.90@6; red kidney, fair stock, \$9.75@10; large, dark, extra quality, \$12.00; brown Swedish, \$8.50@9; lima beans, fancy, \$9@10; do. new California, \$14@15. Poor, dirty, broken, less.

St. Louis—Quote choice hand-picked Michigan white beans at \$6.10 and prime machine-picked at \$5.85 per 100 lbs. Scotch peas 7½¢, green split peas 9c and yellow 7c per lb. California lima beans at \$15.50 per 100 lbs.

Boston—Car lots, per 100 lbs., N. Y. and Mich.: Choice hand-picked beans, \$6.20 @6.40; fair to good, \$6@6.10; California small white, \$8.25@8.40; yellow eye, extra, \$6.20@6.40; fair to good, \$6; red kidneys, choice, \$10@10.25; fair to good, \$9@9.25; California limas, \$15.25@15.50; native green peas, \$7@7.50; Canada, \$5.25@5.50; split, \$5.50@5.75; jobbing prices, 25 to 50 cents above car lots.

San Francisco—Peas—Split peas, yellow, 7½¢. Beans—Whites, small, 8½¢; do. large, 7c; pinks, 9c; limas, 15c; cranberry, 8c; kidney, 12c; Mexican garbanzas, 11½¢; lentils, large, 9c; do. small, 8c; speckled bayos, 8½¢; bayos, 8½¢.

New York—Pea beans were somewhat irregular in tone Friday morning, with \$6.25 shaded 10c or more. Red kidneys very dull sale and \$10 might be shaded to force sales. White kidneys dull and weak, with \$8.25 about top. California limas weak and about 25c lower. Black eye peas maintained a steady feeling, with bulk of the business at \$10.75. Splits quiet and unchanged. Domestic, 100 lbs.—Marrow, \$9.50@9.75; pea, \$6.15@6.25; red kidney, \$10; white kidney, \$8.25; lima, Cal., regular, \$14.75 @15.00; baby, \$13.35@13.50. Imported, 100 lbs.—Marrow, \$8.50@8.75; white kidney, \$7.50@7.75; lima, Mad., 1924-25, \$12.25@12.50; 1923-24, \$11@11.50; 1922-23, \$9@9.50; lima, Europe, large, \$11.25; medium, \$11; small, \$10. Lentils—Chile, \$6.75@7; Russia, giant, \$7.25@7.50; avg., \$6.25@6.50. Peas—Domestic, 100 lbs.—Black split, \$10.75; yel. split, \$6.25@6.50; gr. split, \$7.50@7.75. Imported, 100 lbs.—Green, Japan, \$6.50@6.75; Belgium, \$5.25@5.50; yel. split, \$5.50@6; gr. split, \$7.75@8; chick, Mex., imperial, \$11.75; monster, \$11.50; large, \$9.50; small, \$7@7.50.

Potatoes—Chicago—Market weak and 10c lower. Extremely warm weather had a depressing effect on this market and price recessions were necessary. Demand was light and very few buyers were in the market for supplies. Most of the trade were waiting until next week, as cooler weather is forecasted. Receipts were 42 cars and cars on track 141. Sales reported today were: Per 100 lbs., round white, Wisconsin, bulk, 1 car at \$1, 1 car at \$1.10; sacks, 1 car at \$1.05, 4 cars at \$1.10, 1 car at \$1.15; Mich., sacks, 2 cars at \$1.15; Minnesota, 1 car at 95c. Bulk, per 100 lbs., Wis., dustys, \$1@1.15; round, white, sacks, Wis., \$1.05@1.15; ordinary and poor, 90c@1; Minnesota, 95c. New potatoes—Market firm and 10¢@15¢ higher. Warmer weather stimulated the demand and the trade was very good for a week-end. Fresh arrivals were light at 12 cars and consisted largely of sacked variety. Dealers now look forward to a broad trade. Cars on track 76. Sales reported today were: Per 100 lbs., sacks, triumphs, Alabama, 1 car at \$2.90, 2 cars at \$3, 2 cars at \$3.10; No. 2, 1 car at \$1.60; Louisiana, 1 car at \$2.65, 1 car at \$2.75. Barrels, South Carolina, \$6.50@6.75; sacks, Louisiana triumphs, 100 lbs., \$2.65@2.75; Alabama, \$2.90@3.10; ungraded and poor, \$2.25@2.40; No. 2, \$1.60; Louisiana cobbles, \$3.25. Sweet potatoes—Arrivals light; fair demand noted. Hampers, Tenn., Nancy Halls, \$3.25; Illinois white yams, \$1.50.

New York—Florida potatoes fairly active; South Carolina firmer; old sacks extremely dull. Fancy sweet potatoes tending upward. New potatoes—Fla., bbl., No. 1, \$4@7; No. 2, \$1.50@3; S. C. bbl., No. 1, \$5.50@6.50; No. 2, \$3@3.50; old potatoes, Me., bulk, 180 lbs., \$2.25@2.60; car lots, cwt., \$1.20@1.25; 150-lb. sk., \$1.80@2.15; state, bulk, 180-lb. sk., \$1.90@2.15; 150-lb. sk., \$1.75@2.15. Sweet potatoes—Jy., bskt., \$1@3.75. Yams—Del., bskt., \$2.50.

BUCKWHEAT MARKETS.

MILWAUKEE.—Prices continued unchanged in the Milwaukee buckwheat market last week. Demand was slow and receipts were light. Current quotations, per 100 lbs., are: Silver hull, \$2.10@2.15; Japanese, \$2.20@2.25.

BUFFALO.—Mixed, per 100 lbs., \$2.25; silver hull, do., \$2.17.

CHICAGO.—Sales of mixed buckwheat were made at \$2.06.

Hay Department

KANSAS CITY HAY NOTES.

T. J. Tanner, Correspondent.

B. F. Tyler, head of B. F. Tyler & Co., has returned from a rest period of two weeks at Excelsior Springs, Mo.

Reports from New Mexico say the new alfalfa crop is moving freely to Texas, Louisiana and Alabama. Prices being paid preclude shipments to Kansas City.

A hay firm in Des Moines, Ia., has appealed to Kansas City dealers to join in a protest against an advance in freight rates on hay from Omaha to Des Moines. Kansas City hay men are unable to understand why they should help to fight the battles of their competitor, Omaha, in Iowa, where Kansas City would like to sell more hay.

J. A. Brubaker says prices of prairie hay can be held steady only by continued light receipts. In other words, he doesn't think well of the demand.

Maxwell, Neb., 20 miles east of North Platte, reports alfalfa being killed by worms.

On his return from a trip to Butler, Mo., this week, Bryant Arnold of the Kansas City Hay Co. said the new timothy and clover fields presented a good appearance and that a considerable percentage of old timothy remained on the farms. The blue grass outlook, also, was favorable.

The Government report for May shows only 198,000 tons of Idaho's hay crop of 2,198,000 tons left. A year ago the carry-over was 477,000 tons. According to the report, the winter-killed acreage of alfalfa has been plowed up and seeded largely to corn, oats and barley. The alfalfa remaining for harvest looks exceptionally good, so that prospects for feed and forage are favorable. Stockmen are optimistic concerning a satisfactory grazing season.

In pursuance of a plan adopted several months ago, the site of Camp Funston, near Junction City, Kan., is being turned into an alfalfa field. With tractors the farmers are pulling up the concrete foundations of the barracks in which thousands of soldiers slept during the World War, and the macadam roads will soon be cleared away. One huge stone monument will be left to tell the story of army training.

Receipts of alfalfa hay in Kansas City during most of this week invariably contained two or three cars of new-crop product, nearly all coming from the Great Bend district of Kansas, which seems to have had dry weather when rains were falling elsewhere. By Saturday the movement of new hay sud-

denly expanded to 30 cars, making 45 cars for the week. The source of receipts broadened. Most of the hay showed good quality and curing, but there were some heating and junky cars. Though demand for alfalfa, both local and shipping was good, buyers gradually reduced bids until new No. 1, equal to the \$26.50 car of the previous week, sold at \$24. Most of the hay graded standard or below. There was a range of \$14 a ton from the poorest car to the best during the week. Dealers said that, if the sunshine continued a week, movement of the first cutting of alfalfa in Kansas would be general. Despite somewhat pessimistic official reports on the first cutting, most Kansas City dealers held the opinion that it would prove to be a good one, probably better than that of last year.

J. C. Mohler, in the Kansas weekly crop bulletin, says alfalfa was more severely injured by frost of April 28 to 30 than was at first supposed. In some meadows the damage proved so severe as to stop further growth and cutting was necessary immediately to insure a fair start for the second crop. This frost damage makes it sure that the first cut of alfalfa will be light and the quality only fair. Wild hay, he adds, has made excellent growth and a good crop of native grass, with early harvest, is almost certain.

HAY MARKET REVIEW.

Seasonal dullness prevailed in the hay market during the week May 10-20, according to the weekly hay review of the U. S. Department of Agriculture. Offerings were moderate but the demand was largely restricted to city and industrial requirements while the large supply of hay still on farms caused buyers to purchase sparingly. Top grades continued scarce and met with a good inquiry, but off grades were in excess of the demand and could be sold only at wide discounts.

Alfalfa cutting extended northward and new alfalfa arrived at Memphis while new crop native hays were competing with Kansas prairie at New Orleans. Pastures have improved considerably in the Southern states and are mostly good in the Middle Atlantic area, although they are rather short and growth was slow in Central and Northern states. More rain would be beneficial to meadows in some sections, particularly parts of the upper Mississippi and upper Ohio valleys.

Timothy held steady. Eastern markets were practically unchanged, although liberal concessions were made to move lower grades at New York. Receipts at Cincinnati were more than double the low level of the past two weeks and prices declined 50 cents to

North & Company
Receivers—Shippers
Hay, Grain, Millfeed, Alfalfa Meal
Live Stock Exchange Kansas City, Mo.

\$1.50, but offerings at Chicago were small and quotations were advanced \$1.

Alfalfa was barely steady with weakness in California markets. Good quality arrivals moved readily at Omaha, although off-grades were hard to move. New alfalfa was arriving at Kansas City and was selling \$6 to \$20 per ton, depending upon the condition. Some cars were arriving in heated condition.

The prairie market ruled practically unchanged. Prices held steady at Chicago and St. Louis, with a small volume of trading. Light receipts held the Minneapolis and St. Paul market firm and the stock yards took the bulk of the offerings at Omaha where quotations were unchanged. Competition among local dealers for the scanty arrivals of the best hay forced an advance in the price of number 1 prairie, but the lower grades were steady to easier. The stock yards took only a little hay at this market.

HAY MARKETS.

BOSTON.

May 23.—No. 1 timothy, \$25.50@26; No. 2 timothy, \$22@24; No. 3 timothy, \$17@19; eastern, \$16@23; clover mixed, \$21@24. Straw—Rye, \$21@22; oat, \$13@15.

PORTLAND, ORE.

May 21.—Buying prices f. o. b. Portland: Alfalfa, \$20@21 ton; valley timothy, \$20@21; eastern Oregon timothy, \$23@24; clover, \$16.50@17; oats, \$19@20; straw, \$19.50@20.50; vetch hay, \$19.50@20.50; straw, \$8@8.50.

NEW YORK.

May 21.—The New York Hay Exchange Ass'n has issued the following weekly report, with latest quotations:

	Hay.	Straw.
Receipts for week	1,255	36
Receipts last week	1,132	13
Receipts from Sept. 1	44,388	988

Manhattan and Brooklyn continue to present entirely different conditions, with values at both points weaker at the close.

Moderate rail receipts at Manhattan (33rd street) were augmented by the arrival of a river barge Monday, which combined offerings exceeded immediate needs, causing a slight easing off in values. Supplies consist of about an even assortment of large and small bales of a good No. 2 down, with \$23 about top for No. 2 timothy large. Although a car or two of this class reached \$24 in early week, this figure is considered too extreme at the close for the table of quotation.

At Brooklyn the situation continues unsteady and weaker, particularly on small bales which constitute the bulk of the stock, of a medium and lower quality, a large proportion of which is of a fair No. 2, greatly in excess of requirements, meeting with little demand, most of which offerings are under heavy car demurrage charges. Sharp cuts are being made, especially on the earlier arrivals to check the accumulating car detention penalty, some No. 2 sales reported as low as \$18, with lower qualities as low as \$13, depending upon class and grade. This situation has retarded disposition at Brooklyn, E. D. T. where prices are affected by Bushwick, reductions being accordingly made to attract trade. Brooklyn sales average about \$2 under Manhattan. Inside of table applicable to former. Rye straw nominal. Invoices are reported light. Federal grade quotations for large bales are as follows: Timothy—No. 1, \$25; No. 2, \$22@23; No. 3, \$18@20. Light clover mixed—No. 1, \$22@24; No. 2, \$18@20; No. 3, \$16@17. Medium clover mixed—No. 1, \$18@20; No. 2, \$16@17. Light grass mixed—No. 1, \$22@24; No. 2, \$18@20; No. 3, \$16@17. Heavy grass mixed—No. 1, \$14@15. Rye straw—No. 1, \$16@17.

MILWAUKEE.

May 23.—The Milwaukee hay market continued in nominal status last week. Prices are unchanged. Current quotations per ton, f. o. b. Milwaukee, are: No. 1 timothy, \$14@15; No. 2 timothy, \$12@13; No. 1 mixed, \$13@15.50; No. 2 clover mixed, \$11@12; sample hay, \$6@8; marsh feeding, \$10; packing, \$9; rye straw, \$9@10; oat straw, \$9@10.

DULUTH.

May 23.—Almost summer conditions prevailed in the hay market during the week. Pasturages were better. Dealers discouraged shipments of any but the best grade hay to the market as the off grades are difficult to handle. Closing prices are unchanged per ton, as follows: Timothy—No. 1, \$16; No. 2, \$15. Mixed timothy—No. 1, \$15; No. 2, \$10. Prairie—No. 1, \$16; No. 2, \$13; No. 3, \$11. Midland—No. 1, \$10; No. 2, \$8. Straw—Rye, \$9; oat, \$8.

LOS ANGELES.

May 22.—The hay arrivals for the week ending May 16th amounted to 243 car-

loads. The market remains the same a week ago, both in prices and activity. No. 1 alfalfa selling at \$21@22; No. 2 selling at \$19@20; No. 2 barley hay, \$19; No. 1 oat hay, \$21.

MEMPHIS.

May 23.—New alfalfa is coming in from southeastern Missouri and is better than new hay usually is. Very few cars have been received in heated condition, so that buyers are showing more willingness to take it at the discount of \$1 or so a ton compared with the old. Demand for a kind of hay continues light, but timothy is a shade firmer and higher. Quote: Timothy, one, \$22@22.50; two, \$20.50. Alfalfa new crop, one, \$25.50@26; standard, \$22.50@23; two, \$19; old crop alfalfa is quoted at \$1@1.50 over the new.

CINCINNATI.

May 25.—While the hay market displayed little activity the past week, the demand was sufficient on most days to absorb the materially increased receipts, which were more than double those of a week ago. The market, though, was decidedly easier and from 50c@1.50 per ton lower, which was made necessary by the indifference of buyers, who were apparently waiting for values to reach a lower basis before making purchases. Shipping orders were disappointing, probably due to the relatively higher prices quoted to the south, and to the disposition shown by dealers to buy only for absolute needs, but seemed to increase somewhat toward the close of the week as a result of the break. Top grade seemed to suffer as much as medium and common kinds. No. 1 timothy, \$17@17.50; No. 2, \$15.50@16.50; No. 3, \$13@14.50; threshed, \$8.50@10; no grade, \$8@10; No. heavy clover mixed, \$14.50@15.50; No. light clover mixed, \$16@16.50; No. 1 clover mixed, \$15@16; No. 2, \$12@14.50; no grade, \$10@11; No. 1 clover, \$15@16; No. 2, \$12@14; no grade, \$8@9; No. 1 second cutting alfalfa, \$18@19; No. 2, \$15@16.50; No. first cutting alfalfa, \$16@17; No. 2, \$12@14; sound sample grassy hay, \$9@10; wheat straw, \$9.50@10.50; oats straw, \$9@10; ry straw, \$13@14.

TOLEDO.

May 25.—Hay is quiet, with prices unchanged again and little of interest to report. Dealers are keeping a weather eye on local conditions and those in nearby states. More rain is needed in some localities to make the growth more rapid. Receipts are small as farmers are busy in the fields and the demand is very spotted. The hay surplus will be a check on price and a large trade is needed to make more active market.

Prices for the past week were as follows: No. 1 timothy, \$14; No. 2 timothy, \$12; No. 1 light clover mixed, \$13.50; No. heavy clover mixed, \$12.50; No. 1 red clover, \$11; No. 1 first cutting alfalfa, \$15; No. 1 second cutting alfalfa, \$20; sound dry wheat straw, \$8.50; sound dry oats straw, \$8, f. o. b. Toledo.

BALTIMORE.

May 23.—On the better descriptions of timothy and choice light clover mixed hay prices are steady as heretofore quoted with no real pressure on the market of good hay, but medium and low grade stuff is in abundant offering and for poor stock there is scarcely any outlet. Straw is steady and unchanged, with a fair jobbing demand for No. 1 wheat and oat block. Long rye straw is quiet. Quotations follow: No. 2 timothy, \$18.50@19; No. 1, \$15.50@17; No. 1 light clover mixed, \$17.5@18; No. 1 clover mixed, \$17@17.50; No. 1, \$15@16. Straw—No. 1 straight rye, \$18.5@19; No. 1 wheat, \$15@15.50; No. 1 oat, \$15.50@16.

KANSAS CITY.

May 23.—With aid of a liberal movement of new crop alfalfa and a general broadening of receipts of all varieties, the arrivals of hay this week were 303 cars. A week ago the market had 161 cars and a year ago the number was 361.

Including new hay the alfalfa receipts were 141 cars, more than double those of a week ago. Nearly one-third of the arrivals were from the 1925 crop in Kansas. There was a good demand for sound hay, both old and new. The latter grade standard, as a rule, but toward the end of the week there was an increasing percentage of heating and damaged hay in the offerings and slowness and weakness became apparent. While price ranges of the various grades were unchanged, new hay sold at discounts of \$1@3 a ton under old.

Prairie hay offerings were 117 cars, or more than a week ago. Prices at the outset were depressed, but in the case of No. 1 more than a full recovery was made due to a good demand for good hay. The close showed the best No. 1 hay \$1 higher than a week ago, while other kinds were unchanged to 50c lower.

Timothy came in more freely. The offerings of timothy, clover mixed and clover were 45 cars. Trade was not very brisk but prices were unchanged.

Three cars of straw arrived. Two sold at \$8.50. There was a fair demand.

Carlots of hay and straw are quoted as follows per ton f. o. b. Kansas City:

Alfalfa—Select dairy, \$23.50@26.50; choice, \$21@23; No. 1, \$19.50@20.50; standard, \$16@19; No. 2, \$12.50@15.50; No. 3, \$12@14.

Prairie—No. 1, \$10@12; No. 2, \$8@9.50; No. 3, \$5.50@7.50; packing, \$4@5.

Timothy—No. 1, \$14.50@15; standard, \$14@14; No. 2, \$11.50@12.50; No. 3, \$9@11.

Clover mixed—Light, \$14@15; No. 1, \$12.50@13.50; No. 2, \$9@12.

Clover—No. 1, \$9.50@12; No. 2, \$7@9. Straw—Wheat, \$8@8.50.

PHILADELPHIA.

May 23.—There are no new or interesting features to note in the hay market to which we could call attention. Supplies are moderate, but fully ample for all requirements and prices are steadily held. Demand for straw is limited, but offerings are light and values are steady. Hay, federal grades: Timothy—No. 1, nominal; No. 2, \$18@19; No. 3, \$16@17; sample, \$10@15. Light clover mixed—No. 1, \$17@18; No. 2, \$15@16; No. 3, \$12@14. Medium clover mixed—No. 1, \$15@16; No. 2, \$13@14. Heavy clover mixed—No. 1, \$14@15. Light grass mixed—No. 1, \$17@17.50. Straw—straight rye, \$15@15.50; wheat, \$15@15.50; alfalfa, \$14@14.50.

ST. LOUIS, MO.

May 25.—Arrivals of hay on both sides of the river were moderate, considering it as Monday. The market is steady on top grades of timothy as well as light over mixed. Medium grades are barely ready on account of the receipts being lighter. Clover—No demand. None arriving. Poor grades unsalable. Alfalfa—Choice qualities wanted. Other grades more or less neglected. Prairie—In fair demand for top grades. Medium and lower qualities still difficult to place at reasonable figures. Straw steady. No. 1 timothy, \$21@22; standard, \$19@20; No. 2, \$15@16; No. 3 and sample, \$10@11; No. 1 clover mixed, \$17@18; No. 2, \$13@14; heavy mixed, \$14@16; No. 1 clover, \$16@17; No. 2, \$12@13; threshed hay, \$9@10; choice alfalfa, \$24@26; No. 1, \$22@24; standard, \$16@18; No. 2, \$13@15; No. 1 alfalfa, \$15@16; No. 2, \$12@14; rye straw, \$10; wheat straw, \$8.50@9.50.

CHICAGO.

May 25.—Hay sold well with 34 cars timothy and clover in, also 1 car packing alfalfa and 1 car rye straw. Prices were firmly maintained, as follows: U. S. grades. Timothy—No. 1, \$21@23; No. 2, \$17@19; No. 3, \$13@16. Timothy and clover, light mixed—No. 1, \$19@21; No. 2, \$16@18; No. 3, \$12@14. Timothy and clover, medium mixed—No. 1, \$15@17; No. 2, \$13@15; No. 3, \$11@13. Timothy and clover, heavy mixed—No. 1, \$14@16; No. 2, \$12@13; No. 3, \$11@12. SUES FORD FOR A MILLION DOLLARS.

Henry Ford and the Dearborn Publishing company, of which he is owner, are named defendants in a \$1,000,000 libel suit filed in United States District Court at Detroit on April 22, by Aaron Sapiro, originator of a plan of cooperative marketing for farmers.

In the declaration filed by Attorney William O. Gallagher Sapiro alleges that articles defamatory to his character have appeared in the Dearborn Independent.

The articles, the declaration alleges, charge Sapiro with being one of "a conspiracy of Jewish bankers who seek to control the food markets of the world."

CHICAGO HAY NOTES.

Light offerings have made a substantial inroad on the accumulated stock of hay and have effected a much better market condition with a higher average price. We strongly urge prompt shipments.—E. W. Bailey & Co., Inc.

We do not look for any marked decline in prices as conditions of the new hay crop in the Middle West are not favorable, though there is a lot of old hay back.—Bridge & Leonard.

Light receipts and urgent demand forces further advances on all grades of tame hay. Hay in dealers hands now exhausted. Market working into very strong position and likely to continue favorable for some time.—Albert Miller & Co.

Mose Kahn, one of the large Chicago wholesalers, returned from California on the 14th of May. He reported good crops of both grain and alfalfa enroute.

HAY ASSOCIATION RESOLUTIONS.

The memorial committee of the National Hay Association, in approximate resolutions of respect announces the death of C. J. Milligan of Sioux City, Ia., and of Harry W. Robinson of Cleveland, Ohio.

HAY CROP REPORTS.

[Concluded from page 13.]

Ridgefield, Ill.—The Ridgefield Sheep Feeding Yards: Everything points toward a big crop for this year. Considerable alfalfa hay on hand.

Donnellson, Ill.—Donnellson Far. Equity: My estimate on conditions would be about 85%. Think there is fully 10% of old crop left.

Springfield, Ill.—J. C. Brunk: Indications for very light crop—especially is timothy doing poorly, but few cars locally held.

New Lenox, Ill.—New Lenox Grain Co.: Hay crop poor. Too cold.

Olney, Ill.—Jos. Burry: Present indications for a light crop. In regard to old crop, my estimate would be 1/4 not marketed.

Coatsburg, Ill.—Lawless Bros.: Prospect for a heavy crop of timothy and clover is fine, indeed.

Bement, Ill.—Herbert Poundstone: Practically no old hay around here. Good prospect for a good crop of clover.

Clay City, Ill.—C. D. & J. W. Duff: Meadows doing fairly well. Some hay yet in the farmers' hands.

INDIANA.

Hudson, Ind.—H. A. Opdycke says the crop is short in acreage and in height, cold and dry weather for the last two months.

Grabill, Ind.—C. Schwartz & Sons says new meadows and young clover looks fairly good, but the old meadows a little short. Quite a little old hay being kept on account of low prices.

Millersburg, Ind.—J. W. Groff says hay crop in my territory will be very light unless we get rain soon. Not much old hay on hand.

Le Roy, Ind.—Charles Ross says present outlook is for a short hay crop. Not many new meadows, old meadows mostly plowed up. Old hay all sold.

Rochester, Ind.—Rochester Co-op. Co. says prospects for new hay is not promising, most of the timothy meadows were plowed and put in corn. Clover fields needing rain badly. Some old hay in barns, but it will nearly all be used on farms.

Walton, Ind.—Owen A. Dutchess says meadows good but need some rain now. Good prospects. None of last year's crop here.

Winchester, Ind.—C. V. Graft says meadows are looking very well. Looks like big crop this season. Some old hay, the farmers will not let go at the price.

Roanoke, Ind.—Wasmuth & Sons says grass needs rain. Acreage smaller but large carry over.

Uniondale, Ind.—Miller & Brickley Grain Co. say still about 25% of last year's crop of hay. However a part will not be moved until next year. The meadows are looking fine.

Sheridan, Ind.—William A. Johnson: Not as many meadows as last year. Some old hay but the farmers holding it for fear of a short crop.

Packerton, Ind.—G. W. Denney: Prospects not good. Dry and cold. Farmers holding some under grade hay.

Uniondale, Ind.—Uniondale Equity Exch. say hay crop pretty well cleaned up. Meadows are poor owing to the continued dry weather, low price of hay and high of corn has caused a great many meadows to be broken and planted in corn.

Van Buren, Ind.—The Farmers Equity Exch. say little new crop hay. Lots of meadows were plowed up and put into corn.

Crown Point, Ind.—Henry Ziesenis: New crop very short and little demand for this time of year. Acreage cut down a lot—not as much hay as last season.

So. Whitley, Ind.—Garth R. Kyler: Crop seems very short. Need rain very much. About 25%, maybe 30%, of last year's crop will be carried over.

Parker City, Ind.—Samuel C. Deeds: Hay looks good so far. Farmer has more hay than he will use this year.

Ft. Wayne, Ind.—Stiefel & Levy: We doubt if there will be more than 50% of an average hay crop. Quite a lot of hay being carried over on account of the low price.

Lowell, Ind.—Wm. M. Love: Meadows are looking fairly well. More being plowed up for other crops than usual. Quite a bit of old hay here yet.

IOWA.

Lyons, Ia.—Joe. G. Sikkema, Prop. Farmers Feed Mill: There is a lot of hay around in this part of the country to move yet.

Lowden, Ia.—Herman Wenndt: There is plenty hay to ship.

Oskaloosa, Ia.—East End Mill: There is practically no old hay in this locality that is good enough to ship out. New crop does not look very good.

Wilton, Ia.—Herman Hipp, Prop. Wilton Elev.: About 25 or 30 cars left yet.

Wadena, Ia.—C. W. Coventry: Not any old hay in this county to speak of on account of lack of moisture. Most of the farmers had to feed all their hay. Prospects for the new crop not any too good.

Moravia, Ia.—M. McCrory: Much old hay, but farmers too busy to bail.

Hawkeye, Ia.—V. E. Copp: About 200 tons held back. Outlook for new hay is a light crop.

Welton, Ia.—Welton Elevator Co.: There are a few cars of hay to go out yet.

Doris, Ia.—F. B. Maynard: Hay prospects very poor. Have not had a rain all spring. As to old hay, we have quite a lot for market.

De Witt, Ia.—Chas. Howson: More hay here than I have known for a long time. Lots of hay land plowed and will be put in corn.

Greene, Ia.—Ira Ingraham: Haven't had any rain this spring. Farmers have plowed

up lots of hay. Quite a lot of hay on hand.

OHIO.

Paulding, Ohio.—Bitner, Pollock & Gillen: Ten per cent of hay meadows plowed up for other crops. Dry cold weather has shortened the meadows perceptibly.

Lima, Ohio.—Scott Neeley & Son say we can't have over 25% hay crop.

Brookville, Ohio.—W. N. Troutwine says the prospect for the new hay crop is just fair.

Centerton, Ohio.—Heisler Bros. say hay acreage will be 25 to 30% less than last year. Prospects for growing crop at present time 75 to 80% compared to year ago. About 15 to 20% old crop back yet.

West Mansfield, Ohio.—E. B. Evans & Son say 70% of a normal hay crop. The driest spring for years.

Willshire, Ohio.—Willshire Equity Exch. say acreage 20% less than last year. Twenty per cent of last year's crop in farmers' hands.

Oakwood, Ohio.—Burr Lighthill says extremely dry and cool. Very light hay crop.

Middle Point, Ohio.—Pierce & Stevens say half of the meadows plowed up and put in corn and oats. Twenty-five per cent last year's crop in farmers' hands.

Ft. Recovery, Ohio.—T. W. Clark says clover and mixed hay looks very well if we get rain. Timothy very light, lots of meadows plowed up.

Middle Point, Ohio.—The Pollock Grain Co. say one third of the old crop is on hand. No. 2 and No. 3 hay. Large acreage plowed up, put in corn and oats because unprofitable hay crop.

Payne, Ohio.—Brady Bros. say meadows are short and indications are for a light crop of hay. There is no good hay back on the farms.

Leipsic, Ohio.—John G. Stuber says new crop very light on account of extreme dry weather. Clover also light. Still some hay on the farms.

Bluffton, Ohio.—Amos Thut says short hay crop this year as it has been awful dry. Twenty per cent of old crop in farmers' hands. Most of them are inclined to hold hay over.

Findlay, Ohio.—C. M. Wiseley & Co. say unless we have more rain at once we will not have over one-half a normal crop. More hay in the farmers' barns than there usually is, there will also be more hay carried over on account of prices being low.

New Washington, Ohio.—F. M. Roby says timothy meadows very short and the farmers have plowed up a large per cent more than a year ago for corn. There is quite a little old hay in farmers' hands but not as much as a good many seem to think there is as they have been selling very freely the last 30 days.

Ottawa, Ohio.—W. A. Beutler says hay crop will be very short unless we get rain very soon. About 20% of old crop still in farmers' hands.

Coldwater, Ohio.—Coldwater Hay & Supply Co. say too dry for hay. We will only have 75% crop.

Greenville, Ohio.—E. A. Grubbs Grain Co. say the prospects are for a good crop. There is perhaps a third or more of the old crop left in the country.

Bloomville, Ohio.—The Dellinger & Sons Co. say we think the meadows are all right and will continue so unless we should have a dry spell. There is plenty of No. 2 hay yet to be shipped, but not much good hay.

Rockford, Ohio.—Paul Dudgeon says there is only about 75% of the acreage of last year. Due to lack of moisture the new crop does not look very favorable. There is about 15 or 20% of last year's crop available for the market.

Ada, Ohio.—L. D. Herman says the meadows are not looking very good, have had no rain since March. Still about 20% of last year's crop on hand and farmers holding on for more money.

WISCONSIN.

Black River Falls, Wis.—J. L. Parchman: No hay to be shipped.

Tomah, Wis.—B. H. Mer: Some surplus hay of poor quality. Prospects for crop not good. Farmers inclined to hold over surplus.

Mosinee, Wis.—J. Hanowitz & Sons: Probably 200 tons still on farms, but farmers refuse to sell.

Neer Park, Wis.—H. Aamodt: About 25

American Bale Ties

To conform with the rules of the National Hay Association, hay must be well baled. The use of American Bale Ties accomplishes this. A broken wire on a bale of hay condemns the hay. Broken bales cost more than Bale Ties.

OTHER USES

For baling Excelsior, Shavings, Rags, and Paper. For bundling Barrel Heading and Staves.

No other form of wire has to stand more strain and abuse. Bale Tie Wire must be made in the highest perfection possible. American Bale Ties meet every requirement for which they are intended.

The Growth of Advertising

Is the best evidence that it is the cheapest way to develop business. And, the growth of the Price Current-Grain Reporter is due to this safe and sound advertising policy. Try It.

cars hay for market, but are holding back for better prices.

Lake Mills, Wis.—Morris Rutherford: Considerable timothy in this vicinity, but holders not disposed to sell. Outlook for the next crop not very good, and those with hay left will probably keep it over.

Tomah, Wis.—W. T. Roder: About 1/2 of the hay is here yet to ship. Farmers are holding for higher prices. Grass is looking poor owing to dry weather.

Lone Rock, Wis.—W. M. Sullivan: Lots of timothy and clover hay still in this locality, hundreds of tons. New crop is looking very poor, very dry and cold. Low land hay is good.

Marshfield, Wis.—Fred Seehafer & Son: About 25% of the 1924 crop in farmers' hands. The 1925 crop looks fair. Many farmers plowing over their meadows for grain.

Juneau, Wis.—L. C. Pautsch: Not much hay left here. New crop not so very good.

Bear Creek, Wis.—A. G. Smith, Prop. Smith's Dairy Farm: On account cold dry spring there will be hardly enough hay for local use. Farmers are feeding hay they baled for market. There was an estimate of around 3,000 acres alfalfa killed this past winter.

Prairie Du Chien, Wis.—James Mooney: There is no hay in this locality to sell.

COMING CONVENTIONS.

June 5-6—Pacific Northwest Grain Dealers' Ass'n, Walla Walla, Wash.

June 9-11.—Am. Seed Trade Ass'n, Los Angeles.

June 12-13. — Northwestern Grain Dealers' Ass'n, Placer Hotel, Helena, Mont.

June 23-24.—Ohio Grain Dealers' Ass'n, Toledo, Ohio.

June 22 and 23.—Wholesale Grass Seed Dealers Ass'n, Drake Hotel, Chicago.

June 25-26.—Midsummer meeting of the Indiana Grain Dealers' Ass'n, Michigan City.

July 20-22.—Southern Seedsmen's Ass'n, Memphis, Tenn.

July 27.—Michigan Hay & Grain Association, Hotel Tuller, Detroit, Mich.

July 28, 29, 30.—National Hay Association, Cedar Point, Ohio.

August 20-21.—New York State Hay and Grain Dealers' Association, Syracuse, N. Y. Hotel Onondago.

Oct. 12-14, 1925.—Grain Dealers' National Ass'n, Hotel Muehlebach, Kansas City, Mo.

Oct. 12-14, 1925.—U. S. Feed Distributors' Ass'n, Kansas City, Mo.

1923.	4,857,000	17,784,000	5,380,000	28,021,000
1922.	4,554,000	13,507,000	4,960,000	23,021,000

CHICAGO PROVISION REVIEW.

CHICAGO, May 25.—Irregularity in the hog market as well as the marketing of hogs had a great deal to do with creating an unsettled feeling in the provision trade, and prices moved with a liberal range and commission houses were good buyers of July and September lard, with supplies furnished by packers and speculative holders. At one time there was considerable buying of September lard by a large Western packer. Supplies of hogs at Western packing points were materially lighter than last year and prices of hogs and product are much higher than a year ago.

In the local situation there is disappointment over the volume of consumption due to the employment conditions here being less favorable than at many other points.

On the breaks there was fair buying of lard and meats and cash trade in both was reported as fair. Foreign mar-

kets were irregular with sharp rallies following breaks in Liverpool.

Closing prices on lard were 10c higher to 2½c lower, short ribs 17½ to 45 cents higher and bellies 40 to 60 cents higher for the week. A feature of the trade at the close was the selling of 3,000,000 lbs. of July and the buying of an equal quantity of September lard by a leading carrier. Prices for the week follow:

 *Including via Pacific ports this week: Flour, 122,400 bbls.

BROOM CORN MARKETS.

The market situation has had no new development to change it from conditions as existing heretofore. Corn is being sold and shipped in a limited manner, manufacturers buying for the most part only as needed to fill in their stocks, with a few instances noted of buying to protect themselves against uncertainties of the future. It appears however as though both manufacturers and dealers were playing "a waiting game."

Receipts from field points have been light and have consisted principally of corn obtained from warehouses at primary points.

With the passing of the Rio Grande Valley in Texas as a factor on early corn, new Lindsay is now considered as the earliest source from which quality corn can be secured with the quality factor also an uncertainty and dependent on weather conditions until September.

Corn with merit is being held firm due to the present situation existing. The price range continues as heretofore. Dwarf being held from around \$70 to \$130, with the bulk held at \$80 to \$100. Lindsay Standard is held from \$80 to \$135 with picked cars up to \$150. Western Standard is held on the same general basis as dwarf, except crops above the average for grade, which are held in line with Lindsay.—*Broom Corn Review.*

When you have something on your mind—a query or news or a suggestion—of interest to the grain trade, write it out and send it to **THE PRICE CURRENT-GRAIN REPORTER.**

BUSINESS AND TRADE CONDITIONS

IT MAY BE recalled that we have suggested here the probability during the summer and fall of less persecution of business through governmental channels, the assurance of which seems even now more definite.

The long-standing political football of Congress and the subject of expensive and impertinent attack through governmental bureaus, commissions, etc., organized business today is more fully protected from such political attack than for some time. Senators of the La Follette, Norris and Shipstead type have had their wings clipped recently and are not exerting their former influence.

The appointment of W. E. Humphrey to the Federal Trade Commission is a challenge to the Senate's former whims in heckling our trade interests through the commission, as entirely counter to its purpose. The commission is at present conservative and very properly taking the position that its broad powers shall not be subject through the vehicle of politics to the petty personal tactics of Senators.

The Chamber of Commerce of the United States is also supporting action of the same sort, standing opposed to the annoyances heretofore surrounding business through the small caliber inquiries, investigations and regulatory enterprises of government officials.

The opinions of President Coolidge very clearly support this attitude.

Vigorous Co-operation Necessary.

This paper does not undertake a general or specific defense of any single large interest for actual or alleged misdemeanors, but we do oppose as unfair and un-American the attacks on the large business corporation simply because of its very size.

An interesting change has been going on in the list of stockholders among such large corporations which, with the notable exception of Henry Ford's interests, are now widely held by the common people.

It is, therefore, more important under such circumstances for the voters of the country who may perhaps be stockholders in certain national utilities or large corporations to consider most carefully the character and qualifications of the public servants they elect to office. If we are to avoid the individual and combined mis-directed legislative efforts of such public servants, we can best start the weeding out process when their names are posted for consideration at the polls. Blackball them there rather than cry about their actions later.

People in the cities and on the farms alike must be a unit in their attitude towards such matters if any real improvement is to be expected in the halls of Congress and of state legislatures. Such line of action is quite easy to the individual whose "ox is being gored," but a more comprehensive broad-mindedness is demanded, with a sympathetic view of the similar interests of your neighbor if we are to place the right sort of people in political power.

Gold Fishing Approved in Courts

Some months ago, the gold fish phrase was coined, referring as it does to the printed list of income taxes thrown open to the public just as the clothes line in your backyard reveals the intimacies of the family wash. It was not unexpected that the Supreme Court, from the point of law, should uphold the right of such newspapers, but our best judgment is that the people are not in favor of this rank

publicity, as it entirely disregards one of the most personal aspects of the individual. It has been said by one with considerable insight into political affairs that last year's publication of the income tax list was a contributing cause to the Coolidge election landslide. The court's action is, therefore, not consistent with the conservative policies of the Coolidge administration and a notable exception to the above mentioned let-up in governmental intrusion into private business affairs.

It is probably truthfully said that members of Congress with influence in such matters are back of this entire proposition, adding just another detail of

JUNE CROP ESTIMATES

THE June first crop estimates of experts, Murray, Snow and Cromwell, indicate a wheat crop this year of around two hundred million bushels less than in 1924 and if these estimates prove to be correct, the United States will be substantially upon a domestic basis.

A short crop will, of course, mean a good price per bushel to the farmer, but low yield per acre will cut his total income from that source to a figure which will lack much of being encouraging.

The market was steady to lower under the bullish estimates which had been accurately discounted by the trade.

proof that such Congressmen lack true business judgment, executive ability or common decency.

Improved Farm Outlook.

An interesting survey has just been concluded by the Chicago Journal of Commerce paralleling grain prices and the prices paid for the farmer's needs. The conclusion is drawn that the month of May has shown a considerable increase in the value of our principal farm products, and strange to say much of the farmer's purchases have declined a trifle. It is the latter detail which may be surprising to our readers, for they know full well, of course, how substantially grain, hogs and cattle advanced during the month.

Therefore, our concern is with the tabulation of thirty-eight leading commodities (a broad representative list) and manufactured articles showing twenty declines, nine unchanged, and nine advances. The significant detail of this survey is the fact that the nine items which advanced are farm commodities. It would seem, therefore, that the farmer has been doubly blessed and should have very little to complain about, as he faces the winter wheat harvest of the Southwest and the advancing harvest during the summer and fall.

To the farmer requiring credit, little difficulty should be encountered because the easing tendency of the money market has continued. In fact, from some Middle Western agricultural sections, the federal reserve banks report a somewhat increased demand for loans. In the aggregate, there has been quite an increase in the so-called farm capital account through the increased investment in corn acreage replacing hay and wheat acreage which was abandoned for reasons of over-production in the former crop and winter killing in the latter.

Finances of the Week.

The country is being flooded with printed matter that is largely grossly exaggerated concerning the offenses of our great financial and commodity exchanges. The rather close parallel advance in prices on both the grain and stock exchanges may be more than a coincidence. We doubt if anyone is sufficiently posted to know definitely on this point just how much of the total volume has been legitimate speculation. Neither does anyone who is acquainted with the enormous magnitude of exchange operations dispute the fact that there are much needed corrections to be made. It seems to us that Secretary of Agriculture Jardine covered this in a practical, intelligent manner in his Chicago addresses where he said that such policing of our exchanges can and doubtless will be made within their own ranks.

Stocks in many issues advanced rather sharply last week and confidence in the stability of stock exchange operations was very generally restored, for exchange transactions have again assumed their proper position in the influence of domestic financial affairs. The fluttering of the franc is certainly explained in today's uncertainty in the French budget and by the forthcoming maturities on their indebtedness, as well as pending changes in the government's tax policy.

Cotton and grain commodity exchanges seem to reflect a strengthening situation in the pits and fundamentally throughout the growing and marketing areas.

The St. Paul Railroad receivership continues to occupy front page position in the papers. President H. E. Byram is quoted to the effect that the road's difficulties could hardly have been foreseen, being the direct result of business disturbances during and after the war, trade depression in the Northwest where its lines radiate and the extensive control by the government of railroad operations, expenses and earnings. It seems to us that the following comment of President Byram is especially pertinent:

It is interesting to note in this connection that although many railroads have failed to operate profitably under these conditions, those who have felt the urge to discuss transportation matters have somehow overlooked the fact that it is not altogether fair to hold railroad managers fully responsible for results when so many essential factors are outside their control.

Fire Losses.

Statements have just been published for the year 1924, covering the record breaking high fire losses of the country, not to be proud of in the class of new records, however. The losses in our trades among readers of THE PRICE CURRENT-GRAIN REPORTER has been about in line with the entire industrial interests of the nation, although the trade press, the insurance companies specializing in our field and all interested persons have devoted much time to hammering home the greater care and protection

which must surround the thousands of plants in the trade.

Unfortunately, an alarming element in such fire losses is arson, for which special agents in the field are continually alert. Such representatives likewise inspect fire fighting apparatus, fire protective equipment, but above all, upholding the moral standard of the operators in the industry.

It is rather a far-fetched solace to believe that without these efforts, fire losses would assuredly be even greater than they are. The design, construction and operation of fireproof properties is undoubtedly better each decade, but the shameful heavy loss ratio for 1924 is causing real concern, not only among the insurance companies who foot the bill, but to the policy holders, whose premiums will increase if the present year is similar.

PROTECTION OF OUR INDUSTRIES

SOME students of political economy say that this country, during the time that William McKinley was president, reached the climax in its efforts to upbuild and to protect the nation's industries by means of a protective tariff.

It will be remembered that one of the slogans of the Republican party in the campaign for his election was "the full dinner pail," the aforesaid pail being made from tin which had been manufactured in one of our then "toddling infant" industries, the tin plate mill.

Since that time tariff walls of varying height and strength have been erected by Congress in an effort to protect this industry or that one and to give relief to this group of producers or the other one.

Sometimes the protection thus afforded, has, as in the case of the tin plate industry, been sufficiently permanent to enable the industry to grow to huge proportions and to become an integral part of this country's commercial fabric.

At other times, due it may be, to lack of continuity of protection or to the fact that the idea was basically unsound, the industry was like a plant that had been forced in the hothouse in that it withered away and died when the forcing stimulus was withdrawn.

With world competition becoming more and more keen the problem of thus protecting our producers and manufacturers without bringing down upon us from abroad retaliatory measures, is becoming increasingly delicate.

As our exports in 1924 were valued at around four and a half billions of dollars, the necessity of keeping these foreign markets open is obvious.

This subject is becoming more and more interwoven with the interest of our agriculturists, whose dooryard is not the boundary of their affairs.

A WOOL FUTURES MARKET

WIDE fluctuations recently in the price of wool have led to the suggestion from some sources that a wool futures market be established, and although this suggestion has not been of substantial volume, it does show that some dealers, appreciating the value of the futures market to the grain, cotton and allied trades, would like to try it out with wool.

Those who are opposed to the idea point out the lack of standards, the difficulty in grading and the unreliability of statistics as unsurmountable difficulties precluding the possibility of trading in wool futures.

Faulty statistics could of course to a large extent be corrected and standards, as we see the matter, could be set up in the wool industry in much the same way they are now established for cotton, thus leaving only the difficulty of grading as the really hard problem to solve. If the conclusion is eventu-

ally reached that a wool futures market would be of definite service to the industry, as we believe it is, those behind the movement will soon find a solution to such barriers as may be presented.

BUSINESS ETHICS

WE have upon a number of occasions recently referred to the code of ethics of the grain trade and without any desire to "preach" we want to refer to the matter again.

The prime incentive to any undertaking is the making of money, and as Mr. V. E. Butler the grain insurance authority of Indianapolis, told the members of the Texas Grain Dealers' Association, "No one cares how much money you make just so long as you perform a service in making it."

That, of course, presumes that we are willing to let "the other fellow" make his share of the profit on any business deal, and do not try to take all of it ourselves.

Selfishness and greed are the two outstanding reasons for the failure of a code of ethics to properly function, and while we are confident the men in the legitimate grain trade are as free from these faults as in any other industry in the country there are unfortunately still a good many people who apparently feel that the getting of money is the main, if not the sole, objective in life.

WHEN COUNTY AGENT GOES WRONG

THE FOLLOWING, taken from *Farm Implement News*, will, we are sure, be of interest to many of our readers, and where the conditions referred to exist, the information may be made of substantial value:

Some county agents do go wrong. In this case we do not mean in a moral sense. We mean that they engage in activities for which there is no warrant in the law by which the county agent system was created, and by these activities they injure the business of local tradesmen upon whose success depends in a large measure the welfare of the community. We say these activities, such as promoting co-operative buying and aiding other forms of direct selling, were not included in the functions of the county agent specified in the Smith-Lever act, and more to the point is the fact that the Department of Agriculture in 1922 issued what was equivalent to an order forbidding such activities.

"County agents," said the Department, "may not properly act as organizers for farmers' associations; conduct membership campaigns; solicit memberships; edit organization publications; manage co-operative business enterprises; engage in commercial activities, nor take any part in the work of farmers' organizations, or of an individual farmer, which is outside of their duties as defined by law."

Every implement dealer or other tradesman in whose trade field a county agent engages in any of the activities thus prohibited by the Department of Agriculture, especially commercial activities, owes it to himself and his community to file complaint of such offense with the authorities.

Secretary Hodge stated in his report at the 1924 Federation convention that complaints he had received in that year were brought to the attention of the authorities, with the result that the offending county agents were warned to cease activities complained of. Some of the secretaries of state associations have urged their members to advise them when a county agent goes wrong in his activities and stated that they would file complaint with the authorities.

No doubt there are some county agents who do not know that commercial activities have been banned by the Department of Agriculture. Perhaps some even have an impression that such activities are a part of their duty as defined by the law. A word to them by local merchants may have the desired effect. Where it does not there should be no hesitation in making complaint.

NEW WHEAT

THE MARKET REPORTS and statistical data in other departments quite definitely discuss the new wheat situation. It is mainly concerned with two factors; the apprehension in the Northern tier of winter wheat production relative to damage and freezing, through insect devastation

WEEKLY STATISTICAL SUMMARY.

The following tabulation is a summary of figures from various statistical exhibits appearing weekly in detail in "The Price Current-Grain Reporter," these figures representing the past week, the preceding week and corresponding time last year, here assembled for ready reference:

and plant disease, and the probable offset of such deterioration through favorable production in other areas.

A detail of much importance is also the time of the first movement which in Kansas is promised for the first week in June; in Central Illinois and similar latitudes, about the middle of July.

Our private reports rather indicate over-emphasis on the frost damage factor, which is quite fully covered in the crop reports earlier this week, issued by Murray, Snow and others.

CLEANUP INSIDE AND OUT

PAINTING the outside of an elevator and cleaning up the surroundings is, of course, very fine, but the important place for cleaning operations is inside.

Rats and other vermin are not only insanitary, but they are an expensive luxury which should, in so far as is humanly possible, be dispensed with.

Modern methods make that task, in most instances, comparatively easy, and right now, when most elevators have in them only a small amount of grain, is the logical time to do it.

CHICAGO, JUNE 3, 1925.

GRAIN TRADE REVIEW

THERE has been considerable deterioration in the outlook for the new winter wheat crop during the past few weeks as the result of damage from insects, such as Hessian fly and from various plant diseases, as well as unfavorable weather conditions. Those in closest touch with the country express the belief that the full effect of the recent freeze and frost over the greater part of the belt will not be known until harvest time and that the damage will show up ultimately in the way of much smaller yields per acre than suggested by conditional figures. It is on account of this that they expect the Government report, to be issued next week, will make a poorer showing than the private returns. The takeall disease has been found in several counties in central Kansas and may do some damage there, but the main factor as far as this disease is concerned is that it has apparently established itself in the heart of the great American winter wheat belt, and unless steps are taken to control it, the damage will be a factor every year when weather conditions are favorable for its development. The crop has been going backward steadily and unless rains come shortly further damage is likely to be reported as there is no reserve moisture over a large territory, and the critical period of growth is now at hand in Kansas. Harvesting is expected to start this week in advanced sections in Oklahoma, and should be on in Kansas next week, although the northern counties will not start to harvest until late in the month. New wheat should be available in the Southwest in fair quantities around June 15. The Indiana, Ohio and Illinois winter wheat crops have been severely injured in some sections by the recent freeze but to what extent cannot be determined as yet. The tendency is now to lower estimates on the Kansas crop to around 85,000,000 bus. and under, with some showing fully 15,000,000 bus. less than that figure. Even the most optimistic views do not exceed 100,000,000 bus., or about two-thirds of last year, and further plowing up of acreage is reported not only in that state but also in other sections where it is still not too late to put in corn or catch crops.

Rain Badly Needed.
Soaking rains would be highly beneficial over the greater part of the spring

wheat belt. During the past month the Red river valley received fairly liberal rains, but the moisture received over the balance of the belt was largely in the way of showers, which did little lasting good and with a lack of reserve moisture it would take but a few days of hot and dry weather to bring in a vast number of unfavorable crop comments. Owing to the extremely unfavorable weather conditions of late, the crop has failed to stool as it should in many sections with the result that the stand is light, and the yield per acre will not be overly large. Whether the spring wheat crop was damaged by the recent freeze is problematical, but according to the best reports the low temperature did little permanent damage. It is only about 30 days to the first reports of black rust developing in the Northwest and weather conditions will determine whether it does material damage or not. The May delivery here passed out without any fireworks, although trading the last day of the month was on a moderately liberal scale and price changes were very rapid. With the exception of excessive rains in France the European crop outlook remains extremely favorable, and new wheat is already being offered from North Africa. The rain reports from France naturally attract attention in view of the fact that it was the continued rains last year as well as other conditions that resulted in the poor crop. It is too early, however, to make estimates on the yield. At the same time, as long as the European situation is so favorable, there is no disposition on the part of importers to buy wheat for deferred shipment.

Coarse Grains.

Considerable damage was done to the new corn crop in the more northern sections by the recent frost and freeze, and much replanting will have to be done. The advantage of the early season has been largely lost as some of the crop experts see it, and the season in many sections is now fully as late as it was last season, which will necessitate favorable weather for a long time in order to bring the crop through to maturity in good shape. Soaking rains are needed over the greater part of the corn belt, and unless they are received in the immediate future the lack of moisture is likely to prove a big influence in the market as a price making factor. The demand for cash corn has not been active but at the same time the after planting movement has proven very disappointing and the visible supply has steadily decreased. The oats crop is very spotted with rains now needed over a wide area, and there was also more or less damage from the recent freeze. The rye crop was caught in the bloom in many sections, and heavy damage is feared, but the extent of this probably will not be definitely known until harvest. A little export demand has been in evidence, but it is apparent that the European call will not be as large as long as the foreign crop outlook remains as favorable as it is at the present time.

GRAIN MARKET SUMMARY.

Receipts of wheat, corn and oats at primary markets the past week, with comparisons, follow:

	May 29, 1925.	May 23, 1925.	May 31, 1924.
Wheat	5,373,000	5,576,000	2,944,000
Corn	4,440,000	2,591,000	3,505,000
Oats	3,097,000	3,259,000	2,809,000

Combined primary receipts of wheat, corn and oats for the past week and for the season to date, with comparisons as shown by THE PRICE CURRENT-GRAIN REPORTER:

	1924-25.	1923-24.
Past week	12,910,000	9,258,000
Preceding week	11,416,000	8,788,000
Since July 1	975,264,000	930,776,000

Wheat values were on the upgrade the past week as the result of bullish crop reports, dry weather prevailing over the greater part of the belt, and there was also claims of heavy damage by the recent freeze in parts of the winter wheat belt. Profit taking toward the last with evening up for over the double holiday caused a recession from the top and the finish was at net gains of 6 1/2¢@11¢ on

the new crop futures while the May expired at a net loss of 4 1/4¢. There were no untoward developments in the latter and all contracts were cleaned up at the last.

Corn showed considerable resistance to pressure the past week, with sentiment more inclined to the buying side, the strength in wheat having considerable influence as did the heavy freeze which necessitated some replanting over a wide area. The finish was at net gains of 2 3/4¢, the latter on September. Eastern cash demand remains relatively slow, but stocks continue to decrease as the result of shipments via lake. The entire grain belt needs a soaking rain.

Unfavorable crop reports were received on oats due to lack of rainfall and the recent freeze and the market made a fair response to increased local and outside buying and the finish was at net gains of 2 3/4¢@3 1/4¢, with the deferred deliveries leading. Cash demand was only fair. The freeze apparently did more damage to rye than to any other grain, and while the May was weak and closed 3 1/2¢ lower due to scattered liquidation the new crop months were 3 1/2¢@8 1/2¢ higher, the latter on September. Range of cash grain prices in leading markets follow:

	High.	Low.	1925.	1925.	1924.

WORLD'S WHEAT EXPORTS.

Exports of wheat last week compared with the previous week and a year ago, as reported by the Broomhall service and forwarded to this paper:

	May 30, 1925.	May 23, 1925.	May 31, 1924.
American	6,483,000	6,068,000	12,183,000
Argentine	1,799,000	859,000	4,358,000
Australian	2,568,000	3,032,000	1,104,000
Indian	264,000	80,000	136,000
Russian	—	—	480,000
Others	—	—	176,000
Total	11,114,000	10,039,000	18,437,000

Of the above total wheat from America there cleared in the form of flour 855,000.

The total export of wheat since Aug. 1, the commencement of the European crop year, compared for three years:

	1924-25.	1923-24.	1922-23.
American	376,103,000	382,983,000	385,068,000
Argentine	110,002,000	141,490,000	116,720,000
Australian	107,624,000	68,906,000	42,048,000
Indian	29,896,000	6,200,000	12,364,000
Russian	328,000	28,048,000	—
Others	2,736,000	15,884,000	6,387,000
Total	626,639,000	643,511,000	562,688,000
Season	753,195,000	662,698,000	—

WORLD'S CORN EXPORTS.

Exports of corn last week, compared with the previous week and a year ago, as reported by the Broomhall service and forwarded to this paper:

	May 30, 1925.	May 23, 1925.	May 31, 1924.
American	26,000	26,000	119,000

CANADIAN GRAIN IN U. S.

The following table exhibits the quantities of bonded grain in the United States reported last week compared with previous week and one year ago:

	May 30, 1925.	May 23, 1925.	May 31, 1924.
Wheat	5,916,000	6,366,000	9,215,000
Oats	728,000	1,067,000	1,377,000
Rye	22,000	43,000	—
Barley	1,399,000	1,494,000	406,000

WARTIME WHEAT PRICES

A Review of How the Price of Wheat Was Fixed During the War and the Reasons Therefor.

A report by Dr. Frank H. Surface, an economist of the United States grain administration, made public on May 27, reveals for the first time a chapter of war history which is of special interest to the American farmer.

"By every measure which we can apply," said Dr. Surface, "the wheat farmer in the United States was extremely prosperous during these three crop years (1917, 1918, 1919, the years of price fixing). This prosperity was the direct result of the policies pursued by the food administration and the grain corporation. The suggestion that the farmer would have received higher prices without the control measure is an illusion and the suggestion that he would have welcomed a period of profiteering is an affront to his patriotism."

Edward M. Flesh of the St. Louis grain trade, liquidating trustee of the grain corporation, explained that Dr. Surface had prepared the special report at the request of "certain members" who served on President Wilson's wheat fair price committee. He did not say which of the eleven members of that committee had made the request.

A more complete report on the work of the grain corporation will be published later. The special one is 100 printed pages in length, including a three-page foreword by Secretary of Commerce Hoover, who was food administrator during the war. Much of the report is devoted to tables and charts showing the operations of the corporation.

Mr. Hoover said that "several members" of the fair price committee had asked for a complete review of the corporation's work because of "the misunderstanding and misrepresentation grown up over the action of the committee in 1917."

Sufficient time has elapsed, he explained, so that a broad perspective can be given of the operations and, in addition, it is permissible now to reveal the war fact that the allies were ready to force down the price of wheat.

Quick Action Necessary.

Notice had been served, Mr. Hoover said, that the allies would pay only about \$1.50 for American wheat. Congress had fixed a \$2 minimum for 1916, but nothing for the 1917 crop.

"It was clear," Mr. Hoover said, "that unless action should be taken up on our part the American farmer would receive \$1.50 a bushel for his wheat and the price already was falling rapidly toward that level."

"I and my colleagues considered that a situation was impending of the greatest injustice and danger to the American farmers and we recommended to the President that our government should take control of the market and that he should assemble a committee to determine what would be a fair price for the 1917 crop. Moreover, it was my desire that the farmer, through this committee, should have an opportunity to consider the congressional minimum of \$2 a bushel was bound to become the price the following year unless some action was taken."

Mr. Hoover recalled that President Wilson in approving the \$2.20 price, said that neither Mr. Hoover nor Julius Barnes, wheat director, had anything to do with naming the price.

"That the farmer would have realized far less for his wheat, without the important and courageous action of the committee, is certain," Mr. Hoover said. "I believe Dr. Surface demonstrates that the price which was recommended by the committee and adopted by the President was relatively higher than that of other agricultural commodities in which there was a free market. And it was relatively higher still than the prices determined under similar circumstances,

for most other great commodities such as iron, steel and copper."

Except for continued support by the grain corporation after the armistice the bottom would have fallen out of the wheat market in 1919, in the opinion of Mr. Hoover.

Purchases Amount to \$500,000,000.

"Wheat to the value of nearly \$500,000,000 was purchased in this period by the grain corporation in order to support the market," Mr. Hoover said. "The activities of the grain corporation by the elimination of war speculation, made possible a reduction in the retail price of flour from \$18 to \$13 a barrel, while at the same time the farmer received more for his wheat."

Dr. Surface answered eleven questions on the effect of Mr. Hoover's program on wheat farmers.

In the first place, he said, the farmer received a base price from 20 to 30 cents a bushel in excess of the congressional guarantee of \$2. Wheat farmers received a higher price for their product than other farmers, Dr. Surface said, and added:

"This continuously higher price level for wheat than for other farm produce could not have been maintained in agriculture for the artificial measures adopted in the wheat farmers' interests."

Dr. Surface said the American wheat grower got a higher return for his wheat than growers in any of the surplus countries. The wheat farmer, he found, received more of the consumer's dollar during the government control than before or since that period.

The farmer, he said, received a greater portion of the market price of wheat than he did of other farm products. Wheat farmers, Dr. Surface presented tables to show, in the three years of control "realized the largest margins ever recorded between the cost of production and the farm value of wheat, and that during these years they made the largest profits ever recorded for American wheat growers."

A 51 per cent greater wheat acreage than the pre-war average was cited by Dr. Surface to prove that the prices were high enough to stimulate production. Land values, he shows, were increased in the period of wheat control.

"The purchasing power of wheat in terms of other commodities," Dr. Surface said, "was relatively higher during the period of the grain corporation's active existence and wheat growers were in a more prosperous condition than at any other time in recent years."

Dr. Surface, in answering the last of the questions, denied that the policies of the grain corporation had anything to do with the collapse of prices, "which took place months after its termination and was due to world wide events which caused the prices of all commodities to fall."

A NEW COLD WEATHER CORN.

Revolutionary experiments in corn are in progress at the U. S. Department of Agriculture following the return to Washington of Fred D. Ritchey of the bureau of cereal investigations, with a number of new varieties discovered in Andean highlands of South America.

In Bolivia and Peru Mr. Ritchey found corn maturing in spite of an average temperature for the year of 50 degrees Fahrenheit, while the average minimum temperature during the growing season was as low as 39 degrees. Few varieties of corn raised commercially in this country mature in less than 120 days. In our corn belt an average minimum of 55 degrees night temperature is considered the limit. The average temperature during the growing season is 72 degrees.

In the south 150 to 180 days is the rule of the corn crop. Ability to grow a profitable variety of corn through crossing of the South American varieties with those from the far north may enable great areas of the United States to be thrown open to corn growing and extend the celebrated corn belt virtually to the Canadian line. The product probably will be a dwarf variety, and it is said it will mature in about 70 days.

JARDINE TO KEEP HANDS OFF

Secretary Says, However, That Grain Exchange Must Restore Confidence In Itself.

A clearing house for the Chicago Board of Trade as one device for putting a stop to runaway grain markets was among the suggestions brought out at a conference last Friday between board officials and Secretary of Agriculture Jardine. It came from the officials themselves as one of several remedies under consideration.

"The Board of Trade," said Mr. Jardine after adjournment, "is seeking measures to rectify practices that are not good. The organization is fully aware that certain conditions need remedies and the governing officials have outlined in this talk various plans under consideration. The board will be able to apply the remedies from within and to set its house in order, and I have no doubt this will be done without outside interference."

Here to Get Acquainted.

"Right here I want to emphasize this was only a friendly call on my part to get acquainted. I did not come out here with a program of suggestions. The board officials know what is wrong and they are working on the job of finding remedies."

"In its legitimate business the Board of Trade serves a good and useful purpose. We all know what some of the wrong conditions are, when it is possible for markets to skyrocket up and down under manipulation, fed by wrong reports that serve to get the speculating public inflamed, office boys, stenographers and others with the get rich quick fever."

"The bad things have to be righted without interfering with the legitimate business of the market, and the governing officials realize it and are considering several proposals. One is a modern clearing house."

Secretary Jardine was asked his opinion of a limit on daily price fluctuation, as suggested by Senator Capper of Kansas.

"Before forming my views on the idea of a limit," said Mr. Jardine, "I'd have to know what the results would be. Would it interfere with the legitimate business of the board and with the operations that are beneficial to the community? In considering possible remedies, we've got to make certain the cure will not be worse than the evil."

"The board managers recognize, I believe, that in some ways the board is running wild. The country at large wants the conditions corrected. That is why the grain futures legislation was passed."

No Place for Gambling.

"Gambling in futures has no place on the board of trade. If there's a 15-cent spread in a day, it is obvious that it may not be due to the law of supply and demand. The board of trade must be preserved for legitimate business, and if the officials do not attend to this, then some other substitute must be found to perform its functions."

"I do not want it understood," he added, "that I am opposing the board as an institution, but the board must restore confidence in itself if it is to survive."

On LaSalle street, well defined rumors held that if a clearing house is set up for the grain market, one feature will be the utilization of the margin as a brake upon runaway grain pits. In some banking circles it was pointed out that if the governing board could be empowered to increase the margins required for trades in wheat, whenever the market begins to look too jumpy, it might steady things down.

Experts who are impressed with this idea argue it would operate somewhat as does the federal reserve bank when it curbs overexpansion by increasing the rediscount rate.

Officials of the Board of Trade insist no such idea is in contemplation as part of a clearing house scheme. But some bankers assert it is being seriously talked of in some high financial circles and brokerage houses.

The period under investigation began with Jan. 2 when May deliveries in wheat closed at \$1.76½. From that date on for nearly a month the market shot up, touching \$2.05½ and closing at \$2.05 on Jan. 28. Then the long slide began and May deliveries closed at \$1.36½ on April 3. During the period especially wide fluctuations were noted, several days showing 10 cents or more.

Experts say the market was legitimate up to about \$1.75. Over that it ran away with itself and became top-heavy from stenographers, office clerks, and the general public.

Among board officials who met with Secretary Jardine were President Frank L. Carey and F. S. Lewis and Henry A. Rumsey, vice-presidents. The directors were there and also half a dozen former presidents of the board, including R. G. Chandler, J. P. Griffin, James A. Patten, Robert McDougal, John A. Bunnell and L. F. Gates.

THE FARMER AND FREIGHT RATES.

Careful study of the entire freight rate structure of the country was advocated by Secretary Jardine of the Agriculture Department in an address to the concluding session of the United States Chamber of Commerce in Washington on May 22.

Mr. Jardine declared that if American business is to make any "significant contributions to the solution of farm problems it must get down to brass tacks, find out what these problems are and what they involve, and then offer its help to the farmer in solving them. He continued:

"The business man in city or town must realize that the farmer is likewise a business man, and that business men have a perpetual objection to being directed from the outside. Nobody needs to tell the farmer what to do. He has little liking for advice, and rightly so. What he wants is an equal chance to carry on his business as other business is carried on."

"He will welcome co-operation from others, just as any good business man will, but he will insist on running his own business."

"For instance, if farmers generally decide that co-operative marketing is the best practice for them they will carry out their plans regardless of any opposition that may arise from other elements in the population."

"Any individual or any group that tries to stem the tide of agricultural progress is certain to suffer for his rashness. Farming is the oldest big industry we have and the farmer knows his business from centuries of experience."

On the basis of a joint study of the freight rate structure, he declared, "it should be possible in adjusting rates to take into account both the market value of farm products as reflected over a reasonable period of years and the influence inevitably exerted by freight rates over the economic development of particular regions and of the country as a whole."

The Secretary said he realized that the cost to carriers must be fully reckoned with as a factor in rate making, "but I am convinced that it is equally important to consider the value of the service to the shipper." "What we must do," he said, "is iron out present inequalities in the freight rate structure and work out a policy whereby readjustments can be made in the levels of freight rates to meet the changes that occur in economic conditions over considerable periods of time."

FIGHTING BLACK STEM RUST.

The fight to save the oat crop from one of its most formidable enemies, black stem rust, is being waged from all

possible angles known to science. Not only is the disease being eliminated by the campaign to destroy its alternate host plant, the common barberry, but it is also being rendered less destructive by the "armoring" of the defendants through creating a natural resistance in varieties. The U. S. Department of Agriculture is allied with the various state experiment stations of the oat-producing areas in an effort to develop varieties of oats that are naturally immune from or highly resistant to the attacks of the disease. Two years' efforts to single out varieties that are highly resistant and to breed from them other varieties that will retain this quality along with other desirable characters have shown remarkable progress in the development of resistant varieties.

This spring the Department sent to 51 co-operating stations 16 varieties of oats for testing for resistance under local conditions and environment of these stations. Included in these 16 varieties were two selections, Minn. Nos. 686 and 687, developed by the Minnesota Agricultural Experiment Station from crosses between the White Tartar (White Russian) and a Swedish importation, the Victory, and Minota X White Tartar, respectively, which have shown exceptional promise in their resisting power for the past few years at stations in that state. The Richland (Iowa 105) and the White Tartar (White Russian) varieties which during the tests at 24 stations during 1923 showed only a trace of infection, and less than 1 per cent infection last year, are also included. A new variety, the Heigira Rustproof, introduced from South Africa a few years ago, showed equally good resistance and will be further tried at these 51 stations this year.

The expansion from 24 stations co-operating last year to a total of 51 stations in this country and several in Canada, marks a renewed and determined effort to fortify the oat crop against the losses from black stem rust by the development of resistant varieties. A specialist will visit each station during the growing season to check up on the results of the test. The susceptibility to infection of the different varieties will be measured by comparing them with the infection on control varieties, those which are known to be defenseless against the disease and which will be sown in the testing plats along with the ones on trial.

CHICAGO GRAIN STOCKS.

Wheat stocks in all positions in Chicago increased 908,000 bus. last week and rye 51,000 bus. Corn decreased 169,000 bus., oats 624,000 bus., and barley 31,000 bus. Details follow, last three ciphers omitted, except in the totals:

	Public.	Private.	Total.	Last yr.
Wheat	2,820	1,896	4,716,000	10,904,000
Corn	3,866	5,148	9,014,000	3,954,000
Oats	1,175	7,922	9,097,000	2,096,000
Rye	4,052	36	4,088,000	1,918,000
Barley	183	183,000	120,000	

Contract stocks of wheat in public elevators in Chicago increased 808,000 bus. last week. Details follow:

	This wk.	Last wk.	Last yr.
Wheat	2,819,000	2,011,000	3,175,000
Corn	3,820,000	4,097,000	3,244,000
Oats	1,175,000	1,353,000	1,358,000
Rye	4,050,000	3,897,000	1,835,000

GRAIN REGIONAL RAINFALL.

The following table gives the total average rainfall in inches, in each state in the grain regions beginning April 16 to May 25, inclusive, and the average fall in inches for each station in the state, as reported by the Weather Bureau for the week ending May 31:

	Sta- tions.	Total season.	Total for previous week.	Total
Kentucky	17	4.64	.03	.05
Ohio	15	4.10	.01	.54
W. Virginia.....	1	5.44	.00	.34
Michigan	7	2.71	.08	.07
Indiana	16	2.70	.05	.15
Illinois	19	3.58	.08	.37
Wisconsin	5	3.00	.17	.19
Minnesota	18	2.82	.29	.90
N. Dakota.....	16	2.36	.72	.63
S. Dakota.....	13	1.62	.30	.30
Montana	12	1.94	.65	.18
Nebraska	18	2.49	.29	.07
Iowa	22	2.28	.19	.14
Missouri	24	4.26	.21	.19
Kansas	25	3.75	.36	.19
Oklahoma	11	2.58	.26	.08

LAST WORD IN MOTOR SAFETY

The New Fairbanks-Morse Totally Enclosed Self-Ventilated Motor Has Many Features Which Add to the Safety and Economy of Mill or Elevator Operation.

By J. S. BAKER.

FOR many years the proper wiring of electric equipment in mills and elevators has been emphasized. Indeed, so much has been done to enclose and safeguard switches, fuses, circuit breakers, outlets and conductors that in a well constructed electrical system there is almost no danger of fire from these sources. However, from the standpoint of fire prevention, general purpose motors are not well adapted for installation where there are heavy deposits of inflammable dust such as are bound to occur in mills and elevators.

Realizing this, many mill operators and engineers have attempted to remedy the situation by placing their motors in separate compartments or building enclosures around them. This increases safety, of course, provided the compartments are well constructed. They should be of metal or concrete and properly ventilated. If, on the other hand, wooden boxes are put over the motors to keep out dust, the situation is often made even worse, because if the box is tight enough to prevent dust from reaching the motor, it will very probably make the motor overheat by restricting ventilation; moreover, the box itself may make the best kind of kindling in which to start a fire. The experience of those who have tried to improve the conditions in a dusty place by isolating motors has usually led to several conclusions. First, it is almost impossible to make a motor enclosure dust tight, especially when belt drives are being employed; second, the motor will overheat due to lack of ventilation if it is too much enclosed unless the load is very much below the rating of the motor; third, oiling, cleaning, and inspecting the motor and adjusting the belt tension are made very difficult by boxes or housings around the machine; and finally, motor enclosures are very expensive, especially if the design and

The new Fairbanks-Morse Type EH motors are designed in every detail for the greatest protection to the motor from dust, and to the mill or elevator from any possibility of fire originating in the motor. These machines are squirrel-cage induction motors totally enclosed in a rigid cast iron shell which is practically air tight. At each end is a flanged opening for connection to a pipe leading out of doors. Inside, a blower mounted on the motor shaft keeps a blast of air rushing through the machine to cool the core and windings. A tightly closed terminal box for connection to conduit completely closes the opening in the motor frame where the leads enter. The whole machine is very complete and costs but little more than a general purpose motor. This additional cost is quickly offset by a saving in current due to the use of ball bearings which almost eliminate friction. The installation is very simple, for, in addition to those operations required in placing any motor, it is only necessary to connect the inlet opening by ordinary stove pipe with a supply of clean, cool air, and to pipe the outlet opening out of doors. Contrasted with the difficulties of constructing a suitable protective enclosure for an ordinary motor, the installation of the Type EH motor is very simple. The motor will operate equally well on floor, ceiling, or wall; the end enclosures may be turned to different positions so as to bring the inlet and outlet openings to the most convenient position for connecting to ventilating pipes. Once installed this motor may be forgotten except for an annual application of grease to the ball bearings!

With any motor, a prolonged overload will cause heating. In an open motor the temperature rise may be greatly hastened if the air passages are clogged and the windings and core coated with dust. This considerably increases fire hazard, especially if the dust on the motor may be saturated in places with oil which has leaked from the bearings. If an overload is heavy and lasts long enough, and it sometimes does not take very long, the windings become hot, even red hot, sparks may fly, and then the oil soaked dust on the motor is a fine place to start a little fire which

In sleeve bearing motors there is another possibility of starting a fire which is not altogether eliminated by enclosing the motor. This danger comes from an overheated bearing. If the lubricant runs low, or if oiling rings stick, the oil film between the sleeve and shaft fails, rubbing occurs, and the bearing is sure to overheat. If the situation does not receive immediate attention, the oil remaining in the bearing housing will vaporize by the heat and there is at once a beautiful place to start a fire which may be communicated to inflammable dust or oil on the motor or floor. The new Type EH motor is equipped with grease-packed ball bearings which cannot leak oil. If neglected for more than a year, they might run dry, but would never dangerously overheat, and the "howl" of a dry ball bearing calls attention to the want of lubrication before the bearing is damaged.

If someone happens to be watching the motor when it begins to overheat, he can usually shut it down before it

Exposed View Fairbanks-Morse Totally Enclosed Self-Ventilated Motor.

has started a fire, but unfortunately the operators of mills and elevators have other duties besides watching their motors operate, and most of these machines are not in plain sight where they may be easily watched. To be safe where there is much inflammable dust, a general purpose motor must be cleaned thoroughly and often, oiled frequently and carefully, and watched as much as possible. This situation makes an expensive item of motor maintenance. The Fairbanks-Morse Type EH motor requires a minimum of attention. It is sufficient if a few cents' worth of grease is put in the bearings once a year, and cleaning is unnecessary.

In big mills and elevators of fireproof construction, where motors are often large enough to have separate rooms or galleries, and where men are employed especially to look after motors, the advantages of the totally enclosed motors are somewhat less marked than in smaller establishments, but ball bearing construction is recommended for every motor, and is demanded by the builders of some of the largest mills and elevators. Ball and roller bearings are also popular for conveyors and other machinery, not only on account of reduced fire hazard, but also on account of the great savings in upkeep and power consumption which these make possible.

FAIRBANKS-MORSE TOTALLY ENCLOSED SELF-VENTILATED MOTOR.

materials are such as to make them truly effective.

A few motor manufacturers have from time to time attempted to adapt general purpose motors to mill service. This has generally been done by fastening sheet metal covers over the ventilating openings. These covers have seldom proved to be strong or tight. Not infrequently they have materially reduced the capacity of the motor by making it overheat. In some cases where ventilating pipes have been provided for, the draft through them has been quite insufficient to properly cool the motor. Totally enclosed motors without ventilation are offered for use in dusty places, but these, by nature of the cooling system employed, are large, heavy and expensive, for the power they develop.

may not take long to become a big fire and a big loss. A clean motor, free from dust and oil, is very much safer than one which has been neglected. However, with this totally enclosed self-ventilated motor there will be no dirt or oil on the windings. Furthermore, they are very liberally rated; they are designed not to overheat on moderate overloads, therefore they will be slow to reach a dangerous temperature. If the overload is exceptionally severe or prolonged, they may burn out in spite of everything; a motor could not be built to stand such abuse. If the Type EH motor should burn out, not a spark can escape from it except by the exhaust pipe through which it can only pass harmlessly out of doors. No trouble within the motor itself can ignite the inflammable dust in a mill.

DIGEST OF ARBITRATION DECISIONS.

In a decision by the arbitration committee of the Grain Dealers' National Ass'n, the following principles were announced:

Flanley Grain Co., Sioux City, Ia., vs. The Rocky Mountain Grain Co., Denver, Colo. The plaintiff's broker sold five cars No. 2 yellow corn, no capacity mentioned, and plaintiffs furnished cars of convenient capacity, four sixty capacity cars and one eighty capacity car. The defendants contended that eighty capacity cars were purchased. Held that in the event the plaintiff's and defendant's confirmations do not agree, broker's confirmation must govern, and in this instance where broker did not send out a confirmation, broker's original wire must govern.

TEXAS DEALERS MEET

The Twenty-eighth Convention Held at Texas Hotel—Good Crowd in Attendance.

THE twenty-eighth annual convention of the Texas Grain Dealers Ass'n convened at Ft. Worth, with a good attendance. The meeting was opened with an invocation by the Rev. Charles Raine Scoville of Chicago. This was followed by several songs by the Girls Glee Club of the Texas Christian University.

Addresses of welcome were extended to the dealers by A. E. Thomas, city councilman, and J. A. Simons, president of the Ft. Worth Grain & Cotton Exchange. Mr. Simons spoke in part as follows: "We feel that it is upon you that our success as a market is due. We have a membership of 87 grain and cotton men. We have 16 feed mills and grain elevators, two flour mills and 17 trunk lines of railroad and we feel we have the facilities to serve you. Our weighing and inspection departments are competent and modern and your interests are protected at all times. We have established a laboratory for determining the protein test on wheat. We want you to hurry back and visit us again."

The response to the addresses of welcome was made by A. P. Hughston of Plano, the first vice-president of the association.

J. V. Neuhaus of Houston, president of the association, made the president's annual address as follows:

Report of the President.

To undertake to make you anything like a complete report of conditions relating to the grain and milling interests during the past year, would be so lengthy that I think it would be tiresome to you, especially so as I am of the opinion that most of you keep well posted by reading the trade papers, in addition to the information sent out from time to time by your secretary.

Rate matters in one form or another always seem to be needing the attention of your association, and in that respect the past year has been no exception. Neither are we at present by any means sure that there will not be some material changes in the rate structure that may vitally affect some if not all of our membership.

A similar situation exists in regard to legislative and political matters. We seem never to be free of the politician who will offer some radical bill in Congress, ostensibly for the betterment of the farmers' conditions, but more likely with the hope of increasing his own popularity with the producing class. It seems to me, however, that in the past year there has been a "rift in the clouds" in this respect, inasmuch as the farmers seem to be awakening to the fact that they are more frequently being duped by these schemes than otherwise. There have been so many instances of failure of these various schemes for marketing, etc., with resultant losses to the farmers of great sums in the aggregate, that it would appear that the grain dealers (against whom these schemes are apparently directed) could to their advantage compile a list from that financial graveyard and hold same for ready reference for the benefit of those of whom it has been said "one is born every minute."

The reliable local grain dealer is undoubtedly a much better friend to the farmer than the politician who endeavors to array the farmer against the dealer. I claim that the farmers' interest and the interests of the grain dealer are mutual. It is certainly to the interest of the dealer that the growers get good prices for their product, and the dealer cannot prosper unless the farmer also prospers. They are all children of Uncle Sam, entitled alike to the pursuit of health and happiness, and whenever that good Uncle or any of his agents undertake to array the farmer against the dealer, they make a serious mistake.

At the last annual meeting the membership instructed the directors to incorporate your association, and I am pleased to report that a charter was obtained shortly afterwards from the Secretary of State. We have since been operating under that charter, and I am confident the change will meet the approval of all members.

Your association has accomplished much good and we are prone to go along and not think of what has been accomplished, simply taking everything as a matter of fact. Price fluctuations of commodities dealt in by this membership have been more frequent and more violent during the past year, than ordinarily, and history shows that it is during similar periods that the greatest number of cases come up for arbitration. This year it has not been so, as you will learn from report of the arbitration committee, being rather conclusive proof that the members have pretty well familiarized themselves with the trade rules and are making an honest effort to abide by them, and in this way the mem-

bers are constantly reaping benefits of the past efforts of the association.

Your association is in better financial condition than it was a year ago, but there is still room for improvement. I am of the opinion that your association should gradually build up a surplus of at least \$5,000 and if possible maintain same at all times, for I am convinced that same would be of untold benefit in many ways, both directly and indirectly.

G. E. Blewitt, chairman of the entertainment committee, outlined the program for the entertainment of members and guests.

H. B. Dorsey, secretary-treasurer, presented his annual report as follows:

Annual Report for the Year Ending May 31st.

Complying with the constitutional requirements, I take pleasure in submitting to you my annual report as secretary and treasurer of your association for the fiscal year beginning June 1st, 1924.

At the last annual report our membership showed 330
New members admitted during the fiscal year 20
Total 350
Resigned, suspended, deceased and dropped from the rolls on account of out of business 73

Leaving present membership of 277

Financial Statement.

Receipts:
Cash on hand at last annual meeting (bonds, etc.) \$1,597.70
Received from—
Membership fees 210.00
Special assessment 2,555.00
Dues 5,558.96
Int. on bonds and sav. 72.50
Ads in booklets 210.00
Arbitration deposit fees 250.00
Arbitration awards 37.65
Exchange from drafts 9.70
Railroad claims 274.06
Secular—Bishop (cash for wire) 2.11 \$10,777.68

Disbursements:

Expense Arb. Appeals Committee \$ 3.75
Expense Executive Committee (traveling) 163.99
Refunded Arbitration Deposit fees 155.00
Refunded Arb. Awards 773.99
Arbitration expense 32.00
General Rate Fund expenses 748.10
Paid on railroad claims 36.89
Salary of secretary and office help 5,405.49
Telegraph and telephone 214.82
Charter expenses 167.50
Office rent 575.00
Storage on old records 14.00
Safety box rent 4.00
Miscellaneous expense 28.15
Paid out for Wheat Loss Claims acct. 13.00
Postage account 159.96
Printing and Stationery account 248.55
Refunded membership fee (Colo. Coal & Gr. Co.) 10.00 8,754.19
Balance on hand \$2,023.49
Following accounts have credits as follows:
Wheat loss claims \$2,083.11
Traffic or Rate Fund account 356.74
Arbitration deposit fees 95.00
Total \$2,534.85

As the slogan for this meeting is "Make It Short and Snappy," having kept you reasonably well advised as to the activities of the association the past year, I am only giving the membership and financial statement. Under existing conditions I think we could congratulate ourselves on the improvement, especially in our financial condition, as we have gained nearly \$2,000 over our previous year's statement.

The report was accepted and ordered filed.

J. N. Beasley asked regarding the wheat claims fund and it was explained that the fund was collected for presenting claims to the government for loss by dealers when the government fixed the price of wheat during the war.

G. E. Cranz, chairman of the arbitration committee, made his report which showed only 9 cases during the year and indicated that the membership was becoming better able each year to settle their differences without resorting to arbitration. J. Z. Keel: "This report shows that the dealers are becoming better business men each year and reflects great credit on the association."

The report of the Arbitration Appeals Committee by J. V. Neuhaus, chairman, showed that there had been no work for the committee during the past year.

R. I. Merrill, member of the Tri-State Appeals Committee, reported that there had been no work for the committee during the year.

R. H. Wagenfuhr made a report of the budget committee. It recommended

that expenses should be curtailed and the following budget be put into effect:
Rent per annum \$ 540.00
Printing and stationery 110.00
Telephone and telegraph 150.00
Secretary's salary 2,400.00
\$3,200.00

Leaving \$1,800 to liquidate debts and take care of other unforeseen items and that the secretary be allowed \$5 for each new member secured.

Harry Kearns: "We feel it necessary to build up a reserve and out of the \$1,800 surplus to be received from the above budget, by paying the \$800 deficit it would give us about \$900 as a reserve fund."

B. E. Clement: "I am in favor of reducing expenses but not to the point where it will cripple the effectiveness of the association work."

J. Z. Keel: "I do not think a salary of \$2,400 will hire a good secretary. If we need more money I am willing to pay more into the association."

Pres. Neuhaus appointed the following committees:

Constitution and By-Laws—Ben E. Clement, J. N. Beasley, John E. Bishop, E. W. Crouch, Gus Giesecke.

Resolutions—Julius W. Jockusch, J. Z. Keel, J. C. Whaley, Tom Connolly, E. G. Rall.

Friday Afternoon.

The Rev. Charles Raine Scoville of Chicago conducted the memorial service for those members who died during the past year.

The following are the members who died: G. B. R. Smith, Sherman; J. A. Hughes, Plainview; John L. Smith, Longview.

Eulogies were made by members on the above departed members.

F. G. Horner, president of the Grain Dealers National Association, spoke to dealers on the National Association, its work and its activities.

G. A. Collier, U. S. marketing specialist of Washington, D. C., spoke on the Grain Market News Service, in part, as follows:

Grain Market News Service.

The Grain Market News Service is being developed primarily to provide the farmers throughout the country authentic crop and market information so that they can more intelligently plan their production and marketing programs. While this service is primarily for farmers it is available to anyone who may be interested in it and I believe that our Market Reviews would be of interest to many of you grain dealers particularly those items dealing with foreign crop and market condition.

This service does not take the place of your trade papers. The information which the department can give you may supplement but can not and is not intended to take the place of your trade papers.

The Grain Market News Service is not a regulatory work but is one of the many service projects of the department. I fear that some of you overlook many opportunities of obtaining service from the Department of Agriculture. Under present laws your work comes under two regulatory units of the department but there are several service divisions in each bureau to one regulatory division. Many people are using these services and I believe you men could get considerable assistance in your work along the line of crop and market information if you would just avail yourselves of these opportunities.

I frequently hear men ask what does the Department of Agriculture know about the grain business? Well the department is rather an impersonal thing but the men in charge of the various activities are usually men of considerable experience in their line who have spent a great deal of time, thought and study on the thing they are doing. Because of the wide field covered, their experience and information becomes broader than that of men who do not have the same opportunities.

The department has many facilities for obtaining crop and market information and for the preparation of statistical and other forms of market reports.

The needs and problems of the Country Grain Trade was discussed by V. E. Butler of Indianapolis, who spoke as follows:

The Needs of the Country Grain Business.

I might talk to you about improvements in elevator construction and fire prevention, but that would be shop talk. I might talk about the cost of operating a country elevator, and probably will, to some extent. A reasonable buying margin is a subject about which volumes can be filled, and then not exhaust the subject. Side lines cover too wide a field to be considered in a short period of time. The proposed changes in oats grades, if discussed, might display my ugly disposition. Loss and damage claims are something that a grain dealer don't need. Scale inspection is a

technical question and income tax laws and regulations do not interest many country grain men at the present time. These are all problems in which you are interested but they are not the needs of the business. The needs of the country grain business are the needs of your individual community, because, by its very nature it is a business of individual effort to meet the demands of a community. Communities being diversified in their products, and in the interest of their producers, the needs of one dealer, therefore, are not necessarily the needs of another. The methods that make for success in one territory, could not necessarily be used in another, but right business principles are fundamentally the same and may be applied from Maine to California.

The local markets and the service performed in the marketing of farm products are of prime importance, in fact, are more important than any other activity in the country, and the same principles are involved in successful marketing as are used by the successful banker or the successful merchant. Therefore, it is the business policy that contributes to the making of a successful country grain business, that I wish to call your attention to for a few moments.

My contract with the business in almost every grain growing state, is such that I have reached some definite conclusions as to the cause for success or failure in the business. In the first place, I wish to say that the business is more stable in those states where strong grain dealers' organizations exist, both private and co-operative, because the efforts of the organization is always toward higher standards of business ethics and high standards make for tolerance and fairness in considering the acts of competitors.

More country grain markets are destroyed from the business point of view because of the lack of confidence and friendship between competitors than from any other cause, and I find that at stations where competitors have reached the point of believing that each is honest in his dealings with the other and with his customers, pleasant business relations are maintained and the business is more prosperous. If there is a feeling of confidence between you and your competitor and your customers, then you have supplied the greatest need of the present day grain trade at your station, and from experience and observation I say to you, discuss the needs of your local market with both your competitor and with your former customers as they may have a viewpoint of the question that has never occurred to you. A constant attitude of intolerance toward the other fellow's viewpoint, never helped any business man. I believe the first need of the country grain business is to establish your business on the basis of confidence, so that you will have an intelligent understanding of the needs of your market, the possibilities of its development and the margins of profit necessary to maintain it.

Every elevator owner strives for and desires a profit. This is the essential reason for ownership. But ownership is no longer, if it ever was, a warrant for profit in itself, for profit must come from the public, and the public is only willing to pay profit for service. A country elevator is capitalized, constructed and operated not because any contract is made for a service, but because those responsible for the building of the plant believe they can furnish something which the customers will use in sufficient volume to give a profit. This condition does not prevent any other group from doing the same thing in the same, a different, a better or a worse way, even to over building. The fact of the development of a grain business is the first important condition under which the owner may expect to deserve a profit. He undertakes definitely and without urge to do what will deserve a profit from the public against all fair competition. To do this, he must keep himself informed of all those things which have to do with the better rendering of a service. The more completely he does this, the more will he deserve and obtain a profit.

The margin of profit is perhaps the least understood important need of business. We all try to obtain a profit—some in the process of buying products and others through speculation after they have bought; but I have noticed that the men who stay in business the longest are those who obtain an adequate margin at all times and under all conditions. The old theory that grain can be handled at a certain margin per bushel, regardless of price, does not hold good in these times of high price and wide fluctuations. Those who have made a study of fluctuating prices since the war period, make the statement that fluctuations have been wider in one year in many commodities than those that took place in ten years prior to the war period. The risk assumed in marketing wheat has increased many times over what it used to be when it was sold entirely by grade and weight. There has been injected into marketing the question of protein content. This may create a very wide difference in price, depending upon the time of year that the wheat goes to market and the market selected to sell it in, as well as the year in which the crop is grown. I recently visited a station that, in the territory just north produced wheat this year that will bring a premium of 10c to 12c while the territory southwest of it produced wheat that should be bought at a 4c discount under a protein test, while at the station just west of it wheat will sell at grade price to 2c over. Protein content is a blind factor insofar as it can be determined by country grain buyers, therefore, the risk becomes much greater and the margins should be greater because of

dealer has to contend with. He bases his business on bushels instead of dollars and cents."

A. V. Nelson: "A no grade car of wheat looks just as good on a bill of lading as any other to the wheat bootlegger. The problem is how to get rid of such competition. In the side line business you sometimes have to pay more for the grain than it is worth, so as to collect bills due on the side lines. On grain shipped to Fort Worth, the handling of it is very satisfactory. The only way to stay in business is to make a profit. Our brokers are discouraging transient buyers and are beginning to realize that we dealers should handle the grain."

Spencer Taylor: "Our problem this year is decreased acreages due to high priced cotton. I find it pays best to treat your customers as you like to be treated."

E. W. Crouch: "The only way I can get along is to meet the conditions as they come up each year. Each year develops a new set of buyers, which bring up new problems. I believe our shortages will average up with the averages but it is bad business on someone's part not to have correct weighing facilities."

Saturday Morning.

J. M. Del Curto, chief of division, Texas Department of Agriculture, made a talk on the problems of handling agricultural field seeds: The Texas law requires that seed be labeled as to purity, etc., or labeled not tested, this causes a great deal of trouble to inspectors who examine such seeds and if not good seeds those who have bought must be located and so notified. "We have a laboratory which is willing to make tests as to purity and germination. Cracked seed of over 10% is considered inert matter. Seed should be completely labeled, stating purity, germination, foreign seeds, and who made the test. Violation of this subjects the dealer to a penalty under the law. Our laboratory is at your service and we will be glad to instruct any of you in the correct manner of testing. In making a germination test we take 100 seeds and the percentage is those that germinate. If the first test is not satisfactory we make another test to check against the first test. There is an allowable tolerance for natural variation. There is 7% allowed in the 90's, 8% in the 80's and 9% in the 70's. You should have a representative sample from which to make your test. The way to get a representative sample from a car of sacked seed is to draw a sample from every tenth sack. Sorghums crack easily and deteriorate the perfect seed. So it holds up much better when clean."

Problems of the railroads and the people was discussed by C. D. Morris, assistant chairman of Committee on Public Relations of the Western Railroads. Mr. Morris has appeared before the various state grain conventions already held, in which reports his talk has been covered.

Hon. Earle B. Mayfield, U. S. Senator from Texas, addressed the dealers on transportation problems.

Next Meeting at Houston.

On a motion, duly seconded, it was the consensus of the meeting that the next annual meeting of the association be held at Houston.

B. E. Clement made a report on the constitution and by laws and recommended that the dues be increased to \$25.00 per year, payable in advance. This report was adopted.

He stated that the membership could be restored to its former strength if each member would get a new member.

Mr. Wagenfuhr of the Budget Committee recommended that the secretary's salary be fixed at \$3,600.00, with no allowance for other office help. The report was adopted.

J. W. Jockusch made the report for the Resolution Committee as follows:

Report of Resolutions Committee.

WHEREAS, the purpose of this association is to help the grain dealers of Texas to improve their trade methods and practices to the end that they may attain greater efficiency and surer rewards for their service, be it

RESOLVED by the Texas Grain Dealers Association in convention assembled at Fort Worth, that we urge every elevator operator of the state to study carefully the cost of handling grain from farmers' wagons to the scales at destination and that we do our utmost both as an association and as individuals to inculcate in all dealers the spirit of honesty and fair play to the end that we may raise the grain trade to a high plane of efficiency and to establish the highest ethical standards.

WHEREAS, it appears that continuous and ever increasing interference with business is being practiced by governmental agencies of all sorts and with consequent greater handicaps to legitimate business and added expense in the operation thereof, and

WHEREAS, such interference is not in keeping with the ideals of the founders of this great republic and serves to repress the liberty guaranteed by the Constitution of the United States of America to its citizens, and

WHEREAS, such repression and the heavy taxation resulting from the employment of thousands of government employees whose man power, if directed and devoted to useful work, acts as an additional handicap to the ability of our people to compete in the world's markets, be it

RESOLVED, that the Texas Grain Dealers, in convention assembled at Fort Worth, Tex., do hereby express their disapproval of the conditions now existing and that, by publishing these views in the press of this country and by sending copies of this resolution to the Honorable Senators and Congress of the United States of America, an educational campaign in favor of less governmental interference and less centralization of authority may be hastened.

Also a memorial resolution on the death of Mrs. H. B. Dorsey, wife of Secretary Dorsey. Another commended Senator Mayfield for his address and his efforts in trying to have the Esch-Cummings bill repealed.

A resolution was adopted tendering the thanks of the association to the Ft. Worth Grain & Cotton Exchange for its magnificent entertainment.

Homer B. Wade, secretary of the West Texas Chamber of Commerce: "I am interested in the Texas Association for you are doing constructive work. You must have co-ordinated effort in order to have your association thrive and grow."

Officers Elected.

The following were elected as officers for the ensuing year:

President—H. L. Kearns, Amarillo.
1st Vice Presidents—R. L. Cole, Krum; R. H. Wagenfuhr, New Braunfels.

Secy.-Treas.—H. B. Dorsey, Ft. Worth.
Directors—J. C. Mytinger, Wichita Falls; Victor H. Davidson, Galveston; G. E. Cranz, Ft. Worth.
Adjourned.

The Entertainment.

The boys of the Ft. Worth Grain & Cotton Exchange are to be highly complimented for the generous entertainment provided for the visiting dealers.

The dinner and dance at the River Crest Country Club was a most enjoyable affair. The address by Sidney L. Samuels was well received.

Saturday evening the stag at the Country Club was an enjoyable affair, an appreciation by the boys from the country.

STAND ON GRAIN SPECULATION.

The U. S. Chamber of Commerce at its meeting in Washington last week made the following statement concerning grain speculation: "The harmful effect of incessant wide speculative fluctuations in price of grain, upon all interests connected with the production, conversion, distribution and export of our vast cereal crops and upon our foreign commerce generally, is so self evident as to seem to demand prompt remedial measures by the principal grain exchanges. We commend the efforts of the Department of Agriculture to bring about such voluntary constructive action."

Exports from the United States for the year 1924 reached a total of \$4,498,151,936, with each state in the Union participating to the extent of more than a million dollars, excepting New Mexico with \$792,960, Utah \$550,443 and Nevada \$233,413.

ALL WHEAT 200 MILLION LESS THAN 1924

Experts Murray, Snow, Cromwell and Bryant All Report Shrinkage in Wheat, Oats and Rye.

THE June 1 crop reports of the three crop experts, R. O. Cromwell of Lamson Bros. & Co., B. W. Snow of Bartlett Frazier Co., and Nat C. Murray of Clement Curtis, all indicate this country's 1925 crop of wheat, oats and rye will be much short of last year's and in the case of wheat we shall be practically on a domestic basis.

These reports, which are substantially in line with expectations, are as follows:

R. O. Cromwell, Lamson Bros. & Co. Winter wheat condition 66.6. Indicated production 413,288,000 bushels. Recent freezes damaged the crop in sections of northern and central Illinois, Indiana and Ohio. The smallest crop in the last twenty years was 399,900,000 bushels in 1912.

The frosted wheat stems are completely killed just above the joints. It is too early to learn how great the total damage has been.

Spring wheat acreage 20,465,000; condition 90.8 per cent. Indicated production 249,573,000. All wheat production 663,000,000 compared with 873 harvested in 1924.

Oats acreage increased about 8 per cent to 45,848,000. Condition 85.5 per cent, compared with 82 last May. Indicated production 1,391,200,000 bushels. Freezes and drouth have damaged the crop in leading states.

Barley acreage about 8,820,000, compared to 7,086,000 last year. Condition 89. Production 209,000,000.

Rye condition 83.8. Production 56,990,000.

B. W. Snow, Bartlett Frazier Co. The Snow-Bartlett Frazier crop report makes condition of winter wheat 71.0 and the indicated crop 434 million bushels. The increased value of par this month represents a total of 31 million bushels, so that the crop prospect during May actually suffered a decline of about 25 million bushels. The crop suffered from drought and from frost, and the full effect from both experiences cannot be judged until the test of thrashing is met. Past experience, however, indicates that the final yield in a season of such weather experience as the present is apt to fall below the earlier indications.

Spring wheat acreage 19,926,000 acres, an increase over last year of 2,155,000 acres. Of this increase 1,547,000 is on the North Pacific coast and in Idaho, taking the place of winter wheat abandoned, and represents a seeding in territory that by experience is not best adapted to spring grain. Spring wheat condition 87.2, or over 4 points below a ten-year average, and indicating a crop prospect at this time of 239 million bushels. The greater part of the near Northwest is in serious need of rainfall.

Total wheat prospect at this date 673 million bushels, against a harvest last year of 872 million bushels.

Oats acreage 44,055,000 acres, an increase of 3.8 per cent. Condition 82.8 against a ten-year average of about 89. Indicated crop 1,338,000,000 bushels. The crop is suffering from drought and from the effects of severe frost, and without prompt and general moisture relief final results will run materially below present forecasts.

Nat. C. Murray, Clement, Curtis & Co. The Murray-Clement, Curtis crop report makes the following estimates: Winter wheat condition 69.3 compared with ten-year average of 79.7; forecast 424,012,000 against a crop of 590,037,000 last year.

Spring wheat acreage 20,457,000, an increase of 15.1 per cent. Condition 91.1 against ten-year average of 90.7, forecasting 254,087,000 against 282,632,000 produced last year. The forecast this year is based on government pars, indicating a yield per acre of 12.4 bushels;

last year's average was 15.9 bushels, the season being unusually favorable.

All wheat forecast 678,099,000 compared with production last year of 872,673,000 bushels. Most of the decline in prospects in May occurred in Ohio, Illinois, Missouri, Kansas and Colorado. Forecasts for important states:

Winter Wheat.

Kansas	88,175,000
Illinois	39,368,000
Nebraska	37,427,000
Oklahoma	29,064,000
Missouri	28,465,000
Indiana	25,544,000
Pennsylvania	21,085,000
Ohio	19,048,000
Colorado	16,157,000
Michigan	15,437,000

Spring Wheat.

North Dakota	96,341,000
Montana	39,858,000
Washington	27,538,000
South Dakota	23,271,000
Minnesota	21,381,000
Idaho	16,596,000

Oats acreage 44,325,000, increase of 4.4 per cent. Condition 82.8 compared with ten-year average of 88.2 and forecasts 1,342,452,000 compared with a crop of 1,541,900,000 last year. Low condition is due mostly to deficient moisture. Rye condition 77.9 compared with 86.8 a month ago and a ten-year average of 87.6. Forecast 53,035,000 bushels compared with 63,446,000 produced last year.

AGRICULTURAL MART FOR CHICAGO.

Plans for financing the proposed \$35,000,000 American agricultural mart were discussed by Lawrence H. Whiting, president of the Boulevard Bridge Bank, and promoter of the project, at a meeting at the Furniture Club of America, in Chicago last week.

Agricultural men were present from different parts of the United States, including the entire directorate and executive officers of the American Farm Bureau federation, to hear the story of the move to build a fitting monument to agriculture.

Mr. Whiting said that the building as contemplated will contain 3,000,000 square feet of rentable area, will be approximately 800 feet long and 320 feet wide, which will make this the largest and most imposing structure of any kind in the world.

According to Mr. Whiting there are eleven great national trade exhibitions which it is impossible to show in Chicago because there is no building large enough to accommodate them, including the American Exposition Palace and the Coliseum.

Plans include, in addition to a hotel and club rooms, office space to house adequately the big national, sectional and state agricultural associations. Class rooms and laboratories are also provided for.

CANADIAN WHEAT AND OATS STOCKS.

Total wheat stocks in Canada, as of March 31, were about 80,000,000 bushels less than on the same date last year, according to a telegram received by the U. S. Department of Agriculture from the Dominion Bureau of Statistics. Last year's stocks, however, were the highest on record and the stocks reported for March 31, 1925, are only slightly lower than on the same date of 1923, while they are somewhat above those of 1922.

Stocks of mills and elevators are estimated at 74,000,000 bushels, a reduction of 44,000,000 bushels as compared with 1924, but only 3,000,000 less than stocks of the same date in 1923.

Stocks of wheat in farmers' hands are the lowest since 1920, the amount retained being but little more than sufficient for the spring seeding requirements.

Total stocks of oats are about 100,000,000 bushels less than on March 31, 1924, and 8,000,000 bushels below the amount reported on the same date of 1923.

When you have something on your mind—a query or news or a suggestion—of interest to the grain trade, write it out and send it to THE PRICE CURRENT-GRAIN REPORTER.

BRITISH WHEAT STOCKS LOWER

June and July Contracts Not Large—Wheat and Flour Prices Advance.

By JACK BROOKS.

LONDON, May 16.—Although the freight market in wheat now favors exporters the contracts for June and July shipments do not as yet reach any extraordinary totals. Supplies on passage remain quite stable, buyers obtaining week by week quantities closely approximating to arrivals. Shipping countries sent off around 25,500,000 hundredweights last month against 34,000,000 the previous month. London sales of foreign imported and colonial imported wheats have approximated \$3.50 for more than 75 per cent of the offerings. Some 15 per cent represented good Canadian which realized up to \$3.65, the balance being made up of lower quality American, Argentine and poor quality Indian and ranging down to \$2.85 in price. These prices are all per hundredweight. Winnipeg, while quoting old wheat at \$3.25 per hundredweight, spot, will take \$2.60 for new crop for September exportation, the trade reports here. Wheat stocks here are in process of reduction again, London having imported 2,035,000 hundredweights last month as against 2,970,000 hundredweights the previous month.

Liverpool cargo prices for No. 2 red winter spot and futures show a continuing upward trend. The following table indicates its extent (per 100 pounds):

	March.	April.	May.
Spot	\$2.70-3.10	\$2.90-3.12	\$3.20
Futures	2.60-3.05	2.70-3.00	3.10

London wheat prices show an increase of six cents per hundredweight on the week for Canadian best and 12 cents for Argentine. English wheat of fair average quality stays at the level of \$3.16. The prices realized this week-end for imported wheat varied but slightly between ports, Canadian making \$3.70 to \$3.80, Argentine around \$3.60, Australian \$3.50 and American red from \$3.35 to \$3.60. The prices of this American red vary more than the average foreign description owing to its susceptibility to daily cables from the American wheat centers.

Although flour here is again a little dearer on the week the advance is not of particular importance, judged as a market movement. Canadian flour sells best, while Australian makes the poorest sale. Even as this is being written flour prices are drooping again and before the week-end is through most prices will be back at the level of a week or two ago. Fine Canadian has dropped from \$6.60 to \$6.35 per bag of 140 pounds in London and American red winter flour is realizing \$6 for good quality. At Liverpool a slightly higher rate is being paid for Canadian, Australian realizing \$6, but not a lot of business is being done at this price. Russia has been taking substantial shipments of flour from this country.

Maize continues to gain strength, fair average quality being now practically back to the March price of \$2.60 per hundredweight after being down to \$2.30. Maize meal is worth \$2.82 compared with \$2.60 a month ago. May shipments of maize here have so far been 50 per cent below average except at London where the importations have been above average, thus making it more difficult for local sellers.

NATIONAL ADVISORY COUNCIL MEETS.

United action by all agencies working for better marketing of farm products is forecast by the organization of the National Advisory Council, composed of leaders in farm movements, which met on May 27 at the Hotel LaSalle.

Early application of this united effort to the Grain Marketing Company was forecast in the statement of O. E. Bradfute, president of the American Farm Bureau federation, who issued the call for the meeting.

This action may deal with the selling of \$4,000,000 stock in the Grain Marketing Company, to which there has been opposition.

The council itself is the result of Washington conferences, in which it was said Secretary of Commerce Hoover and Secretary of Agriculture Jardine took an active part.

This statement was issued by Mr. Bradfute when the council met here:

"This council is the result of conferences which have occurred in Washington and elsewhere of all those groups interested in co-operative marketing, including agricultural leaders, publicists and prominent citizens, who have been concerned with the rehabilitation of agriculture from a nation's viewpoint.

"This National Advisory Council may supplement what has already been done to the end of permanently establishing the Grain Market Company as a sound co-operative business agency, operating in accordance with the best banking and commercial practices for marketing the crops at the lowest possible cost to the consumer."

Twenty-three men have been appointed to serve on the council. Outsiders interpreted the meeting as an attempt to bring into closer relationship the two opposing factions in co-operative grain marketing. It is said the National Council of Farmers' Co-operative Marketing associations, led by Aaron Sapiro, and the Grain Marketing Company are hopeful of bringing their interests together.

The fact that representatives of the opposing forces met with Secretary Hoover and Secretary Jardine is considered a step in an effort to bring about a reconciliation between the two groups.

DEPARTMENT MAY USE AIR- PLANES.

The Department of Agriculture is considering acquisition of a fleet of airplanes for use in its field work if experiments now being conducted prove successful. The airplane already has been found useful in obtaining information on cotton crop condition and crop reporters assert that it allows them to cover more territory and get better information than an automobile permits.

L. L. James, crop statistician of Louisiana, has found on several trips over his territory that at heights of 500 and 1,000 feet, he was able to get accurate knowledge of the crops, and negotiations are being conducted with the Army Air Service to permit Frank Parker, statistician for North Carolina, to cover the fields of that state with an airplane.

Charles E. Gage, of the Washington corps of crop reporters, also has been successful in obtaining aerial photographs of cotton fields with special instruments of the department.

The Weather Bureau is now engaged in conducting experiments on weather forecasting with instruments attached to airplanes to determine whether better information cannot be obtained among the clouds than from land instruments. One such flight was made recently at Bolling Field in an army air service plane and bureau officials are studying the results with the view of using airplanes regularly.

It has been reported that Carnet, a new variety of wheat, may in the near future replace Marquis in much of Canada. The conference held in Winnipeg last fall, and presided over by the Dominion Deputy Minister of Agriculture, stressed the fact that efforts must be made to find a wheat that (1) would resist rust, (2) that would resist frost so that the Canadian wheat belt might be extended farther north. Reports that seed of this new variety will be distributed soon appear, however, to be premature. Experiments with Garnet have been made for the past nine years, and it is believed that they have not been conclusive yet.

When writing advertisers please mention THE PRICE CURRENT-GRAIN REPORTER.

OPPOSE METRIC SYSTEM

Grain Dealers Almost Unanimously Against Its Adoption—Cost and Confusion Cited as Reasons.

BECAUSE of the movement which is now being made, looking to the enactment of legislation at the next session of congress, favoring the gradual adoption of the metric system of weights and measures, THE PRICE CURRENT-GRAIN REPORTER recently sent out a limited number of inquiries to the grain trade, in order to find out what the dealers thought about the proposal.

Not a great many replies have thus far been sent in, but enough has been received to indicate a practically unanimous opposition.

A representative number of the replies have been briefed for easy reference and they are as follows:

ILLINOIS.

Bloomington, Ill., Lawrence Farlow, sec'y Farmers Grain Dealers Association of Illinois—The metric system is a matter in which the grain men are all interested and I assure you it will be given due consideration at our future meetings.

Chester, Ill., W. C. Cole Mfg. Co.—We are unalterably opposed to the metric system. It would cost us many hundreds of dollars to change.

Christopher, Ill., Christopher Mill Co.—We are against the adoption of the metric system 100 per cent.

Highland, Ill., Highland Mfg. Co.—We cannot understand how the metric system could be used for weighing. We certainly would not want to fool with any kilometers.

Sidell, Ill., Sidell Gr. & Elev. Co.—We are opposed to it.

INDIANA.

Jasper, Ind., Victoria Mill & Elev. Co.—We are strictly against such legislation.

Lebanon, Ind., Boone Grain & Supply Co.—Within the past year we have installed two 10-ton wagon scales which if changed would mean an investment of probably \$1,000, so from that standpoint we would oppose it.

Monticello, Ind., Farmers' Elevator Co.—We are against the change. Have no trouble in finding weight and value of carload of grain under present system. Why should we be compelled to go to the expense of making the change when it would not reduce our overhead expense nor add one cent to the value of the grain.

Mt. Vernon, Ind., Mount Vernon Mfg. Co.—The adoption of such legislation would mean a complete reorganization in the whole industry of the country. We have for so many years been accustomed to our present method that I doubt very much whether a change would be affected.

IOWA.

Ashton, Ia., Farmers' Eltr. Co.—We believe in leaving it as it is. We have \$3,000 in scale equipment, therefore we are not in favor of the metric system.

Maquoketa, Ia., Trout & Matthias—We are opposed to anything changing our present system of weights and measures.

KANSAS.

Concordia, Kans., The Concordia Mfg. Co.—We are absolutely against this system, for we believe the weight system now in effect is entirely satisfactory.

Partridge, Kans., The Partridge Co-op. Equity Exch.—I can see no reason for such legislation and I believe a campaign should be started against such a move.

Pittsburg, Kans., Pittsburg Elev. Co.—We think it would be unfortunate to change our system of weighing at this time. A change in our system if forced upon us by law would produce endless confusion and expense.

Toneka, Kans., E. J. Smiley, sec'y Kansas Grain Dealers' Ass'n—The grain trade of this state and the grain trade at large will oppose the use of this system. I cannot believe that Congress will approve of this system which will necessitate millions of dollars being spent for new equipment.

MICHIGAN.

Bad Axe, Mich., Farmers' Elev. & Produce Co.—We are very much opposed to the metric system, for we believe it would cause a lot of unnecessary expense and in the end have no improvement over our present system.

Grandville, Mich., Grandville Eltr. Co.—We are against it. Let well enough alone.

Traverse City, Mich., Traverse City Mfg. Co.—We are surely against it and hope it will be defeated.

MINNESOTA.

Rushford, Minn., M. Johnson—We have the best system. It is simple and we all understand it. Why make a change and start confusion?

NEBRASKA.

Neligh, Neb., S. F. Gilman Mill Co.—We have always been for the metric system in weights. We cannot see why any scale would have to be changed. In fact, they now all weigh according to the metric system and everything has to be reduced to bushels.

Central City, Nebr., T. B. Hord Grain Co.—We would be very much opposed to the proposition to discard the bushel as the unit of measure at present in general use

and the adoption of the metric system. It would take the farmers and the grain trade years to become accustomed to the new standards. If we had no system of units the metric system would be the one to adopt.

NORTH DAKOTA.

Carrington, N. D., Farmers' Independent Elev. Co.—We are opposed to the change and will do all we can to kill the bill if it should come up.

Grand Forks, N. D., P. A. Lee, sec'y Farmers' Grain Dealers' Ass'n—The passage of such a law, and the adoption of the metric system, and making the same compulsory, would in addition to the terrific expense that we would be forced to go to create a disturbance the like of which we have not known since we have engaged in the grain business. We sincerely hope that someone will take the initiative in opposition to the scheme.

OHIO.

Marietta, Ohio, The American Hay & Grain Co.—Very much opposed.

Metamora, Ohio, S. L. Rice, president Ohio Grain Dealers' Ass'n—I am positively opposed to making this change. The cost would be so tremendous that it would practically annihilate the business.

Middle Point, Ohio, The Pollock Grain Co.—Our grain interests in northwestern Ohio is absolutely against this bill.

Youngstown, Ohio, A. L. G.—It is my recollection that the matter was once up in Congress in the form of an edict that at a specified time all industries were to adopt the metric system, but that the movement was overwhelmingly crushed. This of course was as it should be.

OKLAHOMA.

Altus, Okla., Leger Mill Co.—We are absolutely against it.

Bradley, Okla., Bradley Elev. & Warehouse Co.—I am opposed to making the change, as it would cost elevators thousands of dollars beside the annoyance in learning. The only people that I think a change would benefit is the scale companies.

Cordell, Okla., Cordell Mfg. Co.—We are against the proposed legislation.

El Reno, Okla., Canadian Mill & Elev. Co.—We are very much opposed to the adoption of this system of weights and measures and think that vigorous opposition should be displayed against the passage of such legislation.

Hobart, Okla., Church Alfalfa Mill—We are opposed to the adoption of the metric system. We are today writing our congressman from this district to this effect, also to both our United States senators.

SOUTH DAKOTA.

Brandon, S. D., E. W. Schilling—We are not in favor of the adoption of the metric system. Not only would the change in scale equipment be a great burden, but there is no unit in the metric system to correspond to our bushel.

Bridgewater, S. D., Shanard Elevator Co.—We are opposed to any change in the system as used. We cannot see any advantage in such change and there would be countless disadvantages.

Claire City, S. D., J. R. Price Elev. Co., J. R. Price, manager—I am against such a change and will do what I can against the passage of any such legislation.

INTERNATIONAL TRADE IN WHEAT AND FLOUR.

A new bulletin, recently prepared by the Department of Commerce, under the direction of J. A. Le Clerc, special agent of the foodstuffs division, contains an exceedingly interesting study of the world's trade in wheat and flour, from 1909 up to the latest data available.

For the four years, 1920 to 1923 inclusive, wheat and flour exports from the United States averaged 22.5 per cent of all agricultural products shipped. The combined value of wheat and flour shipments in pre-war years averaged \$101,000,000; in the 1920-1923 period, \$466,000,000.

The present handbook attempts to give in detail the underlying basic facts with regard to the world's international trade in these commodities. It has been compiled from original sources. To facilitate comparisons, original units have been converted into bushels and barrels.

World production of wheat, by countries and grand divisions—per capita acreage and production—wheat-grain shipments from surplus countries and imports into deficiency countries—wheat-flour exports—wheat-flour imports—grain trade by countries—consumption.

Copies may be secured from the Superintendent of Documents, Government Printing Office at Washington, D. C., and the price is 40 cents.

During the nine months ended March 1925, the value of the U. S. exports of grains and grain products was \$231,000,000 greater than for the same period a year ago.

Barley

RECEIPTS OF BARLEY.

Carload receipts of barley last week at different points named with comparisons, follow:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 25.....	46	33	3	..	27
May 26.....	30	19	11	8	30
May 27.....	5	18	7	33	22
May 28.....	10	29	5	12	10
May 29.....	39	29	6	10	..
May 30.....	Holiday.				
Total	130	128	32	63	89

CHICAGO BARLEY PRICES.

Following is the daily range of quotations for spot malting barley at Chicago:

May 25.....	\$0.85@0.92	May 28.....	\$0.86@0.92
May 26.....	.86@.92	May 29.....	.85@.93
May 27.....	.86@.92	May 30.....	Holiday.

Receipts of barley at Chicago for week ending May 30, 1925, were 54,000 bus., compared with 59,000 bus. same week 1924; shipments, respectively, 112,000 bus. and 72,000 bus.

BARLEY MARKETS.

CHICAGO.—Unchanged. Good demand. Withdrawals, 2 cars. Exports, 88,000 bus. domestic. Visible decreased 555,000 bus.; last year increased 26,000 bus.; totals, 1,798,000 bus.; last year, 757,000 bus. Local stocks decreased 31,000 bus.; total, 183,000 bus.; last year, 120,000 bus. Malting quotably 86@93c; feeding and mixing, 78@90c; screenings, 45@77c. Local inspection, 19 cars.

KANSAS CITY.—Three cars of barley were received this week and practically all went to store, as reflected by an increase of 3,000 bus. in the local stocks. Prices at the close were unchanged to 2c down, with No. 3 at 82@84c and No. 4 at 80@82c. Feed manufacturing demand was light. New crop advices contained no especially adverse features. Elevator contains 14,000 bus., against 43,000 last year.

DULUTH.—Movement of barley was in good volume on this market during the last week, receipts aggregating 89 cars. Everything offered on the tables was promptly picked up each day, and the top bid on the best grade was advanced 1c to from 72 to 87c. Barley was wanted to complete boat loading contracts.

MINNEAPOLIS.—Barley seemed to enjoy a fairly good demand throughout the week just past. Malting quality was in the best request on the whole, but feeding barley came in for fair demand much of the week as well. Receipts generally were not sufficiently heavy to satisfy the demand from various sources. Shipping sales, due to the light receipts, were not as heavy as they might have been. Deliveries on May contracts totaled 275,000 bus. Range of prices on 'change showed 72@86c, according to quality.

MILWAUKEE.—Malting demand was good in the Milwaukee barley market last week and prices were strong as a consequence and in sympathy with other grains. Quotations closed stronger to 1c up for the week. Receipts were light and all offerings were readily absorbed. Choice to fancy, 48 to 50 lb. test, quotable at 94@95c; fair to good, 44 to 47 lb. test, 85@94c; light weight, 40 to 43 lb. test, 82@90c; feed, 70@87c. Iowa quoted 80@95c, as to quality; Wisconsin, 80@96c; Minnesota, 80@95c; Dakota, 80@95c; feed and rejected, 70@87c.

RYE MARKETS

RYE SPOT QUOTATIONS.

Closing outside prices for rye of No. 2 quality cash for the week ending May 30 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 25.....	\$1.18 1/4	\$1.18	\$1.18	\$1.18	\$1.18
May 26.....	1.20 1/4	1.18 1/4	1.17 1/4	1.22	1.17
May 27.....	1.18 1/4	1.18	1.17 1/4	1.19	1.15 1/2
May 28.....	1.19 1/4	1.19	1.17 1/4	1.20	1.18
May 29.....	1.16 1/4	1.17	1.16	1.17 1/2	1.18
May 30.....	Holiday.				

CHICAGO RYE FUTURES.

Following is the range for future prices for rye for the week ending May 30:

	May.	July.	Sept.
25	1.18 @1.20 1/4	1.14 @1.18 1/4	1.07 1/2 @1.13 1/2
26	1.16 1/2 @1.19 1/4	1.16 @1.20 1/4	1.11 @1.18
27	1.17 1/2 @1.18 1/4	1.17 1/4 @1.19 1/4	1.14 1/4 @1.17
28	1.16 1/2 @1.18 1/4	1.18 @1.20 1/4	1.15 1/4 @1.18 1/2
29	1.14 1/2 @1.16 1/4	1.17 @1.19 1/4	1.15 1/4 @1.18 1/2
30	Holiday.		

Receipts of rye at Chicago for the week of May 30, 1925, were 315,000 bus. vs. 16,000 bus. same week of 1924; shipments were 50,000 bus. vs. 53,000 bus. same week of 1924.

RECEIPTS OF RYE.

Carload receipts of rye at the principal primary markets in the Central West for the week ending May 23 were:

	Mpls.	Dul.	Chi.	Win.	Mil.
May 25.....	8	30	16	..	1
May 26.....	1	21	8	3	3
May 27.....	6	15	8	10	2
May 28.....	6	11	15	3	2
May 29.....	4	..	2	4	..
May 30.....	Holiday.				
Total	25	77	49	20	8

RYE MARKETS.

CHICAGO.—Closed 2 1/4c lower to 1 1/2c higher for futures and steady on carlots. Trade of moderate volume and market fairly active. Feeling weaker. Liquidation by leading "longs" an early factor and prices declined. Fair buying on the break credited partly to Eastern interests. Private estimate made crop 57,000,000 bus. Visible supply decreased 35,000 bus. to 10,226,000 bus.; year ago, 18,747,000 bus. Local stocks increased 100,000 bus. to 4,088,000 bus. Exports for the past week 1,782,000 bus., against 1,272,000 bus. last year. Seaboard clearances 145,000 bus. Carlots were in fair demand at 1 1/2c under July for No. 2. Offerings light. Local inspection, 3 cars. No. 2 sold at \$1.16 1/4; No. 3 sold at \$1.15 1/2.

DULUTH.—Strength in the new crop future was a feature in the rye market here during the last week. Its quotation advanced 1 1/2c to \$1.13 1/2, while the spot market gained 1c at \$1.17. The market worked higher, largely on account of the weather news and reported damage by frost to the early-sown grain. The market largely followed the course in wheat from day to day and dealers complained of a lack of sustained export interest for the time being.

MILWAUKEE.—Shippers were active in the Milwaukee rye market last week and there was an improvement in future trading as well as in cash prices. Offerings were mostly offgrade with high moisture content. Receipts were eight cars and quotations closed 3@4c higher in the period. The market closed at \$1.15 1/4 @1.16 1/4 for No. 2, inside for Wisconsin, ranging at 1@2c under July price, depending on billing.

MINNEAPOLIS.—Rye, like wheat and corn, refused to follow the upward trend shown by the futures and with demand of a very indifferent character from milling interests, there was a decline in the comparative premiums. Offerings were generally light but even this failed to bring up the interest in the market. Deliveries on May agreements totaled 230,000 bus. for the month. Estimate that local stocks will show very little if any change for the week. Today's range of sales shows No. 1 at 2 1/2@3c over the July and No. 2 at 1@2 1/2c over July.

SOY BEAN GROWERS' ANNUAL MEETING.

The National Soybean Growers' Association will hold its annual meeting this year at Washington, D. C., and vicinity the latter part of August.

A day will be spent at Arlington where Prof. Morse of the U. S. Department of Agriculture is doing probably the largest and most complete work along the lines of soybean production in the world. These tests and experiments are being conducted by the Department under the able management of Prof. Morse solely for the benefit of the soybean growers of the country. They are in no way commercial.

A day will be spent at Mt. Vernon where George Washington's old home is located and at Union Farms, a part of Washington's original property. Mr. H. S. Clapp, the owner, who has developed a non-shattering soybean, and who is a soybean enthusiast, has arranged for some extremely interesting soybean demonstrations at Union Farms.

Cowpeas from Mexico.

A finding of unreasonableness and an award of reparation have been recommended by Examiner J. Edgar Smith, in No. 16183, Lewis-Simas-Jones Company vs. Southern Pacific, as to a rate of \$1.33 on three carloads of cowpeas, shipped from Navjoa, state of Sonora, Mexico, to San Francisco, in 1923. At the time the shipments moved, Smith said, there was a rate of 94 cents on Mexican peas (garbanzos), minimum 60,000 pounds. The peas involved in this case were loaded to an average weight of 95,958 pounds. After the shipments were made that 94 cent rate, Smith said, was made applicable to the kind the charges on which caused the complaint. He said the rate yielded 90 cents per car-mile.

A motion to dismiss the complaint for want of jurisdiction, the examiner said, should be denied for the reasons set forth in International Nickel Company vs. Director-General, 66 I. C. C., 627. He said the commission had no jurisdiction over the transportation or the part of the rate applicable from Navjoa to Nogales, points in Mexico; and knew nothing about the conditions surrounding transportation or rates south of Nogales. But he said, it had jurisdiction over the defendant and that at the time of the transportation it occurred in a rate of 94 cents on garbanzos or chick peas between the same points. He added that such physical or value differences as there might be between the two kinds of peas, would tend to favor cowpeas. He said there was no real justification for a higher rate on cowpeas in 1923 than was maintained on garbanzos, for, whatever inducement there was for the establishment of the 94 cent rate on garbanzos, that rate, at the same time, should have been extended to cover cowpeas.

He said that the commission should find that the sole defendant, the Southern Pacific, in so far as it participated in the transportation and the rates, was a tortfeasor and that it should make reparation for the damage to the complainant in the sum of \$1,122.72, with interest.

SOY BEANS IN OHIO.

Soy bean varieties seem to be particular what they are used for and where they are grown. Virginia and Wilson varieties, for instance, will do best in southern Ohio, while Black Eyebrows grow best in the northern part of the state.

The Ohio Seed Improvement Association offers to farmers of Ohio this definite information on soy beans, and tells what varieties are best to use for silage, hay, hogging off and seed production, and whether they should be used in northern or southern Ohio. The bulletin, published by farm crops specialists at Ohio State University, will be sent to anyone upon request.

The tabulation on soy bean varieties and their uses is as follows.

Varieties for silage in northern Ohio are: Midwest and Peking, and in southern Ohio, Peking, Virginia and Wilson. The best varieties for hay in the north are Midwest, Black Eyebrow and Manchu; in the south, Peking, Midwest, Virginia and Wilson.

For hogging off, the two best varieties in the northern part of the state are Manchu and Ito San; in the south, Manchu and Midwest. For seed production in the north, the best three varieties are Manchu, Black Eyebrow and Ito San, while in the south the best varieties for seed are Manchu, Midwest, Virginia and Wilson.

The bulletin also gives the amount of seed to sow to the acre under different conditions for different uses.

Beans and Potatoes

Quotations follow for bids of good quality condition beans and potatoes sacked, per cwt., unless otherwise specified, as of week of May 29:

Beans—

Chicago—In small supply and good demand at firm prices. Per 100 lbs.—Spot navy beans, Mich., fancy, \$5.90@6; red kidney, fair stock, \$9.75@10; large, dark, extra quality, \$12; brown Swedish, \$8.50@9; lima beans, fancy, \$9@10; do, new California, \$14@15; poor, dirty, broken, less.

St. Louis—Quote choice hand picked Michigan white beans at \$6.10 and prime machine picked at \$5.85 per 100 lbs. Scotch peas, 7 1/4c; green split peas, 9c, and yellow, 7c per lb. California lima beans at \$15.50 per 100 lbs.

Boston—Car lots, per 100 lbs., N. Y. and Mich.: Choice hand picked beans, \$6.25@6.50; fair to good, \$6.10@6.25; California small white, \$8.25@8.40; yellow eye, extra, \$6.35@6.50; fair to good, \$6.20; red kidneys, choice, \$10.25@10.50; fair to good, \$9@9.25; California limas, \$15.25@15.50; native green peas, \$7@7.50; Canada, \$5.25@5.50; split, \$5.50@5.75; jobbing prices, 25 to 50 cents above car lots.

San Francisco—Whites, small, 8c; do, large, 7 1/4c; pinks, 9c; limas, 15c; cranberry, 8c; kidney, 12c; Mexican garbanzos, 11 1/2c; lentils, large, 9c; do, small, 8c; black eye, 11 1/2c; Mexican reds, 8 3/4c; speckled bayos, 7 1/4c; bayos, 8 1/4c. Peas, per lb.—Split peas, yellow, 7 1/2c; green peas, 8c.

New York—Pea beans, \$5.75@6.25; lima, Calif., \$13.35@14.75; lentils, \$5.75@7; red kidney, \$9.75@10.25; white kidney, \$6.75@8.25. Peas—Chick, \$7@11.75; split green, \$6.75@8; split yellow, \$5@6.50; green, \$5.25@6.75.

Potatoes—

Chicago—Heavy receipts of 150 cars and extreme warm weather caused a setback in prices owing to the light demand. Buyers were holding off and restricting their purchases to absolute requirements. Offerings of the better quality were mostly wanted by the trade. Undergrades and poor quality very slow to sell. Cars on track, 182. Sales reported today were, per 100 lbs.: Wisconsin, bulk, 1 car at \$1.75, 1 car at \$1.80, 1 car at \$2; sacks, 1 car at \$1.70, 3 cars at \$1.75, 2 cars at \$1.80, 1 car at \$1.85; Michigan, bulk, 1 car at \$1.75, 1 car sacks at \$1.90; Minnesota, 1 car at \$1.55. Bulk, per 100 lbs., Wisconsin, \$1.75@1.85; round white, sacks, Wisconsin, \$1.70@1.85; ordinary and poor, \$1.50; Minnesota, \$1.50@1.60. New Potatoes—Market 50@75c lower for sacks and \$1 off on barrels. Liberal arrivals of 146 cars and a disappointing demand had a depressing effect on prices and sharp reductions were necessary in order to effect sales. Buyers were rather cautious and were inclined to restrict their purchases until they fully recovered their bearings after a two-day holiday. Barrels were more plentiful and proved to be the weaker. Cars on track, 182. Sales reported today were: Barrels, Carolina, 2 cars at \$6.75, 7 cars at \$7; sacks, per 100 lbs., Triumphs, Louisiana, 1 car at \$3.65, 1 car at \$3.75; Alabama, 8 cars at \$4; white Louisiana, 1 car at \$3.10, 1 car at \$3.50. Barrels—South Carolina, \$6.50@7; sacks, Louisiana, Triumphs, 100 lbs., \$3.65@3.75; Alabama, \$4; ungraded and poor, \$3; No. 2, \$1.75; Louisiana, long white, \$3@3.50. Sweet Potatoes—Arrivals light; fair demand noted. Hampers Tenn., Nancy Halls, \$3.25; Illinois white yams, \$1.50.

New York—Old, 150-lb. sack: L. I., \$2.50@3.35; Maine, \$1.75@2.10; state, \$1.35@1.75. New—Fla., bbl., \$2.50@4; Bermuda, bbl., \$7.50@8; S. C., bbl., \$2@5.50; N. C., bbl., \$1.50@4.50. Sweet Potatoes—Jersey, bskt., \$1@3.75; yams, bskt., \$2.50; Delaware, bskt., \$2.75@2.85.

Beans All Sold.

Price Current-Grain Reporter: No beans left in growers' hands and only car in dealers' hands. Acreage will be normal.—Leslie Elevator Co., Leslie, Mich., May 28.

BUCKWHEAT MARKETS.

MILWAUKEE.—Milwaukee buckwheat prices are unchanged at \$2.10@2.15 per 100 lbs. for silver hull and \$2.20@2.25 for Japanese.

CHICAGO.—Fancy mixed and silver hulled, \$2.00; Jap, \$2.25.

When you have something on your mind—a query or news or a suggestion—of interest to the grain trade, write it out and send it to THE PRICE CURRENT-GRAIN REPORTER.

The Letter Box

OHIO INQUIRY ABOUT GRAIN MARKETING CO.

Director of Commerce, Cyrus Locher, of Ohio, has asked for an opinion from Attorney-General C. C. Crabbe, respecting the Grain Marketing Company, so-called co-operative corporation, organized by Farm Bureau Federation men. The question Locher asks is, whether or not the company is subject to the securities of "blue sky law." The question is regarded by Locher to be of the utmost importance. The company has a capitalization of \$16,500,000 and it is proposed to sell much stock in Ohio. The company was incorporated under the Illinois law. Under the Ohio co-operative marketing act it is set forth that co-operative organizations, not for profit are not subject to the securities law. Numerous organizations in the Middle West have supported the new company, others are not friendly to the enterprise.

Central Ill. Corn All Planted.
Practically all corn through central Illinois has been planted. Wheat and oats are backward due to dry weather. Red clover and alfalfa have made a good growth but timothy meadows are short. This spring's seeding of clover, alfalfa, etc., is suffering from lack of moisture.—Funk Bros. Seed Co., Bloomington, Ill., May 18.

Crops Badly Damaged.
Price Current-Grain Reporter: The growing crop is badly injured by frosts and a very dry May. Hay short in length and acreage. Hay in farmers' hands about 20 per cent of old crop. Large acreage of corn. Barley all froze. Wheat fair. Demand for hay very poor. Prices not attractive at the least.—H. A. Opdycke, Hudson, Ind.

NOTICE!

MILLS AND ELEVATORS

The U. S. Department of Agriculture recently recommended a new mixture for killing WEEVIL in grain, stating that the mixture was Non-Inflammable and Non-Explosive and could be used without injury to man—at the same time leaving NO ODOR or TASTE in the grain.

"TETRI-CIDE"

For your convenience we are placing on the market the above mixture ready for use, in 30 and 50 gallon Drums, at \$2.25 and \$1.95 per gallon respectively, F. O. B. shipping point. The drums are charged extra at \$6 each, but returnable for full credit within 90 days. Our name and trade-mark for this mixture is "TETRI-CIDE."

For a General Non-Poisonous and Non-Explosive Insecticide for killing moths and spraying for insects generally in mills and warehouses we recommend

S-O-S LIQUID GAS

TRADE MARK

Frt. Allowed
55-gallon drums @ \$3.25 gallon
30-gallon drums @ \$3.50 gallon
10-gallon cans @ \$3.75 gallon
No extra charge for containers.

State Distributors Wanted.

MAY COMPEL CORN BORER CLEANUP.

A delegation from northern Ohio recently called on Director Truax of the Ohio Department of Agriculture and asked that he promulgate regulations requiring a cleanup of all refuse in the European corn borer infested territory. The director has authority to compel this under the provisions of the Ohio Plant Pest Law.

It was suggested by this delegation that the director require the following in the territory infested prior to 1924: "Before all land in corn the previous year be sowed to another crop all standing corn, fodder and other refuse must be cut at least six inches from the ground and destroyed by burning, and that all such crop refuse must be removed and burned by June 1.

This is a serious action but in the eye of the delegation is justified by the seriousness of the corn borer.

It is a well known fact that you cannot compel people to be honest by law and no law is workable until a majority of the people whom it affects are ready to live up to it.

The aim of the suggested regulations is to prevent multiplication and spread of a dangerous insect but before the state begins serving orders on recalcitrant individuals it must put forth an honest effort to acquaint them with the purpose of the regulation.

COMING CONVENTIONS.

June 9-11.—Am. Seed Trade Ass'n Los Angeles.

June 12-13. — Northwestern Grain Dealers' Ass'n, Placer Hotel, Helena, Mont.

June 23-24.—Ohio Grain Dealers' Ass'n, Toledo, Ohio.

June 22 and 23.—Wholesale Grass Seed Dealers Ass'n, Drake Hotel, Chicago.

June 25-26.—Midsummer meeting of the Indiana Grain Dealers' Ass'n, Michigan City.

July 20-22. — Southern Seedsmen's Ass'n, Memphis, Tenn.

July 27.—Michigan Hay & Grain Association, Hotel Tuller, Detroit, Mich.

July 28, 29, 30.—National Hay Association, Cedar Point, Ohio.

August 20-21.—New York State Hay and Grain Dealers' Association, Syracuse, N. Y. Hotel Onondago.

Oct. 12-14, 1925.—Grain Dealers' National Ass'n, Hotel Muehlebach, Kansas City, Mo.

Oct. 12-14, 1925.—U. S. Feed Distributors' Ass'n, Kansas City, Mo.

Make Big Money with this Grain Loader

The Boss Air Blast (Fordson Type) Portable Car Loader loads cars without scooping in a dirty, dusty car. Improves grades. Moves about under its own power. You can load grain on the other R. R. if you cannot get cars on your own line.

SOON PAYS FOR ITSELF

Send for blue print No. 12. It shows low cost plans for receiving, storing and shipping grain.

If your present elevator is not large enough this plan will solve your problem at low cost, and give you additional storage and shipping facilities.

WHEN ELEVATOR BURNS this plan makes for small stations with no fire risk. Handles loose grain, ear corn, pop corn, maize, kafir corn, cotton seed, etc.

TIME PAYMENTS. Sold on time payments if desired. Soon pays for itself. We also make stationary outfits for installation in country elevators to save scooping grain. Combination cleaners and car loaders. Write today for complete information. It will pay you. Hundreds in use.

Maroa Manufacturing Co., Dept. PC, Maroa, Ill.

Humpty Dumpty's Condition

Is the same as Edgar Seals-They cannot be "fixed"—Afford complete protection, telling shipper if cars do not arrive intact.

Someone tampered with this seal. To open breaks it.

Ask for samples and prices today.

Grain Rates to Texas.

The Interstate Commerce Commission in investigation and suspension docket case number 2290, grain from Iowa, Minnesota and Missouri to Texas, gave qualified approval to the proposed joint rates on grain, grain products, and articles taking the same rates, via Kansas City, that are lower than combinations now in effect, the latter based on immediate markets, from points on the Chicago & Great Western, in the states named, to destinations in Texas.

In disposing of the case, the commission took cognizance of the Hoch-Smith resolution and said:

"Since our decision in Grain and Grain Products to Texas, supra, S. J. Res. 107, the so-called Hoch-Smith Resolution, has become effective. That resolution provides in part as follows:

"In view of the existing depression in agriculture, the commission is hereby directed to effect with the least practicable delay such lawful changes in the rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture affected by that depression, including live stock, at the lowest possible lawful rates compatible with the maintenance of adequate transportation service."

"The commodities here considered are products of agriculture. They are produced by farmers in the territory of origin and to a considerable extent are purchased by farmers and stock raisers of the southwest. We are of opinion that lawful changes in these rates can be effected with the 'least practicable delay' if respondents are afforded an opportunity to obviate undue prejudice to Omaha contemporaneously with the taking effect of the rates here under suspension.

"We find that the proposed rates from points of origin on respondents' lines, Minneapolis, Minn., and points south, from which the distances via Omaha to destinations on respondents' lines are less than or substantially the same as the distances via Kansas City from the same points of origin to the same destinations would result in undue prejudice to Omaha and undue preference of Kansas City from and after the taking effect of the suspended schedules in so far as respondents herein may participate in the movement via both gateways and maintain transit service at both, but that in all other respects the proposed schedules have been justified. Upon appropriate application such respondents will be granted permission to file schedules establishing, on or before May 19, 1925, upon notice to this commission and to the general public by not less than 15 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, rates via Omaha which will obviate such undue prejudice as would result from the taking effect of the proposed schedules, and thereupon an order will be entered vacating the suspension of the schedules here considered and discontinuing the proceeding."

VISIBLE GRAIN SUPPLY.

The following table gives the stocks of grain in bushels in public and private warehouses at the principal ports and in transit by water on the dates named, with comparisons as compiled by the secretary of the Chicago Board of Trade for the week ending May 30 (000 omitted):

SUCCESSFUL SERVICE

Edwards Licensed Formula Service is backed by 30 years' experience and a thorough knowledge of feeding problems.

Let us inspect your plant, offer expert advice on manufacturing systems, supply tested formulas for quality feeds for poultry, hogs, dairy cows, calves and all animals.

We handle sales and advertising campaigns to develop your business.

75 MANUFACTURERS USE OUR FORMULAS

Wiedlocher & Sons, Springfield, Illinois
Transit Milling Co., Cincinnati, Ohio
Shawnee Milling Co., Shawnee, Oklahoma
and scores of others endorse our service

We can do for you what we have done for others.

Write for Full Details on
Edwards Feed System Service

THE SYSTEM OF CERTAINTY

Better Be Safe Than Sad

After the fire you would gladly pay more for lightning protection than the Dodd System costs.

Your insurance saving will pay the bill within a reasonable time so why not have this absolute protection now?

Last year was a bad one for elevator fires caused by lightning. This year may be another one. Don't take chances. Let our man estimate your needs.

Write for our book "Lightning" which explains this phenomenon in a very interesting manner.

P. M. Fawcette of I. H. French & Co., Champaign, Ill., was here during the week mixing with his many friends.

Spain Shinault, formerly with the International Sugar Feed Co., has accepted a place as salesman in Mississippi for the Southwestern Milling Co., Memphis branch.

Rain is badly needed all over this territory. The recent cold weather having made conditions worse. Since Jan. 1 the deficiency in rainfall at the local station is 14.28 inches.

Three creditors have filed an involuntary petition for bankruptcy against the American Rice & Feed Mill Co. The combined indebtedness is less than \$3,000. The creditors are the United States Rubber Co., the Graton & Knight Mfg. Co. and the Invincible Grain Cleaner Co.

Business continues quiet with the grain trade but orders are being steadily received, indicating that stocks are light in the interior. The strength shown in the speculative markets has increased interest to some extent but buying continues of routine character. Oats still have the call with feeders, cash No. 3 white quotable May 29 at 53¢53½¢. Corn is steady and receipts have been light but stocks are ample. Dealers are not disposed to buy much. Quotations are somewhat higher for the week end, at the close track No. 3 white quoted at \$1.23, No. 3 mixed at \$1.17 @1.18 and No. 3 yellow at \$1.24.

BALTIMORE.

Robert C. Neu, Correspondent.

Quite a number of Baltimoreans attended the annual convention last week of the Potomac States Bakers' Association at Charlotte, N. C.

Stocks of wheat in Baltimore elevators at present writing amount to over 4,000,000 bushels, a large proportion of which is of the hard variety.

Receipts of water-borne corn in the Baltimore market so far this season amount to 119,000 bushels compared with 312,000 bushels arrived up to the corresponding time last year.

C. P. Blackburn, head of the grain exporting firm of C. P. Blackburn & Co. of this city, has returned to Baltimore from an extended pleasure trip to the Pacific coast and the Northwest.

Henry A. Lederer, member of the flour and grain commission firm of Lederer Bros. of this market, returned to Baltimore early last week from a four months' cruise around the world.

The Baltimore Chamber of Commerce was invited by Secretary Charles B. Riley of the Indiana Millers' Association, to send delegates to the semi-annual meeting of this organization, held May 28 at the club rooms of Bemis Bros. Bag Co., Indianapolis, Ind.

Public announcement was made here last week of the association of Ferdinand A. Meyer and his son with the firm of Yeaton & Co., coal dealers of this city. The Messrs. Meyer until recently were proprietors of the Baltimore Grain Co., receivers and exporters of grain on this market, the business of which is being liquidated.

Among the out-of-town visitors on the floor of the Baltimore Chamber of Commerce last week were Chas. E. Goss, hay shipper of California; Irvin T. Fangbner, grain shipper of Bellevue, O.; W. W. Krout, miller of High Point, N. C.; F. R. Granone, of Philadelphia; Powell Smith of J. Allen Smith & Co., Inc., millers of Knoxville, Tenn.

The way was paved at a conference here last week between city officials and representatives of the Western Maryland and Baltimore & Ohio railroads whereby a \$4,000,000 pier development on McComas street in South Baltimore will soon materialize. The proposed deal has been under consideration for several years and involves the exchange of certain land between the Western Maryland and the Baltimore & Ohio railroads. By this action

the railroads will be enabled to carry out their plans of development, and the former complicated railroad system in South Baltimore will be cleared up. Construction of the piers, bulkhead and tracks in McComas street will inaugurate the first important work of the port development commission and constitute the first link in the expenditure of the 50,000,000 loan authorized for port and harbor development at Baltimore.

Flour Market.

The local demand for flour is slow to follow the late higher asking prices of the mills, but in sympathy with the recent advance in wheat there has been a general tightening up in values all along the line. Export demand is quiet. Rye flour slow sale. Quotations, per 98-lb. cotton or jute sacks, follow: Spring patent, \$9.25@9.50; spring straight, \$8.75@9; hard winter patent, \$9@9.25; hard winter straights, \$8.50@8.75; winter patent, \$9@9.25; winter straight, \$8.25@8.50; rye flour, dark to light, \$7@8.

PORTLAND, ORE.

A new warehouse is being built at North Powder, Ore., for the North Powder Milling & Elevator Co.

E. H. Leonard of the Preston-Shaffer Milling Co. of Waitsburg, Wash., was a visitor on the Portland Exchange last week.

The British steamer Benvorlich, of 3,222 tons net register, has been taken by Kerr, Gifford & Co. to load wheat in August for the United Kingdom.

D. C. Kay has leased the Collier warehouse from the Coquille Wood Products Co., Brandon, Ore., where he will conduct a grain, hay and feed business.

There was a good demand for new crop wheat with buyers bidding \$1.47½ for delivery in August and up to Sept. 10. Offerings on the market, as usual, were light. Five thousand bushels of June Big Bend bluestem were sold at the Merchants' Exchange at \$1.50. Other bids ranged from unchanged to 3¢ higher.

No eastern barley to speak of is coming out this way now. Interest is centered in new crop California barley. While the crop in that state will be fairly large, too much rain has caused stained barley, and it will not be very high grade barley. Barley crops in the Pacific Northwest will be fully up to normal. More than the usual acreage this year, with crops reported in good shape. Price quotations are nominal.

Terminal receipts, in cars, were reported by the Merchants' Exchange as follows:

Portland—	Wht. Bly. Flr. Crn. Ots. Hy.

WINNIPEG.

Geo. H. Measham, Correspondent.

Winnipeg October has steadily gained ground but is still a long way away from Chicago September and December deliveries. There will have to be a considerable readjustment between markets and narrowing of spreads during the immediate future. Winnipeg July looks too high and October too low. The weather will be the ruling factor for some time to come.

Crop conditions in western Canada are good. Many competent authorities consider them the best in years. It may be conceded that the early sown wheat on summer fallows is showing up wonderfully well. About one-third of the wheat land of the West is summer fallow and excellent. About one-third of the remainder was put in on stubble not likely to make any great showing. There are a few complaints of cut worms and dry condition coming in but generally the reports are better than average.

Nervous and erratic markets have been the rule during the week but the under-

tone has been firm and prices have advanced. May wheat twice hit the \$2 mark and twice suffered a sharp setback. The more distant months have been steadier and better held gains. The wide fluctuations in May have been the secondary result of extreme declines earlier in the year and extreme bulges have only meant that "shorts" who stayed too long were paying the penalty for having sold more wheat than they could buy without bidding up the price.

The week and the month closed quietly on Saturday. May showed extreme weakness in final trades. There was some liquidation by belated longs that knocked the price down nearly 10 cents from Friday's close. The other months were dull but steady. The professional trade is inclined to be cautious and not venture far from shore until the U. S. government report is published on June 8. A steady trading market is forecast for the next few days unless the private crop estimates are sensationally bullish.

The contract for the building of the new grain elevator at Prince Rupert, B. C., has now been executed by the government, according to an announcement recently by Hon. Thomas A. Low, minister of trade and commerce. The name of the successful tenderer is Carter, Halls, Aldinger Co., Ltd., of Winnipeg, and the contract price is set out as \$876,729. The contract awarded to the Winnipeg firm includes the building proper but not the foundation. The latter has been constructed by the Northern Construction Co. at a cost of \$220,000.

All cash grain prices are now quoted on a July basis except the smutty grades of wheat which are quoted on a premium over October. The cash grain market generally is excessively dull. When the futures advance there is sure to be a rush of selling orders on the low grades and as the demand for these is very limited a widening of spreads naturally follows. The poor demand for No. 1 feed oats has been notable throughout the month. Rye has been neglected in both cash and future markets. Flax is fast going into consumption and is due for more active trade.

BUFFALO.

W. S. Pryer and H. E. Tweeden of this city were recent business visitors in Boston.

T. Douglass of the Eastern Grain & Elevator Co. has returned from a business trip to Baltimore.

Dwight K. Yerxa, manager for the Pillsbury Flour Mills Co. here, has been in the Minneapolis office.

Vessels using the state barge canal this year seem to be unusually unfortunate, three cargoes of grain having already gone down.

Among the visitors to the Corn Exchange recently were R. C. Bacon of Boston, J. E. Lee of North East, Pa., A. M. Cook of Syracuse, and C. H. Monnier of Oriskany.

OKLAHOMA CITY.

W. F. Kerr, Correspondent.

Flour sales were in fair volume for May, mills averaging 40 to 50 per cent of operations. The trade bought sparingly and believed that prices will decline.

T. C. Thatcher, general manager of the Oklahoma City Mill & Elevator Co., has returned from a vacation excursion of 30 days in waters of the West Indies and the Panama Canal zone.

J. R. Lankard, general manager of the Kingfisher Mill & Elevator Co., who is vice-president of the board of trustees of the Oklahoma City University, is active in a campaign to raise an endowment fund of \$1,500,000 for the university.

Millfeed demands are holding out strong in spite of spring vegetation supplying some feed demands. Farm work and oil field activities are responsible principally. Flour millers continue to conserve millfeeds for taking care of mixed-car business.

Hilton & Kern, Drury, Kans., were among grain dealers and feed millers who recently made application for permits to sell milled feeds in Oklahoma. Applications came also from the Alexander Milling Co., Winfield, Kans., and H. Slemmer, Okeene, Okla.

A bureau of traffic has been established by the Enid Chamber of Commerce and C. A. Ray installed as manager. Mr. Ray is assistant traffic manager of the Southwest Wheat Growers Association and for-

merly was traffic manager of the Guthrie Mill & Elevator Co.

Oklahoma City, Okla.—The Great Plains Mill & Elevator Co. is being formed with a capital stock of \$60,000. The new firm has acquired the plant of the Millers Milling Co. at Enid with a capacity of 300 barrels, and new equipment will increase the capacity to 350 barrels. The company will be owned by George C. Grogan, Gen. Mgr. of the Acme Milling Co., and the J. S. Waterman Co. of New Orleans.

BOSTON.

B. A. Hopkins of the C. M. Cox Co. was a recent business visitor in Buffalo.

The damage to Landry Bros. because of their recent fire is estimated at \$8,000.

Among recent visitors to the Grain and Flour Exchange were W. P. Anderson of Chicago and T. A. Dobry of Yukon, Okla.

Frank W. Wise, treasurer of the Grain and Flour Exchange, with Mrs. Wise, has returned from a three weeks' fishing trip to Nova Scotia.

B. J. Rothwell, president of the Bay State Milling Co., attended the recent meeting in Washington of the Chamber of Commerce of the U. S.

At a meeting of the directors of the Grain & Flour Exchange on May 22 Milton L. Cushing, Dean K. Webster and Bernard J. Rothwell were elected trustees of the permanent fund of the exchange. A special committee was also appointed to consider changes in the feed rules proposed by the U. S. Feed Distributors' Association.

Rules on grain and feed trading used by the old grain board of the Chamber of Commerce were adopted by the Grain and Flour Exchange last week. New rules on "trade in" and inspection of flour and semolina were adopted, eliminating some of the old rules no longer of value and bringing the regulations up to date, conforming to the new conditions of shipping and handling flour. Amendments to the by-laws were adopted. As the active membership has reached the limit of 200, a drive was launched to obtain associate members, limited to 100. Quite a number of applications have already been received for such memberships.

CINCINNATI.

George Mosbacher, Correspondent.

Interior millers were good buyers of white corn here the past week and premiums over yellow and mixed were extended. Yellow also sold well but mixed was dull and neglected unless heavily discounted.

The grain market here is showing a little more activity from the dull and lifeless condition of the past few weeks, and receivers of wheat, corn, oats and mill feeds reported a more normal volume of business.

Southern millers apparently awaited lower prices for wheat and were not in the market early in the week, but as no declines occurred, became active buyers toward the close and a good volume of business was reported by all shipping interests. The demand, though, was only for immediate needs and in small lots.

The Procter & Gamble Co. filed a protest with the state public utilities commission against the increase of 1 cent per hundred pounds in the freight rate on salt between Akron and Cincinnati over all steam railroads. The minimum, formerly 60,000 pounds, now is reduced to 45,000 pounds. The new rate is 15½ cents a hundred.

Stocks of grain held in Cincinnati elevators for last week and previous week were as follows:

	May 29, 1925	May 22, 1925
Wheat, bus.....	98,830	112,052
Corn, bus.....	144,183	232,851
Oats, bus.....	59,370	77,184
Rye, bus.....	4,000	4,076

Frank L. Watkins, resident manager of the Cleveland Grain & Milling Co., announced this week that the company will abandon the grain elevator located at Sixth and Harriet streets and will cancel its

annual lease to the Big Four railroad from whom it held leases for the property since 1913. The elevator, which has a capacity of 650,000 bushels, was built more than thirty years ago and will be razed by the Big Four company to make room for the proposed joint freight terminal development of Cincinnati railroads. Mr. Watkins said the grain stored in the elevator would be removed within the next 30 days but that the abandonment of the elevator did not mean that the company intended to withdraw from the grain trade at Cincinnati. The company at the present time maintains grain elevators at Cleveland, Mansfield, Indianapolis and Champaign, Ill., and will probably continue a branch of these interests in Cincinnati. The company has a loyal and appreciative grain trade patronage in a wide territory to whom it has rendered very satisfactory service. Mr. Watkins, who is also president of the Cincinnati Grain & Hay Exchange and who has successfully managed the elevator business of the company, will probably have supervision of one of the outside elevators, and Walter O'Connell, who has efficiently aided Mr. Watkins, will probably remain in charge of the local office.

PHILADELPHIA.

Geo. A. Rudderow, Correspondent.
J. B. Pultz is motoring in the Catskills around Poughkeepsie.

Exports for five days ending May 29 were: Wheat, 715,068 bus.; oats, 296,459 bus.; barley, 189,770 bus.

Geo. F. Morton, head salesman for J. B. Pultz & Co., grain dealers, will spend the holiday and week end at Wildwood, N. J.

Receipts of flour and grain for five days ending May 29 were: Flour, 24,836 bbls.; wheat, 516,467 bus.; corn, 4,000 bus.; oats, 475,961 bus.; barley, 72,700 bus., and 612 tons feed.

Andrew J. Schicklings, Jr., salesman for Geo. M. Richardson, grain and feed merchant in the Bourse building, will spend the week end and holiday with his family at Pennsgrove, N. J.

Daniel J. Sullivan, representing the grain house of Geo. M. Richardson, will spend the week-ends with his son Eugene who has taken up musical work in New York City. The following out-of-town visitors were registered at the Commercial Exchange during the week just ended: J. G. Lewis, Honeybrooke, Pa.; E. D. Evans, Alloway, N. J.; Paul A. Benner, Bridgeville, Del.; S. L. Rice, Metamora, O.; J. W. Arthurs, Kenton, Del.; F. Anderson, York, Pa.; W. E. Ashe, Buffalo, N. Y.; F. Mahlstedt, Reading, Pa.; Charles W. Bricks, Crosswicks, N. J.; W. S. Houseman, Wilmington, Del.; J. N. Hershey, Florin, Pa.

Flour Market.

There is nothing new or interesting to which we could invite attention. Notwithstanding the wild speculative movements in wheat, prices are fairly well sustained and millers are inclined to hold firmly to quotations despite the fact that buyers are disposed to confine their operations to immediate requirements. Receipts for the week were 24,836 bbls.

We quote per 196 lbs. packed in 140-lb. jute sacks: Soft winter straight, western, \$8.75@9.25; soft winter straight, nearby, \$8.50@9; hard winter straight, \$8.75@9.25; hard winter short patent, \$9.25@9.75; spring first clear, \$8@8.50; spring patent, \$8.75@9.25; spring short patent, \$9.75@10.25; fancy spring and city mills patent family brands, \$10.35@11. Rye flour, \$7.40 @7.75 per bbl. in sacks, as to quality.

TOLEDO.

S. M. Bender, Correspondent.
Many of the grain men and millers were out on the links or holding a pole on some quiet lake over the double holiday.

The regular monthly meeting of the Northwestern Ohio Farmers Grain Dealers Ass'n will be held Monday night, June 1, at Liberty Center, O.

Fred Mayer of J. F. Zahm & Co. has returned from a nineteen-hundred mile motor trip to Atlantic City and other points in the East. He reports crops looking very good on the whole.

Some replanting of corn is noted in the state and the condition of most fields is questionable at this time. Oats and wheat are going backward in many localities and the freezing temperature has hurt clover.

Grain inspections for the last week were 34 cars of wheat by lake steamer Thos. Maytham, 125,000 bus. northern spring, 38 cars of corn, 61 cars of oats by lake steamer John J. Boland, 481,000 bus. oats, 3 cars of rye. Total, 136 cars.

Joe Streicher of J. F. Zahm & Co. and Louis Schuster of the C. A. King & Co. have joined the ranks of the pill shooters. Most every afternoon they can be seen in the rough at the Bay View golf course hunting for the elusive white ball.

Flour production of Toledo mills last week 29,600 bbls., equal to 61 per cent of capacity. The week before it was 36,900 bbls., and a year ago last week was 32,000 bbls. Production for the month of May was 131,230 bbls., compared with 121,900 bbls. during April and 146,250 bbls. for May, 1924.

Grain men throughout this part of the country are being urged to attend the forty-sixth annual meeting of the Ohio Grain Dealers which will be held in Toledo Tuesday and Wednesday, June 23-24. An excellent program has been arranged and

49 Board of Trade CHICAGO

the Toledo dealers will furnish some live entertainment.

Soft wheat premiums are easier this week and the demand for wheat rather slow. There is a good demand for corn at present prices. Oats are moving freely with the buyers not very anxious. Some of the larger mills are showing more interest in soft wheat and the flour trade has picked up some.

John W. Luscombe of Southworth & Co. celebrated his fortieth birthday last Wednesday and with his usual horseshoe in the back pocket escaped the fate that accompanies birthdays on the floor. The old paddle was just itching to get to John but no one thought of it. John says he did but was very close-mouthed about such thoughts.

Winter wheat in Michigan is quite spotted over the state. Early sown fields of level fertile lands are mostly in excellent condition and making a normal growth. Fields that were sown late developed but little top last fall and the continued dry weather this spring has not permitted them to reach a normal stage of growth to date. The abandonment was not heavy but the total crop for the state will probably be much less than last year.

LOS ANGELES.

C. G. White, Correspondent.

Wm. G. Wood, of the firm of Wood & Baxter Co., Portland, Ore., was a guest of Strauss & Co. on the floor of the Exchange last week.

D. L. Smith, of Smith & Scott, Inc., will leave today for a business trip through the Imperial Valley. Mr. Smith expects to be absent from the city for several days.

Frank S. Coats, who was manager for a number of years of the Sperry Flour Co., this city, has accepted a position with the industrial department of the Los Angeles Chamber of Commerce and is now touring the East as their representative in the interest of bringing more new industries to Los Angeles and from late reports we understand he has been quite successful on this trip.

The Los Angeles Grain Exchange was quite widely advertised last week at the meeting of the Pacific Coast Regional Advisory Board, held at Fresno, Calif. The Exchange had fourteen delegates present at this meeting for the purpose of obtaining the bulletin system of notification on cars of grain and hay held for inspection, and from reports this delegation was successful in securing this method of notification.

The market conditions at this terminal have remained very good. The demand for all kinds of stock foods has been increasing, creating a market for all arrivals during the week and leaving empty railroad tracks. The grain market has been particularly active. No. 2 yellow corn selling at \$2.43@2.45; No. 3 yellow corn selling at \$2.40; No. 1 Imperial barley, spot, offered at \$1.92½, with a bid of \$1.86¼; No. 3 white oats, 36-lb., Board terms, offered at \$2.05, with a bid of \$1.97; No. 2 bulk kafir, Board terms, offered at \$2.27, with a bid of \$2.15.

NEW ORLEANS.

M. L. Davis, Correspondent.

J. H. Jordan, local manager of the Strachan Shipping Co., is on a business visit to Galveston and Houston.

W. H. Osborn, president of the American Baltic Chartering & Shipping Co., has returned from a business visit to New York.

Stocks in elevators as of today are: Wheat, 750,000 bus.; corn, 85,000 bus.; oats, 43,000 bus.; rye, 2,000 bus. Cars on track: Wheat, 10; corn, 1.

Standard blackstrap molasses is steady at 13c per gal. f. o. b. tank cars New Orleans; medium is quoted at 13½c; light blackstrap at 14c per gal.

G. Salorio, general manager of the Peninsular Navigation Co., Inc., spent several days in New Orleans this week en route from New York to Progreso, Mexico.

R. C. Jordan, formerly superintendent of the I. C. R. R. elevator at Stuyvesant docks, is now general agent covering export grain and flour traffic for the I. C. R. R. with offices in Chicago.

The Chicago & North Western Railway Co. has opened New Orleans offices at 1215 Hibernia Bank building, in charge of C. S. Evenson, general agent, and will serve the states of Louisiana, Mississippi and Alabama.

R. S. Hecht, W. L. Richeson and General Manager J. H. Walsh of the dock board visited Mobile this week where they inspected the harbor. Mobile will shortly start the expenditure of ten million dollars to improve the harbor facilities, which work will be carried out under the direction of General Sibert, chairman of the Alabama harbor commission.

The 26th annual convention of the Rice Millers' Association was held at the Roose-

velt Hotel this week. Frank M. Rickert, president of the association, presided over the opening day's session, and F. B. Wise, secretary-treasurer, made one of the principal addresses. Other addresses were made by John M. Kirby of Texas, who spoke on "Tariff as an Economic Question," and W. H. Mitchell of the B. & O. R. R. discussed "Co-operation Between the Shippers and the Railroads." Dr. J. C. Curran of New York, representing the Near East Relief, also gave a talk on the health value of rice. The following officers were elected for the ensuing year: J. A. Smith, DeWitt, president; Wm. Reid, Orange, vice-president; Thos. Ryan, Crowley, vice-president; E. L. Crandall, Carlisle, vice-president; F. B. Wise, secretary-treasurer.

MINNEAPOLIS.

H. A. Paul, Correspondent.

Verne McCarthy of McCarthy Bros. Co. is spending the week in Boston.

A. W. Durrin of the Western Grain Co. of Denver was calling on the local trade last week.

H. J. Bergman of the Bergman Millfeed Co. left Friday on the "Shrine Special" for the West.

Mrs. J. B. Atkins, mother of Joseph A. Atkins of the Sheffield Elevator Co., died at his home Tuesday.

Will Ireys of the Russell-Miller Co. is back after spending some time at his old home in Massachusetts.

Minor Gold of the Benson-Quinn Co. has just returned from an extended trip through the Dakotas and Minnesota.

M. R. Nelson of the Atwood-Larson Co., who has been confined to his bed for the past two months with rheumatism, is able to be around again.

H. A. Willoghby, an employe of the Minnesota state grain inspection department for more than twenty years, died suddenly on Sunday.

A. L. Searle of the Globe Elevator Co. is back in Minneapolis after a tour of the West. Mr. Searle spent some time in California and nearby states after his return to this country from a world trip.

Minneapolis Cash Markets.

Wheat—Despite the fact that the futures gave a very good account of themselves of late, the same cannot be said of the cash article. The fact of the matter is that the same underlying weak cash situation maintains now that held during the big advance early in the spring and there are some in the trade, although more bullish inclined than otherwise, who cannot see much good in an advance which is not predicated on a good firm cash situation.

Offerings from the country, although light for this time of the year, showed a little improvement on at least two days during the past week. The strength shown in the futures was undoubtedly responsible for the further influx of old wheat, but the decline in premiums more than offset the advance in the futures so that the shipper did not net any more than he would have under the market of some time ago.

There was practically no milling competition for the current offerings of the week past. If this predicted heavy increase in flour business is to develop at all it could not come at a more opportune moment for the cash man than right at the present. No. 1 hard spring sold today at 5@30c over the July; No. 1 dark northern at 4@28c over; No. 1 northern spring at 2@26c over.

GRAIN EX.

OMAHA, NEB.

Offerings of durum were light, due, of course, to the very poor market which there has been for this variety during the past three weeks or more. Early in the week demand was easy but the last three days things firmed up fairly well. Today No. 1 amber was bringing Duluth July price at 11c over; No. 1 mixed, 7c under at 8c over, and No. 1 durum, 5c under at 8c over.

May deliveries of spring wheat totalled 2,466,000 bushels in this market. No report available on elevator stocks for the week.

Corn—There was little if any feature to the local cash market during the past week. Offerings were rather light but met with rather indifferent demand and with the futures market inclined to sky-rocket on the least provocation, cash corn acted like cash wheat and refused to follow the advance. Dry corn was in fair demand as the week drew to a close. Shipping sales light for the week.

Based on today's range of sales, No. 3 yellow sold at 4@5c under Chicago May price and No. 3 mixed at 8@10c under.

Oats—Shipping sales of this cereal were of rather liberal proportions and helped to make a fair market for one grain at least during the past week. In addition to this, understand that two fair sized lots of new crop oats were worked for September shipment to the East. No figures available as yet on local elevator stocks for the

week but judging by comparative shipments and receipts during the past six days, would estimate a decrease of around three-quarters of a million bushels.

Today's range of sales shows No. 3 whites selling at July price at ½c over, and No. 4 whites at ½@2c less. Local deliveries on May contracts total 360,000 bushels.

MILWAUKEE.

D. K. Steenberg, Correspondent.

The Milwaukee Chamber of Commerce was closed all day on Memorial Day.

The June rate of interest has been determined by the finance committee of the Milwaukee Chamber of Commerce at 6 per cent.

Receipts last week were 99 cars barley, 86 corn, 134 oats, 23 wheat, 8 rye, 0 flax, 9 miscellaneous; total 359 cars, against 273 the week before, 204 a year ago and 238 in 1923.

Shipments last week were 217,550 bus. oats, 149,116 corn, 23,460 barley, 17,600 wheat, 10,285 rye; total 418,011 bus., against 559,342 the preceding week and 565,350 a year ago.

Every season is a busy season for the Hellmer Milling Co., whose mill, elevator and offices are located at 186 West Second street, Fond du Lac, Wis. The Hellmer company handles fuel in the winter, seeds

in the spring, and building materials in the summer.

Unsettled markets ruled with the passing of the May future last week and adjustment to new crop basis. Wheat is 4@9c lower, premiums shrinking, while rye is up 3@4c, oats are 2c higher, corn 2@3c, and barley stronger to 1c up. Movement somewhat larger and trade fair.

Milwaukee milling output last week was 3,650 bbls. of wheat flour as compared with 7,200 bbls. the previous week and 2,500 bbls. last year. Flour receipts at Milwaukee last week were 53,200 bbls. as compared with 42,700 bbls. last year, and shipments were 8,620 bbls. last week as compared with 11,660 bbls. in the same week of 1924.

F. B. Morrison, internationally known as an authority on animal feeding and professor of animal husbandry at the University of Wisconsin, Madison, Wis., will be one of the principal instructors at a short course in animal husbandry to be conducted by the college of agriculture of the University of California at Davis, Calif., on June 15-19.

L. A. Bossmann, A. Post and H. Firehammer, all of Horicon, Wis.; E. O. Wright of the Wisconsin Milling Co., Menomonie, Wis.; John McIlwain of Storm Lake, Ia.; A. J. Brown of Janesville, Wis.; Otto Timm of Plymouth, Wis.; Ira Herman of Poolville, Ia., and Paul Siebold, rye miller and flour and feed jobber of Mishicot, Wis., were among callers at the Milwaukee Chamber of Commerce last week.

The weather bureau says that the past week was a bad one for vegetation in Wisconsin. Abnormally high and low temperatures were shown and the frost damage, especially to oats in northern Wisconsin, was said to be extensive. "All crops are suffering from lack of rain and from cold," the report says. "Heavy rains and warmer weather are needed. Oats, barley and spring wheat are fair to good stand but thin in places. Winter grains are fair. Rye is heading in central counties."

PEORIA.

L. L. Eckard, Correspondent.

Calves were 50c lower, with \$9.50 paid for best. Cattle prices steady.

Oats receipts were 13 cars and market was quoted ½@¾c lower, with a fair demand. No. 3 white sold at 46½@46¾c; No. 4 white, 45¾c.

A force of workmen has started to repair and redecorate the Chamber of Commerce building and when completed promises to be one of the best buildings in that part of the city.

W. W. Dewey, senior member of W. W. Dewey & Sons, grain firm at Peoria, who has been spending several months in California, returned last Wednesday and was greeted by his many friends on 'Change.

Hogs at local yards were weak and quoted 25c lower. Receipts were 2,000 head, with a good demand at the decline. The bulk of the sales were from \$11.90@12.10, with a top of \$12.25 paid for choice butchers.

Considerable damage has been noted to the crops in this section due to the heavy frost. It has been necessary to replant several fields of corn which under the best weather conditions will mature late. Very little damage has been done to the wheat, according to reports from reliable sources.

Corn receipts at this market remain fairly liberal, with 69 cars Friday. Prices were unchanged to 1c higher, with a good demand for all grades. Local industries were good buyers for all grades. No. 2 white sold at \$1.15½; No. 6 white, \$1.11; No. 2 yellow, \$1.15½@1.16; No. 3 yellow, \$1.14½@1.15; No. 4 yellow, \$1.14; No. 6 yellow, \$1.11.

DULUTH.

S. J. Schulte, Correspondent.

W. G. Kellogg of the Delmar Co. has been elected a member of the Duluth Board of Trade.

A lot of spring wheat was sold by the Occident Elevator Co. for export during the week, shipment to be made via Montreal.

A revival was shown in trading in oats on this market during the last week. On steady absorption, No. 3 white oats sold 3c up at the end of the week at 46½c. Oats are regarded as relatively cheap by dealers and a disposition is being shown to accumulate them. Stocks of oats in the elevators were reduced 1,000,000 bushels during the week through shipments.

With the filling of early delivery contracts completed, shipments of wheat, durum and other grains have been slow on this market during the last two weeks. Boat space for moving wheat and rye to Buffalo was offered down at 1½c a bushel at the end of last week. In consequence of that condition some of the smaller boats have tied up in the East for the time being, claiming that their earnings at the low rates would not be enough to cover expense.

Premiums on spring wheat and durum have been brought down more to earth following the basing on July in place of May. The premium on No. 1 amber durum has been cut to from 4c to 10c over July in place of from 4c to 20c over; No. 1 mixed durum to from 6c to 8c over July in place of from 8c to 15c over; No. 1 dark northern to from 4c to 16c over July in place of from 4c to 34c over; No. 3 dark northern to from 1c to 12c over July in place of from 1c to 28c over; and No. 1

northern to from 3c to 14c over July in place of from 3c to 21c over. Millers have not been as actively in the market as they were for protein wheat lately, as they claimed to have covered their flour milling needs for the time being.

Opening of trading in spring wheat futures was the principal happening on the Duluth Board of Trade during the past week. A strong movement had developed among members of the board to bring the spring wheat market here back to the importance it held a few years ago when Duluth was one of the most active markets of the country. It was pointed out that the spring wheat movement to Duluth during the present crop year had been in excess of 60,000,000 bushels and that Minneapolis received the great bulk of that hedging which it is considered might just as well have accrued to Duluth houses. With the prospect of another heavy spring wheat crop and Minneapolis millers becoming increasingly important buyers of spring wheat, there is considered to be no reason why operators here should not have the profits of taking care of the hedging in it. Attention has been drawn to the point that with more than 5,000,000 bushels of wheat now in store and the capacity of the houses whose receipts are regular for delivery standing at 31,700,000 bushels, Duluth has all the facilities necessary for the operation of a futures market. Trades in spring wheat futures on the opening day in it aggregated 674,000 bushels.

ST. LOUIS.

O. Wagner, Jr., has been appointed assistant manager for Anheuser-Busch Inc., in the grain and feed department.

A vote of the membership of the St. Louis Merchants' Exchange was taken May 28 in regard to changing the rules for redemption of certificates of membership.

Henry G. Craft, president of the Bernet, Craft & Kauffman Milling Co., formerly president of the St. Louis Millers' Club, died recently at his home, 5317 Vernon avenue.

Among recent St. Louis visitors were J. G. Brady of the Excelsior Flour Mills, Denver; Matt R. Loders, grain dealer of Hamburg; and Dr. T. Brinkman of the University of Bonn, Germany.

Samuel Jenks Smith, member of the Merchants' Exchange, died last week at his home in this city after a stroke of apoplexy. Mr. Smith was born in 1844 and came to St. Louis in 1882. He was a member of the Philadelphia Board of Trade and served as its president for one term. He was active until his death, having been on the floor of the exchange within a week of his death.

Flour output of the following mills was 47,785 bbls. this week, against 52,124 the week before, as follows: G. P. Plant Milling Co. (city), 8,000; Stanard-Tilton Milling Co. (Alton, Ill., and Dallas, Tex.), 8,485; Kehlor Flour Mills Co. (East St. Louis, Ill.), none; Sparks Milling Co. (Alton, Ill., and Terre Haute, Ind.), 8,000; Saxony Milling Co. (city), 3,600; Meyer Milling Co. (Nashville, Ill., and Springfield, Mo.), 3,200; Hezel Milling Co. (East St. Louis, Ill.), 1,500; J. F. Imbs Milling Co. (Belleville, Ill.), 3,000; Bernet, Craft & Kauffmann Milling Co. (Mt. Carmel, Ill.), 6,000; Valier & Spies Milling Co. (4 mills), 5,000; Annan, Burg & Co. (city), 1,000.

Leigh Leslie, Correspondent.

When the new Rock Island grain elevator on Twenty-eighth street and First avenue is completed, Council Bluffs, Ia., will have a combined storage capacity of six million bushels. The addition to the Rock Island elevator is to cost \$250,000.

Frank J. Taylor of the Taylor Grain Co., former president of the Omaha Grain Exchange, now has a circus—a high grade, first rate three-ring circus. It gave its first performance at South Omaha Saturday, May 23, and Monday it showed in Omaha. The members of the Omaha Grain Exchange, of whom Mr. Taylor is one, attended the Omaha performance in a body. A section of the "big top" had been reserved for them and their families and employes. Just before the show began, E. C. Twamley of J. F. Twamley, Son & Co.

DANNEN HAY & GRAINCOMPANY

Shippers of Choice Quality Grain & Hay

Write or Wire us for Delivered Prices

St. Joseph, Mo.

drew Mr. Taylor into the center ring and presented him with a large basket of roses, a gift from his friends and associates of the Exchange. Mr. Taylor responded briefly to Mr. Twamley's speech. Thousands of people witnessed the show that followed. From Omaha the show went to Glenwood, Iowa, where it played to a big crowd. Mr. Taylor was associated with his father in the circus business when he was a youth. He and Fred Stone, the well-known actor, used to ride bareback (the horses, not the men, as Mr. Shean would say) together in those days.

As friends of the court and attorneys for wheat growers who are being sued for violation of their marketing contract with the Nebraska Wheat Growers' Association, Butler & James and J. F. Ratcliff of Furnas county have filed a brief with the supreme court of this state attacking the power of the association to enforce its contracts with growers, alleging that the contracts penalize men who violate them by marketing through other channels. It is alleged in the brief that it is unlawful in Nebraska to enter into a contract for pooling grain.

ST. JOSEPH, MO.
N. K. Thomas, Correspondent.

C. A. Geiger of the Geiger Grain Co. left on May 23 with his family for an automobile trip of several weeks through Kansas, Nebraska and Colorado.

Visitors on the St. Joseph Grain Exchange during the week ending May 30 included J. S. Allen, Highland, Kans.; W. A. Owens, Maysville, Mo.; C. McColl, Westboro, Mo.; J. Brown, Westboro, Mo.; J. F. Brant, Robinson, Kans.; S. P. Holderman, LaBelle, Mo.; J. Borchers, Rosendale, Mo.; Phil Guthrie, Kansas City, Mo.; D. F. Whittaker, Troy, Kans.

KANSAS CITY.
T. J. Tanner, Correspondent.

During the life of the May wheat delivery in Kansas City the option had a range of 73½¢, touching \$1.21½ and \$1.95½.

W. H. Burns, pit broker for B. C. Christopher & Co., will spend June in southern California, taking his annual vacation.

Special railroad rates for harvest hands in Kansas have been published, after approval by the State Utilities Commission, and the indications favor a plentiful supply of labor.

King City, Mo., which claims to be the world's largest blue grass distributing point, will hold its third annual blue grass carnival June 2 under the auspices of the King City Commercial Club.

An effort is being made by F. W. Hipple of the Hipple Grain Co. to reorganize the business that was closed a week ago. Mr. Hipple hopes to recover his membership in the Board of Trade, which was posted for transfer to E. M. Marshall.

Visitors at the Board of Trade this week included W. B. Lease, Detroit, Mich.; Major Moberly, Omaha, Neb.; W. Whitmore, Wichita, Kan.; W. O. Brackett, Fort Worth, Tex.; F. W. Linton, Oklahoma City, Okla., and H. Karr, Fairview, Mo.

An investigation this week showed that Kansas City mills held 2,417,000 bus. of wheat and 45,400 bbls. of flour. Some of the wheat was in public elevators. Millers said they would need to buy only certain qualities for mixtures up to the first week of July unless flour production became unusually large.

The lowest estimate on the Kansas wheat crop thus far reported is that of W. T. Vailes of the Hunter Milling Co., Wellington, Kan. Mr. Vailes, after extensive traveling, says the state will harvest only 65,000,000 to 70,000,000 bus. Most other observers have lately figured the crop at 85,000,000 to 90,000,000 bus.

Word has been received by W. R. Scott, transportation commissioner of the Board of Trade, that the Interstate Commerce Commission has postponed until Sept. 24 transit provisions published by the Santa Fe railroad, which were to have become effective Thursday, authorizing privileges in Kansas City on grain originating on the Santa Fe in Kansas destined to Texas points, including Galveston, for export.

Litigation over the estate of Leavenworth Fowler, a deceased Kansas City Board of Trade member, continues. The latest development is a decree from the Kansas City Court of Appeals upholding the Probate Court in ordering Talbot A.

Fowler, a brother of the dead man, to surrender \$4,513 of life insurance to an administrator. The money had been held by the defendant pending a decision in the state supreme court as to the sanity of Leavenworth Fowler.

Broker Ends in Suicide.
Kansas City, May 29.—Under conditions indicating suicide, the body of Norton B. Rixey, a dealer in cotton and linseed meal and other feeds, was found in the broker's office, 505 Live Stock Exchange building, at 6:50 p. m. today. A handkerchief, tied around Mr. Rixey's neck, had been tightened by a screwdriver. The body lay on two chairs. Furniture in the room was not disturbed. Mr. Rixey was 39 years old and married, living at 3931 Roanoke road. He and Mrs. Rixey had one child, a daughter 10 years of age. He was of frail physique and had not been in good health for some time. As far as others knew, he had no family or financial distresses. Memoranda in his desk referred to a note for \$8,000 due the Drovers National Bank in a few days, but bank officials said this was not unusual in the conduct of Mr. Rixey's business. He operated in the feed business on his own account, also as a partner of J. H. Maley in the road contracting business. At one time Mr. Rixey was manager for the Chickasha Cotton Oil Co. of Chickasha, Okla., with an office in Kansas City. His life was insured for \$10,000.

Heavier Grain Movement.
Sharp increases in the receipts of wheat, corn and kafirs last month gave Kansas City total arrivals of 3,417 cars of grain and mill products. Total shipments were 6,327 cars. Wheat receipts amounted to 2,326,000 bus., as against 874,000 in April. Higher prices induced the farmers and country elevator men to make a clean-up prior to harvest, despite the unsatisfactory outlook for the new crop. Corn also sold on a better basis, resulting in freer marketings. The month's arrivals were 1,068,750 bus., as compared with 723,750 in April. Oats failed to maintain the volume of the previous month's receipts and only 401,200 bus. came in, though prices were stronger.

Cash Grain Markets.
Wheat.—Receipts for the week, 550 cars, as compared with 552 a week ago and 444 a year ago. The pre-harvest clean-up continued, with many of the arrivals representing direct country purchases by Kansas City mills. Offerings of hard and dark were well taken by millers and elevator men. Except on Wednesday and Friday prices tended upward. The close showed net gains of 1@4c, with No. 1 at \$1.60@1.79, No. 2 at \$1.60@1.78, No. 3 at \$1.59@1.77 and No. 4 at \$1.57@1.76. A survey showed local mill stocks sufficient to meet requirements up to July 1, based on recent production of flour, but the flour demand is increasing and millers are looking for a good business in June. New wheat offerings are expected during the last half of June, but there will be little grinding of this grain before July. Present premiums of protein samples over the July future are 11@25c and hard wheat is 3½@6c over July. The week's receipts of soft wheat were light and mostly of inferior quality. There was a good inquiry for choice milling samples. The market advanced sharply. It closed 4@8c higher, with No. 1 at \$1.72@1.76, No. 2 at \$1.70@1.75, No. 3 at \$1.66@1.74 and No. 4 at \$1.57@1.70. Stocks in the elevators decreased 58,000 bus., to 1,949,000, against 6,969,000 last year.

Corn.—Receipts, 234 cars, against 212 a week ago and 155 a year ago. The liberal offerings met a fair demand from feeders and elevator interests. The market had a good tone, advancing on most days. Closing prices were 1¼@3½c higher, as follows: No. 2 white, \$1.12@1.12½; No. 3, \$1.10@1.11; No. 2 mixed, \$1.08@1.09; No. 3, \$1.06@1.08; No. 2 yellow, \$1.13@1.14; No. 3, \$1.12½@1.13½. Some white corn was taken for shipment to Mexico. Farmers in the country were satisfied with returns, generally about \$1 a bushel. The new crop advices were mostly favorable, with fewer frost effects than in Indiana and other states east of the Ohio river. Local elevator stocks decreased 239,000 bus., to 3,500,000, as compared with 1,013,000 a year ago.

Oats.—Receipts, 106 cars, against 69 a week ago and 36 a year ago. The percentage of cars offered for sale was light, as many purchases had been made direct. There was a good shipping demand, besides some local buying. The market went up with corn. Prices at the close were 2@3c higher, as follows: No. 2 white, 50@51c; No. 3, 48½@49½c; No. 2 red, 49c; No. 3, 48c. Stocks decreased 57,000 bus., to 402,000, against 88,000 last year. Information pertaining to the new crop in southwestern territory was mainly favorable, though a few complaints were heard.

Kafir and Milo.—Receipts, 54 cars, against 87 a week ago and 46 a year ago. The market developed admirable strength, due partly to the action of corn. Orders from manufacturers were scattered and of the hand-to-mouth character but the volume was liberal. The fact that arrivals were in small cars suggested limited supplies in the country. Kafir closed 8@10c per cwt. higher, with No. 2 white at \$1.83, No. 3 at \$1.82, and No. 4 at \$1.78@1.79. Milo went up 4@7c. No. 2 closed at \$2.12, No. 3 at \$2.09@2.11, and No. 4 at \$2.05@2.07. A decrease of 24,000 bus. in stocks was recorded, leaving 231,000 in store, against 425,000 a year ago.

CHICAGO.
G. Wood of this city was a visitor with the Kansas City Board of Trade last week.
K. P. Edwards of J. A. Edwards & Co. has been in Baltimore on business for his company.
J. E. Tawney and J. W. Frankel of Chicago were observed among last week's visitors in Philadelphia.
A Board of Trade membership was sold last week at \$7,600 net to the buyer, an increase of \$100 over the last previous sale.
Among recent out-of-town visitors in Chicago were F. J. Seidl of the F. J. Seidl Co., and J. G. Hessburg of the Hiawatha Grain Co., Minneapolis.

Among the visitors at the annual meeting of the Panhandle Grain Dealers Association in Amarillo, Tex., on May 18 was E. W. Manthey of this city.

The Standard Elevator Co. has been incorporated for \$5,000 to handle the public elevator business of the National Elevators, formerly owned by Rosenbaum Bros. and now by the Grain Marketing Co.

John B. Sanford, superintendent of the Dock Board Public Elevator at New Orleans, visited this office and the Chicago market last week and then visited Omaha, Denver, Kansas City, Wichita, Joplin, Sikeston and St. Louis. Mr. Sanford is sizing up the probable movement of grain to the gulf for which his three large terminal elevators, including two of the Illinois Central properties now leased to the Dock Board, are in shape.

vention on the special train, left Chicago over the Santa Fe Wednesday, June 3. L. M. Smith of the Seed World gave much of his personal time to the transportation details and the entertainment of the boys enroute. A band was provided to start them from the Chicago terminal and amateur talent from within the ranks was arranged for the long trip to the coast. The seed trade convention meets in Los Angeles June 9, 10 and 11.

Trade Opinion.

Dry weather dominates over the major portion of the wheat belt and a good soaking rain is needed, according to best advice, but the market has had an extended advance lately and reactions at this time are to be expected. A local expert estimates total wheat yield for this year at 663,000,000 bus., or 210,000,000 bus. less than harvested last year. The foundation in

wheat seems fairly bullish, the crop outlook is anything but favorable in this country, and on the dips we favor the buying side.—Logan & Bryan.

Foreign buyers refuse to become excited over our crop outlook, being more than counter-influenced by the prospect in Europe. A private cable from London says that European importation for the coming year will be 160 millions smaller than the present year. The action of May wheat pretty well disposes of previous theories of an utter exhaustion of old wheat. However, the market does not depend upon the situation in old wheat for its motive; it is governed entirely by prospect of total yield of the new crop. Practically the entire winter wheat belt is sending many pessimistic claims based largely upon drought; a few country points are sending buying orders in the market on the belief that the final outcome will be very poor. There is no basis for estimating the daily action or general trend of prices except the weather during the coming month.—Thomson & McKinnon.

A local expert put out a very bullish report on winter wheat, estimating the crop at 413 million bus., with indications for 250 million of spring wheat, a total of 663 millions. This figure is 210 million less than the crop actually harvested last year and is only slightly above domestic re-

quirements for bread and seed. Assuming such an out-turn, the result would be very bullish, as the United States is going into the new season with a carryover which is probably 30 to 35 million less than normal. Cash demand generally appears to be indifferent and there was some further narrowing of the July-September difference as a result. Several strong houses have been buying the July and selling the September. A local observer, after an extended trip through Illinois, commented in a very pessimistic manner on the crop situation. Droughty conditions and damage from the recent frost appear to have been the chief causes of the trouble.—Cross, Roy, Eberhardt & Harris.

Outside buying orders increased during the week and the trade is fairly well convinced that the next government report will reduce its winter wheat forecast and that the spring wheat forecast will be less than the crop of last year or a total but little if any more than domestic requirements. The decline in winter wheat prospects is due to dry weather and active presence of fly and "take-all." The crop over a wide area is reported to be spindly and developing short heads. The spring wheat is in need of more moisture, although it is not suffering materially as yet. Favorable conditions in the future can still make a good spring wheat crop.—Clement, Curtis & Co.

Extremely unfavorable crop conditions in this country remain the outstanding feature of the wheat market and have been responsible for the rapid advance in prices. Current pessimistic crop news are confirmed by private estimates, showing thus far a reduction in the total wheat production of more than 200 million bushels compared with last year's harvest. With an average consumption of about 670 million bushels in the last three crop years and indications for an unusually small carryover on July 1, it is manifest that the wheat market is confronted with the most bullish price situation in a number of years.—Charles Sincere & Co.

September wheat made a new high price for the life of the option Friday. The upward movement of the price of wheat and rye is "lighting the way" to a year of prosperity in the agricultural world. This is the real foundation of prosperity and points to a continuation of good business conditions on the North American continent for some time ahead. We have not heard of the advance in the price of wheat affecting the price of bread or limiting the appetite of the American workman, who receives the highest wages for his labor and lives on a plane equal to the "kings of Europe." Crop prospects are daily limiting the possibilities of any surplus in the United States and we are independent of the action of any other country and we do not hesitate to predict that wheat and rye in the U. S. will sell on this crop at 35c a bushel above the world's basis.—Farnum, Winter & Co.

In all of our reports we find nothing that would lead us to infer that the growing winter wheat crop was any way improving, while on the contrary we saw samples of wheat from Indiana, for instance, that had absolutely been killed by the recent freeze. More stories were current regarding the damage to rye also, this plant being caught largely in the bloom. We are expecting a rush of bad crop reports next week and in any event the outlook is anything but promising for the winter wheat.—Bartlett, Frazier Co.

May wheat trades were well evened up and the little pressure to sell from belated longs was taken by the elevator interests, the May and July wheat spread going to about 3c a bushel near the close. The action of the market for the near future will depend on weather conditions entirely and we would prefer to await good setbacks before taking the long side of wheat aggressively.—J. J. Badenoeh Co.

Scattered local interests and "longs" took profits; old time leaders and the public seem much impressed by the known deterioration and possibilities for further crop losses in both the spring and winter wheat areas. Export business is hardly a feature, the trade to domestic millers very small. Corn was a disappointment to its friends, although the close shows advances in the deferred futures. Most reports to us from country trade in this state say the effects of the recent freezes are vanishing with warmer weather. The most urgent need is for rain.—Pope & Eckhardt Co.

FINDS METHODS UNFAIR.

The Federal Trade Commission has issued an order in which the Cream of Wheat Co., whose principal office is in Minneapolis, is required to discontinue certain practices in maintaining prices which the commission found to be unfair methods of competition.

In a statement the commission de-

It was found that the respondent used various methods to enforce its system of standard resale prices for its products. Some of these alleged methods were: Refusing to sell to "collective purchasers" or buying pools of independent stores as distinguished from recognized "chain stores" under one ownership; refusing to sell its product in carload lots and at carload prices when such purchases were for the purpose of dividing the shipments with other customers. The respondent, according to the findings, co-operated with its customers and others in securing information as to dealers cutting prices on its product and acted on such information by refusing further sales to such offending dealers, unless they agreed to maintain respondent's prices thereafter.

The findings in detail go into the general conduct of the respondent's business, including methods of purchasing purified middlings from which its product is made; prices to retailers and wholesalers, and data having to do with margins of profit and prices under varying conditions.

The findings also allege that respondent's policy of naming and enforcing adherence to minimum resale prices for its product, in connection with its nationwide advertising and its dominating position in the market for package cereals, has had the effect of substantially lessening price competition among producers of cereals prepared from purified wheat middlings, and to enhance the price of such cereal foods to ultimate consumers.

Hearing on Great Lakes Bulk Grain Rates.

The Interstate Commerce Commission on May 1 conducted an informal hearing on the application of the Canada Atlantic Transit Co., requesting authority to file, on less than statutory notice, a tariff on bulk grain rates from Chicago and Milwaukee to Depot Harbor, Can., and requesting continuing authority to make changes in such rates without notice to the commission as required by the Interstate Commerce Act.

The Canada Atlantic Transit Company has on file with the commission, tariffs covering all commodities handled by it with the exception of bulk grain. The company desired to obtain authority to make changes in such rates without notice as required by section 6 because of competition with other water carriers of grain that are not required to file tariffs and which could therefore cut under the published rates if filed in accord with the requirement as to statutory notice. Although the commission did not say so in announcing the hearing, it was understood that questions under section 27 of the merchant marine act might be raised by those interested because the applicant is a Canadian-owned line and engages in the carrying of traffic moving via its line and Canadian ports and between points in the United States.

News of the Country Grain Trade

ARKANSAS.

Blytheville, Ark.—The Blytheville Feed & Coal Co. has just erected a large elevator.

ARIZONA.

Phoenix, Ariz.—Federal hay inspection will be in force this summer in the Salt River valley under plans by the Arizona Industrial congress. A number of grades are to be employed, standardizing all hay shipped.

CALIFORNIA.

La Mesa, Cal.—Ralph B. Clemens, proprietor of the Clemens Grain Co., died suddenly following a short illness.

San Francisco, Cal.—The Islais Grain Elevator Corp. has installed silent chain drives, replacing belt elevator drives.

San Francisco, Cal.—Otto Kettenbach will have charge of the local office of the Morgan Sales Co., of which he is a member.

Sebastopol, Cal.—The Sebastopol Feed Co., composed of business men here, will conduct a strictly feed business, and solicit membership of dairymen and poultry raisers. I. N. Cable heads the new organization as manager.

CANADA.

Saint John, N. B.—The Public Works Dept. has nearly completed the new grain conveyor to shed No. 16, which will represent an expenditure of \$130,000.

Winnipeg, Man.—The office of the Seaboard Grain Co. has been closed and the company will handle its interests through the New York office.

Chilliwack, B. C.—Contract for the erection of a 400,000 bushel elevator at Port Mann costing \$300,000 will be awarded in early June, by the Fraser River Elevator Co.

Winnipeg, Man.—Members of the McMillan Grain Co. have voluntarily filed petition for the liquidation and claims of the company. Creditors are fully protected. On May 15th, cancellation of the registration of the firm and suspension of the membership of G. C. Leitch and A. L. Benson were posted.

Winnipeg, Man.—The Harper Construction Co. has been awarded a contract from the Saskatchewan Wheat Pool for the construction of 15 elevators to be built throughout the country. The same company awarded a contract to Knudson & Sons Co. of Regina to build 12 elevators in the rural district. The capacity of each elevator will be 32,000 bushels.

COLORADO.

Hugo, Colo.—Windstorm slightly damaged the elevator of the Plains Grain & Produce Co.

Denver, Colo.—Lightning protection has been installed by the Summit Grain Co. who operate at Arapahoe and Cheyenne Wells, Colo.

Stratton, Colo.—The Star Engineering Co. has the contract to add 5,000 bushels storage above the driveway of the Robinson-Wyatt Grain Co. plant and to put on a steel roof.

Longmont, Colo.—The Farmers Grain Co-operative Marketing Ass'n has just been incorporated at Denver with capital stock of \$50,000. Incorporators: Arthur D. Bacon, William Price, T. N. Beaseley and others. Its offices will be in Longmont.

Limon, Colo.—The elevator of the Robinson Grain Co. is completed, equipped with a compressed air pump, automatic scales and automatic wagon and truck dumps and other modern machinery. Grain, hay, field seeds, and flour will be handled in the retail department. The plant is equipped to receive and store 13,000 bushels of beans, and in addition, can store 20,000 bushels.

IDAHO.

Craigmont, Idaho.—The Union Warehouse & Mercantile Co. (C. S. Bear, Mgr.) will install three electric motors and a grain cleaner in their new elevator which is to be completed by July 15.

ILLINOIS.

Granville, Ill.—A. B. Querclagross has sold the Granville Flour Mill to Chris Wald.

La Hogue, Ill.—The Farmers Grain Co. plan the repair of their elevator and coal sheds.

Pinkstaff, Ill.—The Pinkstaff Co-op. Co. is repairing their elevator for the new crop. A 25 h.p. oil engine is being installed.

Galton, Ill.—The Collins Grain Co. will install new machinery in the elevator here which they are rebuilding. The new corn crib will have a capacity of 35,000 bushels of ear corn. The plant will also fur-

nish ample storage capacity for the wheat crop. A modern dump will be installed.

Urbana, Ill.—An elevator school will be conducted for country grain dealers at the college of agriculture, University of Illinois, June 16 to 20.

Colmar, Ill.—G. E. Hendricks of Plymouth has been elected manager of the Colmar Elevator Co. following the resignation of D. A. Alexander.

Mt. Sterling, Ill.—Theodore Brandt has resigned his position as local manager for the Central Illinois Public Service Co. and will succeed C. A. Rossen as manager of the Lewis-Wilson Elevator Co.

Clinton, Ill.—Clarence E. Crang has purchased the interest of his partner, George Walrod, in the coal, feed and livestock firm of Crang & Walrod, and will conduct business under the name of C. E. Crang.

Essex, Ill.—The following directors have been elected by the stockholders of the newly organized elevator company here: Geo. Hoffman, Wm. Dwyer, Orland Hoffman, Fred Palmer and Thos. Howatt. It is reported that Thos. Callaghan was appointed manager. They will about June 1 take possession of the Dunn elevator, which they purchased.

Chester, Ill.—A new engine room will be built by the Gilster Milling Co., which will be equipped with a 300 horse power tube boiler. The Stevens Engineering & Const. Co., who erected the elevator, is handling the new work. The entire mill is being remodeled, and with new machinery and equipment, the capacity will be increased from 400 to 600 barrels daily.

INDIANA.

Griffin, Ind.—Plans are under consideration to rebuild the Griffin Elevator, recently destroyed.

Auburn, Ind.—Sparks lighting on the roof of the Auburn Roller Mills resulted in a fire with small loss.

Winamac, Ind.—The Indiana Wheat Growers Ass'n drive has brought the association's total membership to 13,745.

Nashville, Ind.—The Stone Head flour mill, four miles southeast of here, was destroyed by fire, causing a loss estimated at \$12,000.

Muncie, Ind.—E. E. Elliott of the Woodbury-Elliott Grain Co. has been named a member of the wheat committee of the Indiana Millers Ass'n.

Lawrenceburg, Ind.—The Stevens Eng. & Construction Co. are erecting a 100,000 bushel grain storage elevator for the Lawrenceburg Roller Mills Co.

Raub, Ind.—Waymire & Powell will operate the newly purchased Benton County Grain Co. 90,000 bus. elevator under the name of Waymire of Powell.

Mt. Vernon, Ind.—Polk-Genung-Polk Co. was awarded a contract by The Home Mill & Grain Co. to construct an elevator and work house to be built of monolithic concrete, to be completed for the new crops.

IOWA.

Irwin, Ia.—Chas. A. Vale has installed a new Jay-Bee mill.

Ft. Dodge, Ia.—The Ft. Dodge Flour & Feed Co. has opened a retail store.

Sac City, Ia.—Lightning protection has been installed at the plant of the Farmers Elevator Co.

Cleghorn, Ia.—S. H. Lassen has resigned as manager of the Farmers Elevator, effective July 1.

Grand Junction, Ia.—Cramer Grain Co. succeeds to the business of the Beatty Grain Co., effective July 1st.

Galva, Ia.—A new elevator will be erected here by J. B. Adams Grain Co., replacing the old building which is being torn down.

Leland, Ia.—The Leland Farmers Elevator Co. is improving its plant by installing a new air dump, electric motor and wiring the elevator.

Traintor, Ia.—A contract has been awarded for the construction of a new elevator, replacing the Farmers elevator which was destroyed by fire.

Allendorf, Ia.—Work will soon start on the Farmers Co-op. elevator here. Russ Koser of Sibley has the contract for the 22,000 bushel concrete building, equipped with electric power.

Allendorf, Ia.—The Allendorf Farmers Co-op. Elevator Ass'n has been incorporated here. Officers: Chas. Moar, Ocheyedan, Ia., pres.; Dave Plum, Allendorf, Ia., vice-pres.; R. Hoekstra, Sibley, Ia., sec'y and treas.

Davenport, Ia.—According to an amendment to articles of incorporation of Dow, Hale & Lerigo, Inc., grain and feed dealers, its capital stock was increased from \$12,000 to \$25,000. The amendment pro-

KANSAS.

Miltonvale, Kans.—The Miltonvale Mill is now owned by Harry Brooks.

Derby, Kans.—E. H. Batt has installed lightning rods on his elevator.

Argonia, Kans.—J. S. Dillon has sold the Argonia Mill to Charles Farmer.

Belvue, Kans.—Lightning rods have been installed by the Geiger Grain Co.

Galatia, Kans.—A Trapp Dump is being installed by the Robinson Mfg. Co.

Clyde, Kans.—The Clyde Mill & Elevator Co. has protected its elevator with lightning rods.

Coleman Spur, Kans.—The N. Sauer Milling Co. elevator was slightly damaged by wind storm.

Satanta, Kans.—It is reported that a new elevator will be built at Ryus, the first station west of here.

Harper, Kans.—Effective June 1, H. O. Davis of Hutchinson took charge of the Harper Milling Co.

Longton, Kans.—Rea-Patterson Mill & Elevator Co. is placing the mill in condition for the coming crops.

Coffeyville, Kans.—Bert Wilson, associated with the new mill here, will be buyer of grain for the company.

Wichita, Kans.—Roger S. Hurd, vice president of the milling company, has been re-elected head of the Board of Trade.

Ruleton, Kans.—The Federal Eng. Co. has the contract for overhauling the Goodland Equity Co. A 10-ton Howe Scale will be installed.

Sharon Springs, Kans.—An 8,000 bu. capacity grain elevator is being erected by Pomeroy Capper which will be ready for the coming crop.

Wells, Kans.—Charles Woodruff has been hired to manage the elevator here, succeeding Mr. Lawson, who will manage the Farmers Elevator at Delphos.

Chetopa, Kans.—Plans are being perfected by the Shields Grain Co. to make improvements and to install a power feed mill at their offices and yards.

Iola, Kans.—Safeblowers wrecked the safe of the Iola Mill & Elevator Co. and secured \$35 in cash, \$200 in negotiable paper and many records of value.

Herndon, Kans.—C. A. Glad, one of the extensive wheat growers and big land owners of Laing township, will erect a 10,000 bushel capacity elevator on his farm.

Caldwell, Kans.—J. E. Damon has purchased the stock of the other stockholders in the old Caldwell Milling Co. and under the name of the Damon Grain & Prod. Co., a \$35,000 concern, will build a new \$5,000 elevator building, replacing the one burned recently.

Kansas City, Kans.—The Frisco warehouse has been ordered closed as the first step in the campaign against storage warehouses in fire zones. The Kansas Flour Mills Co. was also ordered to tear down or strengthen a 60 foot metal smoke stack which was struck by lightning recently.

Pratt, Kans.—E. A. Stokdyk, grain marketing specialist of the Kansas State Agricultural College, is conferring with elevator men in an attempt to install a new wheat grading system in the elevators of Pratt County, whereby the grain would be bought on its protein content rather than by weight.

Smith Center, Kans.—The Derby Grain Co., in addition to remodeling its elevator, will build a feed house equipped with a 2-pair high feed mill, a feed leg and a 10 h.p. Fairbanks-Morse type E-H ventilated, enclosed motor. The elevator will be covered with iron siding and equipped with

Wyandotte Elevator Co.

lightning rods. Two 200 bu. grain bins and two 200 bu. feed bins will be built over the grinder. The contract was awarded the Federal Eng. Co.

KENTUCKY.

Murray, Ky.—A. L. Rhodes will install a cotton gin in the recently purchased Murray Flour Mill property.

Covington, Ky.—A \$600 fire loss resulted May 20th when overheated steam pipes set fire to an oats drier in the Cleveland Grain Co. plant.

Harrodsburg, Ky.—The interests of the Cogar Grain & Coal Co. have been taken over by a new corporation, of which the officers are: Banks Hudson, H. T. Adams and E. R. Dillenay.

MICHIGAN.

Grand Rapids, Mich.—The Michigan Mfg. Co. has reduced its capital stock from \$225,000 to \$112,500.

Clifford, Mich.—The plant of J. A. Kelly & Sons has been purchased by the Cass City Grain Co. and will be managed by J. B. Basler.

Ottawa Lake, Mich.—Herman Heiser and Vance Cannon have purchased the Ottawa Lake Elevator Co. The elevator here is managed by Alex Lindsay.

MINNESOTA.

Fosston, Minn.—Fire slightly damaged mill of S. D. Stallsold last week.

Stockton, Minn.—Fire recently damaged the Farmers Co-operative Elevator.

Delhi, Minn.—A pneumatic dump is being installed by the Great Western Grain Co.

Waverly, Minn.—Paul H. Cullen succeeds H. J. Perra as manager of the Farmers Elevator.

Beardsley, Minn.—The Cargill Elevator Co. will overhaul its plant. A manlift will be installed.

Browns Valley, Minn.—H. J. Perra will assume charge of a grain elevator recently purchased here.

Waldorf, Minn.—The Waldorf Farmers Elev. Co. is enlarging its office and installing a truck dump.

Hadler, Minn.—The directors of the Farmers Elevator Co. have decided to install a truck dump in their grain elevator in the near future.

Morton, Minn.—A Strong Scott Truck dump will be installed this month in the plant of the Farmers Elevator Co.; also an elevator belt and cups.

Hallock, Minn.—W. J. Minaychuk is dismantling his flour mill at Lancaster and will move the machinery here where he will establish a new flour mill.

Fairmont, Minn.—Lew Evans, manager of the Vye Grain Co., has been promoted to management of the Sioux Falls branch of the company, effective June 1. He will be succeeded here by W. J. Boujan.

Thief River, Minn.—Public Examiner Garfield Brown has appointed J. H. Hay, formerly superintendent of Thief River Falls Public Schools, director at large of the Minnesota Wheat Growers Co-op. Marketing Ass'n.

Rushville, Mo.—Wind storm slightly damaged the elevator of the Rushville Elev. Co. and chicken feed.

Mexico, Mo.—The Producers Grain Co. has opened for business with Nick Schmidt of Centralia as manager.

Weston, Mo.—The Farmers Co-op. Elevator Ass'n are installing concrete dumps and other concrete work is being done to safeguard against rats.

Crane, Mo.—Walter Alieger has purchased the interest of his partner, D. W. Waymire, in the Crane Mill Co. which has been closed for some time. After equipping it with machinery and installing electric motors and a gasoline engine, Mr. Alieger will reopen the mill.

Kennett, Mo.—The mill of the Mead Milling Co. has been purchased by L. S. McFadden who has leased the business of McFadden & Co., of which he is president, and will continue the business. New machinery will be added to the plant by early fall to manufacture their own mixed stock.

Palmyra, Mo.—The People's mill has been replaced by the newly incorporated "People's Mill & Distributing Co." with capital stock of \$25,000, of which \$24,000 has been pledged and more than two-thirds paid in. Officers are as follows: H. A. Yeager, pres.; John C. Hansbrough, sec'y; John A. Dearing, treas. Other directors: George Schaffer, Charles Eisenberg and Edward Disselhorst.

MONTANA.

Big Timber, Mont.—The elevator of Strauss & Co., Inc., was totally destroyed by fire.

Absarokee, Mont.—The lease of Geo. W. Potts in the Absarokee Elevator has been acquired by Joy Mann of Columbus.

Poplar, Mont.—Senator John Schnitzler, one of the largest individual farmers in Montana, is putting in over 7,000 acres of crops.

NEBRASKA.

Archer, Neb.—The elevator of the T. B. Ford Grain Co. is being repaired.

Rushville, Neb.—Davis & Wolvington has purchased the Nye-Schneider elevator.

Plattsmouth, Neb.—C. D. St. John expects to start work on the new mill the early part of this month.

Western, Neb.—An automatic wagon dump has been installed in the elevator of the Western Elevator Ass'n.

Grand Island, Neb.—The Reinking Grain Co. contemplates the erection of coal bins to be constructed of iron and concrete, at a cost of \$2,000.

Red Cloud, Neb.—The new elevator being erected by the Farmers Union Elevator Co. will be equipped with a 1,500 bu. leg. Richardson automatic scale, cleaner, distributor, Globe Truck and Wagon Dump and one 5 and 10 h.p. Fairbanks-Morse type E-H enclosed ventilated motors. The contract was awarded the Federal Eng. Co.

NEW YORK.

Gardner, N. Y.—Fire totally destroyed the warehouse of the Central Co-operative Ass'n.

NORTH DAKOTA.

Hebron, N. D.—The Farmers Union Elevator Co. will install a cleaner in its elevator shortly.

Oberon, N. D.—The Equity Elevator & Trading Co. suffered a small fire loss caused from an electrical short circuit in their elevator.

Glenburn, N. D.—The Glenburn Co-op. Elevator Co. is remodeling its plant, putting in new office and vault, new foundation and new pan and leg of larger capacity.

Columbus, N. D.—A contract has been let by A. L. Tennis, Mgr. The Farmers Co-op. Elevator & Merc. Co., for the installation of a dump and for the repairing of the driveway.

Towner, N. D.—Fire, believed due to an overheated boxing, destroyed the Andrews grain elevator together with about 13,000 bushels of grain, which was fully insured. Some grain was salvaged.

Larimore, N. D.—A large granary west of here containing a quantity of grain was destroyed by fire. It contained a feed mill, approximately 3,000 bushels of oats and about 400 bushels of barley.

Bisbee, N. D.—The elevator and coal sheds of the Farmers Grain Co. were totally destroyed by fire of undetermined origin, together with about 3,000 bushels of grain, mostly wheat. The property was insured.

Grand Forks, N. D.—During the first three months of this year losses sustained by the state mill and elevator here since its operation were increased \$61,540.75, according to a report of the industrial commission. The total loss to date is \$698,808.75.

Grand Forks, N. D.—T. E. Ibberson Co. of Minneapolis has secured the contract for the construction of the new elevator building of the Russell-Miller Milling Co., which will be 106 feet high and 56 by 96 feet in size. A warehouse will be erected with a 96 foot frontage and will extend back an average of 80 feet.

OHIO.

Oakwood, O.—The East Elevator has been purchased by J. J. Burt and Bill Bidlach.

East Palentine, O.—Fire destroyed a section of the Jonathan Failer Feed Store, causing a loss of \$20,000.

Mt. Hope, O.—An elevator being erected by the Walter Elliott Elevator Co. of Millersburg will be in operation within two months.

Alpha, O.—A 22 in. Bauer direct connected motor driven attrition mill with two 15 h.p. motors will be installed by the Alpha Grain & Seed Co.

Utica, O.—George Barnstool will erect a new elevator, replacing the one lost by fire, to be equipped with automatic scales, large shipping and seed cleaner, and with labor saving machinery. Contract has been let.

Green Springs, O.—Increased business necessitates the erection of another seed warehouse, 30x100 feet with elevator, by Oatman & Monfort, seed dealers, which will increase their storage capacity to 100,000 bushels of seed. Latest improved seed-drying machinery will be installed.

OKLAHOMA.

Gage, Okla.—A Richardson Automatic Scale has been installed by C. T. James.

Alex, Okla.—The elevator of the Pruitt-Caldwell Grain Co. was destroyed by fire. Insurance, \$10,000. As it was the only elevator here, it will probably be rebuilt.

Pond Creek, Okla.—The W. B. Johnson elevator has been purchased by a new company, the Pond Creek Elevator Co., composed of Orville Caple, former mgr. of the Johnson plant, Ralph James and Wm. Halcomb.

OREGON.

Astoria, Ore.—The Astoria Flouring Mills Co. will install two new disc separators.

Dalles, Ore.—Alloway & Georg Const. Co. has a contract to erect a 150,000 bu. fire proof addition to the plant of the Wasco Mill Co.

Portland, Ore.—Preliminary work is under way on the erection of elevators of \$25,000 and 200,000 bus. capacity for the Balfour, Guthrie & Co., at a cost of \$250,000. The contract was awarded to L. H. Hoffman, local engineer and builder.

Big News On Grinding

Famous Jay Bee now priced within reach of EVERYONE who has grinding business.

Get the best! Save money! Here is an exceptional opportunity. You can have one of 11 sizes of

Jay Bee

to take care of any grinding requirement. Exclusive Air Float System. Manganese steel hammers crush by impact on material. No friction. No wasted power. No grain heating. Lower cost per ton. Write for full description and prices.

J. B. Sedberry

817-S Exchange Ave., CHICAGO, ILL.
Factory and Main Office, Utica, N. Y.

Jay Bee Standard Direct connected to motor, 2 sizes, 30 and 50 H. P. Iron Base. Perfect alignment. Freedom from vibration. Comes fully equipped ready for work. Grinds and delivers to any part of plant.

SOUTH DAKOTA.

Naples, S. D.—The Farmers Elevator will install a new air dump.

Miranda, S. D.—The Farmers Elevator Co. will install lightning protection at their plant.

Willow Lakes, S. D.—The Farmers Elevator Co. will install a new dump and lightning rods.

Holmquist, S. D.—A new scale and truck dump are being contemplated by the Farmers Elevator Co.

Wallace, S. D.—The Great Western Grain Co. will repair its local plant and all the other elevators it operates in the state.

TENNESSEE.

Morrisson, Tenn.—Fire totally destroyed the mill of J. E. Blankenship & Co.

Clarksville, Tenn.—The Clarksville Grain & Elev. Co. has been incorporated with \$25,000 capital stock by R. D. Fort, M. C. Ewing, E. E. Riggins, A. Myer and J. H. Winters.

TEXAS.

Miami, Tex.—L. J. Bennett expects to install a new truck dump soon.

Houston, Tex.—Bids are being received by the Houston Port Commission for the construction of the contemplated \$1,000,000 grain elevator which will be erected on the Houston Ship Canal.

Beaumont, Tex.—An elevator will be erected by the Josey-Miller Grain Co. who will also enlarge its feed mill, the added improvement enabling them to resume the exporting of grain and feed.

WASHINGTON.

Edwall, Wash.—On June 8 the Edwall Grain Co. will be sold by its receiver to the highest bidder.

Waverly, Wash.—Fay Kirk of Spring Valley has purchased the L. H. Roberts Grain Co. interests, effective June 1.

WISCONSIN.

Ashland, Wis.—The Schroeder mill will be shut down for several weeks while being repaired, following the fire which nearly destroyed it.

Appleton, Wis.—The Farmers Elevator Co. will be managed by O. W. Oberg, formerly assistant manager at the elevator of Twedt & Giese at Balaton.

CANADIAN CROP CONDITIONS.

The Manitoba Free Press on May 23 stated that it had within the past 24 hours received reports by wire from 311 points in the three prairie provinces, indicating following crop conditions:

"All wheat seeded and 75 per cent of entire crop was seeded by May 16th; earlier sown is 2½ to 7 inches high, according to dates of seeding; wheat exceptionally well rooted, germination generally even and stooling good; very little, if any, damage to wheat from late frosts; sub-surface moisture abundant everywhere, but many points desired warm light rains to stimulate growth, such rains fairly general in Alberta in last twelve hours and quite a number of points in Saskatchewan and Manitoba report 'raining tonight.'

"Reports indicate that there is no increase in wheat acreage from that of 1924, the increases being balanced by decreases; in fact, when final figures are in they may show a slight decrease for the three provinces.

"Manitoba, out of 86 points heard from, gave four with slight increases and one with a 25 per cent increase; eight points with 10 per cent decreases;

twelve points with decreases from 20 to 50 per cent and 21 with small decreases, amounts not named.

"Saskatchewan, out of 146 points heard from, gave 79 with no increases; 30 with 'slight' increases; 21 with increases from 5 to 15 per cent, and twelve points with decreases from 50 to 25 per cent.

"Alberta, out of 79 points heard from, showed 31 with no increases; 9 with 'slight' increases; four with 5 per cent increase; nine with 10 per cent increase and three with 15 per cent increase in wheat acreage and seven points with decreases of 20 to 50 per cent, and these latter points are ones where previous wheat acreages have been very large.

"In Manitoba particularly, decreases in wheat acreages are being generally fully made up by increase in corn and clover crops.

"Seeding of oats, barley and spring rye, 90 per cent complete in Manitoba; 65 to 75 per cent in Saskatchewan and 50 to 60 per cent in Alberta. Winter rye seeded on summerfallow generally badly winter killed; seeded on stubble, generally a good crop. Winter rye reported two feet high and heading in some districts in southern Alberta. Conditions of all crop generally more flourishing and fully two weeks earlier than in 1924.

"A few points report that late frosts injured barley and oats to an extent to require reseeding. A very few points in Alberta and Saskatchewan report drifting on light land. Quite a number of points in Alberta and a few in Saskatchewan and Manitoba, report the presence of cutworms. Damage to date slight and would be largely controlled by fairly heavy rains in the near future."

SMILEY SUED FOR LIBEL.

Secretary Smiley of the Kansas Grain Dealers' Ass'n, has been sued for \$20,000 for libel. Suits were filed by the Kansas Wheat Growers' Ass'n and the Kansas Co-operative Wheat Marketing Ass'n for \$10,000 each on account of alleged libelous statements about the condition of the associations.

MILWAUKEE SEEDS.

Movement of timothy seed and clover seed at Milwaukee as reported for THE PRICE CURRENT-GRAIN REPORTER by H. A. Plumb, secretary of the Chamber of Commerce, for week ending May 30, 1925:

	Receipts, lbs.	Shipments, lbs.
	Tim. Clov.	Tim. Clov.
1925.....	850	
1924.....	32,115	130,075 173,395

MINNEAPOLIS FLAX MARKET.

Commission houses having flax consigned to them during the week did not have the least bit of difficulty in finding a place to put their offerings. Receipts fell off perceptibly and even at that, the reduced influx of cars were largely bulkhead lots, which of course materially cut down the actual amount of seed available. Crushers were willing to pay right up for anything that was at all desirable in character and even some of the less desirable stuff went at good comparative premiums.

Deliveries for the month were comparatively light and totaled only 72,000 bushels. Stock figures for the week were not available. Today's range of sales showed No. 1 seed on spot worth July price to 4c over and to arrive at July to 3c over.

TOLEDO SEED MARKET.

TOLEDO, O., June 1.—Clover showed a firm undertone last week. Cash clover advanced a dollar and October was thirty-five cents higher. The December remained the same as the week before. Damage reports on wheat also include clover and they are not very optimistic. Traveling men for local grain firms report they have seen some very poor fields in Ohio and Indiana recently. Most of the crop needs rain because of the very dry spring and recent frosty weather has not helped the plant either. Severe winter weather has left fields subject to adverse conditions and may cut the hay crop and give the seed crop a weak start. These reports have started some buying for investors and dealers, hence the advance this week. Carryover will be smaller than normal and for that reason the new crop will be more closely watched. An active market is expected when the new seed starts to move in the fall months. Official report from Michigan says clover is in excellent condition though some lack of moisture is noted.

Trade in alsike is very light and will likely remain so until the crop is ready for market. The growing crop is doing well in most states.

Timothy showed some of its old time pep this week with a fair trade in cash. September was bid up on poor reports of the new crop from many sections of the country. Hay needs rain most everywhere and if dry weather continues the crop will be short. With stocks pretty well cleaned up this season the new crop should meet with an excellent demand when it starts to move.

Field and Grass Seeds

TOLEDO SEED PRICES.

The following table shows the range of prices for seed on the Toledo market for cash and the futures for clover, alsike and timothy for the week ending May 29:

	Range for wk.	Close	Close
	High.	Low.	May 29. May 23.
Clover—			
Cash.....	\$16.00	\$15.00	\$16.00 \$15.00
Oct.....	14.25	13.90	14.25 13.90
Dec.....	13.80	13.75	13.80 13.80
Alsike—			
Aug.....	12.50	12.50	12.50 12.50
Timothy—			
Cash.....	3.50	3.15	3.50 3.15
Sept.....	3.50	3.60	3.95 3.60

CHICAGO SEED MOVEMENT.

Following is a statement of receipts and shipments of grass seeds at Chicago for the week ending May 30, previous week, same week of 1924 and for the season to date, starting July 1 of the years indicated (amounts stated in pounds, 000 omitted):

	Timothy.	Clover.	Other.
	Rcts. Shpts.	Rcts. Shpts.	Rcts. Shpts.
Week..	171 102	30 40	83 67
Prev. wk.	272 70	43 67	
1924.....	40 141	64 41	108 67
1924-25	36,843 27,077	10,626 54,440	16,685 16,138
1923-24	31,263 21,447	10,753 8,237	24,016 14,870
1922-23	31,672 30,878	10,817 8,791	23,517 7,163

Timothy—Firm. Common country run about \$6.10@6.20 per 100 lbs., fair country run about \$6.25@6.40 per 100 lbs., good seed \$6.45@6.50, high grades \$6.50@6.60, extra choice and fancy higher, possibly \$6.75@7.25.

Alsike—Firm. Fair country lots \$15.50@17.00 per 100 lbs. Good seed \$17.50@19.00, choice, \$20@21.00.

Alfalfa Seed—Recleaned \$21.00@22.00 per 100 lbs.

Flax Seed—Easier. No. 1 Northwest-ern closed at \$2.80@2.85 per bu. of 56 lbs.

Clover Seed—Firm. Country lots \$17.00@19.75 for 100 lbs., good \$20.50@21.50, choice \$22.00@23.00, fancy \$24.00@25.00 and Mammoth \$20.00@25.00, according to quality.

KANSAS CITY SEED MARKET.

KANSAS CITY, May 29.—Trade in cane seed, including demand for feed mixing, is fair, with some sales attributable to the effects of May frosts in the Ohio valley states. There continues to be a liberal supply. Receipts this month were 35 cars, while shipments were 18 cars. Prices are holding firm. Dealers realize that the corn crop still has its most critical growing period to encounter, which might induce a heavy call for forage seeds. Inquiry for millet is moderate, though German would sell freely if available. The demand for Sudan seed is moderate, though better than heretofore, and country offerings are less. Kansas City houses are selling soy beans in fair quantities since the weather began to favor the corn crop. Cowpeas are too high, relative to the beans. Country dealers with unsold stocks of clover, timothy, alfalfa and blue grass seed on hand at the end of the sowing season have been trying to unload since. They are making sacrificial prices. Houses in Kansas City are sending agents to the country districts of Missouri to contract the new crop of blue grass seed, which will be stripped this month. There are hopes of a good yield, depending upon rains during the filling period. Prospects for timothy and meadow fescue seed are fair.

The local market for seeds is quoted in a wholesale way as follows, per cwt., sacked:

Cane—Orange, \$1.80@1.90; red top, \$1.75@1.85; black and red amber, \$1.80@1.90.

Millet—German, \$4@4.50; common, \$3@3.50; Siberian, \$2.25@2.75; hog, \$2.25@2.50.

Sudan—Fair to good, \$4@5.

Cow Peas—Per bushel, \$4.50@5; soy beans, \$2.15@3.25.

DULUTH FLAXSEED.

DULUTH, May 30.—Flaxseed market ruled dull and draggy during the last week. Crushers and pit operators appeared to be playing a waiting game and in the absence of any aggressive bidding the market was lifeless throughout. The May future was wound up easily, few outstanding trades being switched over into July. Deliveries were negligible. Spot and July seed closed the week from 2 to 2½c off and the September and October futures unchanged to 1¾c off.

Receipts were in better volume at the end of the week, the aggregate coming to 29,686 bushels. Shipments to crushers in the interior aggregated 62,066 bus., leaving stocks of 224,000 bus. in the elevators.

It was noted that crushers were in the market for only the best lots of seed, leaving the elevators to absorb the balance at a flat basis. After showing a spurt early in the week the new crop futures turned weak and sagged. It had looked as if a strong buying movement would develop early in the new crop seed. Later reports came to hand to the effect that recent rains had afforded relief to the growing plant over North Dakota and that farmers are making progress in seeding perhaps the largest acreage to flax in the history of the Northwest. Operators are watching the crop situation closely in the meantime as it is realized that the outcome will depend upon growing conditions during the next two or three weeks.

Specialists figure that all the seed now in the elevators will be needed by Northwest crushers between now and the harvest. Supplies from Fort William are depended upon to take care of linseed oil plants in the vicinity of Lake Erie. Ports with Argentine imports filling the gap at the Atlantic seaboard. On the present lineup of prices Argentine seed is several cents a bushel cheaper than American or Canadian at the seaboard. Argentine imports are expected to be maintained in fair volume from now on up till the harvesting of the new American crop.

Closing prices of flaxseed on the Duluth market on Saturday, as compared with the previous Saturday and the same period last year were:

	Friday.	Wk. ago.	Year ago.
On track..	2.78½-80½	2.80½-82½	2.39½-41½
To arrive.	2.78½	2.80½	2.39½
May.....	2.78	2.80½	2.48½
July.....	2.79½	2.81½	2.39½
Sept.....	2.58½	2.60	2.15
Oct.....	2.55	2.60	2.12

ST. LOUIS SEED MARKET.

Quote nominally: Timothy at \$5.35 for poor to \$6.00 for good country run up to \$6.50 for bright clean seed, low grade, dark and weedy at \$2.00 to \$5.00; German millet at \$4.00 to \$4.25; common millet at \$3.00 to \$3.10; hog millet (sacked) at \$2.55.

Sorghum Cane Seed—Quote black amber at \$1.50 to \$1.65 per 100 lbs., according to germination.

Stock Peas—Quote whippoorwill at \$4.00 to \$4.25, new era \$3.75, mixed at \$3.50 per bu.

Sunflower Seed—Last sale (car to go out, yesterday) at \$3.60 per 100 lbs.

SOY BEANS REQUIRE INOCULATION.

Soybeans require a peculiar strain of bacterial organism for their inoculation. They are not inoculated by the same bacteria as will inoculate, for instance, clover, alfalfa, vetch, or garden peas or beans.

Experiments conducted by the Michigan Experiment Station show that although the presence of the bacteria on the roots in a fairly rich soil made no notable increase of yield, the inoculated plants were far richer in protein and therefore of greater value than the ones

not inoculated, running from 3.05 to 8.59 per cent.

Tests at the New Hampshire station found inoculated beans gave 7.192 tons in green weight to the acre, while the uninoculated gave only 4.672 tons, representing a gain for inoculation of 2.520 tons to the acre—and the inoculated beans contained 26 per cent more nitrogen.

No experimental data seem to exist as to the length of time legume bacteria live in the soil. Fred and Davenport, at the Wisconsin Experiment Station, state that in a rich silt loam neutral soil, soybean bacteria have been known to live more than eighteen years, but, as a rule, the number of legume bacteria in a soil free from legumes decreases rapidly after two or three years, and in an acid soil the disappearance is even more rapid.

GOOD SEED.

The Department of Agriculture estimates that more than 14,000,000,000 pounds of seed, exclusive of seed potatoes, sugar cane and other vegetative planting stocks are sown annually in the United States. Even a small improvement in the quality of seeds would result in larger crops with little or no additional expense and an enormous gain in the aggregate production or in an equal production on a smaller acreage.

Improvement in his crops is well within the power of every farmer by means of buying better class seed from expert organizations which are constantly on the lookout for improved and higher yielding varieties, and by following the work of their local experiment stations which are constantly testing varieties with a view to determining their availability and value for the state which they represent.

One of the easiest methods of increasing the yield is by using more carefully cleaned seed. A great deal of seed is produced which should never be sown as its quality does not justify its use. As the supply of farm seeds is usually in excess or at least equal to the demand it would hardly be profitable for farmers in general to try to turn seed specialists and produce their own seed, for the time and pains necessary would not yield the returns to make it worth while and many of them could produce something else much more profitably.

The main feature in which improvement is easy is in better seed buying method and closer study of varieties best suited for the section in which the farmer is located. Seedsmen have this information carefully collected and catalogued and available for purchasers and the state experiment stations can give any farmer in their state the information necessary to assist him in getting higher yielding seed grain.

The practice of farmers of securing seed from each other is not calculated

to raise the grade of the crop, because the selection is none too carefully made and expert seed cleaning apparatus is not at hand.

COAST GRAIN PRICES.

Quotations on grain, reported by grain exchanges on the Pacific Coast as of May 28, are as follows:

Portland, May 28.—Merchants' Exchange, noon session.

	May.	June.	July.

Pullman, Wash., May 27. — Red, \$1.36; white, \$1.38.

Walla Walla, May 27.—Bluestem, \$1.65; club, \$1.48; turkey red, \$1.44.

Davenport, Wash., May 27.—Gold coin, \$1.42; club, \$1.42; marquis, \$1.42.

Odessa, Wash., May 27.—Bart and bluestem, \$1.55; turkey red, marquis, fortyfold and club, \$1.40; Jones fife, \$1.38.

Dayton, Wash., May 27.—Club, \$1.44; red, \$1.42.

PROTECTION AGAINST WINTER-KILLING.

The first winter is the testing time for a new seeding of alfalfa. Whether the stand comes through successfully depends largely on how well it was established in the fall. The greater the growth the less likely will the stand suffer from winter killing. Acid phosphate of a high-analysis fertilizer application at seeding time is good insurance for the new seeding as alfalfa is very responsive to phosphorus fer-

tilizers. The application of 200 to 400 lbs. of fertilizer per acre before seeding, thoroughly mixed in with the soil, is one of the best investments that can be made to insure success with alfalfa.

INTERNATIONAL SMUT CAMPAIGN.

Preliminary to an open, international campaign against wheat rust, the Dominion government in cooperation with the states of Wisconsin and Minnesota, is making a reconnaissance in force on the common enemy. A Canadian appropriation of \$100,000 has been made available, and a testing plant is being equipped in the Manitoba Agricultural College. The Canadian annual loss from rust is placed at \$50,000,000, and the American at a proportionately large figure. The interest which the Garnet species of wheat has aroused is chiefly due to the claims advanced that it has stronger powers of resistance to the spread of rust.

DENY FEDERAL TRADE COMPLAINT.

Alleging that the charges against them are so vague and uncertain as to fail to disclose a cause of action, the Barnes-Ames Company and the Barnes-Irwin Company, through Edwin P. Shattuck, counsel, urged the Federal Trade Commission to dismiss a complaint which it has issued against them.

The complaint deals with a shipment of certified wheat sold by the Barnes-Ames Company, to the Royal Italian Government, with respect to which there is alleged to have arisen a dispute as to quality. Mr. Shattuck stated that his clients were charged with having shipped wheat with which there were large quantities of chaff, straw, wood sod, soil sand, and other similar foreign substances. These things, he said, are what are technically termed "dockage," a reasonable amount being permitted under the terms of the grain standards law. Further, the presence of dockage in wheat has nothing to do with quality of the wheat, and an allowance is made in the invoice for its presence.

Mr. Shattuck declared if there be anything at all to the case it is one of a dispute between a dealer and his customer and is without the jurisdiction of the Federal Trade Commission. He ex-

FARM RESEARCH WORK.

Secretary Jardine in an address to the staff of the agricultural colleges and experiment stations, in session at St. Louis, last week, told those present that farm research work on a larger scale than ever will result from the increase in appropriations under the Purnell measure for Federal experiment stations in all the states. The secretary's speech was made at a conference to consider the enlarged program which can now be followed, through the addition of \$20,000 to the resources of each experiment station in the coming year and thereafter cumulative additions of \$10,000 annually until \$60,000 a year is attained in 1930. At that time the appropriations will aggregate \$2,880,000.

Secretary Jardine said agricultural problems are multiplying faster than the growth in funds to study them. The time is fit to coordinate all studies. Some problems are common; others peculiar to certain states, but a broad national viewpoint of the industry as a whole is to be taken. Many projects should be conducted on a commodity basis—specific information should be gathered as to the factors making for success or failure in their production. However, the funds should not be spread out over too many undertakings. Cooperation is good for research people as well as farmers "and the experiment stations should set the farmers an example in the elimination of wasteful methods," concluded the secretary. With which injunction it was the general opinion the secretary had set the conference off to a good start.

Winter wheat areas in Soviet Russia for the 1925 harvest, exclusive of Transcaucasia, Turkestan and the Far East, total 12,921,000 acres, according to a report received by the bureau of agricultural economics from the International Institute of Agriculture at Rome.

BLACKSTRAP MOLASSES.

The market pages of this paper regularly quote blackstrap molasses prices, but in the issue of May 27th a supplementary item referring to the situation erroneously quoted other prices than listed in the regular market column.

As a correction, although we are confident our readers understand that it was a typographical error, please note that during the fall of 1924 blackstrap prices to consumers ranged as low as 12½¢ per gallon, advancing to 14¢ per gallon early in 1925. The present market is 13¢ per gallon with the probability of a small decline shortly.

OIL MEAL MARKET.

A dead market has prevailed during the past week, there having been a great many May contracts to be cleaned up, and with the occasional buying in of cars which have been sold short the market maintained its firm appearance.

It is reported that there is still a good bit of May stuff which will not be out until the first week in June, and some people contend that this will mean a continued steady market for some little time.

On the other hand demand is noticeably lighter, there being relatively little inquiry from other dealers or feed manufacturers, both reporting a reduction in their demand. The extremely strong and rapidly advancing wheat price has also had its effect on the millfeed market. Flour buyers have been afraid to step in and take a normal quantity of flour and as a result milling has continued way below normal for this season of the year.

New crop wheat will be running in a very short while and this should mean heavier production in the southwest. At this time southwestern mills are trying to establish a basis on July and August bran, but buyers and sellers are apparently quite far apart at the present time.

The export market on oil meal continues very strong and a number of the local mills are still shipping good sized quantities of cake for export. Demand for linseed oil meal from the consuming trade in this district is miserably poor. It is apparently not a question of price because oil meal is not out of line with other commodities, but the consuming demand is not present in sufficient volume to create any activity.

With the Canadian seed and the balance of our domestic crop there will apparently be enough flax seed to carry the mills for some little time, possibly through until new crop.

If the domestic demand for meal picks up during the next week or two, it is reasonable to expect firmer and higher oil meal prices.—*The Bertley Bulletin, Chicago, May 29.*

Cottonseed Meal Market Quiet.

Price Current-Grain Reporter: The cottonseed meal market for the past ten days has been very quiet and mills show more disposition to take the market rather than hold out for higher prices, but stocks on hand are not burdensome and there seems to be no disposition to lower asking prices. We look to see a quiet, steady market for the next two weeks.—*F. W. Brode Corporation, J. L. Brode, Vice-President, Memphis, Tenn., May 28.*

S. K. Johnson, formerly head of the feed division, Ohio Department of Agriculture, and former ex-president of the Association of Feed Control Officials of the United States, is representing the Collis Products Co. of Clinton, Ia., in Ohio.

C. J. LaFleur of Waverly, sales manager for the Kasco mills, Waverly, Y., and well known in the feed trade has been invited to be a member of the committee of the American Managers' Association, which will spend six weeks in Europe studying production management, sales management, personnel and welfare work and labor problems. Edward Ewing Pratt, Ph. D., former chief of the Bureau of Foreign and Domestic Commerce of the Department of Commerce, is secretary of the committee. Mr. LaFleur has been a member of the American Management association for some years.

An industrial fellowship of \$3,200 has been presented to the University of Wisconsin by the Quaker Oats Co. of America to secure impartial data on vitamins in cereal grains and their products, with special reference to rolled oats in comparison with other cereals. The special kind of vitamin to be studied is anthracite vitamin. The Quaker Oats Co. industrial fellowship will be effective July 1, 1925, and \$2,400 of this amount will be used as compensation for a competent chemist to carry on the research under the immediate direction of the department of agricultural chemistry. The balance of the sum will be used for the necessary expense of equipment, which will remain the property of the university.

Texas Cottonseed Situation.

Price Current-Grain Reporter: Cottonseed about exhausted. Mills advise they are importing hulls and cake from Oklahoma. Crop outlook very serious due to excessive drought in most parts of Texas.—*Bell Brokerage Co., Austin, Tex.*

COTTONSEED MEAL.

KANSAS CITY, May 29.—The cottonseed meal market was stationary this week, with a light feeding demand and only Oklahoma mills offering product. Dealers are looking for trade to pick up slightly in June and possibly show some activity in July. The carlot price here is unchanged, at \$41.80 per ton for 43 per cent. Oklahoma mills are asking \$36.50 for carlots. The Arkansas mill price is about \$39. Texas is on a basis equal to or higher than Oklahoma, freight rates considered. If the present favorable crop prospect holds out, the new crop meal market probably will be on a lower level than now prevails.
